IS MOST RESPECTFULLY INSCRIBED,

BY THE PROPRIETOR.

# INDEX

TO THE

## FIRST VOLUME OF CHAMBERS'S LONDON JOURNAL.

### HISTORY.

#### ANCIENT.

China, its Antiquity an Imposture . . .	17
Continent, the Fabled . . .	50
Egypt, Editorial Notices on . . .	169
Egypt, the Pharaohs of . . .	122
Egypt, the Tombs of . . .	167
Egyptians, Scientific Knowledge of . . .	153
Elder Egypt, the Arts in . . .	162
Gauls and Goths, Christianity amongst the . . .	158
Kingdoms, the First . . .	73
Nation, the Lost . . .	33
Persian Mythology . . .	177
Persians, the Medes and . . .	185
Persians, Social Habits of the . . .	193
Thebes, the Temple of . . .	145

#### MODERN.

America, Whence was it Peopled ? . . .	57
England, Wade's New History of . . .	60
Pindarees of India, The . . .	190
Russia, Lower Classes of . . .	192
Russia, Marriages in . . .	60
Russia, the Conscription in . . .	112
Serfs, Russian . . .	80
Stuart, the House of . . .	109

#### NATURAL.

Aviaries . . .	85
Animals, Medical Virtues of . . .	87
August, the Zoology of . . .	108
Animals, Restorative Powers of the Lower . . .	179
Animal Kingdom, Minuteness of the . . .	200
Bears, Russian . . .	45
Climate, Phenomena of . . .	49
Cages, Song Birds in . . .	45
Cages, British Song Birds in . . .	68
Coral . . .	53
Changes, Natural . . .	99
Coal Beds, Formation of New . . .	118
Earth, Antiquity of . . .	5
Earth, Internal Heat of the . . .	6
Fossils, British . . .	116, 152
Goat, The Thibet . . .	191
Insects, Medical Virtues of . . .	102
Ireland, Natural History of, 144, and 160 . . .	36
June, Natural History of . . .	53
July, Zoology of . . .	53
Ornithological Museums . . .	165
October, Natural History of . . .	176
Plants, Sexual Properties of . . .	186
September, Natural History of . . .	133

### LITERATURE.

#### HISTORIC.

America, War with . . .	7
American Races, the . . .	141
Ancients, Progress of Suicide amongst the . . .	55, 59, 75, and 86
Aborigines, Colonial . . .	223
Blue Beard, the Original . . .	60
Brothers, the Two . . .	189
Delusion, Popular . . .	213
Early Races, Social Condition of the . . .	98
France, Progress of Duelling in, 118, 123, 134, 143, 151, and 154 . . .	61
Greek Fire, Discovery of in England . . .	31
Herculaneum and Pompeii . . .	1
History, Poetry of . . .	218, 230, 234, 247

"BY EDUCATION MEN BECOME EASY TO LEAD, BUT DIFFICULT TO DRIVE—EASY TO GOVERN, BUT IMPOSSIBLE TO ENSLAVE."—LORD BROUGHAM.

NUMBER 1.

SATURDAY, JUNE 5, 1841.

PRICE THREE HALFPENCE.

## Our Motto Illustrated.

THERE are many kinds and degrees of education. Every sect and party has its standard; all of which may be true, and yet greatly deficient in the essentials by which a perfect knowledge of truth may be acquired. The education which will produce such scholars as our motto anticipates must be of a comprehensive and utilitarian character. It is not to be acquired at schools, nor can any man cease to be a pupil. Such an education can only be obtained in the great theatre of human life, and its alphabets and grammars must be the histories of the world—the fate of dynasties—the growth of freedom, and the power of truth. By studying the characters of the world's governors, and contrasting their conduct by the principles which they professed, a true knowledge of government can only be obtained; and it may be said with confidence that when the majority of the people, in any country, have acquired such knowledge, then the majority of the people shall become the governors. The mere man of to-day may exclaim, that to him it is of no value to know who fell at Thermopylae, or who sat undismayed in the Forum when the Gaul was at the gate; but the impulses of such a man, however fierce when driven into action by the calamities of his class or country, will never lead his brethren to other than casual victory, if so far. If ignorant that the same causes produced a like irritation often and long before;—if ignorant, also, why some with purest motives failed and others triumphed—why some with selfish purposes succeeded and others fell—he must blunder on, as self-willed heroes have always done, to the ruin of the cause he has espoused, as well as to his own undoing. But he who ponders on human history—who tracks the march of tyranny, and pauses to survey the struggles of the oppressed—who, although his search after active principles and moving causes may be baffled by the extinction of one race, can trace them operating in another,—and who, as he proceeds in his investigation, carries with him a portion of the animating spirit he evoked from his researches—such a man must become not only a practically educated being, but be one of those out of whom the statesmen and philosophers of another age shall spring. Even in his own day, be his grade in society what it may, he shall be able to exercise an influence at once useful and extensive, and become a mark at which, although the ignorant may sneer, the thinking portion of his class shall point with pride, and say, "HE IS THE MAN!"

RESPONSIBLE governments have not been altogether free from the charge so frequently, and with justice, adduced against the public actions of absolute monarchies, that the pleasures and passions of the court were more studied than the welfare, either moral or physical, of the people. Nor have the masses been able, from prejudice and party war, at all times to judge correctly or act discreetly. Hurried on by a signal from the demi-god of a day, how often has the populace of one country joined in injury and insult towards another! Not the least wickedness, indeed, of which governments have been guilty, arises from the long-continued series of deceptions which they have practised on their subjects—of talking to them in parables, or in enigmatical sentences which could bear a two-fold explanation—and of preventing the more active and inquiring spirits from exposing a course of policy which had duplicity for its instrument, and the perpetuity of ignorance for its object. The education of the people was not only thus totally neglected, but by precept and example a taint fixed

upon public morals which years of social refinement and individual discipline will scarcely be able to erase.

THOUGH freedom of speech against these and other enormities was denied, no power could prevent the thinking portion of the community from making comparisons between that and the profligate times of ruined empires. The depraved prejudices instilled into the multitude however, prevented the bulk of the people from such inquiry and reflection; they rather pursued a course of debauchery and crime, sanctioned by royal example; and against which no religious dignitary raised a denunciative voice! It was a melancholy fact, and one which will tarnish even the history of our island, that the so-called conservators of the public morals and religion, while they uttered their anathemas loud and deep against every man who questioned the conduct of the Executive, never exposed the atrocities which were daily and hourly committed in high places.

NOTWITHSTANDING the boasted improvements of the present day, there is much of political deformity in our institutions—much of degeneracy in our domestic circles. But the great truth which improved and illuminated former ages still exists—the high road is still open, the way as clear, as when Socrates stood alone in the streets of profligate Athens—when Phocion and Demosthenes uttered words of intellectual fire, and Miltiades and Themistocles led the van of victory against the insulting power of a foreign foe;—as when the elder Cato, severe even in his virtue, sustained his heroic resolutions amidst the wreck of his principles, and the desertion of his friends;—as when Alfred set the seal of regal order on the realm of England, and assigned to every man his station and his duty;—as when Cromwell set his foot on the neck of legal assumption, and as when Sydney and Russell became twin martyrs and monuments of the progress of civil and religious liberty. The experience of ages, however, open as it is to all, is nevertheless a "fountain shut up and a book sealed" to millions, in consequence of a faulty education; the warfare of party being esteemed of more importance than the empire-shaking contests which have taken place between antagonist principles.

TO unfold, therefore, the ponderous tomes of history, and to read its sybil leaves in the fresh language of our day, unincumbered by the wordy heaviness with which its facts and circumstances have been clothed, is a portion of our duty—to illustrate the stirring events of the olden time, with the commentaries of travellers and the rhapsodies of poets, is another—and to point this moral from the whole, that the past is a lesson of emphatic usefulness, and capable of apt and earnest application to the state of society in our own time, is an equally important branch of the task we have undertaken to perform. To teach men to think, and to give them matter for reflection—aided and accompanied by lighter literature, which portrays life and manners as now existing—which disrobes fashion of its silken gloss, and tears the veil of hypocrisy and superstition from the countenance of society—which instructs the inquirer in the sources of domestic comfort, and plants an attracting influence by his family fire, from whence may spring the joys of active life and the sedate raptures of a comfortable old age—these, and corresponding duties, are all necessary portions of the education we are desirous to confer.

THIS is, indeed, a great, a sublime attempt—hazardous and difficult; but, however distant our labours may be from perfection, we flatter ourselves that they cannot fail to produce some good results. The groundwork on which we rest is truth—the object of our performance is to give practical as well as pleasant information, and we conceive that the experience of man in this our own good world provides ample materials for that purpose, without ransacking the dusty holes and corners of improbability. We therefore usher in our first endeavour in the great cause of human improvement with every confidence of success, and shall proceed in our labours industriously, carefully, and fearlessly.

## The Poetry of History.

THE public history of the existing human race might well be commenced at the dispersion of Babel, although little is to be gleaned from the imperfect records of a period only remarkable for the same barbarity and ignorance which clouded future ages. It is not until we reach the empires of Egypt and Assyria that a continuous detail of interesting and verified occurrences can be correctly given. The progress of these old countries in practical science and social refinement takes off, even to this day, the edge of our boasted inventions and improvements—Damascus and the Nile being imperishable witnesses of their early splendour. The land of the Egyptians even now is a storehouse of wonders, but when the sepulchred treasures of uncounted centuries are opened up, the extreme acuteness of that remarkable people stands out in bold relief among the nations alike of the earlier and later world. The kingdoms of Asia, whose martial ardour was only extinguished in human blood, likewise claim a large portion of the historian's attention. They present a most fruitful field of romance and warlike circumstance, redeemed and adorned by noble actions, by heroic suffering, and indomitable courage, which the dark haze of time has too long shaded from the vision of our age. A consecutive account of its greater and lesser kingdoms will be found replete with stirring incidents and bold adventure—with the actions of men of giant mind as well as mould, of high resolves and chivalrous patriotism, in repelling the march of conquest and the maddening tyranny of slaughter-loving men.

THE Greeks, however, occupied the most illustrious position in ancient history. Imbued as they were with the common enormity of aggressive warfare, there was an elevation as well as daringness in their martial spirit, sublimed by a refinement of intellect altogether unknown among the ruder nations by which they were surrounded. Even the foul mythology which chained their minds to the meanest superstitions was unable to prevent their mental superiority from working its way through many labyrinths of error, and catching in its progress some of the brightest glimpses of truth that finite man has been enabled to reflect upon posterity. Among the tiny republics of old Greece, science, philosophy, and art acquired a hold upon the national mind, and purified from the dross of an uninspired religion some of the ablest intellects which have graced our species. Even in war—that disastrous science in which men of all countries have proved themselves apt scholars—the Greeks were remarkably superior. Of indomitable bravery, firm, patient, and enduring, true to their country, and valorous to a sentiment, they were rarely vanquished, and never subdued, until the better qualities of their nation had been destroyed. In the earlier periods of their warlike struggles, particularly against the Persian invasion, the name of Greece became immortalised, for to this day the glory of the past hangs like a halo round the consecrated land.

"The sun, the soil, but not the slave the same;  
Unchanged in all except its foreign lord—  
Preserves alike its bounds and boundless fame  
The Battle-field, where Persia's victim horde  
First bow'd beneath the brunt of Hellas' sword,  
As on the morn to distant glory dear,  
When Marathon became a magic word;  
Which utter'd, to the hearer's eye appear  
The camp, the host, the fight, the conqueror's career;  
The flying Mede, his shaftless broken bow;  
The fiery Greek, his red pursuing spear;  
Mountains above, Earth's, Ocean's plain below;  
Death in the front, Destruction in the rear!"

Such was the scene—what now remaineth here?  
 What sacred trophy marks the hallow'd ground,  
 Recording Freedom's smile and Asia's tear?  
 The rifled urn, the violated mound,  
 The dust thy courser's hoof, rude stranger! spurns around.

What Shakespeare is to English poetry, Greece was to the mental energies of contemporaneous Europe. Like the mind of that sublime poet, the Grecians were encumbered by the oppression of prevailing custom, and swayed in part by the indelicate manners of others. Yet the people and the poet alike burst the earthen trammels of governing example, and dazzled wondering mankind by the unequalled efforts of their genius. Amidst the coarseness common to their respective eras, they both displayed a purity of taste and elegance of language unequalled before or since, and imitated at all times with difficulty. Common to both was the earnest manner in which they inquired after truth, as was also the readiness with which they acquired a knowledge of its principles. It seemed as if their superiority of soul could penetrate the hidden mysteries of the world and man, in the same way as a person of acuter eyesight can discover a distant object more readily than one of weaker vision. For centuries this noble people brilliantly illuminated the pathway of the heathen, and paved the way for the light of true Christianity to shine for ever, although they themselves were shrouded to the last in the obscurity of Paganism. Even when their heroic spirit of liberty had fled, and they were subjugated by the Romans, they still retained their primal position among civilised nations; and when the encroaching Turks deluged the East of Europe, and took Byzantium, the learned Greeks sought refuge in Italy, where they paved the way for the revival of learning in succeeding centuries.

The Turk has kept possession of Constantinople for many hundred years, although almost all his enemies have been on the point of seizing it. Charles XII. of Sweden cherished the design of conquering it: the eye of Russia is fixed on it as if it had the power of the charmsnake. The Greeks, degenerate though they be, long for its reinvestment; while Ibrahim Pacha at one time almost held it within his grasp. European policy, however, demands that no existing power should add the important city to its territories. The progress of events points, however, with an unerring hand to a great and speedy change.

"The city won for Allah from the Giaour,\*  
 The Giaour from Ottoman's race again may wrest;  
 And the Serai's impenetrable tower  
 Receive the fiery Frank, her former guest;  
 Or Wahab's rebel brood,† who dared divest  
 The prophet's tomb of all its pious spoil,  
 May wind their path of blood along the West;  
 But ne'er will freedom seek this fated soil,  
 But slave succeed to slave through years of endless toil."

The decayed and crutch-propped dynasty of Turkey, with its exploded principles of exclusiveness, the barbarity of its men, the slavery of its women, and the ignorance of both, are topics to be depicted with unmitigated scorn. Notwithstanding the crumbling condition of the Moslem's territory, torn and distracted by rebellion and perfidy on the part of its vassals, and disgraced by the weakness and treachery of its Divan, Turkey is still enabled, by its geographical position, to embroil Europe in war. Holding as it were the key of the European route to India, Great Britain is in some measure compelled to support the tottering Ottoman. Whether, however, the present governors of Turkey will be able to withstand the designs of Russia, without the incessant protection of England, is an enigma which history may solve, and even the poetry of Byron in part decide. Poetry has certainly more often lent its charm to the hero's sword than to the cold sophisms of diplomacy; but the experience of every bitter contest against oppression has proved that there has been in the former more of truthful and disinterested action than in the latter. Neither truth, nor valour, nor generous deeds, however, are characteristic of the Turk: brutal and selfish to the darkest corner of his animal heart—stained and polluted by every loathsome crime of which barbarity is capable—suffering under the ignominy of every curse which perfidy and cowardice, and even household cruelty can earn for them, the people of Turkey are yet numbered among European nations. Even the anathema of Holy Writ, which theologians of all creeds and ages have interpreted against them, seems suspended in their favour; and the strange spectacle has of late been presented to the world of a nation boasting the greatest degree of learning and refinement standing forth the champion and protector of the most vile, wretched, and unteachable people that ever marred God's fair earth with blood and desolation. Not the champion and protector alone, but the arbiter of internal differences, that the only man of all the creed of Mahomet who ever sat himself down to study, and designedly and methodically planted improvement in his country, might be driven from his government, and

ignorance replaced in its original tyranny. Syria may be desolated, Egypt destroyed, but Turkey cannot be preserved.\* The curse of ages is upon it; the tameless and inherent savages who defile by their presence that glorious country must be chased away, and some governing spirit, large in his views, and enlightened in his principles, placed at the head of its affairs. This, and this alone can preserve Turkey, alike from the grasp of Russia, and the decay so intricately interwoven with the frame of its society. The elements of regeneration are to be found in Greece, were means only taken to insure their development, but in Turkey a long-seated mortifying sore drags down every energy to the grave.

There is another land prostrate at the feet of time, yet possessing like Greece the remnants of her ancient splendour.

"Italia! too, Italia! looking on thee,  
 Full flashes on the soul the light of ages,  
 Since the fierce Carthaginian almost won thee,  
 To the last halo of the chiefs and sages  
 Who glorify thy consecrated pages;  
 Thou wert the throne and grave of empires; still  
 The fount at which the panting mind assuages  
 Her thirst of knowledge, quaffing there her fill,  
 Flows from the eternal source of Rome's imperial hill."

Illustrious Italy, the restorer of Europe from the darkness of the Goth, is a second time subjugated by its olden foe. The Goths, after overrunning the countries of Europe, were slowly and gradually driven from Italy and France, only to settle down in greater numbers in Germany, which latter country under its first Emperors again subdued Italy. The Dukes of Austria now reign paramount in that classic region, whence issued the conquering legions of imperial Rome, where the refugees ofreece were protected, and the sciences nurtured, only however to receive a second check from the unintellectual German. In Rome itself, which rose so high only to fall so low, myriads of beauties and wonders "mock the gazer's eye." The footsteps of Cæsar may yet be traced in that majestic land: the glories of the capitol have not all departed: nor have the cries and struggles of the arena, nor the triumphal processions of its victors and victims passed from human view. They live again in the Pilgrim's song,—each charnel-house gives up its illustrious dead, and on the undying page repeat with vital energy the heroism of the olden time.

"Alas! the lofty city! and, alas!  
 The trebly hundred triumphs! and the day  
 When Brutus made the dagger's edge surpass  
 The conqueror's sword in bearing fame away!  
 Alas, for Tully's voice, and Virgil's lay,  
 And Livy's pictured page!—But these shall be  
 Her resurrection; all beside—decay.  
 Alas, for Earth, for never shall we see  
 That brightness in her eye she bore when Rome was free!"

This introductory notice of these great and hallowed empires would not be complete were all mention omitted of the tideless waters which sweep along their shores. Not only have the greatest struggles for naval supremacy taken place on its broad expanse, but it is allied with the most important, and miraculous events of sacred and profane history. In the Mediterranean was Jonah cast into the deep to dwell in the bosom of the prepared messenger of his punishment and protection. Through the neck of one of its branches did the hosts of Israel march in safety, and in triumph, walled in by the uplifted but unthreatening wave—on the breast of another of its tributaries did the Redeemer walk and still the tempest by his word—and in its yeast of foam did St. Paul girdle his ship, and direct through storm and darkness a crowded wreck to port. The impassioned stanza of the poet on the unchangeable characteristics of the Great Deep is a worthy tribute to the most sacred, classic, and peculiar of ocean's mighty arms.

"Thy shores are empires, changed in all save thee—  
 Assyria, Greece, Rome, Carthage, what are they?  
 Thy waters wasted them while they were free,  
 And many a tyrant since; their shores obey  
 The stranger, slave, or savage; their decay  
 Has dried up realms to deserts:—not so thou,  
 Unchangeable save to thy wild waves' play—  
 Time writes no wrinkle on thine azure brow—  
 Such at creation's dawn beheld, thou rollest now."

The progress of Western Europe in civilisation proceeded slowly. The victorious march of the Romans had carried with it the germs of refinement, which were not lost, though long in producing fruit that could be recognised as having sprung from the parent stem. The inhabitants of the continent had pursued the usual wandering habits of barbarism, or followed the common pastime of war against their neighbours. The imme-

\* The ablest commentators on the prophecies of Daniel and St. John were Sir Isaac Newton, Dr. Zouch, Father Holmes, &c. Though they differ occasionally in the prophetic symbols, yet all agree in one conclusion, viz., that the Eastern, or Mahometan apostacy, should last for 1260 years, and then its downfall commence. When Daniel wrote, the Jews reckoned only 360 days in the year, and the alteration in the calendar making the year 365 days did not take place till five or six hundred years afterwards, consequently Daniel must have meant 360 days each. If this reasoning be correct, in the year 1823 was the prophecy complete; for the Turkish date for that year is 1243. Now, the Turks reckon their year as we do, 365 days; if, then, we reduce 1243 years, of 365 days each, into years of 360 days, we shall find that the Mahometan religion has lasted just 1260 years, with 95 days over.

diate retainers of the chiefs, in the absence of warlike exercises, amused themselves with the chase, as being the only recreation which approached or was consonant to their trade of strife. In process of time these became the nobles of the state, while the more brutish remained hewers of wood and drawers of water. As war began more nearly to approach a science in Europe, superior instruments for battle became necessary, and a greater portion of the serfs turned their attention to the manufacture of metals and other marketable commodities. There artisans, the more discreet progressing into merchants and employers, were long deemed beneath the countenance of the nobles; and, although often more wealthy and better educated, were denied all participation in the affairs of government. Frequently, however, the superior ruler, or king, as he began to be called, from his superior cunning or wisdom, as a means by which to check the aggression of his ambitious retainers conferred peculiar privileges on growing towns and their inhabitants, appointed magistrates, and ultimately permitted them to send deputies to his council. To these parties the world owes the abrogation of the Feudal System and the substitution in its place of representative government.

But the struggle to obtain this glorious consummation was long and severe. It was retarded by the Crusades, when religious frenzy made men forget their social condition, and daringly imagine that by the bloody hand of war they could advance the message of the Messiah—set aside the inevitable course of prophecy, and plant anew the glory of Jerusalem, which had yet to fulfil its years of mourning as a howling wilderness. The miserable failure of this enterprise produced a wide-spread discontent throughout Europe, which gradually settled into an irrepressible demand for renovated institutions. In England, for instance, the barons wrested a charter of their privileges from King John, and succeeding monarchs in retaliation conferred additional municipal advantages on the principal towns. By slow and imperceptible advances was formed the House of Commons, which, reign after reign, progressed in the acquisition of power until the time of Charles I., when it exercised to its extreme verge the privilege of controlling both the monarchical and aristocratic branches of the state. The vengeance of an unsated people fell heavily on the aggressors, and destroyed at one fell sweep the throne on which the long line of Plantagenet had sat for centuries, and which, after years of civil broil had annihilated their race, they left by succession though the female line to their old enemy, the Stuarts of Scotland. During the long reign of Elizabeth the Commons had quietly stood their ground, retaining hold of the taxing power though unable to obtain a voice potential in the framing of the laws. The advent of the Scottish line, however, was too important an era to be lightly passed over by the watchful Commons; and thus, although James I. vehemently upheld his prerogative, he was frequently compelled to submit to the dictates of the popular representatives in order to obtain the necessary supplies of money. His son, Charles, however, attempted the dangerous experiment of levying taxes without the consent of Parliament, and paid the forfeiture of his life for his temerity. The Commonwealth of Cromwell, although the honour of England was redeemed during its existence, was equally unfavourable to civil liberty. The restoration of Charles II. riveted afresh the iron clasps of monarchical misrule: he bribed the Parliament into submission, and passed a life of riot and extravagance at the expense of British freedom,—ruining the privileges of the people, and transgressing the sacred principles of civil and religious liberty. The bigoted frenzy of his successor, however, hurried the impending storm to a crisis, his cowardice alone saving the empire from being torn by intestine factions. As it was, the country was sufficiently distracted by religious and political strife. When a successful revolution meted out by law the extent of the sovereign's power, and admitted and hallowed the right of the people, not only to the puissant privilege of taxing themselves, but to dispute with effect the succession to the throne, the bitterness of party strife was engendered, from the effects of which the country is not even yet free, nor indeed likely ever to recover.

In the meantime, however, America had been discovered. The ambitious and adventurous of almost every European nation, winged like vultures to their prey, sought the instant acquisition of enormous wealth by the perpetration of crime in all its cruel and disgusting varieties. Spain sent forth its merciless hordes of robbers, nor was England deficient in its amount of barbarian aggressors, to cut and hew the unoffending Indians, to burn their towns and villages, and leave an impoverished and desolated waste where they had met comparative civilisation and refinement. The names of Pizarro and his colleagues will long be remembered in the annals of human butchery, and on the head of Spain shall the death-curse of the Indian hang like a perpetual blight. A somewhat less murderous tide of emigration took its way to the northern portion of the new hemisphere, but the war of extermination was still pursued. It became the favourite policy of England to enduce its discontented to resort to America as a place of refuge, and when the religious persecutions of the Stuarts was at its height, a band of truth-loving patriots, known by the name of the Pilgrim Fathers, proceeded across the Atlantic, and planted on its further shores the noble tree which now waves its blooming

\* Giaour and Frank are Turkish names for Christian.

† The Wahabees have proved themselves deserving of all that has been said against them. Driven from the holy cities by the powerful arms of Mehemet Ali, the people of these districts lived in comparative security; while pilgrims were protected in their journey; now, however, that Ibrahim has been recalled, the Wahabees have again encroached on the shrines of the prophet, pillaged the offerings, and laid the devotees under tribute.

branches as the united and independent republic of America.

On the accession of George I. when the house of Stuart was for ever set aside, the party names of Whig and Tory were introduced, and are likely to continue so long as Britain rejoices in the possession of a mixed constitution. The Whigs maintained the principles of the revolution, by which the people were protected against the encroachments of the monarchy, while their opponents contended for the divine right of kings, and their protection against the encroachments of the people. Whether or not these parties adhere consistently to their principles is beyond the pale of our position to determine; but it may be permitted us to say, that those who really and truly advance the interests of the nations by the inculcation of sound principles, and the diffusion of charitable feelings, are most deserving of our approbation. From existing contests we shall endeavour as much as possible to abstain. "The world is all before us where to choose," and its untrodden wastes are indeed abundantly ample for our purpose, without in the least trespassing on the enclosures pertaining to the newspaper press.

#### The Waverley Novels.—Waverley.

WITH all deference to living authors, we must be allowed to say, that these productions still remain unrivalled, and that no greater triumph has been achieved by the progressive conquests of cheap literature than the publication of "Waverley," while in copyright, at the extremely moderate price charged for the new and elegant edition in course of issue. Since these historic romances and tales first appeared, millions of intelligent youth have sprung up, who not only are ignorant of the interest and excitement which their original publication produced, but have remained to this hour unacquainted with their contents. Libraries have certainly done much towards disseminating their excellencies; but the cursory reading thereby given could never be so gratifying as the possession of the works themselves, which may now be had at an unparalleled reduction from their former value. In giving a rapid summary of "Waverley," we are satisfied that it will only increase the desire of the public to obtain the original, and to read, in the mellifluous diction of the Great Magician, the soul-stirring and heart-improving narratives of his pen.

The hero of the work (which is a tale of 1745), young Waverley, is the son of Richard, who had become a Whig, a commissioner of excise, and a member of Parliament. Uncle Everard is an old and worthy remnant of the adherents of the exiled Stuarts, who at first contemplated making away the estate to a more distant relation, and then embarking in matrimony; but circumstances, admirably told, and alike favourable to the feelings and principles of the baronet, deter him from these resolves, and young Edward becomes an inmate of the hall, and a favourite of his uncle and aunt. The period of his youth is described in a manner only such as Scott himself could portray. The dreamings of boyhood, the romance of hope, the indefinite yearnings to become—he knew not what!—are detailed in natural and glowing colours. Edward is ultimately destined for the army, and his leave-taking from the wealthy old pair, as well as from his High Church tutor, is told in a felicitous style. Mingled with an outline of Aunt Rachel is the following story, told by way of enticing her nephew to deeds of honour, which we shall take upon us to designate—

#### AN OLD MAIDEN'S TALE.

"The benevolent features of the venerable spinster kindled into more majestic expression as she told how Charles had, after the field of Worcester, found a day's refuge at Waverley-Honour, and how, when a troop of cavalry were approaching to search the mansion, Lady Alice dismissed her youngest son with a handful of domestics, charging them to make good with their lives an hour's diversion, that the king might have that space for escape. 'And, God help her,' would Mrs. Rachel continue, fixing her eyes upon the heroine's portrait as she spoke, 'full dearly did she purchase the safety of her prince with the life of her darling child. They brought him here a prisoner, mortally wounded, and you may trace the drops of his blood from the great hall-door, along the little gallery, and up to the saloon, where they laid him down to die at his mother's feet. But there was comfort exchanged between them; for he knew from the glance of his mother's eye that the purpose of his desperate defence was attained. Ah! I remember well to have seen one that knew and loved him. Miss Lucy St. Aubin lived and died a maid for his sake, though one of the most beautiful and wealthy matches in this country; all the country ran after her, but she wore widow's mourning all her life for poor William, for they were betrothed though not married, and died in—I cannot think of the date; but I remember, in the November of that very year, when she found herself sinking, she desired to be brought to Waverley-Honour once more, and visited all the places where she had been with my granduncle, and caused the carpets to be raised that she might trace the impression of his blood, and if tears could have washed it out, it had not been there now; for there was not a dry eye in the house. You would have thought, Edward, that the very trees mourned for her, for their leaves dropt around her without a gust of wind; and indeed she looked like one that would never see them green again."

Waverley is made a Captain of Dragoons, through the interest of his father, and sent to join his regiment, com-

manded by the celebrated Colonel Gardner, a character well known in Scottish history. After undergoing some of his training duties, Edward sets off to the Highlands, on a visit to an acquaintance of his uncle, the Baron Bradwardine, who had been rather too intimately connected with the rebellion of 1715. The description of the Highland village—of its old men, women, girls, children and curs, is true to the life; nor is the picture of Bradwardine Castle less graphic or interesting. The domestics, too, of the Scottish mansion are all characters of sterling merit—even poor and silly Davie Gellatly, the protected idiot, claims a large share of attention as well as sympathy—while the two girls, treading with bare feet the bins or washing tubs, will reveal Brunsfield Links, Glasgow Green, and the Inch of Perth to all who have ever seen them. Of the baron himself, no one should speak but Scott himself, nor of his daughter Rose; but the picture of a drinking society, (which then abounded so much in Scotland, and the members of which toasted every beauty in the neighbourhood), on the occasion of her health being proposed is too racy to be omitted—

"Miss Bradwardine was but seventeen; yet, at the last races of the county town of —, upon her health being proposed among a round of beauties, the Laird of Bumperquagh, permanent toast-master and croupier of the Bautherwhillery Club, not only said *More* to the pledge in a pint bumper of Bourdeaux, but, ere pouring forth the libation, denominated the divinity to whom it was dedicated, the 'Rose of Tully-Veolan;' upon which festive occasion three cheers were given by all the sitting members of that respectable society, whose throats the wine had left capable of such exertion. Nay, I am well assured that the sleeping partners of the company snorted applause, and that although strong bumpers and weak brains had consigned two or three to the floor, yet even these, fallen as they were from their high estate, and weltering—I will carry the parody no further—uttered divers inarticulate sounds, intimating their assent to the motion."

The dinner at the Baron's house; and the evening at Lucky McLeary's, bring out in bold relief all the foibles of Scottish character. To the latter place Bradwardine had been giving a Scotch convoy to his guests, where, of course, they had to drink *doch an' dorrich*; a quarrel ensues, in consequence of the Laird of Balmawhapple giving a toast inimical to the dynasty whose arms Waverley bore—

"The well-known clash of swords, which was no great stranger to her dwelling, aroused Luckie Macleary as she sat quietly beyond the hallan, or earthen partition of the cottage, with eyes employed on Boston's Crook of the Lot, while her thoughts were engaged in summing up the reckoning. She boldly rushed in, with the shrill expostulation, 'Wad their honours slay each other there, and bring discredit on an honest widow-woman's house, when there was a' the lea-land in the country to fight upon?' a remonstrance which she seconded by flinging her plaid with great dexterity over the weapons of the combatants. The servants by this time rushed in, and being, by great chance, tolerably sober, separated the incensed opponents, with the assistance of Edward and Killancruet. The latter led off Balmawhapple, cursing, swearing, and vowing revenge against every whig, presbyterian, and fanatic in England and Scotland, from John-o'-Groats to Land's End, and was with difficulty then got to horse. Our hero, with the assistance of Saunders Sanderson, escorted the Baron of Bradwardine to his own dwelling, but could not prevail upon him to retire to bed until he had made a long and learned apology for the events of the evening, of which, however, there was not a word intelligible, except, about the Centaurs and the Lapithæ."

The stealing of the cattle by the Highland robbers the explanation of *black mail*, the portrait given by Rose of Fergus M'Ivor and his sister, and the reflections of Waverley on the state of that part of country, form a chapter of surpassing interest. While disorder reigns in the household, in consequence of the loss, Evan Dhu arrives as an ambassador from his chief, and the preliminaries of peace being arranged, Waverley sets off with the Highlander on a visit to that majestic country. The description of the pass, the battle, and the eagle's flight, the passage through the moss and the loch, brings Waverley to the retreat of the *catheran*. The scene in the cave begins the drama of the work, for there we first learn that the Highlanders are preparing themselves for some attempt—that they have had spies at the military outposts of the government—and that the *reiver* is entrusted with secrets of a high character, which makes Waverley inquire somewhat seriously of himself whether or not his conduct has been prudent. In the morning, after a Highland breakfast, he proceeds with Evan Dhu across the lake to the residence of the chief, being amused on the way by stories of cattle-lifting and other exploits of the *catheran*. The meeting of Fergus and Waverley is the occasion of a portrait of a Highland chief, said to be that of the bold and daring Glengarry, than whom there never was a better specimen of Celtic hospitality. The policy of M'Ivor, however, is of a different character; the chieftain is imbued with sentiments of attachment and devotion to the House of Stuart, which are largely shared and reciprocated by his accomplished and high-souled sister Flora. Waverley meets, indeed, with a Highland welcome, and is introduced to all the details of a mountain life—feasting, hunting, &c.—as well as charmed with the stupendous grandeur of Highland scenery. While thus enjoying himself, he becomes even more enamoured of Flora than he was of Rose Bradwardine, and even offers himself to the former. The romantic Celtic maiden, however, is too much taken up with the cause

of the exiled family to think of so small a matter as her own comfortable settlement in life, and she decisively rejects the proposal. While these affairs are proceeding Waverley receives intelligence that his father, who has been intriguing with a section of the Ministry to oust the stronger faction, has been dismissed, and also that his command has been superseded on account of his being absent beyond his term of leave. This shock induces Waverley to set out instantly for Edinburgh. A scene takes place at the village of Cairnrechan of the richest description: Waverley arrives at a period when the intelligence of the descent of the Highlanders has alarmed the country, and he is taken for Secretary Murray, Lord Lewis Gordon, or the Prince himself. The gathering mob are inclined to detain the traveller because he will not give his name, upon which he draws a pistol to force his way through the crowd. The Vulcan of the village, at whose forge the delay had taken place in consequence of the guide's horse having cast a shoe, rushes out with a red hot iron to attack our hero, upon which he fires and the blacksmith falls. The parish clergyman appears, Waverley is freed from danger, the blacksmith carried off scatheless, and the whole population of the village accompany the principal characters to the residence of the nearest justice of peace. Before this gentleman, a retired Major, Waverley is subjected to a torturing examination; every little event that occurred at Tully-Veolan and in the Highlands is magnified into importance, and latterly he resolves to explain no more. He is then committed to the care of a Cameronian volunteer, who has instructions to see his prisoner safely lodged in Stirling Castle. By the way the party is set upon by some Highlanders, who carry off Waverley, he being bruised by the falling of his horse. He is taken at great speed to a hut in some undiscoverable recess, and there kept seven days until he is sufficiently recovered to undergo the fatigues of a journey. This latter movement is full of incident and dangers, but all are escaped, and Waverley is ultimately taken to the Castle of Doune, garrisoned by officers in the service of Prince Charles Edward. After a night's rest he is escorted through Stirling, Falkirk, and Linlithgow, at all of which places the author pauses in his narrative to detail some of the historic glories of these towns, until he reaches Edinburgh, at the time the town was in the possession of the insurgents, although the fortress held out against them. Arrived at the palace of Holyrood, he is recognized by M'Ivor, and by that chieftain hurried off to an interview with the Royal Adventurer.

"The politic chieftain of the race of Ivor know his advantage in introducing Waverley to this personal interview with the royal adventurer. Unaccustomed to the address and manners of a polished court, in which Charles was eminently skilful, his words and his kindness penetrated the heart of our hero, and easily outweighed all prudential motives. To be thus personally solicited for assistance by a prince, whose form and manners, as well as the spirit which he displayed in this singular enterprise, answered his ideas of a hero of romance; to be courted by him in the ancient halls of his paternal palace, recovered by the sword which he was already bending towards other conquests, gave Edward, in his own eyes, the dignity and importance which he had ceased to consider as his attributes. Rejected, slandered, and threatened, upon the one side, he was irresistibly attracted to the cause which the prejudices of education, and the political principles of his family, had already recommended as the most just. These thoughts rushed through his mind like a torrent, sweeping before them every consideration of an opposite tendency; the time, besides, admitted of no deliberation, and Waverley, kneeling to Charles Edward, devoted his heart and sword to the vindication of his rights!"

At a ball at the palace Waverley meets Flora and Rose; the former kind but distant; the latter earnestly and fondly attentive. On the morrow, the army, if so it may be called (for the description of the Highland host is painfully accurate and distressing), turns out to meet the Government forces. The battle of Preston, replete with incident and personal adventure, is beautifully and powerfully depicted; the emotions of Waverley, the charge of M'Ivor, the death of the gallant Colonel Gardner, are all depicted in the full glow of eloquence, chastened by historic truth. The triumphant return of the Chevalier to Edinburgh leads to no important event, as the Castle continued to hold out against his siege. The time this occupies, however, is amply filled up by conversations between the two female heroines—the forte in which Scott excelled all his contemporaries. By these we learn that the determination of Flora to reject all the advances of Waverley was in consequence of her discovering that Rose was fondly but unwittingly attached to him. In these arguments Rose approved of Waverley as a soldier as well as a man, but Flora, more deeply versed alike in learning and the human heart, says:—

"High and perilous enterprise is not Waverley's forte. He would never have been his celebrated ancestor Sir Nigel, but only Sir Nigel's eulogist and poet. I will tell you where he will be at home, my dear, and in his place—in the quiet circle of domestic happiness, lettered indolence, and elegant enjoyment of Waverley-Honour. And he will refit the old library in the most exquisite Gothic taste, and garnish its shelves with the rarest and most valuable volumes; and he will draw plans and landscapes, and write verses, and rear temples, and dig grottoes; and he will stand in a clear summer night in the colonnade before the hall, and gaze on the deer as they stray in the moonlight, or lie shadowed by the boughs of the huge old fantastic oaks; and he will repeat verses to his beautiful wife

who shall hang upon his arm—and he will be a happy man."

"And she will be a happy woman," thought poor Rose. But she only sighed, and dropped the conversation.

The Court of the Pretender becomes as full of intrigue as if complete success had waited it to the royal chambers of St. James's, and M'Ivor, whose reckless ambition is ever in active play, is foiled in procuring the publication of an earl's patent he had received in secret some ten years before. This he more urgently required in consequence of an inclination he entertained to marry Rose Bradwardine, a project against which Waverley's heart rebels he scarcely knows how. A tea party takes place, Waverley reads some passages from *Romeo and Juliet*, and the remarks of the company bring to his mind the position in which he stands with Flora. This lady he likes to Rosalind, the lady who denies the love of *Romeo*, and pretty Rose can be no other than his *Juliet*. Matters continue in this train till November, when the insurgent army sets out for the south. Carlisle is besieged and taken, and they progress through Lancashire. There a quarrel takes place between Waverley and M'Ivor, respecting the determination of the former to resign his suit of Flora. By the entreaties of the Chevalier, an apparent reconciliation is made, and the Clan Ivor is somewhat pacified towards their former friend for neglecting their mistress. The army suddenly turns towards the north, giving up all hope of reaching London, which acts like a death-blow to the hopes of the ambitious Fergus. He waits upon Waverley in an agony of despair, increased by superstition, and entreats him to leave the fatal service, and take Rose with him to the continent as his wife, and Flora under their joint protection. At Penrith, at midnight, the retreating M'Ivors, forming the rear-guard of the Chevalier's army, meet with a regiment of dragoons. Fergus, with his faithful ensign and page, are hemmed in, and Waverley escapes with difficulty; he passes the night in a farmer's house, and on the morrow traverses the field of slaughter to secrete himself in another peasant's house at some distance. "And this, then, was thy last field," thought Waverley. "Here fell the last Vich Ian Vohr on a nameless heath; and in an obscure night-skirmish was quenched that ardent spirit, which thought it little to cut a way for his master to the British throne! Ambition, policy, bravery, all far beyond their sphere, here learned the fate of mortals. The sole support, too, of a sister, whose spirit, as proud and unbending, was even more exalted than thy own; here ended all thy hopes for Flora, and the long and valued line which it was thy boast to raise yet more highly by thy adventurous valour." The body of Fergus is not to be found on the fatal heath, and Waverley returns to his place of concealment, where he is compelled to remain in consequence of a snow-storm; during his stay tidings of the retreat of the rebels reach him, of the investment of Carlisle by the Duke of Cumberland, and of the Chevalier having fallen back upon Glasgow; then an old newspaper is put into his hand, from which he learns the death of his father, and the danger of his uncle, in consequence of his proceedings, which impels him to set off for London. Secreted there for a short time, in the house of a friend, whose life he had saved at the battle of Preston, he sets out for the north to secure a passage to the continent. During his journey he acquires intelligence of the disastrous battle of Culloden—of the royal adventurer being a fugitive, with a price set on his head; his adherents dead, imprisoned, or exiled! Where was M'Ivor, where the good Bradwardine—where were chivalrous Flora and the more tender Rose? Arrived at Edinburgh he learns that M'Ivor was a prisoner at Carlisle, and that Flora was with him. Of Bradwardine and his daughter he could only learn that the latter had gone home to Tully-Veolan. Hastening thither he finds the old mansion broken and dilapidated by the soldiery; the place tenantless, except by the unfortunate Gellatly, who, on recognising him takes our traveller to the hiding place of the Baron, which is in the hut of Daft Davies's mother. Among the explanations of Bradwardine there is not a more touching sentence than the following:—

"Half the people of the barony know that the auld laird is somewhere hereabout; for I see they do not suffer a single bairn to come here a bird-nesting; a practice, whilk, when I was in full possession of my power as baron, I was unable totally to interdict. Nay, I often find bits of things in my way, that the poor bodies, God help them! leave there, because they think they may be useful to me. I hope they will get a wiser master, and as kind a one as I was."

At Tully Veolan Waverley receives a communication from his friend in London of his and Bradwardine's pardon being granted, and the safety of his uncle secured. He then sets out for Carlisle, and arrives there only in time to witness the condemnation of M'Ivor, and to endure the agony of an interview he sought with Flora. The gallant bearing of the Highland chief, the devotion of his foster-brother Evan Dhu—and the horrors of the execution—are all too delicately and feelingly narrated to be transcribed in other language than in that of the author. A train of explanations afterwards takes place, by which Waverley becomes acquainted with the means that were adopted to induce his joining in the enterprise; and he visits the mansion of his uncle only for a short time, that he may again proceed to Tully-Veolan, to become the husband of Rose. Of the many minute and tender details which follow we shall not attempt a tran-

scription; for who would assume to alter the manner in which those delicious topics are handled by the gifted writer—who could hope to fascinate the public taste by rashly unravelling the happy web of circumstances which conclude the interesting volume? To know its beauties as a tale—its merits as a composition—its excellences as a work of fiction—or its superiority to all previous historical novels, it must be read as it came from the pen of Scott himself; and if the present imperfect sketch of "Waverley" shall induce such of our readers as have not already had that pleasure to commence it now, our purpose will have been fully answered.

### The Domestic Hearth.

BEING NO. I. OF THE EXPERIENCES OF BENJAMIN TRUESTEEL, ESQ.

No subject could be better demonstrated by experience than domestic comfort, and yet none is treated with more rhapsody and sentiment. The ministering angel of home, prior to her being translated there, is so accustomed to compliments, and to the expression of confidence that her very presence will confer lasting happiness on the chosen spot, that she in by far too many instances is led to believe, that pleasure and contentment should come to her and her family, instead of her being under the necessity of enticing and seducing them to her fireside. We shall, for these reasons, endeavour to propound a few home truths to our fair and gentle readers, and if at any time, they discover our philosophy overmastering our gallantry, we trust they will then consider that at that precise period we evince ourselves their best friend and truest counsellor.

The accomplishments usually conferred upon young ladies, though sometimes misplaced, are never altogether useless. Indeed, the more that is done to render a woman agreeable and engaging the greater service is rendered to the social world; but unless these accomplishments and adornments are based upon a correct domestic education, they only serve to render the primal deficiency more conspicuous, and to render their recipient more helpless in society, more lonely at home, and more cheerless in her own reflections—that is to say, if she reflects at all, for the greatest cause of sorrow to the world, and the chiefest source of suffering to women, is that they are seldom if ever taught to think in their youth. It is only when disappointment of one kind or another fixes its searing iron on the heart that they begin to ponder, and it is no wonder therefore that their thoughts sometimes wander in a wrong direction. Women are the most splendid builders of castles in the air in existence; they are all daughters of hope and sisters of expectation; they think they are so by nature, when they are only so by habit; and a few illustrations we hope will convince a goodly portion of them, that they could not only be the means of improved usefulness to mankind, but of increased enjoyment to certain individual members of the lordly sex.

The duties of the wife and mother do not commence merely when the bride is introduced to her new home and made the mistress of a greater or lesser mansion. These duties in reality commence when the girl begins to suppose herself a woman, and has proved herself such to her own satisfaction, by fixing her mind upon one of the rougher creatures of humanity as being most agreeable to her; and how early in life that is we shall leave each gentle dame and damsel to determine for themselves. At this period of a woman's life—late or early as the case may be—she has already witnessed much of domestic life: she has formed opinions of her father and mother, and, we must be permitted to say, generally has seen much that is faulty in both. But how to remedy these in her own case she never entertains a conception; she merely resolves that when her time comes she will act differently, forgetting all the while that the same passions are being planted in her—the same feelings of distrust or over-confidence—the like hasty mode of expression or sullenness of temper—the self-same fastidious or careless manner of conduct, which has produced the very effects she deprecates or condemns.

But there is a greater evil under which she labours, and one which every mother ought seriously to consider, as it is her alone that is responsible for it, and by her alone that it can be remedied. Young females are seldom if ever seriously taught the duties and dangers of womanhood at home; they are either left to pick up a knowledge of their natural position in society from loose-tongued gossips, or by taunts and jeers at being seen in the company of young unmarried men. This lamentable deficiency in the practical education of women is the more to be regretted, as on it depends the weal and woe of each succeeding generation. We have often been grieved to hear the ribald manner in which delicate subjects were spoken of by mothers in presence of their daughters, some of them certainly thought too young to understand the topic of conversation; but if these ladies had looked more to the effect of their narrative on their offspring, they would have been somewhat startled to witness the distended eyes, ears, and mouth of even a seven years' child, who felt stunned, quickened, and tortured by the remarks she heard. These thoughtless conversations tend more to blunt the moral perceptions of the female mind

than can well be imagined; and although a girl so brought up may sustain to the last her honour and her purity as a woman, she is doomed to become a hypocrite in company, which in time is too easily and too often transferred to the daily conduct of her life. There is nothing more painful to a really virtuous woman than to be compelled to feign ignorance on topics of which all are fully cognizant, and which she cannot doubt but that others think her so, although conventional manners presuppose it otherwise. The first duty of a husband, then, is by his own discreet conversation, to set an example by which his wife may be guided, and his daughters trained; and the first task of a young man about to marry should be to make himself acquainted with the language and manners of the family from which he means to take a helpmate; for he may rest assured, that how ever delicate of speech and soft in manner the lady may be in his presence, that the family characteristics are deeply if not irrevocably seated in her temper, to burst at a future time on his devoted head, when he least expects it.

There is nothing more engaging in a little girl than her lisping prattle, nor is there a greater pleasure for man than to listen to the chastened conversation of an educated and polished woman. Both of these interesting specimens of humanity might go on for ever, and the listener gather pleasure like fragrance from a flower garden. But the deep continued flow of animadversion and personal remark for which too many matrons are remarkable is decidedly of a comfortless character. The vain toss of her head by a chagrined woman, and the sharp silly laugh of one that is tantalised, are signs more of weakness than folly, which due care might easily remedy; but the love of scandal, once brought into active operation, is almost incurable; it is a practice against which every man of mind should set his face determinedly, for there is no greater cause of conjugal neglect and domestic bitterness than gossiping. Woman is taken from her father's home to her husband's to remain there, not to make it a mere resting place or rendezvous; and it may be safely said that the lady who has too many visits to make or to receive is an unloving wife and a careless mother.

Against all these crimes, for such they are, we have determined to commence an exterminating war, and we give notice that the faults of the husband, instead of being considered a palliation, shall only add to the guilt of the offender; as our creed is—that woman has empire in her own hands, and if she sways the sceptre aright, her husband will be faultless—happy at home and honoured abroad. As we are willing, however, to suppose that each individual lady who reads these remarks is entitled to consider herself an exception, we expect in return that she will admit their correctness, and prove as well as express to her husband her belief to that effect. To her, therefore, we say, in the meantime, is given a more potent sway over a fireside-kingdom than any possessed by the most absolute sovereign on earth. Her spell, paramount at home, extends its benign and blessed influence over every thought and action of her liege protector. It cheers him in travel, and invigorates him in toil. He dwells upon it with a fondness which he would almost be ashamed to confess, and he relies upon the affectionate care and little assiduous attentions even when he least seems to reflect upon them. He enters upon matrimony with a long lease of conjugal felicity in expectancy, and labours determinedly to convince himself that he has bid loneliness of heart as well as weariness of mind a long farewell. Now we know, most gentle lady, that you are this moment thinking that that is all very well, but that he must make up his mind to endure some little disappointments, and to have some slight unkind looks, and a few cross words now and then, with the president of his parlour and the comptroller of his exchequer. Allow us, however, our most dear but much mistaken, madam, to contradict you in the most becoming but resolute manner possible: he ought to expect no such thing; he ought to be a stranger to their infliction so long as you keep watch and ward over his interests and affections. "What!" we well know you are about to exclaim—"although the fault may be his own, either by staying out too late at night, or being unjustly displeased with my cookery, or doubting my word, or taking me up too hastily, or contradicting me too sharply, or disappointing me when I have company, or keeping me waiting when I go abroad to meet him?"—No, Madam; no; although you multiplied your grievances a thousand fold, and could justify them all to be truly grievances, you have no right to give him a cross word or a sullen look in return. Your duty, pardon our extreme candour, is to obey; and your interest, your influence, your pleasure, and your power all lie in your obedience. You know well, if you will only hearken to reason, that you can turn him any way you like by a smile and a simper, and where is your profit then, setting aside the misery it will cause you afterwards, of driving a pang into his heart as an undertaker does a nail into a coffin. Now, madam, just keep quiet a little longer; we are somewhat rude, we admit, but as we know what you are going to say, and as we can say it much better than you, we will do so, and answer it at the same time. There never was a greater mistake made by woman since that of our universal ancestress, Eve, than her supposing that these petty quarrels give an additional zest to the pleasure of reconciliation. It is pleasant both to man and woman to have a load of anxiety removed from their mind, and the

elastic spirits rejoice at the release; but, sometimes in the heat of business, sometimes during a sleepless hour, the memory of that pang will return to be increased, extended, and confirmed by every jar and discord which may occur. Allow us, therefore, to put this one simple question to you, our very patient lady, and we have little doubt you will at once admit that we are in the right. Do you recollect what your feelings were immediately after you had spoken the first unkind word to your husband? Did you not feel both ashamed and grieved, and yet too proud to admit it? That pride, madam, was, is, and ever will be, your evil genius. It is the tempter which labours incessantly to destroy your peace, which cheats you with a vile delusion that your husband deserved your anger when he really most required your love. It is the cancer which feeds upon those glad and unspeakable emotions you felt on the first pressure of his hand and lip, and will not leave them till their ashes corrode your affections, blight your moral vision, and blunt your sense of right and wrong. Never forget that yours is a lofty calling: never forget the manner in which the duties of that calling can alone be properly fulfilled. If your husband is hasty, your example of patience will chide as well as teach him; your recriminations will drive him from you; your violence may alienate his heart, and your neglect impel him to desperation. Your soothing will redeem him; your softness subdue him; and the merry twinkle of those eyes now filling beautifully with priceless tears will make him all your own.

But there is his knock at the door; he is repeating to himself the pleasurable lines—

" 'Tis sweet to hear the watch-dog's honest bark  
Bay deep-mouth'd welcome as we draw near home;  
'Tis sweet to know there is an eye will mark  
Our coming, and look brighter when we come."

Will he be disappointed? Ah! no. Kiss him at the threshold, tell him what you have been reading, and say you shall hear further from us in a week. And if he should express his regret, as no doubt he will, that our present observations were not more extended, read to him the concluding speech of Katherine in Shakspeare's "Taming of the Shrew."

Kath.—Fye, fye! unkitt that unkitt threat'ning brow;  
And dart not scornful glances from those eyes,  
To wound thy lord, thy king, thy governor:  
It blots thy beauty, as frosts bite the meads;  
Confounds thy fame, as whirlwinds shake fair buds;  
And in no sense is meet or amiable.  
A woman moved is like a fountain troubled,  
Muddy, ill-seeming, thick, bereft of beauty;  
And, while it is so, none so dry or thirsty  
Will deign to sip, or touch one drop of it.  
Thy husband is thy lord, thy life, thy keeper,  
Thy head, thy sovereign: one that cares for thee  
And for thy maintenance: commits his body  
To painful labour, both by sea and land;  
To watch the night in storms, the day in cold,  
While thou liest warm at home, secure and safe:  
And claims no other tribute at thy hands,  
But love, fair looks, and true obedience;—  
Too little payment for so great a debt.  
Such duty as the subject owes the prince,  
Even such a woman oweth to her husband:  
And when she's froward, peevish, sullen, sour,  
And not obedient to his honest will,  
What is she but a foul contending rebel,  
And graceless traitor to her loving lord?—  
I am ashamed that women are so simple:  
To offer war where they should kneel for peace;  
Or seek for rule, supremacy, and sway,  
When they are bound to serve, love, and obey.  
Why are our bodies soft, and weak and smooth,  
Unapt to toil and trouble in the world;  
But that our soft conditions and our hearts  
Should well agree with our external parts?  
Come, come, you froward and unable worms!  
My mind hath been as big as one of yours,  
My heart as great: my reason, haply, more  
To bandy word for word, and frown for frown;  
But now I see our lances are but straws:  
Our strength as weak, our weakness past compare,—  
That seeming to be most which we least are.  
Then vail your stomachs, for it is no boot;  
And place your hands below your husband's foot:  
In token of which duty, if he please,  
My hand is ready—may it do him ease.

#### Time and Love.

An artist painted Time and Love;  
Time with two pinions spread above,  
And Love without a feather;  
Sir Harry patronized the plan,  
And soon Sir Hall and Lady Ann  
In wedlock came together.

Copies of each the dame bespoke:  
The artist, ere he drew a stroke,  
Reversed his old opinions;  
And straightway to the fair one brings  
Time in his turn devoid of wings,  
And Cupid with two pinions.

"What blunder's this," the lady cries  
"No blunder, Madam," he replies,  
"I hope I'm not so stupid—  
Each has his pinions in his day,  
Time, before marriage, flies away,  
And after marriage, Cupid."

#### Familiar Chapters on Science.

##### NO. I.—THE ELECTROTYPE.

Of all the brilliant discoveries in Electro-Metallurgy which the mind and perseverance of man have lately wrested from electricity, there is no branch of that comprehensive science which offers greater inducement for investigation, or promises more for the advancement of art and manufacture, than the one generally known as the **ELECTROTYPE**.

Electrotype is the name given to an art, by the proper exercise of which perfect metallic copies of any material substance may be obtained. Thus, a coat of arms on a seal, may become the parent of any number of copies, in copper, of the engraving, the impressions from the whole of which shall be as perfect as those of the original. To secure this object with ease, certainty, and economy, it will only be necessary to attend to the strict fulfilment of certain conditions, the explanation of which is here given.

Electricity, on the one hand, and chemistry on the other, are the two agents by whose united assistance all the wonders of the Electrotpe are produced. In order to combine their separate means to one end, it will be necessary to employ a galvanic battery; in fact, all operations in Electrotpe are carried on by means of this battery, a brief description of which will not be considered out of place, because although thousands talk of it, but few understand it.

If any one will place a spoon made of silver underneath the tongue, and another of zinc on its upper surface, taking care that the ends out of the mouth do not touch each other, no effect will be experienced; but if, in that situation, the protruding parts are made to touch each other, a very peculiar and marked sensation will be felt. This is galvanism, a current of which is continually flowing round and round, first from the zinc to the silver, then from the silver through the tongue back again to the zinc; and this current will only cease to flow by disuniting the ends of the two spoons. In technical language this is called a galvanic "circuit." The galvanic battery acts in a way similar to this. In its simplest form, it may readily be constructed out of a drinking glass. Pour into the glass an acid solution composed of fifteen parts of water and one of vitriol. Then take a slip of zinc and another of copper, and place each at opposite sides of the glass so that they do not touch each other. In this state no action takes place. But if the piece of zinc and the piece of copper are brought into contact (generally done for practical purposes by soldering a piece of copper wire to one end of each, and then twisting the two pieces of wire together), rapid action immediately commences, as will be seen by the copious liberation of gas on the surface of the piece of copper. All galvanic batteries are constructed on this principle, but the one here described is not recommended for use, because, at a very small charge, complete batteries for amateur purposes may be obtained in many parts of London, which will enable any person, however unversed in their employment, to secure many of the most pleasing results of the Electrotpe by only attending to a few simple directions.

By the action of the galvanic battery, copper in one state is compelled to undergo a change into another. Before the change takes place it is *sulphate* (domestically known as blue vitriol); afterwards it becomes a solid metallic plate. This change is effected in the following way. Provide a wooden box, open at the top, the joinings of which are cemented with pitch, to make it water-tight. In like manner let a smaller one be made, to be placed inside the other, leaving a space of an inch and a half between both on all sides. The bottom of this inner box must not be made of wood, but of plaster of Paris, as it is absolutely necessary that it should be *porous*. This inner box must be made to rest on the top edges of the other by supports of wood.\* Charge the larger box with a saturated solution of sulphate of copper, which is made by pouring boiling water over the crystals, and stirring the solution several times during its cooling. Into this solution place the object to be copied—say an engraved copper-plate, which must be well cleaned, and have attached to it a piece of copper wire. Every part of it, except the face, must also be coated with spirit varnish, in order to prevent the duplicate plate from forming anywhere but on the engraved surface. This done, place the smaller box within the one containing the plate, particular care being taken that it does not touch the surface of the plate, but merely that of the solution. Into this second box pour a mixture of one part of sulphuric acid (oil of vitriol), diluted with forty parts of water, and then place a piece of sheet zinc, the size of the plate, over the porous bottom, or diaphragm, having affixed to it a piece of copper wire, as in the case of the copper plate. Connect these two wires by twisting them together, and in this situation the necessary change goes on, the process requiring from four to seven days for its completion, according to circumstances. The acid solution must be changed every morning, and fresh crystals supplied as fast as they dissolve; and at the end of the time mentioned a second plate will be deposited upon the first, which may with

\* Galvanic batteries, well adapted for all purposes of the Electrotpe, may be obtained in the Entrance Hall of the Royal Polytechnic Institution, at a charge of from one to five shillings.

ease be removed from it. This second plate will be found to exhibit, transferred upon it, every mark, even the most minute, which existed in the original, with this difference, that what was an engraved or cut-out line in the original, is an elevated line upon the copy. But the plate thus copied becomes a mould; and by making it, in a second process, take the place of the first, and subjecting it to a similar process, another plate will be produced, in every respect identical with the original, and adapted, like it, to purposes of printing. The mould thus prepared, becomes, in fact, the parent of every subsequent copy of the original, and duplicates may be multiplied from it to any extent.

In a succeeding chapter on the Electrotpe, we shall show how the practice of that art may lead to domestic ornament and embellishment, our present purpose being to awaken consideration to the primary truths of a discovery not less wonderful in its present and prospective results, than it is pleasing as a means of scientific recreation and instruction, and as an element of sound and useful education.

#### Antiquity of the Earth.

THERE is scarcely a more convincing proof of the progress of scientific and philosophical inquiry, than that afforded by the circumstance that facts and principles, which some time since were regarded as startling, or heterodox, are now promulgated without doubt or hesitation, as truths susceptible of almost mathematical demonstration. Thus, instead of this vast and wondrous earth which we inhabit being no more than six thousand years old, it is found to partake of the infinity of that system of which it forms a small but integral part, and to date from almost incalculable antiquity. This fact is proved, in the first place, by the corresponding magnitude and extent of the sidereal system, which bears the character not so much of time, but of a period approximating to eternity; and though we know that matter, being finite, must have both a commencement and a termination, yet the evidences of its origin, and the prospects of its destruction, are both so vague and distant that we are compelled to adopt the philosophic views of the enlightened and pious Bishop Butler, and to admit that "we are placed in the middle of a succession of changes of which we know not either the beginning or the end." The evidence of the antiquity of the material creation, and the scale of magnitude and grandeur which astronomy unfolds, as much transcends in degree the similar testimony afforded by geology, as the whole must be conceived to exceed a part; and when we read of nebulae or starry bodies, the distance of which Sir W. Herschel would only express by nearly twelve millions of millions of millions of miles, and the light of which cannot have been less than one million and nine hundred thousand years in reaching us—when we reflect that we have no reason for conceiving that we have here reached the limits of creation, but that, if we could attain this point, and reach these distant orbs, we should behold not the termination of the universe, but, in fact, its beginning—fresh worlds stretching into immeasurable space, and no end, no termination of the vast sphere of being—our minds are well prepared to admit the less marvellous but still striking phenomena it calls on us to investigate. The chief evidence which geology offers on the date of the earth, is afforded by the number, variety, and contents of those materials which form the crust or covering of the globe. Many of these consist of accumulations of igneous matter, lavas and basalts, which, judging from the progress of an Etna or Vesuvius, must have required thousand and millions of years for their deposition; these are succeeded by fossiliferous rocks, the mineralised beds of primeval seas, when oceans rivalling the Pacific or Atlantic in extent, and, consequently, in duration, must have prevailed during incalculable epochs, and then must have passed away to give occasion to fresh and equally extensive phenomena. The seas, then, became dry land, forests of tropical plants spread over the newly-formed earth, and after their cycle of date and prevalence, were entombed beneath the waters to elaborate supplies of mineral fuel, and yield to mankind the invaluable blessing of coal. Fresh seas succeeded, teeming with fresh forms of life and being, adapted to the ever changing conditions of external nature; while dry land obtained, at intervals, lakes were developed in turn, and deposited their sediments and organic remains; the volcano and the earthquake occasionally burst forth in paroxysms, and every variety of revolution and disturbance at once diversified the then existing aspect of nature, and furnished elements for successive changes of condition. And when we compare existing nature with nature in by-gone eras, when we reflect that nothing is created in vain—nothing made for a day, but that everything has its sphere of usefulness and of duration—when we remember that the oceans of the present day, with some trifling modifications, have prevailed during the entire historic period, that the same Channel crossed by Cæsar still parts the Briton from the Gaul; the same Atlantic still divides the Old World from the New; while the seas and rivers navigated by Alexander are in existence now—we cannot refuse our assent to a proposition so self-evident as the fact that changes so numerous and extensive as we have mentioned, must have required an adequate space of time for their development, and that a world made up of changes so numerous and diversified must have occupied a corresponding space during its preparation. The antiquity of the earth is a fact demonstrated by evidence of so cumulative, so convincing a character, and constitutes so essentially the foundation of all judicious inquiry into the nature and condition of our planet, that it forms an early lesson in every work on the science; and so far from being considered to militate against our ideas of the wisdom and benevolence of the Great First Cause, it will serve only to assist and to exalt our concep-

tion of His greatness and perfection. For, if there be a contemplation which, more than any other, enhances our admiration of His bounty and benevolence, it is that which this science so admirably supplies, by representing the Creator as first fitting up and providing this beautiful and harmonious earth with every variety of boon and blessing, and storing it with metals, with limestones, with sandstones, and, above all, with coal; adapting it for every variety of soil and cultivation; making it a sphere in which every industrial and active faculty of man could be beneficially and usefully employed, and, finally, moulding it into external beauty and loveliness; diversifying it with land and sea, with lake and forest and river and plain; clothing it with vegetation, and harmonizing all its attributes into one consent of grace and plenty and loveliness.

#### Internal Heat of the Earth:

THAT the earth possesses a source of internal heat, is a fact proved by testimony as conclusive as that which has been adduced in favour of the various phenomena to which we have already had occasion to advert. The increased temperature of wells and mines, the existence of thermal springs, or sources of heated waters, the occurrence of the volcano and the earthquake,—sufficiently attest the presence of a source of heat beneath the surface of the earth's crust. It is occasionally termed the central or subterranean heat, and the latter is conceived to be the more correct term, since, though of necessity subterranean, it is not of necessity central, and, in fact, many phenomena tend to show it is situated at no very remote distance from the surface. Various theories have been propounded to account for its existence—some philosophers conceiving the interior of the globe to consist of a molten mass, the remains of an original incandescent condition of our planet; others, with more probability, ascribing its heat to the agency of electro-magnetism—a supposition which certainly appears in the highest degree probable; for, since by the puny operations of man we are enabled to produce results in the highest degree influential and important, and, by the mere opposition of plates of copper or of zinc, to evolve light and heat, it is conceived that the same powers, exerted in the magnificent scale of nature, would be sufficient to produce all the conditions implied by that internal heat which is recognised as a highly powerful and active agent in producing some of the most extensive and mighty changes of our earth.

#### Traits and Sketches of Irish Character.

##### MOGUE THE RATTLER.

This exquisitely-told story is from "Ireland, its Scenery, Character, &c." by Mr. and Mrs. S. C. Hall, a work of surpassing interest, and which deservedly ranks among the most talented and popular serials of the day:—

"In country towns there are no public stands for cars of any kind; they can be hired, as we have intimated, at the principal inn, or, as is generally called, the 'first Hotel.' Sometimes individuals manage to 'start a car,' or, 'set up a jingle,' and in such cases, drive it themselves; those persons are usually well-informed in legends and localities, and always well pleased to obtain a listener. The most amusing of the class we ever knew, was a tall, lanky fellow, whose real name was Mogue Furlong; but who was better known in his own particular district as 'Mogue the Rattler.' Mogue was in the confidence of many a youth and maiden, for, as he said, the jaunting-car was the most convenient thing for 'coortin' that ever was invented. 'Ye see,' said the Rattler, 'I know at once when people are married or single; if they're keeping company, they tell me to balance the car by sitting on the other side—for the sake of the horse, to be sure!—if they're married, bedad! they let me keep my own seat, and balance it themselves!'

A proud man was Mogue when the liberality of a gentleman—whose hand, while he had life, never closed upon his purse—enabled him to set up a car for, as he said, 'the convenience of his neighbours, and his own profit.' Mogue was a patriot, and his car painted a bright green; and as he desired the country at large to be informed of his wealth, he had an inscription on the back of his vehicle, 'Mogue Furlong his car for the public and his friends leaves home twice a week wind and weather permitting.—P.S. let on hire when not goin'.' Mogue sported a very loose, ill-fitting coat, a huge whip, with a lash long enough, as he said, 'to keep the childre and the pigs from under the horse's feet,' and his 'new' beaver was an 'ould' hat belonging to the coachman at the big house, a tributary offering to the Rattler's new 'vocation'; as, however, the coachman's head was large and Mogue's small, he was obliged to stuff it with a wisp of hay, or straw, or some such material, to render it a 'beautiful fit,' and he generally managed by such means to keep it off his eyes; he was a very tall, powerful man, but gentle and good-tempered, as powerful men usually are. During the summer he had abundant occupation in driving 'the Bathers' (he lived in a sea-side village) to the sea. No matter how many crowded into his car; 'the more the merrier' was Mogue's constant observation, ('three of a side and two in the well,') and he aided not a little to make them merry, for he was the very soul of sly and quiet humour. In those days the 'firing cushion,' that well-stuffed and most lounging appendage to a modern outside car, was not known; and we have seen three or four children laughing in 'the well,' while 'mamas, grown-up sisters, and nurses crowded the sides.' Twice a week Mogue re-

paired, 'wind and weather permitting,' to the country town, and certainly no one envied his occupation: everything that the inventive faculties of a whole parish—in which there were ten or a dozen rustic beauties—everything, from a pennyworth of mixed hair-pins up to a bonnet, from a 'quarten of tea' to a side of pork, was Mogue expected to convey for next to nothing—or pure love. 'Ah thin, Mogue honey, don't forget the crooked comb; what'll I do if you do, and the dance to be to-morrow evening?—here's the money.' 'And for the carriage, Nelly?' 'Oh, I'll owe ye for that.' 'Ah, thin, Mither Mogue, don't forget the bit of a slate for the boy, this time anyhow. Sure he's losing the figures for want of it intirely.' 'Mr. Mogue, sir,' whispers a tall gawky lad, looking fitter to go to school than think of 'sach things,'—'here's the size of her finger, ye see; try it on yer own little one, will ye, for fear ye'd lose the measure?' 'Ah thin, don't bother us with such nonsense, ye bather bosthoun,' was Mogue's reply. 'Sure the key of the door served your father's turn, and it may yours.' 'The dickens a key to the door at all, at all,' answered the youth; 'but the priest is grown particular about a ring, and ye needn't dread the money, for here's the half of it; and don't be hinderin' us, Mogue, like a darlin' man, and it so nigh Lent. I'll pay ye honest, and if ye don't take my word, the little girl herself's outside, and will go bail—and you never misdoubted the word of one belonging to her.'

Christmas, however, was Mogue's time of importance; he had to please all the ladies then, and not a few of the rich farmers' wives—in the choice of pudding plums, jar raisins, sweet and bitter almonds, beef suet, Christmas candles, kitchen candles, citrons, with a host of et ceteras. He had to convey presents of turkeys and eggs from the dwellers in the country to those in the town; and presents of town cheer from those in the town to friends in the country.

The fifth Christmas after Mogue became a man of substance had come round. It was a fine clear evening when he repaired to the dwelling of his friend, the old gentleman, who had set him up in the first instance as a car-driver; in three days more this old gentleman would have spent sixty Christmas days in the house where five generations had preceded him; and Mogue Furlong came, once again, to take orders for the Christmas fare. He had heard rumours that the 'squire's' circumstances were changed for the worse, and in accordance with that beautiful Irish feeling which renders the Irish doubly respectful to the relics of good old times, when 'in trouble,' Mogue on being sent for to the parlour bowed much lower, and was much more civil than usual; but his heart smote him when the gentleman's daughter placed in his hands a far shorter list than heretofore of the fare that was required.

'There's only Mary and I now,' observed the 'squire; 'the boys are all away, and we do not want much, do we, Mary?' Mary smiled and turned away; Mogue saw she did so to hide her tears.

'Well!' exclaimed the grocer's wife; 'I must say, Mogue Furlong, ye'r the hardest to please of any man I ever see. Why, they're the same currants you let me put up for Mrs. Harragan.' 'They'll do very well for Mrs. Harragan; but there's a dale in the differ between buying for her and Miss Mary of the big house.' 'And is this all they've ordered?' said the woman, snatching the list out of the car-driver's hand. 'Well, if ever I see such a mane, poor order from a gentleman's house.' 'Ye may keep yer currants, Mrs. White, ma'am,' he said, having repossessed himself of the order. 'Ye may keep yer currants as change for yer impudence, in daring to look at my papers; and see what ye'll do without my custom. See that now, Mrs. White, that's the price of your curiosity, ma'am!' and Mogue walked off in fierce anger to another grocer's, despite the efforts of Mrs. White to obtain a reconciliation.

'Well,' she exclaimed, 'who would ever *drame* of his firing up that way; and indeed it's myself is sorry to hear what I heard about the family; they war good people—'

'And good customers,' added one of the shop-loungers.

'I'm not going to deny *that*,' replied Mrs. White; 'but they always had the worth of their money.'

'Small blame to them; ye did not *ax* them to have more, Mrs. White?' observed a caustic blacksmith.

'I shall let them know Mogue's impudence, and get him broke,' she said, tossing one scale into another as they swung from the beam, and wiping the remnants of the 'soft sugar' into the drawer with her hand. 'I shall certainly let them know Mogue's impudence.'

Mogue Furlong heard that day much which made his heart ache; meeting the servant of his patron's attorney strolling down the street, he asked him 'if his master had said anything about he knew who?'

'No,' the only thing he heard was, that if the old gentleman could be kept out of the way and free from arrest for a few months, there was no doubt his affairs would come round; 'but,' added the man, 'I did hear my master say to Mr. Lacey, just when I stooped to poke the fire, 'that he was too fond of staying in the old walls.''

This troubled the honest car-driver a good deal; but he had much to think of, and though he made excellent haste—that is, excellent haste when the delays of Irish shopping are taken into consideration, the Dublin mail had arrived, and the evening closed into night before he was ready to depart.

Mogue had packed his commissions on the car with exceedingly care, and had just admonished the mare, for the fifth time, that it was his desire she should forthwith proceed on her way, when two men advanced, and signified their design to travel to his own sea-side village that very night. Mogue immediately set about re-arranging his packages, and balanced his passengers according to the usual mode, one at each side; they were evidently strangers to the neighbourhood, and, as Mogue opined, anything but 'the rale gentry, for they never left a farthing with the beggars.' Before they had proceeded half a mile, they commenced questioning the car-driver,

and he was nothing loth to reply to their interrogatories; according to the most approved Irish fashion—by himself becoming a questioner. He observed, however, that they were remarkably guarded in their replies; but suddenly, contrary to his usual practice, Mogue himself became communicative, and found that his information was received with avidity. They asked a few leading questions touching the habits of his patron, the old 'squire, of whom the car-driver spoke in anything but a kind or respectful manner; and so they joggled on together until they came to a certain cross-road, where Mogue's mare wanted to get the reins between her teeth and go on one way, while her master was even more obstinate in his resolve that she should go another. At last, by the dint of blows and abuse, he succeeded in compelling her to take the mountain road; though she every moment signified her determination to have her own way, if possible, by backing into the ditch, or turning her head towards the place she had left.

'One would think your horse ought to know the road home,' said one of the men.

'Know it!' repeated Mogue, 'why it's she that does; only, poor thing, it's her nature ye see (go on, do, or I'll make ye, ye baste)—her foal that's atmy brother's, a piece down that boreen—I brought her from it this morning, leaving my other horse there, just for a change of grass, which is very wholesome this time of year.'

In this little account Mogue Furlong perpetrated three falsehoods; 'the mare' never had a foal, he, himself, never had a brother, and as to his having a second horse—!

Leaving Mogue to pursue his journey, we must relate what occurred at the 'squire's.'

'I wonder,' said Mary to her father, 'what can possibly have delayed Mogue Furlong; it is now half-past ten: they say in the kitchen they never remember him to have been so late since the last heavy fall of snow.'

The old gentleman, who had been walking up and down the room, with a restless step, paused. 'I wish he was come, my dear—I wish he was; and then he sighed heavily and resumed his walk.

'If you please, Miss,' said the cook, poking in her head, while she held the knob of the door in the folds of her apron, 'we've no kitchen-candles, and the groom says he can't go to the stable till Mogue comes home, on account of the lantern that he took to get mended; and it's what I wanted to know, what is to be done about the suet, for till Mogue comes—'

'Let me hear no more of Mogue,' interrupted the 'squire in anger; the quick, sudden anger, not of an evil temper, but of a mild ill at ease; 'let me hear no more of him, I suppose the fellow is drunk. I shall have no letters to-night. Come, Mary, it is time to go to bed.'

Mary could not rest; but if the gentle girl had been inclined to retire to her own room, the heavy tramp of her father's footsteps overhead would have banished repose; the apartment had once been handsomely furnished; now all looked chill and lonely, and the snuff of a candle that was dying in the socket only rendered more intense the darkness that cloaked the distant parts. Suddenly the bough of an aged oak, which grew almost against the window, became violently agitated, and at the same instant she saw a man look into the room. Her first impulse was to scream, but she checked herself and rushed to the door. 'Miss Mary—Miss Mary—stop—stop—sure it's Mogue, avourneen, Miss, machree!' And the voice was very distinctly heard through the crack in a board which had replaced a broken pane. Mary opened the window. 'There's a dim light in the master's room, and that's his step all the world over,' said Mogue, after shaking the sleet of a December night off his rugged coat; 'I've had a troublesome time of it, but it's all safe now!' he continued, 'at least for the present. Bedad, I've netted 'em as nate as ever a rabbit was netted in its own burrow; and yet I'd rather the master would quit for a while, for there's more of the same varmint where they came from—and if you'll only trust me, I'd get the grid ready in a jiffy, and drive his honour to London, or the world's end—an it's a long lane that has no turning. I came on the sly, for there's no knowing who's who. Do, Miss Mary, just show the master the rights of it, and tell him that Mogue Furlong the cab-driver has a grateful heart in his bosom. Sure what would I be now—only a spalpeen like the rest of the boys—only for him. Tell him I'll go to Death's door for him on the jaunting-car and bring him back. Sure it's his own car; and the mare, bad cess to her, had almost sold the pass on me, but for the management. Go, alana, for every minute is *gould* to us now.'

Mary would not go until she knew what she had to tell; which simply was that Mogue had ascertained his fellow travellers to be sheriff's officers armed with the law either to take the old 'squire or put execution into the house, as he said, to 'blow it up;' that being certain of this by their offering him a bribe to let them 'step in with him' when discharging his cargo, and also finding that they were ignorant of the road, he took them 'fair and aisy' to a cousin of his own, where he persuaded them to alight—the night was so cold, just to get a drop to keep the life in them. Having succeeded so far, there was little difficulty, when their object and occupation was known, in prevailing on 'the boys,' when in the shebeen house to forcibly bind them hand and foot and keep them there for as many hours as Mogue should command them so to do.

'The never such divarshion was in my cousin's house,' said the car-man, 'since as good as five years ago, when the same boys made James Logan the gauger dance the sailor's hornpipe on a hot griddle. They were making 'em drink the downfall of the law on the flat of their backs when I left 'em, and feeding 'em with a spoon like fighting cocks. Faix, I was glad to see the poor fellows so full of innocent mirth of a Christmas eve!'

The 'squire took the hint, and left for a time the old walls; but only to return to them for the rest of his days with a small real, instead of a large nominal income. The sheriff's officers talked of actions for false imprisonment, but they did not put the threat into execution; and the grateful car-man has now really two horses, and is the most welcome of all guests in the old 'squire's hall.

### "War with America a Blessing to Mankind."

In a late number of *Fraser's Magazine* there appeared an article bearing this title, which, after detailing some of the horrors of American slavery, recommends the project of encouraging an insurrection of the negroes, of placing arms in their hands, supporting them with British troops, and wrapping the Southern States in flames! This the writer contends would so far cripple the United States that the Union would be destroyed, the pride of its citizens humbled, slavery abolished, and the dignity of Britain maintained over the only rival which she has cause to fear. In reply to such an outrageous recommendation, we beg of our readers to recollect that the ostensible cause of any war with America can only arise from two circumstances, viz., either from the disputed territory of the Maine, or the affair of the burning of the Caroline leading to hostilities on the part of Great Britain. Both these matters relate exclusively to the northern states, which have repeatedly denounced the attempts of the centre state of New York to interfere in their settlement. How then could Great Britain, in the event of a war of retaliation, be justified in attacking and destroying the Southern States? The latter have in no instance interfered in the quarrel, because they of all the other states are most interested in the local independence of their domestic legislatures. They have refused to permit even Congress to take up the subject of slavery, except upon the representation of the slave-holding states themselves, and accordingly they admit the full possession of the same right in the more northern districts to control their local differences and disputes. The project then, as recommended in *Fraser*, is decidedly unjust. But although it were the reverse, the blessing to humanity is the most problematical portion of the projected crusade. Detestable as is the conduct of the American slave-holders, pitiable as is the condition of the unfortunate negro, fire and slaughter can never be the instruments of his emancipation, much less of his regeneration. The advent of an invading foe upon the American soil would aggravate the prejudices and arouse the hate of every citizen of the republic, and a general massacre of the slaves in the south, as well as an immediate confiscation of British property throughout the entire union, would be the consequence. The merchants of New York would be released by Congress from payment of their English debts, they being handed over to contribute towards the expenses of the war. A complete stoppage to our trade would ensue, and the manufacturing millions of the north of England, already scantily enough employed, would be driven forth to idleness and want. This would be the first of the "blessings to humanity" which a war with America would accomplish.

Not a less evil than the foregoing would result in the infuriate passions of an unemployed populace. Instead of ascribing the miseries of war to their proper source—to the ignorance and presumption of diplomatists—the great body of the people in this country, judging from the antipathies they evinced during the war with France, would ascribe every misfortune to their brethren of America; and these, in turn, would do the same, by which millions of human beings, whose best interests proclaim that they should live in harmony together, would be set at variance in every possible way; the progress of civilization would be arrested, the growing mildness of the national disposition be galled into inveterate hate, and the lust of blood and the heat of conquest would engender the foulest and most hateful passions that can disgrace humanity. Nothing steels the heart of a half-educated peasantry more than the well-told tale of a victorious battle-field—nothing imbues on their mind a greater carelessness of human life; and thus private butcheries and open murders would speedily reappear with all their wonted horrors and rapidity. The last fearful engine of the law would again become a well-known spectre in the public streets, and demoralization go hand in hand with every cruelty that could be practised. It is not to be doubted that even the legislature would catch the infection, and the extreme penalties of abrogated laws again be placed upon the statute book.

Humanity can never be improved by war, nor a blessing of any kind result from even its most brilliant triumphs. Even allowing, however, that the people of this country were to remain calm and uninjured spectators of the deadly fight—that they would mourn and deplore, instead of shouting and rejoicing on the death of their fellow-mortals, the most questionable of all results of a war with America is the idea of benefiting thereby the mind-degraded and body-tortured slaves who pine beneath the most abject and cruel slavery under heaven. Deplorable as is their present condition, low and lost as their intellects are to all good in heaven or on earth, a bloody retribution on their inhuman oppressors is the last spectacle which should be presented to their view.

Granting that the invasion by Britain of the southern states was successful to the utmost hope of its projectors—that the man-stealer was driven from his lair, and the oppressed were rendered free—what could be done with them? to what employment could they be settled? who would be their masters, their instructors, their protectors? If quietly emancipated by legal

means, the slaves might be induced to continue their labour at remunerating wages, and gradually approach the confines of civilization; but the intoxication of bloodshed would not speedily evaporate—the fever of revenge would be slow in abating; they would either rebel against the control of their emancipators, or by their idleness, or acquisition of their tyrants' property, be a profitless expense to their protectors. Even the most educated and refined settle down gradually, and by slow degrees, to traffic or to toil after the excitement of a war for liberty; and the low mental powers of the negroes, more dark and lacerated than their sable skins, would prevent for years their advancement in willing industry or comparative refinement. The whole history of the world cries aloud against liberation by the sword. Masters have been exchanged, but freedom has seldom or ever become a dweller in the land saturated by the blood of its inhabitants. Let our readers curb their poetic recollections for a time, and pass a rapid glance over this world's history of blood. The glories of William Tell start upon our imaginations, and for a moment attempt to convince us that the patriot's sword secured the freedom of his country. What is Switzerland at this moment? The vassal of that same Austria against which Tell struggled into victory. Greece, the most chivalric of all weak nations against a powerful foe, though freed from the yoke of Turkey, bends in the most disgraceful attitude beneath the sway of an alien, the puppet of the continental powers. Spain and Portugal, whose teeming soils have been so often drenched with gore, are even yet the sport of faction and the slaves of dynasties. South America, though liberated for many years from the control of Spain, is torn and distracted by contending chiefs. The name of Bolivar is forgotten amidst the crowds of would-be Kings and Presidents, and the people suffer all the miseries of war and slavery without a prospect of their termination. France, which has undergone varied scenes of slaughter to rid itself of the Bourbon dynasty, now chafes and frets, and scowls and threatens, beneath the rod of a King of their own selection. North America itself, which presents the most successful instance of revolution in the world, still lingers under the inflection of its triumph. The minds of its people are not yet attuned to brotherhood with the ancient race from which they sprung. But why were the United States the most successful in their demand for liberty? Not in the superior justice of their cause, for Switzerland, Poland, France, and Spain, were all equally wronged, and equally deserving of success? Not in the weakness or pusillanimity of the enemy, for Britain, though unsuccessful, struggled long and well to retain possession of her colonies. The success of America lay not so much in the victories of Washington as in the governing and controlling intellects of Franklin and Jefferson. Had these men not directed the public energies, America, though successful against Britain, would have been destroyed by faction, and at a future period been glad to seek the aid of England from native tyranny. Nay, more, the present sin and weakness of the United States may be traced to that point at which Jefferson and Franklin stopped.\* As England during the excitement of the Reform Bill could not afford an encouraging glance to helpless Poland, so these American statesmen were so fully occupied in framing a constitution for those

\* Mr. Buckingham, in his new work on the United States, gives the following instances of guilty fear respecting the condition of the slaves:—"During our stay at Washington, Mr. Forrest, the great American actor, was engaged at the principal theatre; and, as connected with his performances, some anecdotes came to my knowledge, which, as they are strikingly illustrative of the state of feeling in the slave States, on all matters touching negroes and slavery, deserve to be mentioned. After his representation of Othello, the editor of the *Native American*, published here, denounced the play, as one wholly unfit to be permitted in any Southern State, where it was revolting, as he thought, to represent the dark Moor, Othello, paying his suit to the fair Desdemona. This was an outrage which he deemed it the duty of every white man to resent; and he shadowed forth the sort of resentment which he thought ought to be put in practice by saying that 'even if Shakspeare, the writer of the play, were to be caught in any Southern State, he ought to be 'lynched,' (that is, summarily punished by being tarred and feathered,) for having written it!' In strict harmony with this sentiment, was the other incident that occurred. Mr. Forrest had performed the part of Spartacus, in the play of the Gladiator; and in this is represented, first, the sale of a wife and child away from her husband, all Thracian captives, at which great horror is expressed by the characters of the play themselves; and next, the gladiators, who are all slaves, are incited by Spartacus to revolt against their masters, which they do successfully, and obtain their freedom. On the day following this, Mr. Forrest's benefit was attended by the President and his Cabinet, as well as members of both Houses of Congress, and a full share of residents and strangers. But the manager of the theatre received many anonymous and threatening letters, warning him against ever permitting this play to be acted in Washington again; and one letter from a member of Congress, told him if he dared to announce it for repetition, a card would be addressed to the public on the subject, which the manager would repent. Such is the feverishness of alarm among a population whose constant objection to any efforts for the quiet and legal emancipation of the slaves, is, that they are so happy and contented that there is no need of change! and that they are so satisfied with their present condition, that they would not accept of their freedom if were offered to them!"

in rebellion against Britain that the slaves, planted there by the mother country, were forgotten. The principle of keeping their fellow-men in bondage was taught them by England, and we are not amongst those who are entitled to upbraid America for its continuance of the hateful system. Washington retained his slaves in bondage till his death, when by will he made them free. It is reported of Jefferson, we hope untruly, that his own female offspring by a domestic slave were torn from his house and sold by his authority; but like crimes against humanity have been perpetrated over and over again by British as well as American subjects since. The West India Islands furnish abundant and painful evidence of this inhuman practice.

The only method by which the plague-spot of slavery can be cleansed is an unrestricted intercourse of commercial nations, by which the better feelings of each may come in collision with the more selfish passions of their neighbours. The example of Great Britain, in purchasing the liberty of its slaves, was a glorious poetic idea to the educated and sentimental of the world; but to the sordid—to all who are so far gone in shame as to possess a slave—it appeared an act of madness, which constant friction with those who think otherwise can alone bring out in its proper and humanising effects.

Have the savages of the South Seas been semi-civilised by other means than constant intercourse with settlers? The Red Indians of Canada have been induced to settle down only by the strong practical example of those around and among them. And the more savage traffickers in the unrewarded toil and sweat of their fellow-men can only learn reason by the gradual but resistless action of public opinion upon their thinking faculties; and that same influence also can alone prepare the despised and neglected slave to a sense of his condition. Be it recollected that the West Indian slaves were not altogether ignorant or uncivilized: they had undergone a long and patient tuition under local missionaries, whose presence and labours, beneath the most trying circumstances, will remain a recording monument of British philanthropy until slavery shall be forgotten even in name. The human intellect, when properly exercised, is the only just and effectual retributor of human wrong. Only by the abeyance of the mental faculties of man has slavery been permitted to continue, and only by the vigorous exercise of those faculties which adorn mortality can or will it be driven from the face of the earth, which it too long hath marred.

### Patriotism—Valour—Women—Flowers.

THE Tyrolese are a people who deserve immortality for their simultaneous rising against the French in the year 1809. The Austrians having crossed the Inn, the inhabitants of the Tyrol, without any previous concert among themselves, rose, as it were, by magic. One of the most severe actions took place in the ravines of Mount Isel. This part of the Tyrol is the most romantic of all that beautiful country: and, in one of its most sequestered valleys, stands the Abbey of Wilton. Near this abbey Hofer collected the entire male population of the Tyrol. These consisted of peasants, arrayed, for the most part, in their dress of husbandry, undisciplined, and therefore totally unskilled in some of the simplest military operations.\* On the evening, and during the night preceding the battle, the monks of the Abbey mixed among their brave defenders; practised many religious ceremonies; and animated them to the successful discharge of their duty. The French, in the meantime, pressed them on all sides. The Austrians had abandoned them: they had nothing, therefore, to depend upon but their own valour and determination. During the battle that ensued the friars mingled in the ranks. Habited in their cowls and robes, and walking in their sandals, these holy men exposed themselves to the hottest fire of the enemy. The enthusiasm was universal: women and children partook of it: the former guarded the prisoners; the latter, unable to bear arms, were yet eager to join their fathers, and actually performed offices of use. One of them—the son of Speckbacher, continued by the side of his father during the most intense heat of the battle; and when commanded at length to quit, he went to a hillock where he saw several balls of the enemy strike, picked them up, and carried them in his hat to those who were most in want of ammunition. The battle lasted from sunrise to sunset. The women occupying the rear, were receiving the wounded, and administering to their necessities. The battle terminated in the defeat of the French and Bavarians. In the history of this battle there is one circumstance exceedingly curious. In all others the dead have been buried indiscriminately on the field of battle. In this, those of the Tyrolese were carried to their homes; and every one was buried in the churchyard of his native village; where, covered with living flowers, their graves are still to be seen. These men were worthy of defending so beautiful a country; and the country in which they were born, and in which they are buried, is worthy of them. They were also worthy of being buried, as they were, beneath flowers and shrubs.—*Bucke.*

\* Their method of warfare was exceedingly curious. They cut down large trees, which they fastened with ropes to other trees standing on the brink of precipices. On these they laid other trees, pieces of rock, stones, and all manner of rubbish. When the enemy approached, they cut the ropes, and the whole mass fell upon their enemies below.

## Capital Punishments.

THE following anecdotes, from an article in *Tailor's Magazine*, will more ably assist the great cause of abolition than all the ratiocination of the most fervid philanthropists, as they palpably impugn the conduct of legal functionaries, who rarely stop to look beyond the dull and cruel formalities of law:—

A half-witted seneschal of a manor court in Galway, lately provoked a loud burst of laughter by threatening to hang up some boys for wrangling about a game of marbles at the door. He fiercely brandished a charter in the black letter, which conferred the power of life and limb upon the authority which he represented; and he swore lustily that he would assert his privilege in five minutes' time, if he could but find a hangman. But although this may be excellent laughing matter now, it is not so very long since a man was hanged in Ireland for making a noise! The fact is authentic. It was cited at a solemn meeting of the Twelve Judges, last winter, by a member of the venerable 'Conseil d'Etat,' who had himself been an eyewitness of what he related.

A man was found guilty of some felony, for which it appeared uncertain whether he would be cast for death or not. The court deferred the sentence, and ordered that he should stand over till the end of the assizes. The fellow was crazed; and being taken back to prison, fell a howling, and uttering various other disagreeable noises, such as judges do not like to hear, and which (as the window of his cell and that of the Crown Court opened upon the same plot) seriously interrupted the public business. The cause of this strange disturbance being ascertained, the judge sent a peremptory order to the malefactor to keep the peace, or, as his lordship pithily remarked, 'it might be worse for him.' But the wretch, ignorantly supposing that the law could do nothing worse in his case, returned an answer of defiance, and sent forth more piercing yells than before. Now, what would one of our feeling Popish or Radical judges do in a like case? The solemn business of the court was at a stand, and it was absolutely necessary that silence should be restored. To remove the noisy culprit to a distant part of the prison would have abated the nuisance, *pro hac vice*; but then some future convict might repeat it, and, at all events, this would have compromised the dignity of the sacred ermine. The judge, of whom it is our hint to speak, had no notion of sanctioning so bad a precedent; and therefore, as soon as he received the insulting reply, he cried with a loud voice, 'Bring him up!' These are thrilling words, from whatever lips they proceed, after a damnable verdict of a jury; but who that has heard them once uttered by the *Rhadamanthus* in question, can ever dismiss from his memory the tiger's growl and the bloodshot aspect of cruelty, which filled the bystanders with indescribable horror, and shot a pang, equal to the very bitterness of death, through the heart of the stoutest criminal? In five minutes after the issuing of that terrible mandate, the criminal stood again in the dock, and received sentence of immediate execution. . . . The court adjourned while it was done; and—so prompt was justice then—his lordship resumed his seat in about half an hour, with an unmoved countenance, and went on trying men for their lives, who, if they were capitally convicted, did not (you may be sure) offend his ears with 'exclamations hyperbolical.'

In the declining days of a very famous vindicator of the law, already glanced at, he presided at a trial, but was asleep during the greater part of the time. It is well for those whose conscience can suffer them to slumber in such a situation. But, though he dozed during the evidence, he was wide awake to the 'charge,' which was 'home' for a conviction; and the jury, all picked men, according to the usage of that day, did their 'spiriting'; and the wretch was sentenced to die. An application, however, was made to his lordship to recommend a mitigation of the punishment, which he stoutly resisted, until the convict's attorney boldly told him that he must produce his notes to the Government, which would certainly be applied to on the subject. Now, although Homer could sometimes nod as he wrote, it is not every one that can write while he nods; and our 'Nestor' had, in fact, taken no notes at all. Conscious of this, and perceiving also that he was 'caught napping,' he yielded without further entreaty; and thus, owing to a happy accident, the man's life was spared.

The stoical indifference with which the Irish go to meet death on the scaffold, where, except in a political cause, no honour is to be gained by dying like a hero or a martyr, has puzzled many a grave inquirer. But the philosophy of the matter was well explained by a ragged vagrant, who was sentenced to die at the Downpatrick Assizes in 1836, for a highway robbery. On his way back to prison he was taken under the gallows, upon which workmen were then employed, 'dressing it,' as a Frenchman might say, for the execution of a murderer, which was to take place on the following day. The unexpected sight of these preparations appalled him for an instant; but speedily recovering from the shock, he walked on, remarking to the attendant turnkey, 'Well, it will save me many a wet foot and hungry belly!' As to the barefoot philosopher of Downpatrick, his saying (*a bon mot* to him) was the means of saving his life; for, otherwise, the case might not have been brought under the notice of the government until it would have been too late. The incident, however, having got into the newspapers, the attention of Mr. Drummond was drawn to it, and that good and kind man, with a heart ever awake, in private and in public, to the claims of humanity, and a spirit that instinctively recoiled from the thought of cruelty, nobly exclaimed, 'He must not die!' The case was submitted to the Lord-Lieutenant, our present Home Secretary, to whom the proposal of mercy, 'grounded on just and right,' never came unwelcome; and upon inquiry, it was found that the interests of property, in Downshire and elsewhere, did not render it imperatively necessary that a poor shoeless vagrant should be hanged by the neck till he was dead. If he still lives, it is probable that he enjoys a life of ease, and walks dryshod to his daily servitude, in New South Wales, blessing the hour when he 'thought aloud' under the gallows-tree at Downpatrick.

## Flowers from the Heath and Fragments from the Mine.

**VOLTAIRE'S WIG.**—I have still present in my imagination that satirical countenance, every wrinkle of which seemed to laugh the world to scorn. Voltaire's wig was a memorable curiosity. I had, for some time, sacrilegiously premeditated an attack on this strange sanctuary of genius; and I made an attempt to put my design into execution one morning when the philosopher sallied forth after breakfast. Voltaire turned sharply round, and with his penetrating eye scanned my little figure from head to foot, while I stood, as it were, transfixed and spell-bound. After a few moments he said, "*Per-met-tez-moi, monsieur . . .*" Having uttered these words, dividing the syllables in his peculiar manner, he paused as if ransacking his memory, as if searching for some appropriate term of reproach; then curling his mouth to the left side of his face, as he always did when he wished to be particularly sarcastic, he continued, "*Per-met-tez-moi, monsieur . . . de Fleury*" . . . tell you, that I am not royal enough to understand the tricks of pages. Remember that at the court of Ferney, wigs are respected in consideration of what may happen to be within them.—*M. Fleury's Memoirs.*

**THREE HUNDRED AND SEVENTY-FIVE POUNDS A LINE.**—James Smith, one of the authors of the celebrated "*Rejected Addresses*," was better paid for a trifling exertion of his versatile muse than any poet since the world began. One day he met the late Mr. Strahan, the King's printer, at a dinner party, whom he found suffering from gout and old age, though his intellectual faculties remained unimpaired; and the next morning he transmitted him the following *jeu d'esprit*:—

"Your lower limbs seem'd far from stout  
When last I saw you walk;  
The cause I presently found out  
When you began to talk.  
The power that props the body's length  
In due proportion spread,  
In you mounts upwards, and the strength  
All settles in the head."

This compliment proved so highly acceptable to the old gentleman, that he made an immediate codicil to his will, by which he bequeathed to the writer the sum of three thousand pounds, being at the rate of three hundred and seventy-five pounds sterling for each line.

**MUNDEN'S MOTHER.**—I went one night into the green-room of Drury-lane Theatre. When young girls are called upon to perform in London play-houses, it is customary for their mothers to come to look after them, to adjust their dress, rub their cheeks with a rouged hare's foot, and prevent viscounts from falling in love with them. It so happened that five young girls were wanted in the drama; the consequence was that five black-bonneted mothers blockaded the green-room. "Did you ever see anything like it?" ejaculated Munden (then between 70 and 80), in an under tone. "I'll bring my own mother to-morrow night; I've as much right as they have!"

**AN INDIGNANT MERRY ANDREW.**—Volange, an actor of low buffoonery at one of the minor theatres in Paris, had a particular objection to exhibit his professional talent before private company, a proof of good taste which some English performers might study with advantage. One evening when he was at a party, at the house of a nobleman, he was given to understand that he had been invited only to amuse the company, and that they looked for some drolleries similar to those which excited so much risibility in his favourite character of *Jeannot*. He politely excused himself; but he was reminded that it was "*Jeannot*" who had been invited. "Very well," said he; "since you have thought proper to invite *Jeannot*, M. Volange will wish you good evening." So saying, he took his departure. An English story, of a similar nature is told of the well-known Lord Kelly, and Fischer, the celebrated performer on the oboe. He was invited to sup with his lordship, and went. In the course of the evening, Lord Kelly hinted that he hoped he had brought his oboe with him. "My Lord," said Fischer, "my oboe never eats suppers."

**D'ORSAY'S LAST.**—A junior partner in a Lombard-street banking house was lately asked to dine at a fashionable table. Having been raised from the ranks of the clerks, he commemorated his elevation by setting up a carriage and intending to do a bit of grandeur in the drawing room where the guests were assembled, exclaimed, "I can't think what could be the matter with my horses just now, the coachman could hardly manage them; he was obliged to drive them three times round Grosvenor-square to make them quiet." "Why the fact is," said the count, "they were frightened,—they did not know where they were. If they had been in Finsbury-square they would have been quiet enough."

**RESTITUTION.**—Darby Kelly went to confession, and having detailed his several sins of omission and commission, to which various small penalties were attached, at last came, with a groan, to the awful fact that he had stolen his neighbour Kitty Mahony's pig; a crime so heinous to the sight of Father Tobin, that his reverence could by no means give him absolution for the same. Darby begged and prayed and promised, but to no effect; no penance could make atonement: no repentance could produce effect; nothing, in short, would do but restitution, that is to say, to give back her own to Kitty Mahony. But a difficulty arose inasmuch as Darby and Darby's children had eaten up the pig. Upon which the priest waxed wroth, and threatened the rogue with evil here and a tolerable destiny hereafter. "And now, hear me, ye vagabond cheat," said he, "when ye go up to stand yer trial, and finding yourself among the goats (for sheep ye are not) to get yer sentence, ther'll be two witnesses against ye—ther'll be Kitty Mahony that ye robbed, and the pig that ye ate—and what will ye do then, ye vagabond?" "Och, plaze yer reverence, and is it true what ye say, that Kitty Mahony herself will be there?" "She will." "And the pig I ate; will the pig be to the fore?" "He will." "Oh, thin, plaze yer reverence, if Kitty Mahony will be there, and the pig will be there, what'll

binder me from saying 'Kitty Mahony, bad luck to yer sowl there's yer pig; 'sure wont that be restitution?'"—*Mrs. Hall.*

**THE WOMEN OF ELDER GERMANY.**—When the men are wounded, they have their wives and mothers for their physicians. These are in no way fearful to suck their wounds; and during the time of action they carry provisions to their sons and husbands.—*Tacitus.*

**FEMALE EDUCATION.**—Women, such is their unfortunate style of education, hazard everything upon one cast of the die; when youth is gone, all is gone. No human creature gives his admiration for nothing; either the eye must be charmed, or the understanding gratified. Every human being must put up with the coldest civility who has neither the charms of youth nor the wisdom of age. Neither is there the slightest commiseration for decayed accomplishments; no man mourns over the fragments of a dancer, or drops a tear on the relics of musical skill.—*Sydney Smith.*

**A SAILOR ON THE HUSTINGS.**—Captain Napier is a stout man, with an intelligent face, the head poked rather forward, and with dark hair, now becoming grey. On the occasion of his contest for Greenwich, he appeared in an old blue frock-coat with brass navy buttons; duck trousers, not rivaling the snow in whiteness; shoes patched, but very easy; and white cotton socks, carefully if not comfortably darned. On his left breast dangled a profusion of orders blazing in their brilliancy, yet serving only to render more striking the *tout ensemble* of seediness, which this "British Tar" presented to the admiring crowd of the "beauty and fashion" of Greenwich and Deptford. The whole was crowned by a round hat of most "unmanageable" brim. And there stood the man, pelted by the bargemen at Greenwich in a paltry election squabble, on whose cool head, ready hand, and unfinching heart had depended the destinies of a nation—one who had gained more victories and made more captures with less loss of life than any man had ever done before—a man quick to plan, prompt to execute—whose very rashness was a carefulness of consequences, and who, when he struck a blow, always weighed how much depended upon that blow being at once decisive.—*Strange's Life of Napier.*

**AMERICAN PARTIES.**—There are, as in England, three political parties—Conservatives, Moderate Reformers, and Radicals. The Conservatives are called Whigs, the Moderate Reformers called Democrats, and the Radicals are called *Loco Focos*, a recent name bestowed upon them in consequence of a knowing stratagem which they had successfully put in force. A public meeting of Democrats was called at Tammany Hall, their usual place of assembling; and the Radicals wishing to obtain possession of the room, but not being strong enough in numbers to effect this by force, each member of the Radical party provided himself with one of the small instantaneous light matches called *Loco-focos*, and each taking a box of these in his pocket, they contrived, by a pre-concerted arrangement, to extinguish all the lights of the room during the proceedings of the evening. The whole of the audience being thus left in total darkness, the greater number of them who were not in the secret went away: when the Radicals, taking advantage of their retirement, lighted all their matches, and with these rekindled the lights in every part of the room at once; after which they voted into the chair a member of their own body, proposed and carried their own previously-prepared resolutions, and sent them out in the papers of the following day as the resolutions of the great Democratic meeting held by advertisement at Tammany Hall. This trick has fixed upon the Radicals a name which unites opprobrium and ridicule in one.—*Buckingham.*

**TAILORS' BILLS.**—Sir Walter Scott was once under the necessity of fitting out his eldest son as a cavalry officer. When the bill was brought to him, he observed to the expectant *schneider*, "it takes nine tailors to make a man, but only one to ruin him."

## Editorial Notice.

CHAMBERS'S LONDON JOURNAL is this day issued to its readers with the conviction that they will discover in its pages the beginning of a new era in economic literature. Existing by itself, without being even remotely connected with any other publication, or relying on other sources than those which the Proprietor has already at his command, the Journal is independent both of party and personal trammels; it requires to bend to no local or provincial prejudices, and it is unbound to any imitation of its contemporaries. Of a superior and more extensive design than any periodical of its description, the entire plan of the Journal cannot well be developed until the completion of our First Monthly Part, which will be published on Saturday, the 26th of June; we shall then be able to inquire of our readers whether the promises of our Prospectus have not been amply redeemed. Of a true cosmopolitan and catholic character, swayed only by the immutable principles of truth, and desirous to aid the progress of our race in human knowledge, domestic happiness, and international brotherhood, we cast our good ship on the waters with every confidence of a prosperous voyage. Laden with a rich cargo, which has been gathered from almost every country and time in which man has had existence, there can be few who feel uninterested in its welfare. Those, however, who desire to make their home happy—who wish to initiate their children in the highest attributes of knowledge—self-government and self-respect—and who wish to have upon their shelves a concise and agreeable history of earth, its inhabitants, and natural wonders, with the humorous traits of national character, will possess in this Journal an interesting companion, an honest counsellor, and a household friend.

LONDON.—Published by W. STRANGE, Paternoster-row, W. CLEMENTS, Pulteney-street; and G. BERGER, Holywell-street. Published also by HEYWOOD, Manchester; NOBLE, Hull; WATTS, Birmingham; MANN, Leeds; and MACHEN, Dublin.

Printed by H. H. CHAMBERS, 366, Strand.

"BY EDUCATION MEN BECOME EASY TO LEAD, BUT DIFFICULT TO DRIVE—EASY TO GOVERN, BUT IMPOSSIBLE TO ENSLAVE."—LORD BROUGHAM.

NUMBER 2.

SATURDAY, JUNE 12, 1841.

PRICE THREE HALFPENCE.

## The Nationality of the Jews.

It is now eighteen hundred years since Titus passed a plough through the streets and over the buildings of Jerusalem—since the descendants of Israel were scattered for the last time, to undergo a long and weary ordeal of contumely and suffering in every part of the globe. Whether or not the warfare of their race has been accomplished, symptoms of its termination are gradually being developed, which the more enthusiastic gladly seize upon as evidence that the time is at hand when the wanderers shall fix their eyes upon Zion, and shall say to each other—"Let us go up, for our pilgrimage is finished: the fulfilment of prophecy is at hand—the arm of God is visible, and his children shall now be gathered to their own land!"

Prophecy is too dark and serious a subject on which to enter rashly; mortal eye can never behold it plainly until its entire course shall have been fulfilled; but the impulse which is now gradually and gently awakening the mind of Europe to the subject, plainly indicates that the words which have been spoken of old are now in course of rapid fulfilment. Whether the present age shall behold the due completion of that movement is more than human knowledge can determine; there is a glory, however, and a distant vision of immortality for this period of the world's existence in the fact, that this century has witnessed a mighty and soul-inspiring revolution in the barbaric antipathies which a so-called Christian race evinced towards the Hebrew brotherhood. Persecution of the nation without a country is now no longer taken as a proof of zealous Christianity—the badge of servitude, though not yet torn from the escutcheon of the children of him who so devoutly pleaded before one brother for the life of another—who offered to become a servant for ever, that the grey hairs of their father might not go down with sorrow to the grave—that badge at least has had its most hateful colours obliterated, and individual respect is now as readily awarded to the honourable member of the tribe of Judah, as to the loftiest in those races who have often had little else than the customs and prejudices of their caste to recommend them.

In England, although as yet denied the full exercise of the privileges of citizenship, the voice of the scoffer has been silenced, and the first principles of our common humanity have achieved a triumph which shall not be forgotten even when the day of Israel's honour shall be in full blaze of its meridian. Instances have occurred where members of the Jewish persuasion have been selected to discharge high and important functions in the magistracy, and although certain legal technicalities have intervened, by which the complete development of that liberal spirit has been prevented, sufficient has been evidenced to prove that a milder and more humane influence has begun to exert itself upon the public mind than what existed even twenty years ago. When that spirit, therefore, shall have had due course in England, when the illiberal trammels which prevent its beneficial operation shall have been removed, the example of this country will progress through all lands with amazing force and rapidity, and the brotherhood of nations receive one more link to its golden and glorious chain.

It must be confessed, however, that an unhappy error still prevails on the minds of many, and that chiefly too among the otherwise well-informed masses of England—an error which we are especially desirous should be removed, not more for the advantage of the long persecuted and despised descendants of the priests and prophets of old, than for the honour of all the Gentile race. It is

supposed by some that as the anathema of the Most High has lingered on the head of Israel, it would be presumptuous in any of his creatures to soften the effects of that malediction. Others entertain the opinion that if the Jews are looking forward to a restoration to their ancient heritage, it would be improper to enfranchise them as citizens of this or any other country, save their own Jerusalem. With sorrow not unmixed with shame we must add, there still exists a remnant who arrogate to themselves the office of God's messengers, and who, interpreting his word by their own opinions, act upon them as if they were the clearly-expressed commands of Jehovah, given to them for personal fulfilment. These latter—blessed be the influence of charity, that first and sublimest principle of our Christian faith,—are rapidly converging towards annihilation, and a broader and more philanthropic philosophy is as quickly occupying its place. A sense of mortal weakness and inefficiency to comprehend the attributes and mysteries of the Godhead, could not for ever retain the presumptuous belief that it was capable to discharge those functions which only pertain to the inspired.

With respect to the class of opinions we have first stated, it is only necessary to say, that the power which condemned can pardon—that He who threatened to destroy has promised to redeem. Nay, more, that even He whom the Jews despised and rejected, but on whose faith we build our hopes for eternity, wept when He uttered the fate which awaited Jerusalem. If our holy and divine Saviour felt one pang of agony in contemplating the destruction which his words made sure, how daringly presumptuous is it in us to gloat or glory in the prostration of a city made holy by his footsteps, in the miseries and tortures of a race descended from the root of which He was and is an Everlasting Branch? It is our duty to soften the spirit of persecution to the utmost of our power—to mourn over the afflictions of our fellow man—to assuage his sorrow and mitigate his distress. Even when misfortune is the result of his own crime or folly, humanity in its better reason will cry aloud for mercy and forgiveness; but if, as we believe in the case of the Jews, the sins of the fathers have been visited on the children through many generations, it is incumbent on every mortal creature to remember, that the same curse is extended to the oppressor as has been inflicted on the suffering Israelite; and, therefore, the persecutor should beware lest he fall before its power. Where are the oppressors of ancient Israel—where are the conquerors of Judah—where the destroyers of Jerusalem? What vestige remains of the mighty men of Moab, of the sons of Anak, of the hosts of Pharaoh, or the armies of Gath? Where is the kingdom of Nebuchadnezzar—where the towers of Babylon? Where is the strength, the learning, the expanded glory of Chaldeæ, under which nation upon nation reposed in shelter? What now is old imperial Rome, whose conquering legions fired the holiest temple ever reared on earth, and proudly passed the plough over the offstreets hallowed by the footsteps of divinity? Look on the Coliseum and behold a ruin which was to stand entire so long as Rome existed—a ruin, massy in all its materials, gorgeous in its appearance, and soul-stirring from its associations, but still a ruin—a memento of the past, declaring that Rome shall never be forgotten, although as a nation it never can again exist. Be it remembered also that of those who took part in the fate of Jewry, the only nation of antiquity now existing is that of Persia, the descendants of Cyrus, who said—"Go up from your captivity, and build the house of the Lord."

In the midst of all this desolation and extinction, however, the Jews exist, a numerous, a wealthy, and an educated race. They are scattered, truly, broken and dispersed over every region of the earth, marked and separated from the rest of mankind by an inscrutable providence. That overruling destiny, however, in its own good time, has only to instil into their minds the principle of association, and the period of their pilgrimage may be instantly fulfilled.

Those, on the other hand, who entertain the opinion that no rights of citizenship should be extended to them, because they desire another country, should reflect on the important events which must issue from the occupancy of the now desecrated land of Abraham, of Isaac, and of Jacob, by their chastened and mind-enlightened descendants. Even supposing that every member of the Jewish community were to set his face towards the temple of his progenitors (which is improbable) the civilised nations of Europe could never forget them, or stand aloof from their communion. Not only are many of the most wealthy Hebrews intimately connected with and interested in the finances of the principal continental states, but the merchant princes of London, Vienna, and St. Petersburg, are much beholden to them for commercial assistance. Expediency, therefore—the primal policy of Europe—as well as reason and humanity, demands that we create and maintain a friendly feeling with them previous to their departure for the land of Canaan.

The political aspect of the East has, for the last twenty years, given tokens of an eruption, which must end in the evacuation of Syria by its present heterogeneous hordes. That extensive and fertile country is claimed by no people under heaven. Its present inhabitants are a motley assemblage of all castes and colours—who have no claim to its soil, no regard for the associations connected with its history. Ignorant and savage, they have alternately been the slaves and tyrants of each other, and have made no progress in the most common rudiments of civilisation. Nominally pertaining to the Ottoman empire, Syria became the scene of violence and outrage; even the holy cities of Mahomet, which the Sultan was bound by religious as well as political duties to protect, were ultimately abandoned to the most fierce of these lawless tribes; for years' avarice triumphed over order, and infidelity usurped the places of devotion and religion. This weakness of the Porte, this inability to repress insurrection, was believed by the Christian world to betoken its dissolution; and as all theologians had agreed in describing the Turkish empire as the only barrier between the Jews and their acquirement of Judea, the finger of Providence was deemed to be apparent in the struggle. When Greece was wrenched from the grasp of Turkey, the Janizaries destroyed amidst the uproar and revolt of Constantinople, and the designs of Russia rendered visible by repeated encroachments, these events were all classed as tending to the annihilation of Antichrist, the disruption of Turkey, and the restoration of the Jews. To the chagrin, however, of the romantically religious, a new active policy sprung up in the Cabinets of Europe, and the integrity of the Ottoman empire became a diplomatic watchword, in which even Russia lustily joined. In the midst of the Ottoman broils, the Viceroy of Egypt had extended his control over Syria, the Wahabees were expelled from the Holy Cities, order was in some measure restored, and pilgrims were enabled to reach Mecca in safety. Mehemet, however, was deemed by the controllers of Europe to be

encroaching too far on the power of the Sultan, and by a series of events too recent for present narration, his victorious arm was arrested, and the forces of his son were withdrawn from Syria. A new and important question has since arisen from this evacuation by Ibrahim of the Holy Cities and adjacent countries. The savage Wahabees have already again returned, like wolves, to prey upon the traveller, and the Sultan is utterly incapable of repressing their rebellious robberies, or checking their progress in anarchy and misrule. Although Mehemet Ali is confined to his African possessions, Turkey is not more stable in its government, nor more consolidated in its territories; on the contrary, riot and revolution seem to be growing stronger, and spreading further, as occurrences are known.

The persecutions of the Jews have been revived in Damascus, while the Turks have commenced their outrages on the Christian community. The passage of the Desert is already threatened, pilgrims are arrested on their way, and the shrines of Mecca and Medina have again been polluted by the presence of the Wahabee destroyer. It is essentially necessary for the peace of Asia, and of the world, that a strong and civilised power should take possession of this distracted territory. Such a power would separate the Turk and Egyptian, and keep the savage tribes in awe—would plant refinement where barbarism has too long held its penal sway, and prepare the way for the amelioration of the whole Mahomedan races. And who has better claims to Mount Lebanon than the long-expatriated children of Jacob? Who are better fitted than they to follow out the great work of regeneration which that quarter of the globe so urgently requires?

Nor is it remotely necessary that the sword should become an agent in this vast and heaven-approved design. The country is nigh desolated—the Jews are countless in number. The Sultan is stricken with hopeless poverty—the Jews are passing wealthy, as all the world is aware. The sovereignty of Syria might therefore be purchased from the Porte, and the soil from the barbarous hordes by which it is infested. There is nothing improbable, nothing impracticable in the project. It is less romantic than the expedition to the Niger to civilize Africa; it would be less expensive than the emancipation of our West Indian slaves; more honourable than our war upon Mehemet Ali; and more impulsive to human improvement than any event since the introduction of printing. The sublime spectacle of a remnant of the most ancient race which inhabits this lower sphere taking quiet possession of their God-appointed heritage, after an expatriation of nearly two thousand years, would have so great an effect on the minds of men and nations, that a mental revolution would shake the whole human race; universal peace would claim the world as an inheritance, and the mystical Millennium be rendered less problematical, less distant, and less miraculous.

## Napoleon and his Contemporaries.

### CHAPTER I.

THE stir which for the last twelve years has been made respecting the military achievements of the Duke of Wellington, and the somewhat strange manifestations evinced in various parts of the country to raise a number of monuments in token of the warlike exploits of the gallant Duke, were not lost upon the French. That observant people felt themselves unable to cope with the martial glory of England, so long as their hero reposed in the isle of his imprisonment, and an impulse being thus given to a long and deeply-rooted wish of the people of France, to procure the restoration of the Emperor's remains, a number of representations were made to the British Government to obtain their possession. It is not likely that the true reason of refusal will ever now be known, but there can be little doubt that application was made both to the Duke of Wellington and Earl Grey for that purpose. It would be ungenerous to suppose that the former antagonist of Napoleon maintained his antipathy to so late a period of his life, the more especially as the same disinclination to accede to the request of the French Government was evinced by the succeeding Minister, Earl Grey. It is more probable that these statesmen were inclined to look upon the proposal exclusively in a political point of view, and were afraid that the mercurial disposition of our galled neighbours, which had so recently signalled itself during the three days of Paris, would again break forth in insurrectionary movements. Time, however, mollifies fear as well as hate, and it must be recorded with an exulting sensation of national pride, that the first overtures on the subject to Queen Victoria were immediately complied with. So great indeed was the enthusiasm, even in England, respecting the "Soldier's Return," that the press was profitably employed in reprinting old, and disseminating new memoranda of the great man, for the possession of whose ashes France had so long and eagerly prayed.

Among the poems which were written on the subject few embrace the extreme range of action included in

the following lines, which appear for the first time in our pages. Their sturdy language of truth, their freedom of expression, and truly cosmopolitan spirit, peculiarly fit them for reception in our columns, and our running commentary on the topics of which they treat will prove how consonant the incidents alluded to are to fact, and how possible it is for the poet to invest actual circumstance with the lofty attributes of his calling.

### Napoleon's Career.

#### THE CONQUEROR.

##### I.

The Soldier stood—chief of an empire grown,  
A statesman sound, and politician sure—  
Although the seion of a race unknown,  
Of blood unheralded, and birth obscure.  
Yet did proud men his arrogance endure  
While his hot rage for power made kingdoms reel;  
Nor prince, nor potentate, was deemed secure  
Against the impress of his haughty heel:  
Vain the protecting wall—vain armies cased in steel!

It was long a favourite duty of our press to decry the merits of Napoleon as a statesman, and to impute to him and his government the most shameless and wasteful expenditure of the public money. While blushing pensioners and sinecurists sneered at the conduct of the few liberals, who, in the British senate, were stout-hearted enough to protest against the French war, they also, in the plenitude of their ignorance, scoffed at the labours of the council, headed by Bonaparte, which produced the most perfect code of laws that ever was emitted from the genius of statesmen. The people of this country, seduced by a senseless cry of nationality, deemed their rulers superior in birth, education, and talent, to the men whom Napoleon had searched out from among all classes to occupy situations for which he estimated them capable. However small the quantity of noble blood that might stagnate in the veins of the latter, and although their education was generally acquired in the great school of experience, their conduct, devotion, and, above all, their self-denying principles, entitled them to be ranked infinitely superior. Napoleon's yearly expenditure, although he brought more men into the field, and gave constant employment to all the labouring population of France, was only about one-third of that of England. There were, it will be recollected, no mere parrots or peacocks in his army—no jackdaws in his council—no cormorants keeping greedy watch over his exchequer. Every man in his employment was of use, and a rigorous discharge of duty was exacted from him. The domestic statesmanship of Napoleon, it must be confessed, was made subservient to his warlike operations: he never professed otherwise. Here the Imperialist found his weakness. Had he gone but one step further, and conferred the suffrage on the citizens, even after the campaign in Russia, he would have been so securely seated on the throne of France, that not even the thunderbolt of Waterloo would have been able to shake him from it. Had the provinces been enfranchised, the war would not have been concluded by the capitulation of Paris; every town and fort would have held out—every ford would have been contested—every step disputed, till the imperialists had again been enabled to make head against the relentless antagonists of their giant-hearted leader. But his hour was come. It would be well, however, for the traducers of Napoleon to profit by his error, and to convince themselves that there is no safer or more invulnerable barrier against aggression than the devotion of a free and self-governing people.

##### II.

The kingly race, who sought by right divine  
Possession of their sceptres to maintain,  
Were stricken like a maniac filled with wine,  
Or soulless mob whose leader has been slain;—  
Scatter'd like drops of tempest-driven rain,  
They tailed at destiny and called it chance  
While the fair fields of Italy and Spain  
Were strewn with trophies of his sword and lance,  
And Europe wept the sway of still encroaching France.

The sovereigns of Europe, alarmed at the atrocities arising out of the French revolution, and fearful lest the same enormities might be perpetrated in their own countries (for they well knew that their own conduct equally merited popular vengeance) had resolved to put down revolutionary principles, even in France itself. Napoleon, however, suddenly arose to power, and dispelled these velvet dreams of triumphant interference. He successively chased the majority of them from their thrones and kingdoms; he vanquished the dynasties of Prussia, Spain, Portugal, Italy, Naples, Holland, Sweden, Bohemia, and other of the German States, and compelled Austria and Russia to accept his terms of peace. The world was never more full than at that time of "grey discrowned heads," who could scarcely be made to believe that other than impious hands would have dared to disturb that "divinity which doth hedge a king." Even when the tide of fortune bore them back unwelcomely to their subjects, their native meanness and duplicity shone as conspicuous as ever. The same princes who had flattered themselves that the arm of war could never prevail against them, hesitated not to record a living lie in the annals of their kingdoms, by refusing to fulfil their promises of bestowing constitutions, involving responsible government, on the people, although on that

ground alone the deceived nations agreed to assist in crushing the hydra-despot before whose uplifted sword almost all Europe quailed.

##### III.

The day of Austerlitz laid Austria low—  
A day of vengeance to the Soldier sweet.  
He stood unmatched—again without a foe,  
The heart of Europe bleeding at his feet.  
Then Poland's secret pulse began to beat—  
Perhaps by him her fetters might be riven,  
And she in the world's council take her seat;  
But to him was no soul of freedom given.  
He was a fateful scourge—no messenger of heaven.

At the suggestion of England, aided by immense subsidies of British gold, Austria was induced to break its peace with Napoleon, only to receive a more severe chastisement at the battle of Austerlitz. So complete was the discomfiture of the allies, that the Emperor of Germany was glad to bestow his daughter, Maria Louisa, in marriage to the victor. This heartless system of exchange of hostages, for such marriages are nothing else, is even now too common, and is a bitter evidence of the want of feeling and family ties among the royal bloods of Europe. This alliance, one of the most disgraceful acts to which Napoleon ever was a consenting party, not only compelled the divorce of Josephine, a loving and loveable wife, and broke the heart of one woman without gaining the affections of another, but it operated powerfully against the emancipation of indignant Poland from the thrall of Austria. The shadow of this deed, however, became the evil genius of Napoleon. On his way to Russia he received the Polish deputation, and amused them with his usual parade of dramatic sentences. In reply to the affecting appeal of the Poles for liberty, and the restoration of their country to its place in Europe, he exclaimed, "Poland can never be annihilated! Poland exists! It shall exist!" But no guarantee could be drawn from him that he would recognise its nationality. The disastrous retreat from Russia would not have been so fatal through all its course had Napoleon held out hopes to Poland; the gallant and grateful people of that country would not have tamely witnessed the destruction of the French army, and the immediate rise of the Allies in consequence, without coming forward to the rescue. There was no call on them, however, to occupy the gap of danger—no prompting from the unconquerable spirit of freedom with which they were animated to arise and bleed, for they well knew that the sacrifice of their lives would not bring deliverance to their country.

##### IV.

The Russ barbaric yet withstood his sway,  
And he his legions to that empire took;  
Invincible they seem'd in their array  
As they march'd on by valley, plain, or brook,  
Till on deserted Moscow they did look—  
Yet did that city's voiceless streets acquire  
A full revenge, which to destruction shook  
The frenzied foe, hemm'd in by walls of fire,  
Then driven forth to meet wild winter's deathful ire.

The burning of Moscow is by some writers ascribed to accident, but there can be little doubt of its being a preconcerted determination of the inhabitants to prevent the invaders wintering in the city. Extreme as was the destruction of property, and great as must have been the amount of individual suffering endured by the emigrated Muscovites, it was the cheapest victory over the projects and power of a hitherto invincible enemy that history bears upon record. It shall speak to all time, in characters vehement as its own fire, of the desperate valour and indomitable heroism of the people of Moscow, as well as of the awful vengeance they inflicted on their invaders. Humanity, however, will ever shudder at the retreat of the French in that disastrous campaign, and seek to draw a veil of sorrow over the horrors which accompanied it. The bodily suffering, the mental agony, the disappointment and despair of the injured sufferers, must have presented an amount of human anguish rarely congregated on one track of country, and such as man can never desire again to hear of, much less to witness.

##### V.

By Berezina's life-destroying stream—  
He scarcely paused his army's wreck to view.  
There, like a world's destroyer he did seem,  
As desolation did around him strew  
Its worn and wasted victims! Ah! how few  
Of all that chosen and unequal'd force  
Return'd to where their happy childhood grew.  
The Soldier did return! His baffled course  
Broke not his iron heart, nor tinged it with remorse.

The passage of the Berezina was indeed a misfortune fitted to try the souls of the most heroic. The flight of Napoleon from the dreadful scene may in part be justified by the political consideration, that it was necessary for him to be in Paris as soon as the disastrous information of the Russian campaign reached that capital. To Marshal Victor, therefore, he consigned the melancholy duty of contending with misfortune, and the conduct of the bravest of the French Generals on that occasion placed him on an equality with Xenophon, who conducted the famous retreat of the ten thousand Greeks through Sythia. The following is a condensed narrative of the passage, which occupied three days. "The number of stragglers and the quantity of baggage were immense. On the night of the 27th, the stragglers left the bridge, tore down the whole village, and made fires with the

materials, around which they crouched their shivering figures, and from which it was impossible to tear themselves away. At daylight they were roused by the report of Wirgenstein's cannon thundering over their heads, and again all rushed tumultuously to the bridges. The Russians, with Platow and his Cossacks, were now in full communication on both sides of the river. On the left bank, Napoleon's own presence of mind, and the bravery of his soldiers, gave him a decided superiority; but the scene on the right bank had become the wildest and most horrible which war can exhibit. Victor, with eight or ten thousand men, covered the retreat over the bridges, while behind his line thousands of stragglers, old men, women, and children, were wandering by the side of the river like the fabled spectres which throng the banks of the infernal Styx, seeking in vain for passage. The balls of the Russians began to fall among the disordered mass, and the whole body rushed like distracted beings towards the bridges, every feeling of prudence or humanity swallowed up by the animal instinct of self-preservation. The weak and helpless either shrank from the fray, and sat down to wait their fate at a distance, or, mixing in it, were thrust over the bridges, crushed under carriages, cut down with sabres, or trampled to death under the feet of their countrymen. All this while the action continued with fury; and, as if the heavens meant to match their wrath with that of man, a hurricane arose and added terrors to a scene which was already of a character so dreadful. About mid-day the larger bridge, constructed for artillery and heavy carriages, broke down, and multitudes were forced into the water. The scream of the despairing multitude became at this crisis for a moment so universal, that it rose shrilly above the wild whistling of the tempest, and the sustained and redoubled hurrahs of the Cossacks. The dreadful scene continued till dark. As the obscurity came on, Victor abandoned the station he had defended so bravely, and led the remnant of his troops in their turn across. All night the miscellaneous multitude continued to throng across the bridge, under the fire of the Russian artillery. At day-break the French engineers finally set fire to the bridge, and all that remained on the other side, including many prisoners, and a great quantity of guns and baggage, became the property of the Russians. The amount of the French loss was never exactly known; but the Russian report concerning the bodies of the invaders, which were collected and burned as soon as the thaw permitted, states that upwards of 36,000 were found in the Berezina."

From this period the arm of the conqueror withered, and a second stage in his career became visibly apparent alike to his friends and enemies.

#### A Modern Robinson Crusoe.

We have been favoured with as remarkable a journal as ever was penned by human being; it is written on seal skin, with the blood of that animal, and by the undressed quills of the birds which frequent the wild shores of New Zealand. The journal comprises the narrative of Mr. Laurieston and his companions, who resided for nearly four years on the west coast of that remarkable country, having been left by their ship to pursue the dangerous occupation of seal catching until its return from Sydney. That vessel, the *Active*, was never more heard of, and the deserted and unknown prisoners on a sullen beach remained from the 16th February, 1809, to December, 4, 1813, when they were described by Captain Grono, of the Governor Bligh, and taken to Sydney.

Mr. David Laurieston was a junior member of a respectable family at Chatham, and was indentured, with a premium, to a builder in the dockyard of that place. His inclination, however, was bent upon the sea. An elder brother had been fortunate in the South Sea trade, and he therefore resolved to embark in the same perilous traffic. In the year 1807 he entered on board the *Dalve*, Captain Samuel Chace. With a fine passage out, he made the cruising ground in about four months. There the ship remained six months, and then proceeded to Hobart Town to complete its cargo of whale oil. Having shortly after set sail for England, on the fifth day the vessel sprung a leak, upon which they returned to Hobart Town, where the vessel was condemned.

On the 9th April, 1809, he joined the brig *Active* at Hobart Town, and sailed for Bass's Straits, in company with the Governor Collins schooner. Both vessels were wrecked on the south coast of New Holland; the schooner being entirely lost, but the brig was enabled, with great difficulty, to return to Hobart Town. After being repaired the crew again embarked, and proceeded to New Zealand. Mr. Laurieston was there left in charge of a sealing party, composed of Alexander Brooke *alias* Roberts, Robert Robinson *alias* Mackenzie, James Anderson, John Ward, William Jones, John Jackson, Francisco Ferrara, John Campbell, and Bartholomew Vincent. Half of this number were prisoners or assigned convicts, and their conduct he describes as "indifferent." The captain on leaving the party, promised to return in the May following, or, if not, in November. He left two months' provisions, consisting of bread, meat, and the other materials of which a sailor's diet is composed. As already stated, neither the Captain or ship were again heard of by them, nor by its owners in London. During three years of their sojourn the Sabbath Day was observed by doing no manner of work thereon, but during

the fourth year they were so intensely engaged in building a vessel to take them from their desolate home that they worked every day indiscriminately. With their axe, adze, and drawing-knife, they had built a small boat, and with the same implements they pursued the laborious work of the vessel. Not having a saw, their only means of making boards was by cutting down a tree, and with their axe and adze hewing it down to a half-inch board. When visited by Captain Grono they had finished eighty planks in this manner, manufactured from as many trees. They had no books of devotion with them, nor indeed any books whatever. They possessed, however, a piece of an old newspaper, and every Sunday the adventurers sat down to hear the news! Sometimes, by way of adding a zest to the well-known information it contained, one of them would arouse his fellows on a Sabbath morning, after the manner of a London newsman, and deliver to their hut the soiled and creased remains of an old *Sydney Monitor*, with as much importance as if it had been an extra edition of the *Times*. Seal hunting was alike their occupation and their solace, and its exciting details served greatly to prevent melancholy or doubt acquiring a hold upon their spirits. They hoped confidently to the last that deliverance would come, and they cheered each other with the exciting idea that they would yet again become acquainted with their kindred and their home. The small island on which they made their resting-place was shut out from the view of the main land by a chain of mountains, which ran from Dusky Bay to Cook's Straits, and its not being of the fertile soil so common in the larger islands of New Zealand may account for the absence of the natives. Water was excellent and in abundance; the fish, in the proper season, plenty and of the best quality; but birds were few and not over delicate eating. Their fish-hooks were made of old iron hoop, and their method of destroying the seal was by getting him between them and the shore, driving him upon dry land, and killing him with wooden clubs. Their clothing was made in part of New Zealand flax, which grows luxuriantly in all districts of that remarkable country, and of the skins of seals.

Their hut was constructed of stakes interwoven and roofed with flax, but the domicile was sadly infested with rats. This universal vermin was of a peculiar species, being neither the well known Muscovado brown nor the common water rat. Their heads were disagreeably large and their appearance almost loathsome. Sometimes they came in droves, and attacked any eatable, which happened to be on the premises. The solitaries were compelled to sleep "club in hand," as they were often awakened by the attempts of the vermin on their legs and arms, and frequently wounded with their attacks. To so great an extent, indeed, did these audacious intruders carry on their operations, that the adventurers were compelled to hang fitches of blubber to the branches of trees, to prevent their unwelcome visits. This manoeuvre had the desired effect. The vermin came from the mountains in rather fearful array, and ascended the trees to obtain possession of their spoil. Like other successful marauders of a higher species, they sometimes quarrelled among themselves, and many a well-contested fight occurred between them for possession of an inch of blubber.

After the two months' provisions had been consumed, the party anxiously turned their attention to obtain a regular supply of victuals. At first, the seal furnished them with large quantities of very excellent blubber, as Mr. Laurieston facetiously calls it, but their depredations upon that animal gradually scared it away from the island on which they were located, and the possession of a carcass laterly became a work of difficulty as well as of great importance. Many attempts were made to pickle and preserve the blubber, but the difficulty of obtaining salt, and the frequent deposits of blow fly, prevented the accomplishment of that desirable object.

Their bread was out from the fern, which, in certain districts of the island, grew in great abundance. It was pretty palatable, though not quite wholesome when raw; but when fired it became so nauseous that even their Russian stomachs could not peaceably contain it. It was not until within the last few months of their sojourn that the best description of the fern was discovered. Mr. Laurieston examined and tried thirty-two sorts of the plant, some species growing to the height of nearly thirty feet; that, however, which never exceeded five or six feet was the best, and this not discovered till within a few months of their deliverance.

Their potatoes were an object of care, anxiety, and disappointment from first to last. The captain had originally intended to leave a bag of that esculent with them, but having, it is supposed, thought that they would eat better at his own table he kept possession of them himself. Francisco Ferrara, however, a man of colour, had not till then seen a potatoe, and he purloined a couple for the use of his own delicate stomach. Shortly after their location on the island, Ferrara, after the manner of more experienced epicures, had determined to enjoy his treat alone, and accordingly, while in the hut by himself, he thrust his stolen provender into the fire. At that instant, however, Mr. Laurieston caught him in the act, and snatched them from the fire. These two potatoes were planted with great care. Watched assiduously, the soil returned a grateful produce, which in turn were again care-

fully planted. Notwithstanding the unpalatable nature of the fern-bread, with a self-denial worthy of the ancient stoics, they resolved to husband their potatoes for yet another season. The roots were therefore committed to the ground, which in that bland and healthy climate in a few months produced seventy-five pounds weight. This precious store was dug up at the time they were setting out on an exploring voyage to another island in their dilapidated whale-boat, and by the carelessness of one of the party they were left on the beach. On their return the sea had washed them off, and the produce of eighteen months' labour and watchfulness was destroyed. Driven almost to desperation at the loss, they examined every swamp on that and the neighbouring island. In a remote corner of the latter they discovered the plant growing, and with eager hands they gathered seventy-two potatoes, none of them being larger than a hazel nut; these were hung in a bag from the roof of the hut for safety till the planting season. When that period arrived, the bag was brought down, but their remorseless enemies the rats had been there, and left not a vestige of their treasure! Again the swamps were explored, and in the same place where the seventy-two had been found, a few good sized roots were found growing. They were transplanted, preserved, and planted again. Every morning, after looking on the sea in search of a vessel, they gazed upon an acre and a half of blooming potatoe stalks, which gave promise of an abundant harvest. Ere the time arrived to dig them, however, Captain Grono made his appearance, and they left the island without regret, except that they had not on it tasted a potatoe.

In the prolific swamp before noticed, which had been some years before sown with various seeds by Captain Grono, they found cabbage and turnips. These vegetables sweetened many a strong dish of blubber; smoked seal and turnip tops, Mr. Laurieston assures us, 'was a very good dish when it could be had, and when the former was more scarce than they wished, they contented themselves with the turnips. In their worst times, however, they never killed the goose for the sake of the eggs; they always preserved a portion for replanting. In every district they visited they planted cabbage and turnips, and found spinage growing luxuriantly.

The island on which they were left was about a mile and a half long, and 250 yards broad; the other one they visited was about ten miles in length. Both were situated about 400 miles from the present flourishing colony of Port Nicholson. During their sojourn on the island they saw several traces of natives, who then were characterised as furious and bloodthirsty cannibals, and who, consequently, were neither sought after nor wanted. The adventurers, during their stay, steadily pursued their seal-hunting occupation, and were in possession of 14,000 skins when taken off the island. One-third of this valuable property was assumed as a consideration for their passage to Sydney. The remaining two-thirds were handed over to the agent at Sydney, but by a process of management which it is unnecessary for us to characterise, no part of the proceeds were ever received by the owners or adventurers. Mr. Laurieston worked his passage home, first in a vessel to St. Helena, and from thence to London. With three others who reached England, he applied for compensation, but the owners, not having received any proceeds of the skins, declined to award them any remuneration. Since that period, while in health, our journalist made several voyages, being in command of a vessel in 1815. But declining health and fortune has gradually reduced him. The heavy hand of time has impressed on him its debilitating touch;—a lurking disease, arising from the anxiety, cold, and ill-prepared food of his sojourn in the island-wilderness, shows itself visibly and painfully. His case was some time ago laid before the Trinity House, the managers of which generously accorded him at once a small gratuity, and shortly afterwards a moderate pension. There are, however, many trifling extravagancies which a worn-out sailor requires; and if the publication of his journal, which we shall continue from time to time, should induce any of our readers to visit him, they will find the old wreck of a once hale and hearty mariner in No. 1, Church Row, Greenwich. His yarns are replete with interest, although neither of smoke or thunder—of pillage, piracy, or slaughter. His was a hermitage upon the desert shore, unbroken by the excitement of war or plunder;—and who but himself can tell of the many thoughts which would crowd upon him during all that dreary time, gilded and adorned by the one ruling and exalted hope that he would yet see home and wife again? The condition of that home, and the comfort of that wife, may be gladdened by the visits of those who delight in tales of the sea, and who are desirous that those who go down upon the Great Deep should not be left unheeded in their latter years.

#### The Ruined Mind.

Ah! sad it is to see the deck  
Dismasted of some noble wreck;  
And sad to see the marble stone  
Defaced, and with gray moss o'ergrown;  
And sad to see the broken lute  
For ever to its music mute;  
But what is lute, or fallen tower,  
Or ship sunk in its proudest hour,  
To awe and majesty combined  
In their worst shape—the ruined mind?—L. E. L.

## Govern your Temper.

BEING NO. II. OF THE EXPERIENCES OF BENJAMIN TRUSTEEL, ESQ.

"A WOMAN moved is like a fountain troubled." This admirable simile by our own adorable Shakspeare should be deeply fixed on the mind of every female, and hung before her eyes continually. The changeful characteristics of women, temper excepted, carry with them some remnant of each other by which the prevailing one may at all times be in part discovered. Thus, a lady in her dress and manners need not fear being discovered in dishabille, as the native grandeur of her deportment will at once explain her undress. The mistress of a house, who keeps her place among the servants, is not ashamed of being found in the midst of them, as her demeanour and their attendance will sufficiently attest the relative positions of each. But a woman who permits her temper to break out in violent raptures, hurls herself at once into the most degrading posture in which a member of the tender sex can possibly be placed; and yet that forgetfulness of the first principle of discretion is the most common crime of which dear womankind are guilty! These painful aberrations are not more distressing to a thinking husband than they are humiliating in a wife. What woman is there who can say that her much-loved voice never awoke itself to unkind harshness, and whose apparent disposition of tenderness was not belied, at some time or another, by an outburst of feminine rage? If women who thus prostrate themselves in the estimation of those who love them best could, at such cruel junctures, arrest the progress of their hasty speech, and look at themselves for a moment in their much-studied glass, they never again would be guilty of such an atrocious slander on themselves and on their valued sex. We knew a lady who was kind, loving, faithful, attentive to all her domestic duties, elegant in her person, engaging in her manners, attractive by her superior accomplishments, and, above all, doatingly attached to her husband—than whom there could not be a man more deserving of woman's love; yet this gifted creature, who governed her household well, could not control her own silly temper. On a sudden, with or without cause, the paroxysm would break out, and, without saying one word offensive to ears polite, or which in another tone could be called objectionable, her complaining and irritating tongue would occupy itself for hours in the disagreeable discharge of every petty threat or grievance she could imagine. What made the matter worse was this, that she was conscious of her error, knew that she was destroying her husband's peace and rendering his home uncomfortable; but while she regretted she could not remedy her weakness. When her better reason was restored, she would cry like a child, weep on her husband's neck, and seek his forgiveness with an earnestness that no human being could withstand. What, however, was the ultimate result? The husband's once unbounded affection gradually cooled in consequence of repeated outbreaks; his excitement waxed less fervent in the blissful moment of reconciliation—for the first forgiveness is ever the most truly given, and every repeated pardon loses a portion of its original fervour. The failings of her temper, therefore, although they came less unexpectedly upon him, settled themselves deeply on his heart, and her sudden and unaccountable ill-nature became, in his eyes, her chief characteristic. Her faithful discharge of every other duty as a wife and mother—and these are many and important—were swallowed up and forgotten in the prevailing grievance; the husband became less earnest in his attempts to soothe her, less attentive to her reasonable requests, and, at length, became so careless of his home as seriously to meditate a separation. Strangers who saw her in happy moods would have pointed to her as a model by which women might regulate their conduct; yet she was miserable. The consciousness of her own weakness, of its impropriety, of the result which she saw must follow, sunk deeply in her heart; still she had not strength of mind sufficient to redeem herself from the thralldom of a peevish and stupid ill-nature. She betook herself to the too common refuge of unthinking mortals—she gave herself up to the lowest and meanest propensity of which a woman can be capable, and lives at this moment a confirmed and despised drunkard! Her husband struggled long against disgrace; he bore up for a time with fortitude, till desperation made him obnoxious to his friends and hateful to himself;—he is not now entitled to claim a better character than that held by his once accomplished and engaging wife!

Let not one of our gentle-hearted readers imagine that this is a mere creation of our fancy; nor let another say that such a result is too frequent to be made a wonder of. Neither let any lady flatter herself that she at least will never fall so far, whatever the little out-

breaks of her temper may be. Arrest the bud in its infancy, say we—pluck the germ of discord from the little palpitating heart, and trust confidently in him who calls you wife. Try for one evening the different effects of two opposite rules of conduct, and ponder well on each. Break out into a parade of insulted dignity, or fall back into a fit of sullenness: if the husband soothes and flatters, he commits the dangerous error certainly of inducing you to try the scheme again, but think seriously whether that soothing makes you comfortable. Your pride will prevent you accepting his attentions at the proper moment, and he will not hesitate to remind you of it when you may have thought it was all forgotten. Treat him on some other occasion with all the fondness of your marriage-week—crowd upon him the many little attentions which a loving wife alone can make agreeable—and you will storm the inmost recesses of his heart, awaken every feeling of affection, send him forth to the world rejoicing in the pleasures of his home, and bring him back at night laden with hopes of bliss, while his heart is singing like the lark in the mid air when he carols to his lowly mate.

There is not a more rapturous feeling than that enjoyed by a virtuous lover when he meets his faithful maid at the appointed spot. We have ourselves enjoyed many such blissful moments, and the memory of those glad sensations bring to our eyes more tears than well becomes our silvered head. Had disappointment followed our young affection, we might have deemed these hours the best of our existence. But fifty years of a married life have somewhat softened the ardour of such feelings, although they never, never, can be altogether forgotten. It was their newness to our heart that fixed them there, and clothed them with a romance which is green in our memory still. Since those days, however, some few tribulations have broken over our head, and the continual and unfailing solace has been, a kind look and a loving word at home; yet have we been no better husband than we ought, and can claim no merit in possessing—A finger has been laid upon our shoulder, and a well-known voice desires us to proceed no further on such a topic.

What we intended to have said before we digressed, was, that the smallest offices of attention on the part of a wife are esteemed by the husband of much greater value than she can well imagine. The proper discharge of each little kindness meets his eye at every turn: wherever he looks, if he discovers order, watchfulness, and preparatory care, a calm but irremovable conviction settles itself upon his gladdened mind. He is thought of in his absence, longed for till his return, and delighted in when he arrives.

But how can he observe these little nameless attentions if he is distracted by the murmuring or clamour of an unbridled tongue—by the swelling and overflowing of an ungenerous temper? How can a man delight in the prattle of his children—or, if he have none, in the purring of his cat or the singing of his tea-kettle—if a discordant note is thrown in by a female voice which, before marriage, was modulated to a much softer key? Although a woman should actually have occasion to complain—(which, alas! is the case with too many)—she cannot say that bitterness of words ever redeemed an erring husband, or brought him to his home an hour sooner when wanted; or if he did come home, did his coming add to the pleasure of either? Unmanly as it is for a husband to tyrannize in his little kingdom, like all other monarchs he is aware that the "king can do no wrong." He knows also that no hand or voice can be lifted up against him except in treason or rebellion; but he also knows that there is a power behind the throne, which, if properly exercised, can rule him and his kingdom both. When that power becomes unnecessarily prominent, whether in monarchies or families, it is instantly deprived of its influence, if not of its existence, as an element in government. None know this so well as the careful good-natured wife. She is aware in what the secret of her power exists, and by a patient and attentive discharge of her household duties, under the cheap garment of a smiling face, that influence is ramified through every thought and action of her loving spouse.

Who, then, among all our fair and loving readers, would rashly risk the power of swaying their husband for the precarious gratification of having the last word, or giving the smartest retort? There is not one of you, we are certain, would wittingly break in upon the bland expression of a happy countenance; but sometimes, in a moment of forgetful haste, the rash word will find an utterance, the cruel sentence will have its way, and like the opening flood-gates of an ill-embanked river, will the tirade pour forth ere you are aware. Check the baneful practice; resist it, crush it; and glory in your triumph, for on the day that victory is achieved, you drive a serpent from your path, and plant flowers of peace, and love, and hope, which shall spring up around you in beauty and in gladness for ever.

"Then love shall bring a blessing to your home

Though poverty abide a constant guest,  
Nor pillar'd hall, nor regal marbled dome  
Outvie the raptures of your inmates' blest;  
There shall contentment smile its sweetest charm,  
And there the dove of peace shall build her nest;  
There independence nerve the labouring arm,  
There be the olive branches loved the best,  
And there the faithful wife most tenderly caress'd."

## The Last Battle-field.

"Battered with war in many a hard campaign,  
Though the maimed soldier quits the martial plain,  
Fancy restores him to the battle's rage,  
And temporary youth inflames his age—  
Again he fights the foe—counts o'er his scars,  
Though Chelsea's now the seat of all his wars;  
And fondly hanging o'er the lengthened tale,  
He slays his thousands—o'er a mug of ale;  
The vet'ran hero tells, with 'rected crest,  
'Twas for my king—Zounds! I have done my best!"

THESE lines are painted on a rustic shed in what is called "The Good Man's Garden," at Chelsea. At that excellent receptacle for worn-out bravery, until within these few years, the veterans had no other employment than to listen to each other's tales of battle and of blood, or to frequent with their friends the nearest tavern. When Lord John Russell was Paymaster of the Forces, that nobleman caused a neighbouring piece of ground to be purchased and laid out in patches, each five and a half yards square. These spots of ground are given for culture to the well-behaved in the hospital, reclaimable only by the death or misconduct of the holder. Very few cases of either have occurred. Those who in past years have spent "their dearest action in the tented field," now struggle with the soil, and battle with the clod, to rear flowers, fruits, or vegetables, as their taste may guide them. A soldier who has left a limb

"To feed the crow on Talavera's plain,"

may now be seen hanging up the remnants of a once gay red coat, to scare the same unwelcome visitor from beds of lettuces or peas. The patches being intersected by regular walks, the privileged visitor may witness the variety of appearances which the ground presents. Here some unambitious gardener contents himself with goodly rows of cabbages; next to him the proprietor has reared a gorgeous display of roses and other gaudy flowers. One, somewhat more classic than the rest, has placed a bust of Thomson, the poet of the seasons, in the centre of his ground, and adorned the vicinity with laurel and other evergreens. As there are not wanting those who have an eye to the useful as well as ornamental, so are there also some who attend to the profitable. Beds of musk are rather plentiful, and the rich fragrance which they give forth generally induces some fond beau to carry off a pot for the use of the lady who accompanies him. Of course no charge is made, but—

Our guide through the pleasant maze was an old Egyptian; one who had trod the sands of that classic country, and been blinded by its scorching dust. His "five yards and a half square" contained potatoes, cabbage, lettuce, onions, pease, beans, currants, wall-flower, pinks, daises, and five young cherry trees! In no part of the ground was a sluggard's garden to be seen—not a weed usurped the place of a more useful plant. There was, however, a sick soldier's spot; it was uncultivated, bare, but clean. The proprietor was said to be 102 years old; he had not visited the place for some time, nor was he expected to do so again. But it was still his, and would remain so until the funeral shot had proclaimed dust to dust above the hoary veteran's grave. His companions did not feel themselves at liberty to plant any thing in the ground for him; he was tenacious of his privilege to attend to it himself; the neighbouring "land owners," however, preserved it from weeds. At present there are many cadets on the roll, all anxious to become tillers of the soil, but none of them have the least desire to get possession of the centenarian's spot. "He is so old, so good a fellow, and so well known, that some of the already privileged patriarchs should take his place." Such is the general language of the applicants, their ideas of promotion being still strong within them.

During a visit of some hours to this interesting place, not one veteran in our hearing alluded to his deeds of arms. "The triumph and the vanity" seemed to be forgotten in the midst of better and more agreeable labours. May a like spirit dispense its healing influence on those who have ever been too ready to

"Cry havoc, and let slip the dogs of war."

The rustic shed already spoken of was built by direction of Lord John Russell, as a retreat in wet weather for each imitative "Cincinnatus of the West." Our inquiries were naturally directed as to the author of the lines, and the reply we received was merely this—"Don't you think that the man who had the heart to buy that ground, and build this grotto, wouldn't have the head to write them?" Our thoughts turned involuntarily to the House of Commons, and to the position occupied by the Noble Lord therein. Our friend, however, knew little of these matters; but this he knew, that Lord John and the Duke of somewhere or another visited the place not long ago; he was seen pointing out various spots to his noble companion; and before he went away he talked a good bit to the Serjeant-Major of the garden.

Well! thought we, perhaps his Lordship was a greater man in the Eye of Omniscience while in this garden, than when contending and controlling in the Senate.

\* None are admitted into the garden but those under the escort of a "good man."

## Scenes and Sketches of Military Life.

PATRICK O'NEIL—THE IRISH GRENADIER.

## CHAPTER I.—THE FIRST FLOGGING.

It is only necessary to say one word to the reader in the outset, in order to prepare his mind to receive what is to follow—to assure him that there is not a single incident or circumstance narrated in the following chapters, but has its foundation in truth and fact; that I have purposely avoided colouring or heightening, adding to or taking from it, but that I have endeavoured all through to give my own impressions and recollections with as faithful and true a hand as I could command, and that I have been an eye-witness; present and often acting, in most of the scenes laid before him. I hope he will bear this in mind.

I entered the British army as a private soldier, at a very early age. Should any one inquire the motives that led to such act, I can only reply they must at present rest a secret; but, to relieve his anxiety, I can assure him that it was no ardent thirst of military glory—no bright aspirations after warlike renown. I was not dazzled by the gaudy trappings and shining equipment. Ambition was above my reach, and stern necessity below my footsteps. I well knew that the life of a soldier was one of privation and suffering, uniform, dull monotony, strict discipline, degrading humiliation, and the most debasing slavery to the most despotic tyranny. I was fully aware of all this, yet I enlisted a private soldier in the — regiment of foot; but some other time I may tell the story—it is rather curious.

On a fine evening in the beginning of October, 1825, I entered the barrack square of the — regiment, then quartered in the town of C——r, in the West of Ireland. I wish I could give the picture as it appeared to me then—it was anything but a heartening display. Just imagine a large square yard surrounded by high walls with a sentry posted at the gate and occupied by about ten or a dozen "squads" of young awkward lads, dressed in a semi-soldierlike habit, in different attitudes and positions, some standing erect and motionless as a row of hedge stakes, others stalking about in the most uncouth manner imaginable; while the harsh notes of "the drills," mingling and breaking in every variety of sound and cadence, struck upon the unaccustomed ear strangely and disagreeably.

Here a gang of about two dozen were all in a line—undergoing what in military parlance is called "setting up"—they were the latest arrivals and learning to stand alone. An old rat-like grey whiskered sergeant was moving around them, scrutinizing them with the eye of a hawk and with a most artistic expression of countenance; now and then giving one a poke with his cane to make him bend forward, then another to make him lean back; screwing back the shoulders of another, twisting out their wrists, turning out their toes, and chucking up their chins. In this state of most intense torture they were held until nearly exhausted, and at last the old reformer, in a most literal sense, moving round to the front, gave the word, "stand at ease." Suddenly, yet with any thing but a simultaneous movement, each drew back one leg, some the left some the right, and slapped their hands smartly together in front. A momentary glance around told of unspeakable relief from a most painful torture, but short was the rest accorded. The irregularity of the movement drew forth a volley of abuse and curses from their tormenter, and the command of "attention, eyes front," soon restored them to the same erect and motionless attitude, and the same round of jerking, poking, and screwing went on as before.

In another angle on the right, another row of juvenile heroes were placed in the same predicament, being a little more advanced in the exercise necessary to render them competent to kill by rule; they were what is technically called "going through their facings." The "drill" giving the word "to the left or right-about face." At the word "left" or "right," as the case might be, they drew back the left or right foot until the toe touched the heel of the other, and then at the word face, away they went like so many dancing dervishes, or animal tee-totums, turning their backs like many a better platoon upon the enemy.

There was another pack learning to walk, or doing "the gander step." In their front a little squat, round-bellied man from Norfolk was delivering his lectures in a dialect that was then to me strange and laughable. He stepped backwards as they moved on, keeping time by striking his cane perpendicularly on the ground. His short, plump person, florid countenance, and pendant gills, were in strong contrast with the pale and meagre faces of the youths who received his instructions. "Ha-w-lt! what the devil are you arter, there?—wandering away like a flock of geeze on a common—dress up!—heyes front!—now mind the word—left foot foremost, and all together—Mar-ch!—Hawlt! there you go, one arter another, just as you came into the world—Heyes right; dress backer there in the centre—backer still—for'ard there, on the left. You feller with the long nose, hold back your head—that there nose of yours would spoil a brigade—so heyes front! now mind the word—Maw-reh!—left—right—left—right."

On the other side, a little thin, hard-featured corporal, evidently from the west of Ireland, was delivering his ideas in a rich mellifluous Connemara brogue—

"Lift—right—lift—right—shup! haw-lt! Ooh, my curse, an' the curse of seven generations of crows on yous, every mother's son! Did I ever see such a flock ov born natherals (idiots)? I wish I had the court martial on the man that listed the half of yous; by my sargeawl he'd feel the taws (cat-o'-nine-tails) for robbing his Majesty's exchequer—fine bargains he made for the king when he took such a pack ov flyin' fish for the army. Now, dress up there—touch—always get so close to your right hand man that you may feel his elbow. Now, be afther mindin' my biddin', and see and find out your left legs from your right, iv you've got any left legs at all among you—and you Jim Muldoon, you're a neighbour's child ov my own, and ought to know something better. Now just imagine that there's a sogawn (a straw or hay rope) of sthraw round your right leg and a sogawn of hay round your left, and when I say left right, sure its hay foot—straw foot I mane; and lift them nately off the ground, one afther another, like a turkey in a stubble-field, you spalpeen. Here, now thry it once more. Muw-rrh, left right—hay foot, sthraw foot—that's it—hould up your head, you with the pock-marked face and the crooked eye; is it afther some of your dead friends your looking into the ground that way? Hawlt; ach! look at them now: but its my heart that's breech with yours, bad luck to you every day you see a pavin' stone."

Such is the drill, and all this is necessary to make a soldier. The discipline, in the first instance, is generally intrusted to the care and direction of the ignorant and wrong-headed; very little pains being taken in selecting the well-informed and good-tempered, to give these first lessons. The men for the drill are generally chosen by the serjeant-major and adjutant, and are generally favourites, whom they wish to indulge by keeping from the stricter and more severe duties of guard mounting, &c. They have mostly to deal with very young men; most of them, perhaps, boys, fresh, and for the first time from their home and their parent's care; some of them wild and high spirited, struggling with sorrow and home-sickness; others drooping and despondent. Instead of cheering or soothing words, or addressing them even in the language of sense and reason, these petty tyrants often drive the poor recruit to madness, to suicide, or murder. He is overwhelmed with the most vulgar abuse upon the slightest omission or neglect, and should he manifest the least impatience he is punished with rigour; on the next alleged offence his punishment is doubled, until disgusted, harassed, and worn out with ill treatment, he turns to the only source left him, to castoff his tormentors and desert. He is taken and flogged—deserts again; is re-taken and re-flogged; confined, watched, punished and persecuted, until spiritless, soulless, and restless, he becomes the subdued beast of burden—the silent ass; the animal machine, upon whom encouragement and reproach are equally thrown away. I have seen all this; I know what I have said is merely a faint outline of a truthful and startling picture; but can any soldier say that I have overcharged or distorted its features.

It was on the drill-ground that I first beheld the subject of the present sketch. Patrick O'Neil was then considered the best swordsman in the regiment, and, as such, he was engaged in drilling some young officers. His fine figure struck me immediately. He was nearly six feet three inches in height, full formed, muscular, athletic, and every motion of his body displayed a symmetry and attitude—models for a sculptor—as he showed the young gentlemen the proper handling and true delivery of the weapon. His shoulders were widely and evenly spread, falling down in a gentle undulation: his chest ample and swelling, bespeaking giant strength and a powerful constitution; while his finely-formed limbs tapered down to a foot so small that, viewed at a distance, he appeared like an inverted pyramid. His face was handsome, without a tinge of effeminacy, but wearing in every lineament the fixed and manly impress that tells of firm confidence and stern resolution; his hair was black as the raven's wing, and his large eyes as large as a moonless midnight.

O'Neil was then what is called a "lance serjeant," that is, he had the rank and did the duty of serjeant, with the pay of a corporal; and, unfortunately for him, his promotion to the brevet rank took place while the colonel was on leave of absence. Our lieutenant-colonel was a little, meagre, irascible Connaught man; his name was B—ke. It was said he was poor, and owed his rank chiefly to the patronage of the Marquis of L—d—nd—y, to whom he was brigade-major for some time during the Peninsular war. The major's name was A—bth—t, a scion of an English aristocratic and wealthy family. He was a young man, and attained his rank by purchase. He was fond of dandy soldiers, and generally promoted the good-looking men. The major had used all his influence to get the command of the regiment before B—ke was appointed, and, it was surmised, had thrown many obstacles in his way. However, a jealous feeling existed, which showed itself mostly on petty and trifling occasions, and which spent its venom mostly on the heads of the men.

The morning after the colonel joining, the additional chevron on the arm of O'Neil caught his eye—his lip became compressed and thin, and the faintest smile of satisfaction passed over his bitter face.

"Who gave this man liberty," he asked, turning to the adjutant, "to assume the rank of serjeant?"

"He was put in orders by Major A—bth—t, while you were on leave," replied the official at his elbow.

"Ha, one of the major's pets, I suppose," he remarked again. "We'll see, we'll see."

The downfall of O'Neil was dated from that moment; for as one of the barrack-room jokers remarked, "he might be a very long serjeant, but it was impossible he could be a serjeant very long. He acted with every care and circumspection, but there were many keen and eager eyes fixed upon him, and only one short month elapsed until he was brought up before the commanding officer by one of the serjeants of his company, charged with some very minor, real, or pretended neglect of duty. He received his choice either to resign, or stand the award of a court martial. This is, or was at least, the general proceeding adopted to remove obnoxious non-commissioned officers, whose general deportment would not admit of a serious charge being brought against them. O'Neil knew it was useless to contend, where the wish and the power to do were both against him. He resigned as a matter of course, and returned to his barrack-room a private soldier.

That evening, burning with shame and indignation, he flew to the canteen, resolved to bury the sense of his degradation in that universal panacea for the evils of the ignorant and miserable—ardent spirits. Here a fresh bitterness awaited him; he was no longer permitted to enter the room held sacred to the libations and amusements of the non-commissioned officers only, and as he sat with the privates, by whom he was much beloved, on account of his easy and cheerful disposition, the same serjeant passed through and asked him, with a sneer, if he felt inclined to try his hand at bagatelle? pointing to the room which he knew O'Neil dare not enter. This gratuitous insult was not noticed at the moment, but it failed not to rankle. The unfortunate young man continued drinking until the last roll of the tattoo; then suddenly reeling to his room, he was retiring to his bed in silence, when the same serjeant, in an overbearing tone, ordered him to perform some menial act connected with the interior economy of the barracks.

"It is not my duty," replied O'Neil in a grumbling tone—"I am not the orderly man."

"Do you dispute my orders, sir?" retorted the other.

"I tell you again I am not orderly man," said O'Neil.

"I did not ask you, sir, who was orderly or who was not: it's your duty to do what I bid you. Do you refuse to obey my orders? If you do, you march to the guard-room."

"Will you?" asked O'Neil, fiercely.

"I will, by G—," replied the serjeant.

"Then, by G—," cried O'Neil, felling him, "you now have a cause; there, you sneaking, pumping, cowardly informer;" and he spurned him as he lay without motion.

The men surrounded him, and carried him to the other end of the room; a file of men from the guard was sent for, and he was placed in durance.

The next day, a regimental court-martial was called: O'Neil was brought up, tried, and sentenced to receive 300 lashes.

Many of my readers may have formed an erroneous idea of the mode and character of this particular kind of punishment, from reading the discussions in the public press: for the benefit of all, I will give as exact a description as it is possible to write of such a scene of cruelty and horror.

A parade was ordered before breakfast the following morning, and every man off duty to attend. The regiment was marched from the parade-ground, by companies, to a sequestered angle of the barrack-yard, and there formed into a hollow square, with the barrack wall as one side, and close to which the triangles were set up. These consisted of three great beams of timber, shot at the foot with iron spikes, and fastened by a ring at top—the same as a large moveable weighing machine. At about two feet from the ground a serjeant's halbert was tied horizontally from one side to another; and, at about breast-high, another halbert was made fast in like manner. These prevent the man from falling forward, should weakness or pain make him endeavour to shrink from the lash. The drummers, with the drum-major at their head, are ranged on the left of the triangles. The colonel, doctor, and adjutant are in the centre of the square, the other officers with their companies. When the whole apparatus was arranged, the culprit was marched from the guard-room (where he had lain, in mid-winter, on the bare boards, since he was first put into confinement) within the area. The men were brought to attention, and the adjutant proceeded to read the minutes of the court-martial aloud, concluding with the sentence, and its confirmation by the commanding officer. The prisoner was then ordered to strip, and he was led over to the triangle by the drum-major. His hands were encircled by a noose, and drawn tight as possible up to the top of the triangle; this keeps him stretched, and prevents him warping from the blows, and his legs were firmly bound to the horizontal halbert below. When the drum-major had him properly "tied up," he came round and drew his shirt over his face and head, but this O'Neil would not admit of—he tossed it from his face indignantly; the bare back, from the neck to the waist, was thus left exposed to the lash. Everything being ready, the drummer on the right stripped off his jacket, and advanced with the lashes in his hand, while the doctor took his station in rear of the sufferer, so as to command

a fair view of the operation, and direct its infliction to the proper spots, and the adjutant pulled out his watch to keep time.\*

The signal is given: at the first lash the skin is seen to curl off in white flakes from shoulder to shoulder, and the blood starts from the points where the knots of the lashes had sunk into the flesh. Two—three—four—in slow time: it cannot be described stroke by stroke. The lashing proceeds, both drum-major and adjutant counting the successive strokes until twenty-five are given, and then a fresh drummer steps forward, and so on at every twenty-five lashes; thus in inflicting three hundred lashes twelve fresh men are employed; and, good Heaven! before they are half done, what a spectacle has grown before the eyes of men. There it is—I think I see it now, as I first beheld the horrid sight—the body of a fellow-creature, mangled, torn, and bloody; black, red, purple, blue, and streaming, like a mass of weltering carrion, with here and there a hillock protruding, where the bones of the spine have been literally lashed bare; the blood running down to the ground, and the tortured muscles writhing and quivering like living fibres all over. A man of common sense, and moderately strong nerves, can look on death almost unmoved; he can appeal to his reason, his religion, and conviction, while looking on the exit of a fellow-creature from this breathing world: but I defy any one, excepting the most hardened and reckless, unmovedly or calmly to behold this human immolation to the demon of cruelty—this more savage than barbarian display. It is a trial which many a strong, and time-and-crime-hardened man, cannot stand; and when I add, that I have seen some of the holdest men in the regiment faint away, actually drop senseless in the ranks, it may be conceived what an effect it must have upon young unbearded youths, fresh from the paternal fireside, and raw from the village school.

Such is flogging in the army as it is practised in the present enlightened, and as some of our philanthropists boast, most humanized state of society.

O'Neil bore his punishment without breathing a murmur, or once wincing; not a look, not a quiver, not a breath betrayed his suffering; but when he was untied, he glared around him with a wild and bloodshot eye,—he was white and colourless as a corpse, and his lips were thin and blue, as if with the force of the compression that held them glued together: still he held his head erect, and walked to the hospital with a firm step.

#### Familiar Chapters on Science.

NO. II.—ELECTROTYPE CONCLUDED.

In our first number we gave a brief description of a galvanic battery, and of its power of changing copper in a state of sulphate into a solid plate of metal for useful objects. Our present purpose is to point out how it may be made to accomplish the chemical manufacture of articles of ornament, a branch of the science to which we the more willingly call attention, because the attraction of its pursuit may readily pave the way to the acquisition of an amount of knowledge, the most sententious description of which is comprehended in the title "Philosophy in just made science in earnest."

We will take the present early occasion to observe that there is a sort of dislike existing amongst the juvenile members of almost all families against any kind of meddling with a galvanic battery, under the supposition that its management requires a vast deal of skill and knowledge; that the laws which govern its operations are only registered among the most remote truths of abstruse science; and that any expectation of demonstrating its powers in the domestic circle, as a generator of amusement and instruction, is altogether hopeless. Now these are all mistakes. By attending to the directions given in our last number, which are both few and simple, a galvanic battery is more easily managed than a hoop, a top, or a game at marbles; for all these require some dexterity on the part of those engaged; whereas a galvanic battery is self-acting, and requires no dexterity whatever. We make this observation in the hope that some of our enterprising young readers will turn their enthusiasm into a current which shall conduct them to one of the most delightful results of remunerating knowledge.

The cheap and rapid multiplication of objects of interest is one of the pleasantest prerogatives of the Electrotrope. If an apple of extraordinary size and beauty of shape should be produced in your own garden, and you wish to perpetuate the remembrance of both, the galvanic battery is your ready assistant. First cover the fruit with a thin coating of plumbago, which is the ordinary black lead used in darkening and polishing stoves, and similar things. This plumbago is one of the best known recipients of the copper precipitated by electricity. However non-conducting the substance may be which it is wished to copy, by covering it with this black lead or plumbago, which is done with a brush, it immediately becomes fit for all purposes of Electrotrope. The apple thus prepared is then placed in the acid solution (mentioned in our last chapter as one division of the galvanic battery) and between it and the sulphate of copper in solution (the other division of the battery also mentioned) a galvanic

current is established, by means of the wires previously described. In two or three days the original apple will be covered with a copper coating, every part of the surface of which shall correspond exactly with that of the apple itself. In this state, a small hole may be made at the point where the stem enters, through which the vegetable interior will finally exude; but immediate decomposition and removal of the parts may be effected by applying at any chemist's shop for the means of effecting it.

What is true of the apple is true of all vegetable substances. In the manner just described, pears, plums, cucumbers, peaches,—in fact any thing that grows in the garden—may be correctly copied in copper by the silent but unerring process of a galvanic battery properly adapted to the purpose. And this process is one to which no objection can possibly exist on the score of loss of time, because its management will only require a few minutes daily, its results being self-produced.

We will mention a circumstance connected with the precipitation of copper by voltaic electricity, the advantages of which come home to the understandings of us all in our every-day pursuits. No one will deny that it is more agreeable to possess cups, saucers, plates, dishes, &c., which are handsome in themselves and suggestive of reflections connected with the arts of painting and design, than to have our tables covered with those articles of constant domestic use of one unvarying picture of a monotonous Chinese absurdity. The "willow pattern" is the principal stock in trade of every earthenware shop. Appropriately enough it is a weeping willow, for well may it mourn for our past want of invention and indomitable content. This "willow" reproach to our pottery manufacturers is now about to be removed. In consequence of the discovery of Electrotrope, we shall in due time find twelve different and well-executed landscapes or other scenes on the surfaces of every dozen plates we buy. This result is only secured by the cheapness with which metallic duplicates of an original engraving may be produced by the galvanic battery. The greatest consumption of copper plates is at the potteries, where they are employed in giving the designs or patterns to our dinner services of china and earthenware; also to our breakfast, tea, and other services. The process is as follows:—The intended device is first deeply cut into copper and then printed on a piece of thin paper, a composition of arsenite of cobalt being used instead of the ordinary ink. This ink is first transferred to the unglazed plate by pressure; the paper is then removed, and the plate made fit for use by glazing. Although our common pottery ware is the envy of all foreigners on account of its excellent quality, they have good reason to laugh at our pottery artists, at least so far as common ware is concerned, for undoubtedly there are some specimens of manufacture which cannot be matched for beauty of painting and vividness of colour in any part of Europe. The reason of our inferiority in common ware, though not obvious at first sight, is easily to be accounted for. The expense of engraving superior plates, from which but a limited number of impressions could be taken, has been the sole obstacle; the manufacturer could not afford to pay for designs a price which would never be returned to him by the sale. The case is altered now; and we may confidently hope to see, before long, the ordinary blue and white dinner service supplanted by plates and dishes embellished with copies of the finest works of art, the most exquisite scenes of nature, the most elaborate machinations of fancy, or the most intricate specimens of execution.

The pleasure of making agreeable presents, a practice in which the French and Germans particularly excel, is much facilitated by the Electrotrope. An aged person may desire to give a "likeness" to a numerous circle of relations and friends; or the parents of a child may wish to perpetuate the remembrance of its youthful beauty in a similar way. According to the ordinary method of painting portraits the expense of such an undertaking would effectually neutralize it. But by the Electrotrope it may be done in two ways with economy. Metallic copies of a small wax bust or impressions of an engraving on paper are producible with ease. In the first instance, it will only be necessary to make an Electrotrope mould from a wax original, (in the way described in our last number for the production of a copper-plate matrix), and from this mould any number of exact deposited copies may be obtained at the cost of a few pence. In the second case let a small medallion likeness of the individual be modelled in clay and then cast in plaster. From the plaster cast an Electrotrope copy is taken, and this copy is submitted to what is known to engravers as a copying or ruling machine, which engraves mechanically upon a plate a *fac simile* likeness of the original medallion, with all its lights and shadows well developed. From the plate thus obtained eight thousand impressions may be taken. This latter is a more expensive process than the one first-named, but it is capable of being proportionately extended. Both, however, are cheap; and they present in their manipulations one of the least generally understood but most extraordinary results of a combination of scientific knowledge with mechanical skill. In our future "familiar chapters" we shall have frequent occasion to bring a conviction of this truth home to the understandings and sympathies of our readers, to whom meanwhile we leave the consideration of what we have already said, and in the hope that they will lose no time in commencing the scientific but amusing practice it suggests.

#### Comparative Youth of Man.

IN advertent to the modern date of man as contrasted with that of the globe which he inhabits, we do so as to a truth in the highest degree instructive and important, since it proves the groundless nature of those fears which many well-meaning but greatly mistaken persons entertain of the danger of scientific inquiry; and shows, as is naturally to be expected, that both philosophy and religion are perfectly harmonious with each other, and that the great discoveries of science seem only to confirm the dictates of revealed truth. The evidence of this fact is of so cumulative, so overwhelming a nature, that it becomes absolutely necessary to select from the mass of testimony a few circumstances calculated to enforce, in the strongest and most lucid manner, the principle which it is our object to explain. One of the most convincing of these proofs consists in the circumstance, that while we find throughout the whole of the rocks, with the single exception of the igneous deposits, the remains of those animal races which once inhabited the primeval earth, we nowhere discover in the solid rocks themselves any traces of the human structure, or the smallest evidence of man or of his existence. It is only in the alluvial or modern beds, the mud, or slime, or gravel, the deposits, as it were, of yesterday, that we find any vestiges of even the most ancient tribes of our race. It is only in substances of this recent date and character that we discover in this country the tombs and the skeletons, the weapons or the implements of our British ancestors, or the urns or coins of their Roman invaders; in beds similarly modern it is that, on the Continent, we find the relics of the Etruscan, the German, the Greek, or the Gaul; or that, in the New World, we discover the remains appertaining to the ancient inhabitants of that continent, the aboriginal Peruvians or the Tullegues, a people who preceded the Mexicans in the occupation of their country, and excelled them in refinement and civilization. No solitary relic of the human structure, no fragment of a skeleton, no portion of a bone appertaining to the human osteology, is discoverable in the solid rocks, but such reliques are found only in those superficial and modern depositions, those beds of mud or gravel, to which we have already referred as the sole depository of such remains. Yet man, as is well known, is the only universal animal fitted to inhabit every region and clime of the earth; he is also, of all creatures, the most enterprising; his existence is exposed to the greatest vicissitudes—he meets his death by the most varied accidents, and his remains strew land and sea, the field, the flood, the forest, the mountain and the vale. Nor is there any circumstance which would prevent the preservation of his remains when committed to the custody of Nature. His frame, composed of the same elements as the animals around him, would be as perfectly preserved as theirs; and Cuvier has forcibly remarked, in allusion to this fact, that the same battle-field has preserved alike the bones of the horse and of his rider. The absence of all relics of the human frame, save in the most modern depositions, would thus be sufficient to prove the recent origin of man, even were not a stronger argument suggested by the fact, that the mere human skeleton—the fragments of his osseous structure alone—would be the least of those legacies which man would bequeath to the soil of which he was an inhabitant. We should possess not the mere fractions of his frame, the exuviae of his animal fabric, but we should have his mighty and majestic works, which so far transcend his own puny existence. We should discover his bridges of granite and of iron; his palaces of marble and of hewn stone; the tombs which he erected in memory of the departed; the temples which he erected in honour of his God. In the absence of all these, and in the non-existence of all traces of the human race, save in the mere yesterday of the vast annals of our earth, we are compelled to adopt the chronology of revelation, and to confess, that since the chronicles of Holy Writ teach us that the existence of man does not extend beyond five or six thousand years, so science in like manner convinces us, by the unquestionable evidence of physical fact, that no remains of man are discoverable in strata which must have required a longer period for their deposition. Nor does the importance of the lesson which geology here conveys terminate with the simple accordance of philosophy with revelation here pointed out: for science not only confirms, but immeasurably exalts our appreciation of the Creator and His perfections. What contemplation of the Deity, it may be asked, can afford a more magnificent idea of His attributes than that under which geology presents Him to our view, as rendering the vast and mighty fabric of the earth one scene of bounty and of blessing—enriching even its most barren deposits with mineral and veins of precious metal; of storing it with quarries of limestone and of marble, and above all of coal; of adopting its various beds and coverings to every purpose of cultivation, to every beneficial energy of man; of elaborating the whole planet into one grand sphere of fertility, harmony, and beauty; and then, finally calling the human race into being, to inherit and to enjoy a sphere of existence fitted up by Almighty wisdom and benevolence for their reception.

\* The drum-major stands behind the inflicting drummer with a cat-o'-nine tails in his hand, and his eyes fixed on the sufferer's back, ready to lay it hard and heavy on the shoulders of the striker, should he hit light or unfair.

## Traits and Sketches of Irish Character.

## THE PILGRIM OF KILCREA.

MANY have supposed that wit and repartee were the only characteristics of the Irish people. Others have given them credit for kindheartedness, which only ignorance and party prejudice has prevented from becoming the belief of all. But a higher and more devoted feeling pervades the heart and mind of the uncontaminated peasantry of Ireland, which misfortune and distress have given ample opportunities for display. During the rebellion, and the oppressions under which the professors of Catholicity laboured, many cases of revolting cruelty were practised on the people, and many instances of endurance as well as wild revenge were evidenced by the sufferers. The latter were emblazoned on the party records of the country: the former were known only to immediate witnesses in the district. Mrs. Hall, however, in her admirable work on Ireland, has redeemed from obscurity many of these acts of fortitude and devotion—of elevated sentiment in the midst of crime and error—of high-souled honour unsubdued by poverty and oppression. Not the least interesting of these remarkable delineations is the story of the widow of Kilcrea. "We never," says the highly-gifted authoress, "saw a ruin so full of graves as Kilcrea. Choir, cloister, aisles—every part is crowded. There are some other tombs worthy of notice within this extensive ruin—where we have lingered long, and must remain a little longer to note an old and remarkably handsome woman, who was praying, very devoutly, in a small dilapidated chapel at the right hand, near the entrance. There was something so meek, so humble, and withal so earnest in her face, upturned as it was to the heavens while the rosary trembled in her fingers, that we asked the guide who she was.

"A poor *thravelor*, God help her, and nothing else," was the reply. At the instant it began to rain, and one of us was glad to take shelter in the guide's cottage, while the other proceeded to inspect the ruins of the castle.

We have been in many Irish cabins; yet, perhaps, never in one so neat or so well-ordered, as the little one that crouches by the entrance gate to Kilcrea. The earthen floor was clean—the deal table white—and a pretty kitten was lapping milk upon it, who looked both sleek and happy; there was a half partition opposite the door, where the bed was placed; two coops filled with speckled chickens; a dresser heavily laden with crockery; two chairs, and a stool; completing the furniture of the room, in which there was barely space to turn round. We almost wished to have been benighted in such a cottage; to have set with the guide by the blazing faggot, and heard the tales—all the tales she could tell of the old abbey in its glory. She wanted us very much to have some milk, or an egg;—she knew it was fresh, and she could either roast it in the embers or boil it in a minute. She had a cake of griddle bread—there it was—if she had not made too free, would we have a bit of that? Having offered us everything in her cabin, we at last prevailed upon her to sit down. She forthwith pulled out her knitting, and we inquired what she knew of the woman we had seen in the abbey.

"Ah thin," she said, "my heart aches for that poor *riddy* woman, though I never set eyes on her till four or five days ago, when she came here one morning faint and fasting to finish a *round* she'd undertaken."

"Going from abbey to abbey to pray for remission of her sins?"

"Not her own sins," she replied, "but, poor thing, here she is coming in out of the rain; she laves me to-morrow."

"Does she lodge with you?"

"We give her the length and breadth of herself, at night, on a lock of straw under the table; and, sure, neither me nor mine will ever miss the bit or the sup the Lord allows us to have for such as her." Oh, what lessons of loving-kindness are to be learned in Irish cottages; hospitality without display, and that true generosity which takes from its own necessities to relieve the necessities of others!

We at once observed that the woman was superior to the generality of her class; she was neatly clad; her cap was white as snow; and a broad black riband fastened round it indicated an attempt at mourning. We had asked her how she intended to return, and her simple answer was "the Lord will raise me up friends to help me on the way; sure, hasn't He helped me homewards already?" she added, as she looked on the silver we had given her, "praise be to His holy name, that cares for the widow and the fatherless."

"You've had a busy time of it lately," we said, as she entered the small cabin, and with a meek curtsy took the seat we insisted on her taking—"a very busy time of it lately?"

"I have, praise be to Him who gave me the strength to get over it! a very busy time; it's a long journey from Kenmare to Kilcrea, a wearisome journey; and a wonderful thing to be climbing the mountains; it's a fine thing too, my lady—for somehow one feels nearer to the Almighty. I thought the life would leave me before I got over the Priest's Leap,—that is a wonderful mountain intirely—I don't suppose there's many higher than that in the world."

"And why did you undertake such a journey? You seem old."

"I am old, my lady—three score and eight years at the least;—but God fits the back to the burden; and the limbs to the mountain steep. I would not, for all that, have took it, only for a reason I had; you see ma'am, since you've been so good as to ask—you see, after the will of the Lord had taken from me my husband (the heavens be his bed), and my poor boys, He left me one little girl, a delicate, gentle creature; and though she was my own child, I may say, a handsomer or a better girl never brought the sunshine to a lone widow's cabin. Oh, but her goodness was past telling. When I closed my eyes as if asleep, I was sure to hear her voice praying for me; when I opened them in the morning, she was there beaming blessings on me. She was so handy! Such a fine scholar too! The brightest girl, the schoolmaster said, that ever stood at his knee. Well, ma'am dear, every true crown has its cross. My little girl's love was sought by many, but won by a young man respected by no one, though chose by her.

'Alley,' says I, 'if you marry Laurence Daly, you'll break my heart.' 'Mother,' she says, throwing her arms, white as a wreath of snow, about me, 'mother,' she says, 'I'll never do that.' My mind was as light as a feather at first, for I knew she'd keep her word. But oh, my grief! to see her wastin, and wastin, dying in the sight of my eyes; to see that, almost took the life from me. She made no complaint, but fell away like the blossom off the bough of a summer tree; and I could not bear to look in her faded face; and I says, 'Alley, take him, take him avourneen; and from this day out I'll never say a word against him.' In less than a month from them words she was blooming as a rose; in another she was his wife! The poor woman covered her face with her hands and wept bitterly. 'His love,' she continued, 'never, to say, turned; and he was gentler to her than he could be to any other thing; and if he had kept from meddling with what didn't concern him, all would have gone well enough; but he got into trouble, sore trouble, and the end of it was, that three years after they were married, he was in the jail at Tralee, and my poor child, my poor Alice, at the feet of every one in the country that could help her to pass a word through the iron bars or get her a look at him. Now wasn't it strange! She was as pure in the light of heaven, as pure as unfallen snow; and she knew he was guilty. She would not even deny it; for the thought of falsity wasn't in her; and still her love grew stronger the greater grew his trouble. It is not for me to tell what she went through. Before the first blush of morning she'd be on her knees at prayer; and I'm sure, for six weeks that passed betwixt his taking and trial, the rest of sleep was never on her eyes for five minutes together. I asked her, when the day came, for the love of God and of me, her broken-hearted mother, not to go to the court house, but she would; and she did. She clung to my side in the crowd, and I felt her heart beating against my arm; I don't look at her, and she kept crushing closer and closer to me until the trial began, and then she gathered strength and stood upright, at once. All along, her husband denied that he was in it at all, when the great harm was done; and two or three more boys stood up for the same. 'There,' said the counsel for the crown, pointing to my poor Alice, 'there's his own wife; ask her where her husband was that night.' Every one cried shame; and the counsel for the prisoner said it was contrary to law to question a man's own wife; but before I could get at the rights of it, Alley, throwing her arms round me, muttered, 'Mother, take me away, I can't tell, I can't tell!' With that a neighbour's son, who had loved my little girl all her life almost—a fine fellow he was, though she never would hear to him, and with a good character, and of decent people, that wouldn't look at the same side of the road with Laurence Daly—steps out at once, with his cheeks reddened and his eyes like diamonds, and says he, 'Hear me,' says he, 'I can swear where he was that night; and no one who knows me, will think I favour Larry Daly.' Between supporting Alice, who fell in a faint on my bosom, not knowing what was coming, and knowing myself that the boy had good cause to spite Laurence, I thought my senses would leave me; and then my blood ran cold to the heart, and my brain felt as if afire; for I heard him sworn and prove an ALIBI for the prisoner. When it was over, his cheek was like the cheek of a corpse, and no light was in his eyes; he came forward to the outside, where Alice, come a little to herself, and understanding her husband was safe, was crying, like an infant when it first draws in the air of a sorrowing world; he made the throng keep back, and after looking at her for a minute, he whispers, 'Alice, live, avourneen; live and be happy, for to save you I've done what an hour ago I didn't think I could have done. I've sinned my soul, Alice, for you; so live, and God bless you.' I've heard of the love of many a man, but I think that bates it all; and though what he did was not right, still he did it for pure love of my child:—love, without any feeling in it that could make a blush rise to the cheek of a married woman, or cause the pang of shame at her heart; and that's a wonderful thing to say. But his love didn't end here. I was going home from Laurence's cabin, and after seeing them happy together once more, and he making all the good resolutions a man always makes, at the first goin' off, after getting out of trouble, and the children so glad, poor things, to have their father again; and as I was going on, just at the end of the boroen, 'Mrs. Lawler,' says a voice, (you'll excuse my telling his name) 'Mrs. Lawler,' he says, 'after to-day, I can't stay in the place. Who knows, but Laurence is so odd tempered, he might mistrust his wife, knowing as he does that I perjured myself to make her happy. Those that arn't what they should be, often think bad of others; so I'll go to America, Mrs. Lawler, and mind the last prayer I'll brathe in Irish air, will be for Alice.' Again the old woman wept; it was some time before she added, 'And I saw him no more.' I begged of her to continue. 'It's soon ended now,' she said, 'and not much to tell; but the poor have more trials than the mere want of food, and I've often thought that when the rich and the stranger laugh at their rags, or turn from them in disgust, they don't think that may be the heart beating under them has a dale of feeling.

"Well, as I said, I'll soon be done now: Alice, my poor child, every one saw she was going, and yet the darling, she talked for evermore of taking 'a round,' and I used to talk to her, and tell her what sin had she to answer for to put that in her head, and she'd only smile! Oh then, but the smile upon patient lips is scalding to the heart to look at: Oh, God, forgive me for having wearied Him with prayers to leave the angel he was winging for heaven a little longer over her children, and to close my eyes; and Laurence, poor man! he was sorry too, and so loud in his grief that it shook her spirit. The priest had been with her, and said to me as he was going out, 'Take comfort, for it's a great privilege to have reared up a child for heaven; I wish we were all as sure of it as she is.' After that I went in, and she told the people she wanted a few words with her mother; they cleared out of the little room at once; and her voice was so thin I could hardly hear it, and her breath on my cheek was cold as the first breath of the new frost upon the air in harvest: 'There's one thing,' she whispered, 'though his reverence says it's no

harm, that's heavy on my heart—it's a debt—if I could have lived to pay it I should die easy."

"What debt, dear?" I asked.

"You remember THAT day, mother?"

"Ay, sure, I said.

"And what he did?"

"Yes darling, it's not easy forgot.

"He sinned his soul."

"The Lord above is merciful, and will forgive him, I pray night and day, I made answer.

"He was nothing to me more than a neighbour's child," she went on, "and for all his love I never gave him a good word; yet mother—mother—he perjured himself for my sake."

"The Lord is merciful, I said again; what else could I say? and sure it was the truth any how.

"Yes, I know that, but I made a vow, that night, to make my rounds at the holy Abbey of Kilcrea, so that the sin might be taken off him through my means. Oh mother, that is denied me, and I must die with it on my soul—I can't get rid of it."

"No, avourneen, no, I said; the way is long, and I am old and poor, but by the blessing of the holy saints I'll take off yer vow; I'll do for you [what, if the Lord had spared you, you'd have done for yourself.—I made the vow on my knees.

"Oh my mother, my mother, my mother!" she said, as if a new life had sprung in her, and then faded, faded, faded. She was gone—before Laurence and the children could catch her last breath; but she died happy, and so shall I now, for I've done all she would have done."

## The "Inexpressibles" Duel.

Two young French actors, Paulin and Fleury, of the *Comédie Française*, had contracted for each other so remarkable a friendship, that all they both possessed was common property between them, even to their dress. "One day (records one of them) we had a very droll quarrel; but comical as its subject was, it might have had a tragic termination. I know not whether it is on record that Orestes and Pylades wore each other's tunics, but Paulin and I united our wardrobes together, and wore one another's clothes indiscriminately. Our wardrobe thus united was by no means badly stocked, and it enabled us to dress not merely in respectable style, but even to exhibit a certain degree of elegance when occasion called for it. Among our best articles of dress were two pairs of inexpressibles, the one of black cloth, the other of black silk; and we entered into a mutual agreement that the most elegant of the two pairs, viz., that of black silk should be worn by us alternately. Paulin adhered to the compact with the strictest fidelity; but my honour yielded to the promptings of vanity. I violated the treaty, and sported the silk inexpressibles three times in succession. Paulin took no notice of this; but having received an invitation to dine out, he very civilly asked me to surrender up the visiting suit. He fixed upon a most unfortunate day for making this request. I had learned that a Mademoiselle Clermonde, a provincial actress of great celebrity, was that day expected to pass through Troyes, on her way to Amiens. Her beauty was not less highly extolled than her talent. A feeling which I cannot define—a sort of presentiment—prompted me with the idea of going to meet Mademoiselle Clermonde, and I determined to station myself at the door of the inn at which she was to stop to change post-horses. On such an occasion I was, of course, fully alive to the importance of being elegantly dressed, and accordingly I resolved once more to usurp the black silk shorts. Paulin asked me to surrender them to him, but I met the request by a blank refusal. Paulin's wonted placidity now forsook him. He reproached me with the violation of our compact, and declared that thenceforward there must be an end of all friendship between us. One angry remark led to another, until at length we both placed our hands on our swords, and sallied forth into the high road, which was but a few yards distant from the house in which we resided. This was the very spot on which I had proposed, a few hours afterwards, to present myself to the beautiful Clermonde. I heaved a deep sigh as this reflection crossed my mind. My antagonist and I withdrew to a meadow, which lay a little to the right, and there, burning with impatience, we drew our swords. We were on the point of advancing upon each other, when we were suddenly arrested by a piercing shriek. We looked round, and beheld a lady advancing hurriedly towards us. "Stay!" she exclaimed, "Stay! I conjure you!—Is this like gentlemen?" (Paulin and I, it must be confessed, succeeded admirably in giving ourselves the air of young men of fashion.) What! fighting without seconds! Is it for a woman to remind you of the laws of honor! Recollect, gentlemen, that if one of you had been killed it would have been nothing less than murder!" The tones of that voice—the beauty of the speaker—a certain air of dignity of authority in her deportment and manner overawed us, and we instantly sheathed our swords. I was captivated by the beauty of the lady, and stood gazing on her in an extacy of admiration. But Paulin soon recovered from the surprise caused by this unexpected interruption, and assuming his usual lively and jocose tone, he said "Truly, my dear Fleury, there never was a more ridiculous affair than this quarrel of ours. To fight for a petticoat might be perfectly natural; but who ever heard of a duel for a pair of black silk shorts? Ah! madame, could you have believed it?" The friends embraced; the lady was Clermonde herself.

## Auction Portraits.

THE following scenes occur daily within a few minutes' walk of the Legislative Assemblies of two of the greatest countries in the world. The same want of honesty may be discovered in each, but the cool and heartless impudence of the agent of the man-stealer not only outrages every feeling of humanity, but presents a picture of depravity the shades of which deform a whole hemisphere.

LONDON.—Mr. Richard Tattersall stands forth. Like Scott and Byron, his pedal supporters do not exactly match, as may sometimes be seen by his limping gait—it is a trifle; still "the College" would certainly not pass him as perfectly sound. But see, like another Richard, he now occupies his selling throne, and is announcing in a clear voice "Ambrosio." "Lot 54 (he says, glancing down at his desk at the same time) is Ambrosio, by Waterloo, dam by Gohanna (sister to Silverthorpe), her dam by Sir Peter, &c. What will any gentleman please to give for him? Mind, he's to be sold—400, 350, 300, will nobody give 300 for Ambrosio? run him down; and as Ambrosio's croupe comes close to the standers-by in the act of turning for the run, Tattersall call out a caution. "Take care," he says with a smile, adding in the same breath and with the self-same smile, the pleasant assurance that "he will kick some of you. 300's bid for Ambrosio, 305, 310—310 guineas are bid—going for 310, the last time—three hundred and ten"—and down goes the hammer, transferring Ambrosio for the trifling sum of 310 guineas, without any warranty, whatever, or a single syllable said in his praise either by the auctioneer or any one else. The next lot is a hackney. "Lot 55, is the property of the same nobleman. This is Juniper, a grey gelding, six years old, 200 for him, 150, run him down; 150 for Juniper;" then after a second's pause, "100's bid," and the hack after a few progressive biddings is ultimately sold for 200, the sum first stated. "A pony that has carried children" follows. Then comes a carriage. "Who wants a carriage?" smilingly asks Tattersall; and in a minute after knocks down for 15 guineas a wrong-end-of-the-town-built phaeton, on its first wheels (and that not a fortnight ago perhaps cost 150). The carriage is easily enough kept, but the horses—there's the rub. "They are to be sold," laying a particular emphasis on "are." "140, 120, 100—will nobody give 100?" No; scarcely half that sum; they are sold, and well sold too, to a rising barrister, for 56 guineas. Thus, for about 70 guineas, the denizen of Russell-square sets up an equipage which, in his learned ignorance, he perhaps thinks quite as good as his neighbour's, because the horses are as big, and bay like them. Lot succeeds lot, till at length comes the last, "Captain Candour," a hunter well known with her Majesty's hounds, and master of 15 stone. "What will any gentleman give for the Captain? he's by Comus, a capital fencer, and fast." The elite crowd round and compete for the Captain, who is ultimately booked to a well-known baronet for the unusual sum of 446 guineas, Tattersall, at the same time saying *sotto voce*, as if speaking to himself more than to others, "he's cheap." Yes, thought we, there is something in a name; or peradventure the purchaser thought Candour such a rarity, that the lot was cheap at any price, however high; for the Captain was a coarse cart-horse-bred animal, with a broken knee, a big leg, and many other blemishes.—*Sportsman*.

WASHINGTON.—Monday next, at 9 A.M., at public sale, the slaves whose names follow, all negroes of the first quality—namely, Betsy, a negro-woman, twenty-three years of age, with her child Cesar, three years old: an excellent cook, washer, and ironer; warranted healthy. Julia, a mulatto girl, aged thirteen, robust and active, a good field-labourer; with the exception of a slight defect in the left eye, she is without fault. \* \* \* "Let us proceed, gentlemen," cried the seller of human flesh, in a stentorian voice; "let us proceed—a woman for sale!" "An excellent woman; not a fault! and a little boy in the bargain. How much for the mother and child—250 dollars; very well, sir, 250 to begin. Some one has bid 250. Truly, gentlemen, they sell cattle for a larger price; 150? look at these eyes, examine these limbs—shall I say 260? Thanks, gentlemen, some one has bid 260. It seems to me that I heard 275—go on, gentlemen; I have never sold such a bargain. How! 280 for the best cook, the best washer, and the best dressmaker in Virginia? Must I sell her for the miserable price of 280? 300; two gentlemen have said 300. Very well, gentlemen; I am happy to see you begin to warm a little. Some one bid 310—310, going—330—335—340—340, going. Upon my honour, gentlemen, it is indeed a sacrifice to lose so good a cook; a great bargain for 340 dollars. Reflect upon it a little, and do not forget there is a little boy into the bargain." Here our auctioneer was interrupted in his harangue by one of his customers, a man whose appearance had inspired me, from the first moment, with a feeling of horror, and who, with the indifference and sang froid of an assassin, made to him the following observation—"As for the negro child, it was good for nothing; it is not worth a day's nourishment; and if I have the mother, I will give away the child very quick; the first bidder will be able to have it at a cheap bargain." I glanced at the unfortunate mother, anxious to see what effect this barbarous proposal would have upon her. She did not speak, but a profound sadness was impressed on her countenance. The little innocent which she held in her arms, fixed his large eyes on her, as if saying, "Mamma, why do you weep?" Then he turned towards the witnesses of this heart-rending scene, with an expression that seemed to ask, what they had done to his mother to make her weep so bitterly. No, never will this moment escape my memory; it has confirmed me for all my life in the horror that I already felt at this infamous traffic. The auction continued, and finally the crier, striking a heavy blow with a hammer, pronounced the award to Mr. —, for 360 dollars. The victim descended from the table, and was led away by the purchaser. The other slaves were sold in the same manner as poor Betsy. Julia was sold at 326 dollars, and Augustus at 105. They both fell to the same individual who had purchased the former lot.—*Tail*.

## Small Shot from the Magazines.

VULGAR IF TRUE.—The Princess of Wales was a self-willed, froward woman, without affection for her husband, ignorant, and obstinately proud; and, in short, such a person as no man of good taste and feeling could have endured. Within a few, very few days after their marriage, these high personages were assembled at their dinner-table in Carlton House, surrounded by a splendid party of ladies and gentlemen, their guests, when the princess exclaimed, "I left my *mouchoir* upstairs; Prince of Wales, will you lend me yours?" Surprised, yea, astonished at such a request, at such a time, and in such a place, he desired, in a mild tone, one of the attendants to go to Mrs. Young and fetch him one of his new white cambric handkerchiefs; which was immediately brought to him, nicely folded, upon a silver waiter, when he took it as delivered, and so sent it to the princess. Her royal highness took, or rather snatched, it from the silver waiter, and applying it to her nose, used it most violently, and audibly too, in the sight and hearing of the whole company: when, rolling, or rather pressing it closely together, she collectedly measured the distance between herself and the prince, and with the force of a *catapulta* sent it up the centre of the table at the prince's head!—*Fraser's Magazine*.

HAVE YOU BEEN ON THE CONTINENT?—In John Bull this feeling—this hankering after far-fetched and dear-bought pleasures, operates in a peculiar manner. While he is loth to spend a shilling to patronise native talent, let but a Signor Squeakiana, or a Mademoiselle Malapert, an American Nigger, or a Chippeway Chief, come out, and what a change comes o'er his spirit! The strings of his purse relax immediately, and he acts the part of the British baboon admirably, if grinning be any test of excellence in that character. To see the wonders or beauties of nature and art in his own country he cannot spare a moment. Leave his ledger! is it likely? "Time is money," "A penny saved is a penny gained," with a whole host of "wise saws and modern instances," rush to the rescue, and chain him to the desk. Let, however, a trip to the continent be named, and mark the difference—a month now is nothing. "Books and business will do very well for a short time," "Brown, the bookkeeper, is a very steady fellow, and Frumps, the foreman, worth half a hundred of some." And, applying this flattering unctio to his mind, he braves the perils of land and water—makes a sea-gull of himself for the benefit of land-sharks, and, with the courage of a Columbus, actually sets out to explore the continent! To eat "*bifsticks de mouton*" (and which, by the bye, taste as much like dry sticks as mutton) at the "Hotel de Meurice," or to sing, smoke, and sentimentalize on the broad bosom of the majestic Rhine. "Returning from his finished tour," with purse and palate equally out of order, it would be thought that *dulce domum* would be the theme most agreeable. But not so. The homely and honest bluntness of English manners contrasts, in his eye, very badly with the showy deference of the French, or the insidious courtesy of the Italian. And then the charge from "Milord Anglois" to "Barnabas Bruff, Button-maker, Bull-ring, Birmingham,"...is that nothing? O, ye unenlightened who ask the question, little do you know "what's in a name," or the brittle stuff that a Brummagem button is made of! A fall like this, slap bang from the summit of the sublime to the lowest depths of the ridiculous, destroys, at one fell swoop, the gloss that a month's labour had given it; and we have, instead of the polished mirror, which reflected with daguerrotypic faithfulness the mouldering glories or the tinselled splendour of the continent, a piece of cross-grained stubborn metal, incapable of receiving the most beautiful image without distorting it. Or, to speak plainly, what with the assiduous and cringing attention with which he is assailed; what with the honorary emblems of dignity which he receives on the continent, the vanity of John Bull is wound up to the highest pitch. He is honoured and *feted* till, like poor Sly, in the "Taming of the Shrew," he believes himself entitled to the distinction. He treads upon classic ground, and talks

"Of music, painting, sculpture, rhetoric,  
Of dazzling light, and darkness visible,  
And architectural pomp,"

till he actually considers himself a man of indubitable taste. Returning home, his airy castles vanish.—*Small-wood*.

THE FIRST GENTLEMAN IN EUROPE NO COOK.—The royal Amphitryon of England had, indeed, possessed great views for the elevation of the national kitchen; but he wanted the supplies. He had imported the immortal Careme, and had implored his assistance in the revival of the art, as Louis the Sixteenth had called on Necker to restore the ruined finances of France. Careme came!—he saw; but he could not conquer. The ponderous batterie of Brighton (that Woolwich of the kitchen) shone out, in its vast armament of polished coppers in vain! Troops of chuckle-headed little English aids, plump and platter-faced, as the *Cupidons bouffis* of the days of Louis the Fourteenth, were no aids to him; and hecatombs of constitutional English beef, and oceans of passive obedient fish, which came to be caught within view of the kiosks of the Pavilion, invoked the genius of the enlightened foreigner to no purpose. To use his own expression, he was "*suffoque*." Careme could not but perceive at a glance that he had a school, not to reform, but to create. There were no abuses, because there were no uses. He looked at the Smithfield fires of the royal laboratory, and he thought of the *petits feux* and *petit fours* of France! He listened, and discovered that there was no language capable of expressing the ideas which he would have communicated. He found that he had a vocabulary to invent, a grammar to compose, and he shrank from the herculean labour imposed upon him. But, above all, he discovered that the women of England knew nothing of his art—that the presiding deities of the Pavilion scarcely rose above Cowslip's appreciation of a roasted duck, with its coarse and predominating accompaniment of sage and onions, &c.—*Lady Morgan*.

UNDUE POLITICAL INFLUENCE.—Grim-sullen. In holiday trim, with orange cockade in hat, flour-whitened garments laid aside, in silent mill, paces Hopper, conscience-galled, threat-compelled, waiting for summons to march; which may, or may not, be obeyed. Grim-sullen walks he, in silent mill, pondering many things. Specially considers this:—how busy neighbours may regard such base tergiversation. To sacrifice interest for conscience'-sake is good; so is quiet possession of mill, and profitable crushing of grains. In doubting miller's mind, between promptings of honest heart, and dread of ejection, such fierce conflict is there. During which uncertain struggle a knock at the door! Whereupon thou threat-compelled miller of Straggleton? "Ready!" replies the threat-compelled:—decides against conscience; admits the visitor. As iron-bound criminal, death-doomed, *drop devoted*, (so to speak,) expectant of last summons, hearing, instead, glad tidings of unhopd for reprieve; in such manner changes the grim-sullen aspect of Hopper, Long-Straggleton miller, when Barbara, loved maiden, unexpected visitor, appears before his sight; Barbara, maid of the soft lustrous eyes!—which may, or may not, look kindly upon his suit. Choose, miller of Straggleton!—*The maid, or the mill!*—For to be master of both thy destiny suffers thee not. Brief time for decision. Cruel maiden, calm-inexorable, with downcast eyes, has one hand on the door; offers with the other cockade of blue. Thy choice, wavering Long-Straggleton miller! Barbara's eyes, unveiled, love-glancing, mild-upbraiding, are raised upon the waverer. Bright lightning-volley, love-winged! Victory!—People's-Friend Dalton for ever! Orange cockade torn off, and trampled under foot; blue badge of liberty fastened upon love-conquered miller's bosom by Barbara's hands; tempting propinquity of lips!—with or without design; love-tempered box on the ear from the blushing maiden's palm. And now why should the pen of history loiter?—*Peoples-Friend Dalton, 270, Hot-Aristocrat Gander-mere, 269.*—Victory secured by thy vote, love-vanquished miller of Straggleton! Which may lead to consequences? To ejection from profit-grinding mill? Sharp London attorney again! Who affirms that there is no flaw in lease: affirms, and also proves it in courts of law. Undisturbed possession of mill, and profitable crushing of grains. Vine-clad cottage not without a mistress! Soft-lustrous eyes, love-beaming, care-dispelling, making the glad glad with pure sunshine of faithfulest affection. Happy miller of Straggleton, carolling from morn till eve, to the ceaseless beat of profit-grinding mill,—let this be the burden of thy song,—*"Amor vincit omnia!"*—Love unconquered ever.—*Tail*.

AGE OF ANIMALS.—A bear rarely exceeds twenty years; a dog lives twenty years; a wolf twenty; a fox fourteen or sixteen; lions are long-lived.—Pompey lived to the age of seventy. The average age of cats is fifteen years; a squirrel and hare seven or eight years; rabbits seven. Elephants have been known to live to the great age of 400 years. When Alexander the Great had conquered one Phorus, King of India, he took a great elephant which had fought very valiantly for the King, and named him Ajax, and dedicated him to the sun, and let his go with this inscription—"Alexander, the son of Jupiter hath dedicated Ajax to the Sun." This elephant was found with this inscription 350 years after. Pigs have been known to live to the age of thirty years; the rhinoceros to twenty. A horse has been known to live to the age of sixty-two, but averages twenty-five to thirty. Camels sometimes live to the age of 100. Stags are long lived. Sheep seldom exceed the age of ten. Cows live about fifteen years. Cuvier considers it probable that whales sometimes live to the age of 1,000 years. The dolphin and porpoise attain the age of thirty. An eagle died at Vienna at the age of 104 years. Ravens frequently reached the age of 100. Swans have been known to live 300 years. Mr. Mallerton has the skeleton of a swan he attained the age of 200 years. Pelicans are long-lived. A tortoise has been known to live to the age of 107.—*Polytechnic*.

An order was issued by Kien Long, Emperor of China in 1794, to assemble before him all the old men in his empire. Yet, through his extensive dominions, and of the immense population of that country, four persons could only be found whose several ages exceeded 100 years.—*Ibid*.

THE ALOE PLANT.—This exotic production, which is occasionally to be seen in the gardens of horticultural amateurs in this country, is a native both of America and the East Indies, as well as the southern parts of Africa. The latter country it is perennial, and throws forth blossoms annually, although in England, and in other temperate latitudes, it effloresces but once in a century. It from this plant that the medicinal aloes are extracted which are obtained by making incisions in the stem as leaves of the shrub, whence exudes a brown lachrymose gum, which is carefully removed, and exposed to the sun until it becomes hard and crystallized. It is then packed up in bladders or boxes, as an article of commerce. In Africa, and particularly round the Cape of Good Hope the fibres, which are withdrawn from the leaves, are converted by the natives into coarse cloths, as well as cords and cables, which are remarkably strong in the texture and wear extremely well. The liquor expressed from the leaves is used by the Hottentots as an abstergent, in the place of soap, and possesses an unctuous and saponaceous property, producing, by agitation, a very powerful lather. The aloe (Agave) is also employed in forming hedges, and from the stubborn compactness of the leaves, which are armed with acuminous points, resembling needles, it makes a very formidable fence.—*Anon*.

BRITISH BENEVOLENCE.—The income of the principal religious societies, supported by voluntary contributions, exceed £300,000.

LONDON.—Published by W. STRANGE, Paternoster-row, CLEMENTS, Pulteney-street, and G. BERGE, Holywell-street. Published also by HETWOOD, Manchester, NOBLE, WATTS, Birmingham, MANN, Leeds, and MACHEN, Dublin. Printed by H. H. CHAMBERS, 366, Strand.

"BY EDUCATION MEN BECOME EASY TO LEAD, BUT DIFFICULT TO DRIVE—EASY TO GOVERN, BUT IMPOSSIBLE TO ENSLAVE."—LORD BROUGHAM.

NUMBER 3.

PRICE THREE HALFPENCE.

### China.—Its Antiquity an Imposture.

WERE the world to listen to the absurd claims of the Chinese to a high antiquity, the chronology of the human race, as given by the sacred historian, and as proved to demonstration by the scientific researches of geologists, would be confounded, and made only equal to the chaotic mass out of which the world and all its elements were created by the finger of Omnipotence. Sceptic writers, in various ages, have seized with avidity the fabulous chronology of the Chinese, and granted to it all the credence which incontrovertible history could command; that a weapon might be furnished them by which to assail the Mosaic account of the creation of man, and to throw discredit on the occurrence of a universal deluge. Among these Voltaire held a high place; his philosophical deductions, assuming for a moment that the Chinese fables were as true as they are false, startled and shocked the uninformed, and bewildered even many devout believers of the Gospel, because they had not possession of the necessary information whereby to baffle the assailant of truth. Science, however, which many ignorant enthusiasts denominated the handmaid of sceptic philosophy, brought its own immutability to bear witness of its Great First Cause, and prostrated alike the time-fabled structures of the heathen and the doctrines of an illogical philosophy.

That the Chinese are amongst the oldest of known existing nations is undoubted; the foundation of their empire is lost in the wilderness of its own ignorance. Few great nations have existed so long without a marked progress taking place in its institutions—in the acquirements of its people, in the culture of its soil, in the expansion of its commerce, in the advancement of its literature, or in the extension of its name and power as a conquering or humanising nation. In neither of these have the Chinese made the smallest progress, although their pretensions to an early knowledge of almost every known art is unbounded. When a nation progresses in improvement, remnants of other ages remain to attest the speed and amount of progress made towards refinement; an old tower, a broken wall, relics of household goods, and every petty article of ornament, become to the antiquary evidences of other times and systems, and without which changeable history is incomplete in its credentials. In China, however, improvement has been arrested. There exists no witness of the past to attest an antiquity of even a thousand years, except, perhaps, portions of the great wall, which can be traced to have been built nearly three centuries before the Christian era; but even that is modern in comparison with other Asiatic countries. With a pride and ignorance unmatched by any other people, they prevented the visits of strangers, and flattered themselves with the belief that no improvement could come from without. All that can be said with certainty is, that six hundred years ago they were a numerous, a civilised, and comparatively a polished people—as civilised and as polished as they are at the present day. The records which they submit as evidence of their remote antiquity, however, were not then known. An invading Tartar dynasty at that period held possession of the throne, and in that alien family the supreme power remained until the year 1357, when the Tartars were destroyed or expelled from China.\* For nearly three hundred years the Chinese were governed by native rulers, when a second revolution took place. A rebellion having occurred in the

country, it was invaded by the warlike Tartars, who, with the rebels, took possession of Peking, and their successors have since retained the throne of the empire.

This is almost all that can be given of the history of China. The people are so self-satisfied, beyond a wish for change, or a desire to become acquainted with the progress of the world in improvement, that no judgment can be formed of them by comparison with other nations. Wedded to their soil, their extensive territory now swarms with myriads of human beings, who have scarcely one more elevated thought than how to eat and live, and die. Of the one hundred and thirty millions which own the yoke of the emperor, at least one third subsist upon plunder or by alms; the trade of the merchants seldom extends beyond their own narrow seas, and their ideas of commerce are characterised by narrowness and stupidity. No stranger is by law permitted to settle in China, and every adventurer who succeeds in obtaining a footing must have done so by pandering to the gross prejudices of the authorities, and prostituting his own information to an acknowledgment of their superior attainments, and an admission of their boasted antiquity as a nation.

The principal evidence of the age of the empire is contained in a record of its chief events, said to have been written by the command of each emperor as the circumstances occurred. These events are said to be confirmed by accounts of eclipses and other solar phenomena, which occurred at the particular periods. This, at first thought, might be received as incontestible evidence of the truth, did not a number of other circumstances render the antiquity of China not only impossible, but its claim to it ridiculous. The principle of eclipses, for instance, once known, the periodical return of the phenomena can be calculated to a certainty. In like manner the previous occurrence of an eclipse can be equally easily decided upon, and back and back may the mathematician calculate till he has ascended to a date long prior to the creation of the human race. To each of these eras the fabulous historian may ascribe certain events, and fill up the remainder of the periods with concurrent circumstances. By this easy method a genealogy may be verified (if celestial phenomena is to be taken as a verification of sublimary events), from before the birth of time itself. To be able to calculate thus, however, is to prove an acquaintance with mathematical science to no insufficient degree; but a short inquiry will speedily demonstrate that it was not the Chinese who produced the record, nor verified it by celestial observations.

The Chinese have long been in possession of astronomical instruments, and pretended to take observations by them. These instruments are kept at Peking and at Nankin. The former city is situated in latitude 39 deg. 55 min. 15 sec.; the latter in 32 deg. 4 min. 3 sec.; but all the instruments are constructed for the latitude of 36 deg.! It is, therefore, impossible that a correct observation or calculation could have been made at either of these capitals. Add to this, that the Chinese astronomers and geographers are altogether ignorant of longitude, while they adhere to the opinion of the earth being of a square form, and some idea may be formed as to their capacity of calculating eclipses from remotest antiquity. As to their possession of the instruments, a short historical fact will sufficiently demonstrate that they are not of Chinese manufacture. A colony of Greeks planted themselves in Bactriana, and cultivated the sciences with their accustomed talent and acuteness. Having obtained their independence from the successors of Alexander the Great, they pushed their conquests to some extent, founded an empire, and placed the seat of government in

the city of Balk, which is situated in the 36th degree of north latitude. This empire was overthrown by the first Tartar princes who invaded China, to which latter country the sun-dials and astronomical instruments were transported by the victors. The Jesuits, who, some three hundred years ago, obtained a footing in China, knew the use of these instruments, and were well acquainted with mathematics. They several times rectified the calendars, which the Chinese could not keep correct. They gathered the legends of the country, threw them into a collected form, interlarded their detail with accounts of celestial phenomena, and fixed themselves in the good graces of the emperor, by presenting him with an established history of the empire, confirmed by celestial observations, and hence the boasted antiquity and the name of the Celestial Empire.

With reference to the discoveries in the arts and sciences said to have been made in China, a short summary of contradictions and indisputable references will prove that the same system of imposture has been adopted. The celestial record attributes the invention of gunpowder to an era coeval with that of Julius Cæsar. It was invented in Europe during the reign of Edward III., the very period when an eruption took place in China, and the most likely at which strangers were permitted to enter. About that period the Portuguese had pushed their discoveries to China, and the form of the Chinese musket at the present day is precisely the same as that used by the Portuguese three hundred years ago! The art of printing is only a few years older than that of fire-arms, yet in China it is also set down as being known in the period of Julius Cæsar. That it must have been introduced by the Jesuits, however, is evident from the fact, that the manner of printing in China to this very day is the same as that pursued by Faust, viz., wooden blocks in the shape of pages, with the letters cut in relief. The loadstone was known in Europe during the twelfth century, but its uses were not fully developed till a considerably later period. The Chinese boasted to the Portuguese, on their first visits, that they were already acquainted with it, but that they found no use for it. In fact, a knowledge of the power of the magnet had been taken to China before its application to navigation, and it was not until informed by later strangers of its polar influence that its noblest uses became known to them. Glass also is said to have been made in China two thousand years ago; this might have been the case, and yet the celestials have no claim to its invention, for that material has been discovered in the ruins of Pompeii, and may, therefore, have been known to many other nations of antiquity. The art of painting has, undoubtedly, been long practised in China, but no improvement is visible in the most modern from the most ancient specimens. Possessed of splendid colours, they are enabled to make a gorgeous display of figures, but they have not the remotest idea of perspective, and the most incongruous shapes are crowded together in confused though glaring masses. In architecture, the Chinese have made some slight advances towards perfection. Their temples are solid, and look light, though not graceful; but in sculpture they are miserably deficient. A comparison of the pagan devices of the Greeks and Chinese will attest the utter want of taste in the latter. The statues of the Grecian gods have been unequalled by the most talented of modern sculptors; the majesty of grace, the expression of attitude, and the perfect elegance of symmetry and form with which the Greek chisel impersonated the creation of the artist's mind, are lessons and examples even in

\* This was contemporaneous with the reign of Edward the Third of England.

their ruins; but those of the Chinese are hideous in appearance, deformed in shape, and disgusting alike to nature and to art.

In gardening, the Chinese early displayed a taste approaching to refinement, and the beautiful display of hill and valley, lawn and shade, which now diversifies the parks of our nobility, has been imitated in a great measure from them. In the manufacture of porcelain, also, the celestials must be allowed to have been in advance of Europe until within the last century. Although British art has since outrivalled in workmanship the productions of China, we have not yet discovered a clay sufficiently pure and white to equal that enjoyed by the Chinese, which is found in great quantities in their rich and teeming country.

The political constitution of the Chinese is that of a widely-ramified despotism. The Emperor retains an uncontrolled mastery over every subject in his empire, and all his officers possess the same authority over those beneath them. The office of mandarin is open to unchallenged purchase; and justice, if such it can be called, is bought and sold like the most common article of merchandise. The professed religion of the country is a confused mass of common-place truths and absurd doctrines, without either force or meaning; the grand panacea of doubt and fear is divination. The principal book of religious consultation, which by the priests is held in high estimation, contains a diagram of several cross lines, which symbolically portray the most complete state of human enjoyment and felicity. This is consulted by a religionist when he is anxious to acquire a knowledge of his future being. The priest takes a handful of short pieces of wood, throws them up in the air, and, as they fall, their position with the lines of the diagram is compared. The more nearly they resemble the figure of the lines the more happy will be the lot of the inquirer: but, as the priest can alone determine whether he threw the pieces of wood to a proper height, or if they fell in a proper manner, it generally requires some two or three attempts before the true fate can be known, according to the will and ability of the person to pay for his information. The morals of the Chinese are produced and ruled by fear, interest, hypocrisy, and selfishness. As the poor are said to be supported by the public purse, so the authorities exercise the most despotic sway in compelling the relatives of the destitute to maintain them. A father is answerable for the crimes of his children, brothers for their brothers, and so on, through all the gradations of a family; and it is no uncommon practice to sacrifice the whole for the fault of one.

This rude and barbarian system is nearly akin to that which pervaded Europe during the darkest years of its history. It evidently had its origin from one and the same source, spreading its baneful influence over almost the whole habitable globe. Gradually and securely it has been swept away from the progressing nations of the north; but it prevails, with the infancy of all the arts, in China to this day, undisarmed of its barbarities, blind in its decisions, and remorseless in the execution of its edicts. The same brutality of system—the same combination of pride and ignorance, may exist by itself for ages yet to come, and thus the most crowded country in the world vegetate from generation to generation, unaltered, unimproved—unless the disturber come.

Nations which permit themselves to remain in the slough of ignorance are only to be driven from it by the strong arm of war; to undergo the ordeal of carnage—to be maddened by the cries of their murdered countrymen, and the desolation of their native land. As the sea would become a source of pestilence unless for the tempest, and as the earth would burst with the pressure of its hidden fires, save for the volcanic valves, so the country which has no remedying power within itself must be shaken by an adverse power. It will not be until oppression has sanctified their country to them that the Chinese will look upon what they have lost with inquiring eyes—it will not be until affliction has pressed the wine-juices from their hearts, that selfishness will give place to patriotism, and a desire to equal or surpass the conqueror, whoever he may be, become a living and active principle in their minds. The free and unfettered intercourse of nations with each other is the best preventative of war; the exclusion of strangers is sure to excite the cupidity of the powerful. Situated in a country remarkably favoured by nature, the Chinese possess within themselves almost every necessary product of the earth—hence their little dependence on commerce and international communion. Situated in an untraversed continent, surrounded by no great individual competitor—hence the lengthened period of their security. A distant people, however, have taken umbrage at their manner of dealing—a remote island, unknown in its position, its resources, and its gigantic power, by their wisest men, sends forth its armed vessels to humble, if not to destroy. Did China contain even one great or governing spirit, that catastrophe might be avoided, the haughty islanders might be pacified, and the country preserved from rapine—from the whelming flood of fire, and the still more dreadful sacrifice of human blood. But the whole history of the vast empire gives painful evidence that the noble attributes of the human mind have obtained no mastery in its councils—low cunning and paltry subterfuge usurp the places of wisdom and discretion, and in all likelihood millions of our fellow creatures will be doomed to slaughter through the errors of their rulers. It is a fearful prospect on which we

look; may the assailant be merciful in his day of vengeance—may his car be untarnished with unnecessary gore, and should his be a victor's footstep on the soil, may its impress bear the majesty of a deliverer, and become the pathway of renovation and improvement!

#### The Waverley Novels—Guy Mannering.

This romantic story of astrology, gypsies, villany, and adventure, has been frequently dramatised; but never with effect—never with justice to the author, and seldom with any regard to the characters of those who figure in the work. Those who have seen the opera of "Guy Mannering," and the melo-drama of the "Witch of Dorncleugh," will at once admit the truth of this observation. The presiding hero of the novel is introduced as a young English gentleman, who, travelling for amusement in the northern counties of England, crosses the border, and while visiting an old abbey in the neighbourhood of Dumfries, is benighted and loses his way; but, by the assistance of a lad bearing the inglorious name of "Jock," he reaches Ellangowan on the evening when an heir is born to that old but decayed family. The parlour is occupied by the laird and his taciturn companion, Dominie Sampson; the latter had been a serious but ungainly boy, and his parents, with the feeling so common in Scotland, had educated him for the ministry; he failed, however, in his first attempt, and settled down into a voluntary schoolmaster, receiving fees from those that would pay, and teaching gratuitously the children of those who could not. At the juncture of Mannering's arrival, Meg Merrilies, a gipsy chieftainess, makes her appearance, brought by the important intelligence which had been scattered over the country by the midnight messenger for the midwife. Meg offers to tell the fortune of the baby, and Mannering enters into a jocular argument with the Dominie respecting the pretended science of astrology. In the morning Mannering attempts to resolve the nativity of the child, and by the rules to be observed, becomes half-seriously impressed with the belief that danger awaits the object of his calculations in his fifth, tenth, and twenty-first years. The scholar had, on a previous occasion, made a horoscope of his lover's fate, and found that her death was threatened in her thirty-ninth year; she was then eighteen, consequently, the crowning danger of the heir of Ellangowan would occur in the same year as that which astrology fixed for the death of his mistress. Struck by these conclusions, and disturbed by the reflections they produced, he resolved to pursue the unquiet art no longer. He takes an early walk through the grounds and ruins of the old castle, where he discovers Meg Merrilies spinning a thread, by which she also may attempt to determine the fate of the infant. Ere he can accost her, however, the witch or gipsy is intercepted by Dirk Hatteraick, who comes with curses in his mouth to beg the hag's blessing on his smuggling lugger, that she may sail with safety! At breakfast, Mannering is asked for the "fortune" of the child; the astrologer, however, fearful lest the expectation of danger at a particular period might produce the fatal result, gives the old laird possession of the document with some reluctance, and only upon an assurance that it will not be opened for the period of five years. He then takes his leave of Ellangowan, and is not known or heard of for a long period of time.

The scheme of nativity is encased in parchment, then in a velvet bag, and hung round the neck of the infant, not without a strong desire on the part of the mother to open it; but the fear of displeasing fate prevails over her curiosity, and it is to be kept sacred till the eventful period shall arrive. Four years elapse without events. During the fifth the ministry of the day was broken up, parliament was dissolved, and the district disturbed by all the concomitants of a contested election. The old member had been obnoxious to Ellangowan (all Scotch proprietors were called by the name of their estates), and he and his rascally attorney, Gilbert Glossin, resolve to oppose him. The estate is divided upon parchment into "faggot votes," ten new electors are added, and by them the new candidate is returned; the laird is made a county magistrate, and Glossin is rewarded by the lucrative situation of clerk of the peace. Ellangowan, elated by his preferment, becomes an active dispenser of justice: he detects poachers, orchard breakers, and pigeon shooters; the lame are made to walk, the blind to see, and the palsied to labour; and, worst of all, the clan of gypsies, which for years had dwelt comfortably and securely in a glen on the estate, are removed. The latter was a matter of some difficulty and great annoyance; the gypsies could not at first believe that Ellangowan was in earnest; but when they found that their children were horsewhipped for trespass, their asses impounded for grazing on the lands or parks, then the hen-roosts began to be plundered, the linen stolen, the dogs kidnapped, and every possible retaliation resorted to. In the midst of this warfare, Henry approached his fifth birth-day; he was already a rambler in the woods and glens; had been several times lost, and once at the gipsy glen, from which he was brought back by Meg. The old witch, however, would never enter the house after the warfare commenced; her nephew had been sent to bridewell, and she therefore, transferred her hereditary goodwill from the head of the family to its scion, and sung him songs in the wild wood, gave him a ride on her jackass, and stuffed his little pockets with gingerbread. The smugglers, also, came in for a share of the

magistrate's wrath, and Dick Hatteraick is kept at bay by the vigilance of Frank Kennedy, a diligent excise officer. The birth-day arrives, and with it an engagement between a revenue cruiser and the lugger. The latter is disabled by a ball while rounding a headland, and Kennedy, who has been a spectator of the chase from Ellangowan height, sets off to inform the sloop of war that the smuggler is lying disabled behind the point. While on his journey, he meets young Bertram and the Dominie; the former claims a long-promised ride, and off they set. But they do not return! After a long and painful search by the distracted father, the body of the murdered exciseman is discovered as if thrown over the cliffs into the sea, the sloop has gone off, and the lugger is, burned and blown up. In the midst of his agony, the intelligence had been incautiously conveyed to the house; the lady is overtaken by premature labour, and the bereaved laird enters his dwelling the father of a female infant and a widower. The distraction of the father at his loss, the inquiries of the sheriff, the apprehension of Meg Merrilies, her confinement, and subsequent liberation, and the loss of all clue to the smugglers, occupies a chapter of no small interest, which concludes the narrative for a space of seventeen years.

We have now arrived at the scene which opens the opera of "Guy Mannering," where Mrs. M'Candlish is presiding over her parlour, the laird and his daughter Lucy being expected, as they have been compelled to leave the mansion through the knavery of the agent and attorney, Glossin. A stranger also arrives at the inn, who proves to be the great Colonel Mannering from the East Indies, and the astrologer of the early part of the story. By a letter which he transmits to a friend in England, we learn that the lover of his youth had accompanied him to India, born him a daughter, and died there under peculiar circumstances. A young man of the name of Brown had joined the regiment as a junior officer, whose conversation became somewhat pleasing to the lady of the colonel. A rival subaltern plays the part of Iago, whose insinuations produce a duel between Brown and his commanding officer. The former is wounded; but at the moment attention is about to be paid him, they are set upon by a party of the natives, through which they have to cut their way. The lady having heard of what was occurring, had come out to stay proceedings. She also is placed in jeopardy; the betrayer is wounded, and while dying confesses his guilt; the lady sinks under the infliction; Mannering resigns his command, and arrives in Scotland with his daughter, to whom, and not to the mother, Brown had been devoting his attentions. The Colonel attends the sale of the Ellangowan property, with a view to its purchase; Mr. Bertram, having removed to the vicinity of the ruins to avoid the gaze of the purchasers, being shocked by the unexpected presence of the villainous attorney he had fed and nurtured, suddenly expires. His mental and physical energies had been alike prostrated, and his death in the open air, by the side of his daughter Lucy, is portrayed in some of the finest touches from the pen of the author. The sale being postponed for a fortnight, Mannering leaves the country for a time, informing the conductor of the sale that he will send him instructions to purchase on his account. The day arrives, but neither Mannering nor his missive arrives. The conductor lengthens out every preamble of the sale to the utmost, reads the title-deeds as slowly as if they were his own death-warrant; but all this is of no avail; no other purchaser appears than Glossin; and the lands of Ellangowan are purchased by him at the upset price. That same evening a drunken messenger arrives with a packet, four days old, authorising the purchase for Colonel Mannering.

We now learn that Brown has also returned from India, and has had several nocturnal interviews with Miss Mannering, while sojourning at a friend's house in the north of England. Disappointed in the purchase of Ellangowan, the Colonel takes up his residence in a neighbouring seat, and adopts Miss Bertram as a member of his family, while the old, pedantic, but virtuous-hearted Dominie is made custodian of his library.

The second volume opens with the description of a Cumberland scene. Brown is a solitary pedestrian, determined to obtain another interview with Julia. Arrived at a hut, he there meets with a jolly Scotch farmer, and no less a personage than Meg Merrilies. From the conversation of the men, Meg learns Bertram is dead, that Ellangowan has been sold, and Glossin, whose mother was no better than herself, had become the purchaser. An idea, indistinct but painful, makes her inquire of Brown who and what he is. She determines to see the glen of Dorncleugh again. Brown accompanies Dinmont to his farm. The pictures of a Scotch farmer of the last generation, and a farmer's wife, are beautifully given; but for the children and the dogs, the book must be read;—Sir Walter Scott had a family—was a good husband, and possessed the feelings of a father. Brown remains some days with Dinmont, and is introduced to the Border sports of fox hunting on the hills, and salmon hunting in the stream—otter-hunting and badger-baiting filling up the time till his departure.

In travelling to the neighbourhood of Ellangowan, Brown is benighted, and caught in a snow-storm. In attempting to reach a light from a cottage, he undergoes several perils from the nature of the ground, and is shocked on reaching the hut to find it occupied by Meg

Merrilies and a dying gypsy. Meg recognises him, and evinces the same mysterious feelings towards him. The gypsy is no other than he who had thrown the exciseman over the cliff into the sea, and the deed weighs heavily on his death struggle. Others arrive, Brown is hidden and protected by Meg. In the morning she conducts him to the road towards the village, but charges him not to leave the country till he hears from her again. From the letters of Miss Mannering to a female friend, we have a stirring account of an attack of the smugglers on her father's house, in consequence of some excise officers being protected there from pursuit, and of an interview she had with her lover. She, Miss Bertram, and young Hazlewood, Lucy's lover, had been walking round the frozen lake, when Brown, at a narrow path, suddenly made his appearance. Agitated and surprised, Miss Mannering screamed aloud, which Hazlewood interpreted into fear. Brown is about to accost the lady, when he is told to keep back by Hazlewood, who points his fowling-piece at the stranger. Brown, equally agitated, rushes forward to seize the piece; it goes off in the struggle, and wounds young Hazlewood. Julia faints, Lucy screams, and Brown hurries off and escapes. The whole country is alarmed, already in excitement at the conduct of the smugglers. Glossin, kept at a distance by all the gentry of the neighbourhood, deems this a fitting opportunity to make himself useful—to ingratiate himself with Colonel Mannering and old Hazlewood. He, therefore, employs some of the lower limbs of the law to search out and apprehend the offender; and they bring him Dirk Hatteraick, the captain smuggler! The interview is of a new and startling character to the reader. By it we learn that on the murder of Kennedy, Glossin had gone to a secret cave, and there for half of the cargo of a consort-vessel, had aided the escape of the murderers, and counselled the taking of the boy to Holland. By this means the heir-male to the estate was removed, and old Bertram placed completely within his power. Alarmed at the appearance of the smuggler, Glossin aids his escape, but is to meet him in the cave to learn more about the boy, who, he is told, is alive and well, and on the very coast! At the rendezvous the villains agree that on the capture of Brown for the attack on Hazlewood, Glossin shall refuse all bail, but commit him to bridewell, which, being situated next the custom-house where the smugglers' property, taken by the officers protected by Mannering, was lodged, Hatteraick is to attack, and carry off the victim to sea. At this time a maiden aunt of Lucy's dies, and a ten years' old will in the hands of Glossin, giving the property to the niece, is handed over as a salve to the lady. This document is taken by Colonel Mannering to Edinburgh, who attends the funeral of the deceased. The anxiety of the expectant legatees, their disappointment and remarks, are truly characteristic of legacy hunters. The old lady willed her property to Henry Bertram, on the assurance of Meg Merrilies that he was alive and well, and would speedily appear to claim his inheritance. Brown retires from the vicinity for a short time; but impelled by his usual desire to obtain an interview with Julia, he returns in a boat to the district, and is set ashore a solitary and unknown wanderer on the domain of Ellangowan. He ascends the steep, strong but undefined emotions awakening within him that he has seen the spot before. Arrived at the eminence, the spot on which old Bertram had died, he overhears Glossin talking to an architect respecting the demolition of the ruin to furnish materials for a wing to the new mansion. He turns suddenly round, and abruptly says, "Would you destroy the castle, sir?" The unexpected appearance of the man, the question almost amounting to a challenge, and the figure so exactly resembling that of his patron in his best days, makes Glossin fall back appalled and confounded. He sees before him the great obstacle to his retention of the estate, and he resolves to apprehend him at once on the charge of attempting the life of Hazlewood. This is accordingly done; and after an investigation before the elder Hazlewood, aided by Glossin, the prisoner is committed to safe keeping in the bridewell of Portanferry. Glossin alarms Hazlewood that the smugglers intend to attack his house, and thereby induces him to call the soldiers from the custom-house for his own protection, by which means the desperate attempt of Hatteraick is made less dangerous. A secret and untiring agent, however, has been busily engaged in the service of Bertram (for, of course, the reader is already satisfied that he is the long lost heir of Ellangowan). Meg Merrilies, animated by a desire to retrieve the house under which she so long enjoyed a resting-place, despatches a gypsy for Dandie Dimmont to meet and remain with his friend at the jail; she also sends a letter to Colonel Mannering to have a coach ready at the same place to receive some one in whom he is interested. During the night the smugglers land, fire the custom-house, and break into the prison; as Bertram is laid hold of a voice whispers to him to make no resistance till he is in the street, where a wild scene of flame, riot, and plunder is at that moment made doubly terrible by the arrival of the dragoons, who had been drawn off by the sheriff from Hazlewood house. At the given moment Bertram throws the fellow off, who is speedily prostrated by Dimmont's whip. They gain the coach, which drives rapidly off to they know not where, till they at length are set down at the seat of Colonel Mannering. A scene of much awkwardness to all parties ensues. The Colonel sees for the first time the person he thought he had left killed in India. Julia is afraid of a second rup-

ture; Lucy beholds in him the dreaded man who wounded Hazlewood, and Mr. Pleydell, a lawyer, recognises him as the exact similitude of his friend Godfrey Bertram. An explanation, trying and tenderly interesting, ensues. The good old Dominic awakens as from a trance; he cries aloud in the transport of his joy, a ray of light bursts in upon the mind of the adventurer, and at once he recollects that Bertram was his name, and that Sampson was his tutor. He recollects something of being on horseback, of being violently dragged to the ground, and taken to a cave; of an indistinct sense of danger, of going to sea, and of being brought up in Holland under the name of Brown, with a consciousness that he had not been well dealt with. He was told that his father had been a smuggler, and was killed on the coast of Scotland. His employer latterly took a liking to him, placed him at the desk, and thereafter sent him to India as a clerk. The affairs of the house getting into confusion, he entered the army as a cadet under Colonel Mannering, and left India immediately after his release from captivity.

Mannering and Pleydell set off to Hazlewood house to offer bail for Bertram. In their absence Bertram accompanies the ladies to the vicinity of the ruins, and there he is met by Meg Merrilies, who reminds him of his promise to go with her at any moment she should call. Accompanied by Dimmont, the two men follow the old gypsy to the secret cave, into which, after due care, they are ushered, and find it occupied by the smuggler Hatteraick. Remaining unobserved till a signal is given by Meg, the old smuggler vomits his spleen and wrath upon the withered hag, who reminds him of the foul deed of the excise officer's death—of the robbery of the child, and of his return. "The hour is come, and the man!" exclaims the dauntless gypsy, and the men rush forward to seize the villain. With one pistol he mortally wounds Meg in the neck, and accidentally misses Bertram with another. With great difficulty he is secured; the woman is borne out to the open air, then to her hut at Dernelough; there she explains the villany which had been practised, and of the vow she took to remain silent till the boy was twenty-one, if they would spare his life. That vow she kept through sorrow, shame, and want, but she had fulfilled it now, and she called on the brutal and dogged villain to attest the truth of what she said; but he remained silent, and turned upon her a look of hardened and inflexible defiance. Hatteraick is taken to Kippetering jail, while the aged gypsy died as she had lived—her life and death alike proving the truth of an observation of Dimmont's:—"They're worst when they're worst guided—there's baith gude and ill about the gypsies." At the village of Kippetering the examination of Hatteraick is conducted by Mr. Pleydell, who had been sheriff when the murder of Kennedy was committed. The declarations of the gypsies are taken down, but Hatteraick preserves a determined silence. Pleydell, accordingly, tries him on different grounds, and introduces the shoemaker who measured the foot-steps on the day of the murder at and around the cliffs. Hatteraick bluffly contradicts this witness by declaring there could be no footmarks, as the ground was frost-bound. At this moment Glossin joins the quorum, but is received in the most distant manner. Bertram's evidence is taken as to his slender recollection of events, and an attempt made by Glossin to designate him as a bastard son of the old laird is foiled by the production of the real Simon Pure himself. The velvet bag and the horoscope are produced from his neck, and admitted by Colonel Mannering to be the same he wrote on his first visit to Ellangowan. Pleydell, ever on the watch, discovers that Hatteraick's eye is intent on his pocket-book, lying on the table, and takes out the papers to examine them; but, observing that the interest of the smuggler instantly cools, he takes up the pocket-book again, and, on a close examination, discovers an opening between the leather and the lining, from which he extracts three small slips of paper. Then, turning suddenly round upon Glossin, he enquires of him how it was that he was not examined on the day of the murder? The excuse is made of having had to go off to London on the following day, on urgent business. "Oh, I suppose," says the ever ready Pleydell, "it would be to negotiate these three bills, drawn by you, and accepted by Dirk Hatteraick, on the very day of the murder." The result of this exposure is, that Glossin is committed as well as Hatteraick.

In the jail Glossin bribes the keeper to be admitted to an interview with the smuggler, but the latter repels all his advances. Broken and dispirited by the loss of his ship, men, and goods, Hatteraick mutters vengeance against the attorney as the cause of all his losses, and, because he is bantered by him, he strikes him with his chain, and in falling over an iron rod, Glossin is killed by breaking the vertebrae of his neck. Hatteraick commits suicide in the most determined manner, and the law is thus deprived of both its victims. The difficulties of a legal recognition of Bertram are easily got over, and the good humour of the author is displayed in the concluding chapter by a happy intermixture of conversation and narrative, in which is told how Ellangowan was to be repaired, and who were to be its inmates. The old aunt's estate is given up to Lucy, who thereby becomes rich enough to obtain the countenance of the elder Hazlewood. As a matter of course, happy marriages ensue, and the good old dominie is carefully provided for; the astrologer, however, resolves to interfere no more with fate, and ends his history as a quiet country gentleman.

### Progress of Geological Discoveries.

THE account of the progress of this instructive and important department of knowledge constitutes an interesting chapter in the history of the human mind. The science is, in fact, altogether of modern date and origin; and it is a reflection calculated materially to abate the pride of human attainment, that mankind had been denizens of the earth for nearly six thousand years ere they bestowed any attention on the nature and formation of the beautiful planet which they were called on to inhabit. In ancient times, it is true, the occurrence of fossil organic remains attracted, even from the earliest periods, the attention of enquiring and philosophic minds; and Aristotle, Strabo, and Pliny have allusions to fossils; while some well-known lines of Ovid, in reference to their occurrence, are quoted in almost every elementary work on the subject. The enquiries of single observers led, however, to no systematic or satisfactory result, and the little light acquired on the subject during the classic ages was, in the middle era lost amid the gloom and ignorance of that benighted period. The instructive and beautiful phenomena of Nature were mingled with fables of the grossest absurdity, and the facts which illustrate her eventful history were converted into legends of the wildest and most ridiculous superstition. It was not till the revival of learning brought about a taste for natural science, that geology followed the example of astronomy, and that something like a just and rational view of the past history of our globe, and of the varied and interesting phenomena which it exhibits, began to be entertained. It is to be observed as a striking fact in the annals of scientific inquiry, and one singularly characteristic of genius, that we invariably find some distinguished mind in advance of its age, some single philosopher, endowed with almost prophetic intuition, enabling him to see the past and anticipate the future. In the history of this important study we find this truth verified in repeated instances. Leibnitz, nearly a century and a half ago, when all the physical sciences were yet in an infant state, formed opinions as to the igneous origin of the lower rocks, and the true nature of other and varied depositions, which the experience of subsequent enquiries has only served to confirm. Linnæus, a hundred years since, declared many of the calcareous deposits to be of organic origin, the remains of minute corals and shells; an assertion which was subsequently doubted, and even derided, but which the investigations of modern enquirers, in particular of the distinguished Ehrenberg, tend most triumphantly to establish. The distinguished men whom we have named were followed by others of kindred energy and talents; and Lehmann, a practical mineralogist and miner, is among the first who pointed out some of the most important and instructive facts in the history of the science, as to the order and succession of the rocks, and the diffusion, at certain intervals, of similar substances over the whole crust of the globe. Werner followed, and though his theories were partial and limited, and have subsequently yielded to more extensive generalisations, yet his labours, more especially in his peculiar department of mineralogy, have tended materially to advance the interests of science, and to extend and improve our knowledge of the structure of the earth. About the same period the subject was embraced by several of our own countrymen, among whom Dr. Smith was one of the most practical, and therefore the most useful and instructive of observers. The lamp of knowledge, thus kindled by the gifted men whom we have named, was borne along the stadium of philosophy, and bestowed from hand to hand until it reached the Lyells, Bucklands, and Mantells of the present day. The study of the ancient earth, when once reduced to order and system, and elevated to the rank of a science, attracted in an eminent degree the attention of the philosophic public, and enrolled among its votaries some of the most ardent and gifted minds of the age. The casual meetings of a party of naturalists and men of science, for a merely temporary purpose, suggested the expediency of continuing their assemblies, which were found to be both instructive and delightful; and thus gave rise to the Geological Society, the most influential and important of all modern associations of the kind, and the model on which most institutions of a like nature founded since its establishment have avowedly been formed. The value and interest of its collections, the instructive nature of its proceedings and transactions, and its general use in the cause of knowledge, are too well known to require illustration. After a lengthened period of usefulness, the society was instrumental in establishing the annual congress of savans, known as the meeting of the British Association for the Promotion of Science. The idea, it is true, originated with the Germans; but the leading members of the Geological Society were the first to establish and support the project; and under their auspices it has chiefly continued to flourish. At the present moment the labours of our most eminent geologists are found to be so influential, instructive, and important, that it would be difficult, perhaps, to characterise them more justly than that their writings are no less an honour to letters than they are to science, and that they are to be enumerated among those who have contributed most efficaciously and successfully to promote the best interests of society, and assist the moral and intellectual improvement of their fellow-men.

## NO. III.—DISSOLVING VIEWS.

THROUGHOUT the whole range of amusements which depend upon science for their creation, not one will afford more general delight, or better repay the exertions made to secure it, than the exhibition of reflected pictures known as "Dissolving Views."

Most persons are acquainted with the effects to be produced by the magic lantern. This instrument is an oblong box, having two magnifying glasses introduced (telescope fashion) into one end of it, behind which a slit is made in each side of the box, and behind the whole an aperture is left wherein to place a lamp or other sort of artificial light. The slits in the side of the box, which are placed exactly opposite to each other, permit the forward and backward motion of a long piece of prepared glass, secured by a small framing of wood round it. On this glass a set of figures is painted, generally of a comical and fantastic nature; and by passing this frame to and fro in the slits, a light having previously been introduced in the proper place behind, a grotesque display of running and dancing shadows will appear upon the wall, the same being magnified representations of the paintings on the glass. By multiplying the number of these glasses, an almost endless variety of entertainment may be provided for a long evening, which will infallibly produce a great deal of merriment and laughter.

The "dissolving views" are produced by a junction of two of these instruments, simultaneously acted upon by a vivid and powerful light, known as the oxy-hydrogen light. One of the walls in any apartment, where the views are to be displayed, must be provided with a square calico curtain (generally attached to a roller for convenience of removal when not in use), on which a circle, as large as possible, is drawn, and the whole surface of the interior part of it painted white; the other parts, outside the circle, being black. This is technically called a disk, the face of which receives the transparent representation of the objects to be magnified. During the periods of exhibition, the room in which it takes place is completely darkened in every part, with the exception of the disk, which is brilliantly illuminated by the rays of the oxy-hydrogen light in the back of the box, being directed through the magnifying glasses already mentioned and brought to bear, in a proper focus, upon its entire surface.

In order to understand how that peculiarity in the exhibition of the views termed "dissolving" is produced, it will first be necessary briefly to describe what it is.

Suppose a picture were exhibited on the disk which represented a vessel in one of the docks receiving her cargo on board; while the eye is contemplating it, a gradual but almost imperceptible change comes over the whole of it; the original picture fades insensibly from the sight, and another as stealthily takes its place. In a moment or two the first has entirely disappeared, and a second representing the vessel passing the Nore light, is fully developed. Subsequent changes describe the progress and fate of the ship and crew. The first catches fire and is blown up, or becomes a wreck; and the crew have taken to their boats. Then follow pictorial representations of their sufferings, until, finally, they are happily landed and rescued from destruction. A tale of thrilling interest may thus be emphatically told upon the canvas in a series of eight or ten views, the first dissolving into the second, the second dissolving into the third, the third into the fourth, and so on to the end of the history: the peculiarity being that each picture insensibly grows out of that which preceded it, the change in both occupying exactly the same fraction of time, the representation of the second being only completed at the identical moment that the first has totally disappeared.

The means by which this singular and truly charming effect is produced are now to be described; and the process is so simple, that every body will begin to think it very extraordinary it was not well known long ago. The present occasion is, however, the first on which any explanation whatever has been offered regarding this seeming phenomenon, which has lately puzzled many thousands of people in the metropolis, philosophers and scientific persons among the number.

Let it be remembered that we have described a magic lantern as a box, one end of which is provided with a pair of glasses, the other adapted for the reception of the oxy-hydrogen light; and the space between arranged for the reception of the transparent picture to be displayed upon the disk, by the light behind reflecting it through the magnifying glasses, which are pointed towards it. A properly painted subject is then placed in the box; its size, of course, corresponding thereto. This painting must be executed on glass, and the greatest attention must be paid to delicacy and perfection of finish, because the apparatus will magnify defects as well as beauties. When placed in the box, and the light is adjusted to the proper focus, an enlarged representation of this picture will be transmitted to the disk, every colour of the original painting appearing with increased vividness in the reflection. Immediately in front of the glass painting, the box is provided with a shutter (or fan, as it is called), which slides up and down at the will of the lecturer or demonstrator, whose command

over it is regulated to great nicety by a piece of simple mechanism. When this fan is completely down, the transmission of light is effectually cut off, and no part of the picture is seen upon the disk. When the fan is completely up, every part, on the contrary, is displayed and visible; and it is the gradual rising up or shutting down of this fan which produces the "dissolving" effect, the first discovering the picture bit-by-bit, and the last shutting it out from sight in the same manner. This is the whole secret of the matter.

It will be evident, however, upon consideration, that one box cannot produce the illusion previously described, because when the fan was down the disk would be altogether darkened, and only become gradually illuminated as it rose; again, there would only be one picture at a time, whereas both the peculiarity and attraction consist in two pictures interchanging with one another upon a disk always illuminated. This complete effect is secured by the use of two boxes instead of one, both placed close together side by side, and each charged with a painting; the fan of one being completely up and that of the other completely down. The painting in the box with the fan up will now be fully and alone reflected on the disk; but if the fan of this box be moved down at a certain slow rate, and the fan of the other raised up at exactly the same rate, the first picture will gradually fade from the sight in proportion as the sinking fan obscures the original painting, and the second will as gradually appear in proportion as the rising fan unfolds it, the advance of one being exactly balanced by the retirement of the other, a change which has all the appearance of magic.

Our readers will not fail to observe that this ingenious invention is well adapted to the promotion of an endless round of innocent and instructive amusement. By its aid, such a history as that of Robinson Crusoe might be interestingly told in a series of pictorial views representing the principal events of his career; the comical exploits of Don Quixote and his squire would, in like manner, become the subject of a world of fun; while the recollection of more serious events could be impressed on the memory with advantage. As we have previously stated, this is the first exposition of the plan upon which the "dissolving views" are produced, that has ever been made public. We have accounted for the means, but a description of their effects is beyond the power of language, and it is only at the Royal Polytechnic Institution, and other similar establishments, that curiosity on this subject can be gratified, because up to the present moment, the exhibition of "dissolving views" has not been announced in other places.

## Burns Illustrated and Explained.

## CHAPTER I.—INTRODUCTORY.

THROUGH all ages, and in all countries, however barbarous, there has ever existed a national music, to which it has been the pride and practice of succeeding poets to adapt their numbers. The northern nations have been pre-eminently gifted with this pleasant quality, and good old Scotland most certainly holds no mean rank among the admirers and possessors of an ancient, soul-thrilling, and heart-ennobling song. The old but undying melodies of Scotland,—perpetual as her waters, enduring as her rocks—still charm the thoughts, and elevate the pleasures of his sons—still shed a starlike lustre from the quick vibrations of the maiden's eye—still throw a glad-some and inspiring ray into the old man's heart. Glorifying in an immortality of perpetual youth—fresh, pure, and perfect as a new creation—these melodies have been bequeathed by a fierce and warlike people, through many generations, to their peaceful and industrious descendants. The old notes which stirred the stern Caledonian to deeds of battle and of blood now inspire the homely ploughman on the mountain side—the ecstatic numbers which once breathed revenge and desolating slaughter, by a transition which poetry alone can make, now animate the kindest feelings of our nature, and awaken the warm affections of the untried heart to seek for sympathy and love among the guileless and the young.

The many metrical romances and tales attached to these good old melodies have, one after the other, given rapid place to the newer effusions of each existing race. The mixed Gaelic made way for imported Doric, which in its time gave place to a mongrel Scotch. Language changed, and dialects improved, but the music, like the living soul, lived, breathed, and knew not aught of death. The Scotch dialect, as at present spoken, is falling to decay, and the idiom of Wallace and Bruce—of Mary—of the heroes of the covenant, will ultimately expire—but it can never be forgotten;—he, whose name is not to be spoken by Scotchmen but with reverence, nor read by a human being but with respect—has breathed upon it the immortality of his genius, and not one of his words shall fall to the ground.

The English language, as latterly corrupted or improved, as taste or prejudice may determine, by the invading Normans, was introduced into Scotland on the return of the Crusaders from the Holy Land. The invasion of Edward I., though it took not away the inde-

pendence of the country, removed many of the barriers to its separate existence;—the return of Robert Bruce from the court and camp of England still further modulated the old native tongue; and the escape of James I. of Scotland from an eighteen years' imprisonment in England, broke still further upon the rudiments of his people's speech, till the same language came to be spoken on the plains of the Lothians as on those of Devonshire. It will be recollected that the English tongue had not at this time been weeded of its barbarisms, for Shakespeare had not appeared, and Johnson was yet in the dim futurity. On the union of the two crowns in the person of James VI. of Scotland and First of England, a friendly and extensive communication took place between the two countries. James, however, was a pedant, and abominated his mother tongue; yet to the day of his death he could not acquire the English pronunciation—he therefore spoke and wrote in Latin, and encouraged his Scottish subjects to do so likewise. Among the educated, therefore, the Scottish idiom became a dead letter; but the strong guttural sound—the bagpipe music of a Scotchman's voice, was found in a great degree unconquerable. Even in the Scottish capital, at a later date, radiated as it was by the best writers on and in the English language—such as Blair, Robertson, Hume, and Alison—the Scottish intonation, sturdily retained its place, it being accounted a masterpiece of art to acquire the English accent.

Many conceive the English accent is necessary to a proper pronunciation of what is called the English language—a mistake which can be easily shown. In the first place, what is the English accent? in what locality is it to be found—in London or in Lancashire—in Cornwall or in Yorkshire? In the second place, what is the English language? It is not a pure idiom, but a mixture of many. It, therefore, necessarily follows that the accent of each of these idioms forms part and portion of the language—subordinate to it, however, not governing it as many suppose. Accent governs or creates a dialect, which latter is only a different manner of using the same language from that prevailing in another district. The Scottish dialect—though confounded with the Scotch language, which is extinct—is as perfect a portion of the English as the intonation of London or any other part of England. Which is the best or most musical intonation is a mere matter of taste—some may prefer the elegant aspirate of Whitechapel—some the drawl of Devonshire—others the twang of Scotland, or the wheeze of its Highlands; doubtless there are not a few who esteem the sturdy brogue of Ireland; while across the Atlantic the short sharp voice of the Yankee is deemed the standard—but the English language is the ground work of the whole. It is of little importance that dictionary compilers have banished some words from the catalogue—poets appreciate these the more for their local value and humorous raciness—they form the poetry of real life, which scarcely any intermixture with foreign society can eradicate.

Hume, the celebrated historian, though residing long in England and France, and mixing in the most highly cultivated society, spoke to the last in the broad sonorous voice of his native land. Blair, whose lectures on English Rhetoric have long become a standard work and classic model—elegance and propriety pervading every page—spoke in no softer tones. It was not until an Ayrshire ploughman, whose strong good sense and agreeable conversational powers showed that he was more than a poet, proved by his diction, and the energy and purity of his intonation, that the coarse guttural could be conquered, and made subservient to the will and inclination of the speaker. But this new obtruder, though he spoke so fluently and so well, and could write with admirable propriety in the more elegant phraseology of courtly England, delighted to warble his wood-notes wild in his native dialect. His strong and masculine affections had been nurtured on the hills—his awakening energies had pored over the old lyrics of his country—the deeds of heroes came to him in the guise of ballads, strung in the uncouth but much-loved words of by-gone years, and accompanied by the eternal symphonies of that music so hallowed in the legends of his native soil. Ramsay and Fergusson had broken in upon the law of fashion, which banished the dialect from composition, and the green-springing freshness of their works had imparted a zest and popularity to the long despised and discarded idiom. But Ramsay was comparatively indolent, nor was he altogether chaste; and in his truly delightful pastoral of the "Gentle Shepherd" he unfortunately committed the unpardonable, because unnatural, sin of making his hero and heroine, though brought up from infancy in the humblest walks of rural life, to owe their superiority to the fact of being of gentle blood—the old and hacknied weakness of second-rate poets, whose sickly intellects could not bear the noble thought that poverty of blood and power of mind could be allied. Fergusson, alas! died early—died unfortunately! The Scottish lyre again was mute, and silence brooded over the classic hills and streams of Caledonia. The Tweed and Tay, the Forth and "pleasant Yarrow," so celebrated in Scottish song, monopolised the glory of the age; the old ballads having given place to the praises of their streams. At length, however, a bard arose of an unknown stream, and the braes of Doon and banks of Ayr became immortalised!—But who this bard, and whence came he? It was ROBERT BURNS, THE Ayrshire Ploughman.

### Origin of Female Fashions.

No history can lay claim to remoter antiquity than that of the dresses of the fair sex. As to the forms given to primeval clothing, after the exit of our first parents from the Garden of Paradise, nothing certain is known; all that can be said, is that the toilette did not at that early period include in its accessories either gown, stays, or hoops. Leaves, and perhaps flowers, arranged with the utmost simplicity, constituted the entire female wardrobe in those early days.

In the course of time, the gentler sex began to adopt as clothing the skins of animals killed in the chase by their brothers or husbands, and subsequently learned to spin wool and the art of weaving. However, from the great heat of the Eastern climates, and the discovery of plants affording thread ready made, a preference was given to dresses made of this material, as a more agreeable clothing and protection from the ardent rays of the sun. Thus the Jews continued for a considerable period to wear no other covering than a robe made of linen. David wore a dress of this texture when he danced before the Ark.

The Greeks wore a woollen dress next the skin, and a linen tunic as an outer covering.

A contrary fashion prevailed amongst the Babylonians, whose inner dress was composed of linen, with a tunic of woollen texture over that. Even at that early period tissues were manufactured as fine as gauze of the present day; and were particularly adopted throughout the East. At Rome, only the courtesans dared to adopt these transparent dresses in the first instance; but, subsequently, they came into general use even amongst the Roman ladies of the strictest morals.

In France, about the same epoch, the female costume was nearly similar to that in vogue amongst the Romans, with this addition, that the French ladies carried in their hands canes, the top of which bore the form of a bird's or other animal's head—a fashion lately revived; but carried to a more grotesque extent. These canes, however, appear not to have been always play-things in the hands of some ladies, as it is recounted of Constance, the second wife of Robert King of France, that she put out the eye of Etienne, her confessor, with a stroke of her cane.

The dress first worn by French women, and used for a long period, consisted of a large tunic of considerable length, made so as to hide the neck, and closed at the wrists; it was named *cotte hardie*. Queens and princesses wore, in addition to this costume, a long mantle of ermine.

Under the reign of St. Louis, and that of several of his successors, ladies of noble rank had their dresses embroidered with armorial bearings (again coming into vogue at the present day, as far as cambric handkerchiefs are concerned). Widows adopted, as an upper dress, a white scapulary interspersed with black tears, or a *cordeliere*; other ladies wearing a splendid belt, ornamented with gold and precious stones.

At that period, the luxury of dress was carried to such an extreme, that Philippe-le-Bel was obliged to frame laws to keep it within proper limits. Dukes, counts, and barons, even the richest, were only allowed to give their wives four dresses in the year; ladies of minor fortunes were forced to be content with one. None but the wives of great lords were permitted to buy stuffs at 15d. (30 sous) the yard; while citizens' wives could not give more than 10 sous (5d.) the yard—equivalent to about 10d. of the present currency. These ordinances, however, soon became obsolete, or winked at, from the effect of female influence: and thus fashion was once more allowed to exercise its sway.

In the reign of Charles V., a tailor in Paris made a robe (*cotte hardie*) for a lady of Gatinais, which took five yards of Brussels cloth. The train of this dress swept the ground, and the sleeves extended down to the feet; although at the Council of Montpellier, held at the close of the 12th century, it was expressly forbidden, under penalty of excommunication, to wear dresses which *trained* along the ground, "like a serpent's tail."

Under Charles VI., linen chemises were only used by a few persons of distinction, chemises of serge being those generally worn. Isabeau of Bavaria was severely censured for having two linen chemises. This article of dress was at that time considered so great a luxury, that, to display it, a part of the chemise was allowed to extend beyond the wrist and above the neck—hence the origin of ruffles and frills.

In the fifteenth century, ladies, for the first time, began to appear with the neck and a portion of the bosom uncovered. About the same period they adopted the fashion of wearing diamond and pearl necklaces and ear-rings composed of precious stones. Their sleeves were closed at the wrist, and the petticoats made very long so as to train on the ground.

During the reigns of Charles VIII., Louis XII., and Francis I., the wars in Italy and the alliances with the families of Italian princes led to the introduction of Italian fashions into France; ladies began to appear bare-armed, and to adopt short petticoats, so as to allow the lower part of the foot to be seen.

Francis I. and Charles IX. having espoused princesses of the house of Austria, Spanish fashions entered the lists with those of Italy.

The *vertugadins*, or fardingale, or child's helmet,

similar to our basket-head guard, but still more ridiculous, high collars, slashed dresses and sleeves, were then seen in France for the first time. Ladies of the court in those days were called ladies with largenecks (*a grande gorge*); their sleeves were of enormous size, and each of a different colour. This latter fashion was adopted by men, and even by the king.

About that period pins made their appearance for the first time in France, having been manufactured in England in 1543. Before their invention, ladies made use of wooden skewers, extremely slender and flexible.

It was at nearly the same period that the use of masks became very general amongst ladies. They were made of black velvet, and lined with white satin; they were fastened by a slight steel rim, having at the end a glass button, which each lady held in her mouth, and which altered the sound of her voice. They received the appellation of wolves (*loupes*).

In the portraits of ladies of the time of Charles IX., they are represented with dresses open in front, with petticoats ornamented with a profusion of pearls and precious stones; full sleeves, hanging down, the cuffs trimmed with fur or puffed out, slashed and with puffs separated one from the other by a row of pearls or fancy ribbons. The neck bare, or covered by a net-work of pearls or precious stones in large squares. They also wore cuffs fitted to the *amadis*.

The first specimens of lace seen in France at this period came from Venice and Genoa; they became so much the rage, that Louis XIII. issued a law, in 1629, prohibiting ladies from wearing lace which cost more than three francs a yard. As all foreign lace was sold at a much higher price, manufactures were got up in France; and such was the origin of those established at Alençon and Argentan.

In the reign of Henry IV. the hoops were worn so enormously large, that *Chancelier de l'Hôpital* had them suppressed by a sumptuary law, which, however, was not observed.

Lestiboudis relates in his journal that, at the baptism of the son of Madame de Sourdis in 1594, Gabrielle d'Estrees made her appearance attired in a splendid dress of black satin, so overcharged with pearls and other ornaments, that she was unable to stand up straight. On another occasion shortly after, he was allowed by particular favour to see a handkerchief ordered for the same Gabrielle d'Estrees, who had fixed the price of it at 1,900 crowns (£400), and agreed to pay ready money on its delivery.

In the time of Louis XIII. the large *vertugadins* (fardingales), were laid aside, but the upper garment was tucked up behind and at the sides, so as to display the one underneath.

It was not until the reign of Louis XIV. that the art of cutting diamonds became known, and from that period they became more in request.

Under Louis XV. masks (*loupes*), were replaced by a quantity of black patches (*mouches*), which were put on the face; each patch had its peculiar name. For instance, that placed at the corner of the eye was called *amorous* (*passionnée*); fixed on the centre of the forehead, *majestic*; at the dimple or fold formed in the act of laughing, *gay*; in the middle of the cheek, *galant*; at the angle of the mouth, "*baisseuse*;" on the nose, *barefaced*; on the lips, *the coquette*; upon a pimple, *concealment*, &c. &c.

At the above period, hoops of an oval form were worn, and ladies dressed in this manner were obliged to bring forward one side of the hoop, in order to pass through the crowd or a narrow court. In those days all females, even of the lowest classes, wore hoops (*paniers*). Actresses and dancers, even when they had to represent Greeks, Romans, or Sythians, invariably appeared on the stage with wigs and hoops.

The ladies of the Court of Louis XV. and Louis XVI. were also obliged to make use of canes to assist them in walking, rendered difficult by the great weight of their clothes and the monstrous high heels of their shoes.

During the Republic and under the Empire, the Grecian fashions were in vogue; but means were devised to suit them to the climate. It was at that period that an attempt was made to distort the human shape, by having the waist just under the bosom and arm-pits. Fortunately this dangerous and unsightly fashion disappeared in modern times; and the female *toilette* no longer includes anything injurious to health, except when tight lacing is carried to an immoderate and ridiculous extent.\*

Formerly the almanack was the sole arbiter of the fashions. In a particular month, day, and hour, the dress of winter, spring, summer, and autumn were regularly put on or put off; the muff, cane, worsted, cloth, velvet, or silk had their fixed entrées or exits. The almanack was infallible; and the dresses set down for the four seasons must be tolerated, no matter whether the wearer starved with cold or fainted with heat, and thanks to the march of reform, people can now consult the thermometer, and suit their clothing to the

\* It is a matter of general surprise to see some young ladies so fond of tight lacing, and unnaturally small waists, of which every one disapproves: there is a great difference between a small waist and an hour-glass contraction. We shall take an early opportunity of showing the evils of this odious system, and illustrate our observations by a number of drawings of the female form divine, as it is made by nature and destroyed by fashion.

reigning degree of temperature, or according to their different tastes.

In the early ages, females wore their hair hanging loosely down; but their natural *penchant* for the graces of the toilette soon induced them to plait their locks in various modes. For a considerable period, the head was only covered with a veil, and only out of doors. The Greeks and Romans kept their hair adjusted with gold or silver pins, or knotted with gold chains, or encircled with white or red bands. The hair was powdered with gold powder. Flaxen and red hair were so much prized, that ladies with brown hair, who were unable to give a red tint to their locks, condemned them to the scissors, and put on red or fair-haired wigs. Towards the close of the Roman Republic, this fashion was in general use; and hence we find the poets of that day celebrating the red or flaxen hair of their mistresses. The Roman coquettes changed their wigs several times a day: some for the morning, others for the afternoon, and a still greater variety for grand ceremonies.

This custom was persevered in for a long period. In 692, the Council of Constantinople excommunicated all those who dared to wear wigs. Pierre Lombard, who wrote in the 12th century, describes wigs as a "frightful disguise and damnable impudicity;" and, subsequently, Alexander Hall and Bernardin de Vienne decided that to mount a wig was a mortal sin.

[We shall resume the subject on a future occasion, when the more modern innovations of fashion will be adverted to.]

### Scenes and Sketches of Military Life.

PATRICK O'NEIL—THE IRISH GRENADIER.

CHAPTER II.—THE SECOND FLOGGING—THE WIFE—THE THIRD FLOGGING.

It is hard to say how far a man may be carried by the influence of bad example, the force of evil, or the workings of a vicious nature, so as to become the champion of a custom so inhuman and demoniac as that of flogging. It can only be remarked that while raising his voice in support of the vile system, he is affording the best possible criterion whereby the world may arrive at a certain judgment as to his qualities of head and heart—his feeling, morality, and courage as a man—his religion as a Christian.

Patrick O'Neil, from being looked on as a quiet, sober, well-conducted young man—from being esteemed by his superiors as an intelligent and respectable non-commissioned officer, was literally flogged into the most hardened ruffian that ever wore a red coat. He abandoned every sense of self-respect, and flung propriety and good conduct to the winds as if they were of no use to him—as things he had no more to do with.

O'Neil was scarcely a month out of hospital when he received his second flogging. Scarcely were his wounds healed when the grenadier company to which he belonged was ordered on detachment to the handsome little town of W—t—t. The noble domain and residence of the Marquis of S— adjoins the town, and shortly after our arrival that nobleman's splendid library caught fire and the soldiers were sent in all haste to arrest the destruction.

The flames were raging violently when they arrived, and busts, books, paintings, maps, prints, articles of ornament and value were scattered about under foot. The officers amid the confusion and the multitude did their best to arrange the men for the protection of the property, and to station them so as to render them effective in stopping the progress of the devouring element. The fire was extinguished just when it had done its worst, and the men returned to their quarters with the thanks of the Marquis, and no little self-gratification in having so well deserved them.

During the bustle and in his anxiety to rescue some articles from destruction, a few trifling articles attached themselves in the hurry and excitement of the scene to the person of Patrick. When he discovered them, thinking, as he said, that his innocent intentions might be overlooked, and that he really would be looked upon as a thief, should he tell his story as to how they came into his possession unknown to himself, he resolved, now that they were, so to keep them. In a few days after, he was sent on command into head quarters, and at C—t—r he contrived to get rid of them. He returned to his comrades with money in his pockets, a circumstance now become a matter of wonder from his being deeply in debt with the colour sergeant for various necessities, which he drew from time to time and sold at half their value. Lavish in his disposition, he was not disposed to let whatever wealth he acquired grow rusty: he treated his comrades and spent it freely. A low public-house in the centre of the little town was the scene of their debauch, where O'Neil, became heroically intoxicated, and swore he would not return to the barracks until his last shilling was expended. His companions left him at the proper hour, and about midnight the landlord ejected him into the streets in a state of madness. He roamed about the silent and deserted streets for some time, until an unlucky chance threw into his path a townsman and his wife returning from a christening at the house of a neighbour. O'Neil immediately seized on the poor woman with an oath and yell of exultation, and the husband, rushing to her assistance, was felled to the earth. The woman's outcries soon aroused the neighbourhood, and a number of people

coming to her assistance, they endeavoured to secure O'Neil, who, finding himself overpowered, broke through the crowd like a maniac and fled. A full report of the outrage, with a description of the soldier, was lodged the next morning with the officer commanding the detachment, who immediately ordered out a patrol to hunt the fugitive. They found him in a hovel at the skirts of the town, stretched out at length and fast asleep. They carried him to the guard-room, and orders came from head-quarters to try him where he committed the offence. He was tried before a detachment court-martial, found guilty, sentenced to, and again received three hundred lashes.

He bore this second punishment with the same unshrinking firmness, but no sooner were his wounds healed than he again commenced his career of crime, with even a more desperate and reckless daring. It seemed as if flogging had the effect only to render him more determinedly abandoned.

Early in the following spring the regiment received order to proceed to the south of Ireland.

The weather was very severe, and the marches exceedingly long and fatiguing. Many of the men were knocked up from the fatigue of the two first days, which were certainly, for excessive cold, the most trying that human being could be exposed to.

The roads were deep and broken, over a rocky, wild, mountainous, and thinly-inhabited country, and all the time it blew a terrific snow storm. One woman, unable to keep up, and too poor to purchase a seat on the baggage car, even for a short distance, sat down in the shelter of a rock to rest with her child, where it perished in her arms.

A soldier travels under harassing disadvantages—he is so braced up and loaded, that the wonder is how he is able to get on. First, his cross belts, with his bayonet, and pouch containing sixty rounds of ball cartridge depend from either shoulder and across his breast; then his knapsack, containing all his extra clothing and necessities and all the rubbish and dirt that constitute a soldier's cleaning apparatus; this is crowned by his canteen, making, with the heavy musket, a pretty considerable load for an ordinary donkey. These are confined to his back by narrow straps that come round each shoulder, and are buckled under the arms, and these again are joined by two short straps that buckle tight across the breast. The free play of the limbs so necessary is thus prevented, and the sink and swell of his chest is compressed almost to suffocation. Add to these the hard, weighty, and ungainly cap, cutting his forehead and swaying from side to side at each motion, and you will be only astonished how he is able to walk a single mile. But man is an enduring animal, and it is wonderful beyond conception what in time he can be brought to bear and suffer.

O'Neil could feign illness and become a mal-lingerer at any moment; he was taken very bad in Galway, and the regiment proceeded without him. He was sent to the hospital belonging to a detachment of the veteran battalion which at that time garrisoned the town. He remained about a week in the hospital and was then pronounced convalescent, and sent to the barracks to recruit his lost strength, and wait for a route to join his regiment.

A sergeant of the veterans, to whose company he was attached, had a pretty daughter, and the handsome figure of O'Neil, and his easy joyous manner made a strong impression on the girl's fancy. Patrick was not slow in perceiving the impression, and following it up; but the eye of a vigilant mother was on his motions. One evening, however, he made a violent attack upon the girl, and was once more placed in durance. The enraged father was anxious to have him handed over to the civil authorities, but the commanding officer of the veterans being intimate with the Colonel of the — regiment, and wishing to prevent the exposure and disgrace of such a proceeding, wrote to head quarters.

The criminal soldier is never, if possible, subjected to a civil tribunal. There is a publicity given to things of this nature, which is very annoying to a commanding officer; besides it throws an odium upon his government, and subjects him to the strictest and most disagreeable enquiries, the most painful investigations, and the severest reprehensions. The details of military jurisdiction are kept with the most jealous care from the public.

The result was—the matter was hushed up. O'Neil received permission to get married, a favour denied even to the most deserving, and the day following his nuptials the route arrived.

The parents of Mrs. O'Neil gave the happy pair their blessing with tears, with whatever spare necessities and money they had at command, and they began their journey in high spirits. While the money lasted Patrick measured his miles by the whisky shops on the road, and day and night he was wrapt in the elysium of love and inebriety until they reached the sweet city of Limerick. Here he was brought to a sense of the misery that dogs the footsteps of enjoyment, by the display of the last shilling on the breakfast table. He reflected for a moment, and for the first time since his marriage. That moment decided him; he saw at a glance the way before him, and, like an able general, pushed on his plans with vigour and determination.

"Bessy dear," he began, addressing his wife in a soothing tone, "you don't look well this morning—are you unwell, dear?"

"I am weary walking," replied the poor girl; "and striving to bring you on has made me more tired than I

would be; but we'll get on better now; indeed, I'm glad that the money is all out."

"I was thinking it would never agree with you Bessy; you wouldn't believe how fatigued you look—you must be unwell?"

"Not sick in the least, Pat, but very foot-sore."

"I never saw such an alteration in any person for a few days' travelling," again urged O'Neil. "You look very bad; may be you're fretting after your dear mother, Bessy."

"It's only natural to grieve after one's father and mother," she replied; "but sure I have you now, Pat, and must only think of you."

"If you did grieve for your dear good father and mother, Bessy, I couldn't blame you; indeed I wouldn't be the cruel unnatural beast to wish to prevent you from going back to comfort them, for I am sure your dear mother is distracted with grief by this time about you."

She stared with surprise in his face, not knowing what he meant, and wishing to put the most favourable interpretation on his words. He allowed her a full gaze, and appeared quite busily engaged with his accoutrements; and when he thought she had looked long enough to form a guess at his drift, he resumed the conversation.

"Your poor father I'm sure will break his heart. I am sure I never felt so much sorrow for any action I ever committed as for taking you away from your parents. I thought to drown the thoughts of it in that blackguard whisky, but the more I took the more the sin of the thing flew in my face, till faith I fear the very reflection of the same will be the death of me. Wouldn't you like to go back to them once more, Bessy dear?"

"Go back!" she repeated, turning quite pale, for his mocking words, pronounced in a cold unvarying tone, sounded fearfully to her ears.

"Yes, dear, go back, to be sure. I knew you were longing to return to your tender parents," he continued, seizing on the alarmed exclamation of the poor girl as a consent to return. "Better be with them, dear, than following an unfortunate scapegrace like me through hardships and poverty. I'm glad you mentioned it. I knew you had a loving affectionate heart, and would never leave your parents in their old age, and you their only child."

"Pat, dear, what is it you mean?" she asked, somewhat bewildered.

"Mean?" said Pat; "why I mean that you're asking to go back to your father to be sure, and I mean to say that I'm not the man that would refuse so reasonable and natural a request; and proud I am to think he has such a dutiful daughter."

"Oh, Pat, I don't want to leave you; you're all I have in the world now. Am I not your wife, and why should I think of leaving you?"

"Well, well," cried Pat in feigned astonishment, "who can tell a woman's mind? Here you are complaining of being unable to stir with fatigue and pain, and wishing to return to your father and mother, and when I give you free permission to go back, you refuse."

"I am not tired or wishing to return, Pat; I am able and willing to go with you to the world's end—I don't care for hardship or poverty while I have you—my father and mother have given me to you—you are my husband."

"Well, I never thought you were so hard-hearted, but sure you cannot be in earnest. Look up in my face and say that you are in earnest."

"Indeed I am in earnest, Pat," said she, looking up earnestly into his face. "I love you better now than father or mother—myself or the world. Don't speak so, Pat for God's sake, don't speak so."

"Oh dear!" he cried, "am I awake or dreaming. Now I see the sort of a wife I have got. Oh, you ungrateful creature, how can you look at me? Can one that has no regard for her own father and mother have any regard for a husband? I'm glad I found you out. Out of my sight you heathen; worse than a Turk you are. I'm done with you. Now, listen to me;—go home to your father and mother, and comfort their old age if you can, for with me you shan't come a foot further. Go home; and when I write to them I will not tell of your cruel ingratitude. I won't break their hearts by letting them know the serpent they nursed in their bosom. Farewell; we part in peace. I don't wish you any harm—farewell."

Every word he uttered was like an ice-bolt to her heart. She burst into tears—she begged, prayed, and entreated not to be cast off—abandoned. She promised, soothed, and flattered; but all in vain. The ruffian steeled his heart to her weeping prayers—he flung her from him with a fearful imprecation, and vowed with an oath that if she ever attempted to follow him he would be the death of her.

He shouldered his musket and turned away on the road to Bruff, where he was to halt for the night. He had scarcely proceeded a mile when, turning round, he beheld her following at a distance. He stopped—so did poor Bessy, for she feared to approach him until he beckoned her to him.

"Now," said he when she came up, "stop where you are. You have disobeyed my commands. What do you deserve? If you were to be tried by a court martial for this, you'd certainly be shot."

"Oh, Pat, Pat!"—she began.

"Call a halt," he cried, "and listen to your sentence. Now, mind me well;" and drawing his bayonet he fixed it

on the muzzle of his musket, and with the point drew a line from one side of the road to the other between them; he then laid the point of the glittering steel upon her breast. "Do you see that mark on the road?" he asked fiercely.

She looked the assent she could not utter.

"Do you feel that bayonet—do you?" and he pressed it on her breast. Another fearful look of assent. Then a tremendous oath—"if you cross that mark to follow me an inch further I'll bury half a foot of this cold iron in your breast. So to the right-about, march!" and shouldering his musket, and tossing his cap on one side, he turned his back upon her, and walked away whistling "The British Grenadiers."

A scene similar to the above was enacted once at least every day during the march, and still with the untiring affection, the patient suffering, and enduring love of woman, she followed in the vain hope of touching his pity. He would not give her a farthing to buy a morsel of bread, nor even allow her to approach his billet to rest her weary feet. She disposed of almost every article of her clothing to procure food and shelter, and still she followed his footsteps in sorrow and desolation.

"The beautiful city called Cork" was the headquarters of the regiment, and O'Neil, without casting a look on the almost perishing creature who had pursued him so far, marched into his barracks, leaving her hungry, jaded, and deserted. A lone stranger in the streets, she sat near the barrack-gate weeping. Some of the men who heard her story and pitied her, advised her to apply to the captain of the company to which O'Neil belonged. She went and told her pitiable tale. He was an English gentleman, too good and kind-hearted a man to belong to the army; yet he was a brave soldier and one who had fought at Waterloo. He died in 1827, in Portugal. He relieved her distresses, told her the desperate character which her husband bore in the regiment, and advised her to return to her parents, and gave her money to take her home.

She had scarcely quitted the barrack, when O'Neil, having heard that she had received money, followed her. He overtook her in the streets, and laid his hand familiarly on her shoulder.

"Well, Bessy, dear," said he in his softest tones, "where are you going?"

"Why do you ask me?" she replied. "Sure you do not care where I go."

"Come, Bessy, don't talk that way; it's all over now. Tell me where you have taken a lodging?"

"Lodging! I'm going home, Pat."

"Home, sure it wasn't to go home you came here."

"The captain told me," she replied, "to go home, for you were one of the most disgraceful and bad men in the whole regiment; and that you'd think nothing of murdering me. He advised me not to stop under any circumstances, but to return to-morrow to my father and mother."

"Indeed, I dare say he told you that and more too," replied Pat, with the greatest kindness; "he has a spite against me; besides, he doesn't like to have women in the company. That's the reason. But, never mind what he says, I can apply to get transferred; besides, there's some talk of making me big drummer; and now that my spree is over, I'll take my oath against liquor for a year and a day."

"I can't trust you, Pat; I can't forget the way you served me on the road. No, no, I'll take his advice and go home."

"Well, sure I never heard such a foolish girl as you are," he answered again. "Don't I tell you that it's all over with me. Stay with me; try me; and if you don't find me true to the backbone, why, curse me and quit me."

"Its no use, Pat; I can never trust you again."

"You won't believe me," he cried, vehemently. "Will I curse?—will I swear? Why, you'll be so happy that you'll be singing like a thrush in spring all day, and dreaming of blessed saints and angels all night. You'll have your snug little room, and you'll earn your share of the men's shirt-making and washing, and have all my pay to boot—for devil a halfpenny of it I'll spend. We'll make a little fortune in a short time. Come now, give me your hand—forgive and forget; let what's past be past, there's my own dear Bessy."

We readily believe what we wish, and those whom we wish to think speak the truth. The poor girl was softened by the kind tone in which he spoke, and the flattering picture of their humble happiness which he drew; and tears of joy filled her eyes at the thoughts of his returning good nature. She gave him her hand in peace, and looked up into his face, smiling through her tears.

He took her into the nearest lodging-house, and she gave him the money to go out and purchase refreshment. He went, but he did not return. She anxiously waited until the time was past when he should have returned. She went to the barrack, but he had not been there since he followed her out. Until a late hour did she pace the distance between her lodging and the barrack, inquiring almost every five minutes did he come back. Next day and night passed away, and he was not heard of; but on the third morning he reeled into the guard-house, and threw himself upon the guard-bed a prisoner. The men, compassionating the poor girl's miseries, made up a small sum by subscription to send her home.

Next day, when O'Neil was more sober, his knapsack having been previously searched, and some of his "kit"

found wanting, he was brought up for trial on a charge of absenting himself from his quarters without permission, and making away with his necessaries. These misdemeanours, aggravated by the circumstances of cold-hearted atrocity by which they were attended, brought down the extreme sentence of the court, and again he was sentenced to and received three hundred lashes.

### What is "Protection?"

#### WHO GAINS BY THE PREFERENTIAL SYSTEM?

There is, perhaps, no word in the English language that has done so much harm as the word "protection." There is a charm about it which is irresistible to the ignorant, and from which even the well-informed cannot wholly, or at all times, emancipate themselves. The importance of the correct use of language was never more apparent than when speaking of *protecting* any particular trade, manufacture, or production. The word which ought to be used is to "prefer," and not to "protect." *Protection means preference.*

When the venerable Mr. James Deacon Hume was tauntingly asked by a member of the Import Duties Committee, who was in favour of restricted commerce, "Upon what principle could you recommend a general change in the system of levying import duties upon articles, by the introduction of which at a less duty the manufactures of this country would be seriously affected?"—his reply was a memorable one, and worthy of a life spent in the service of his country—"Upon the principle of general national benefit. The question is, whether we mean the nation, or whether we mean to serve particular individuals. I speak, whether from habit, from my own turn of mind, or from official circumstances, in behalf of the nation, or of the country at large."

The question now before the country is stated in this reply. Are the *many* to be sacrificed to the *few*? The opponents of free trade ask the nation to prefer the interest of a very few Englishmen, at the expense of the great majority of Englishmen. They resemble the selfish people described by Lord Bacon—"they would burn their neighbour's house, that they might roast an egg in the ashes!"

Arguments the restrictionists have none; but they have one fallacy which is popular, and which they invariably use with an air of unanswerable triumph. "Is it possible," they ask, "that a heavily-taxed people, as we are, can grow corn as cheaply as other people less heavily burthened?" Now, setting aside the fact that the weight of our public burthens is an irresistible reason why we should not be compelled to consume dear food, we ask the preference-interest advocates to explain one circumstance. If a heavily-taxed people can produce cheap cottons and hardwares, why are they unable to produce cheap corn? We annually export the products of our labour, to the value of more than 50 millions of money; and this fact proves that, burthened as we are with taxes, we can and do produce manufactures at a cheaper rate than they can be produced by any other people. Why, then, not corn?

The restrictionists attempt to frighten the people by bawling out that the abolition of our preferential system will bring down the price of labour. "What!" they exclaim, "reduce the wages of Englishmen to a German or French standard? Horrible, scandalous, un-English!" But what is the fact? The wages of Englishmen are lower than those of Germans or Frenchmen. The English are the best labourers in the world; they are more industrious, more skilful, and more to be depended on than the labourers of any other nation. Comparing the results or products of their labour with its money payments, the fact is indisputable that they receive less wages for more work than their fellow-workmen in any country. But if a removal of restrictions should produce, as is justly anticipated, an increased demand for English productions, that demand will act on the labour market by increasing the price of wages. Thus the very reverse of what the preference advocates predicate, is the logical necessity of commercial freedom.

Driven from their popular fallacies, the restrictionists protest against risking the pre-eminent commercial position of the country by change. Let us bear the ills we have, they implore, rather than fly to others that we know not of. Their remedy for the financial condition of the country is to diminish the public burthens by shifting them from the shoulders of one class to those of another. Mr. Porter, in one of his useful publications, tells an anecdote which admirably illustrates the absurdity of this *hocus pocus*, *hey presto* system.

"We were travelling," he says, "in the south of Ireland, and overtook a peasant seated in a cart, drawn by a miserable horse, and loaded with a box containing some very heavy substance. At the moment of our approach he had reached the foot of a hill, and the horse, which had with difficulty drawn his burthen along the level road, was unable to mount one foot of the hill. The peasant flogged, and coaxed, and flogged until he became almost as tired as his horse, when suddenly a bright thought struck him. He lifted the box from its position in the bottom of the cart, and placing it on his knees, renewed his flogging with the assured hope of making progress; and sorely puzzled was he to find that, although he had burthened himself with all the weight of the box upon his own knees, he had brought no relief to the poor beast."

Exactly analogous is the operation of merely changing the sources of public taxes; they are still paid, and their payment restricts consumption and diminishes the receipts of the public treasury.

*Who are they who receive preference, and who are they, in consequence, unduly burthened?*

Mr. Porter states that in 1831, the year of the last census, there were living in the United Kingdom 5,836,889 male persons, 20 years of age and upwards, of whom were:—

1. Employed in agriculture, occupiers employing labourers.....	283,997
2. Ditto, labourers.....	2,194,808
3. Employed in trade and manufactures.....	2,478,805
4. Capitalists.....	1,896,876
5. Labourers, not agricultural.....	277,777
6. Other males, except servants.....	701,620
7. Male servants.....	347,932
	133,879
	5,836,889

Now, which of these seven classes, containing nearly six millions of adult males, are benefited by preference? The two millions of agricultural labourers are not, because they, in common with all labourers, are through it checked in consumption, and their only chance of advantage is dependant on the pleasure of the first class, and what advantage that pleasure gives is demonstrated by the average rate of agricultural wages—say 12s. per week. Were things left to their natural course, wages could not be lower in agricultural pursuits than they are now. The two millions of the third class have no interest in a preferential system, because that system not only checks their consumption, but it restricts their employment. This class has, over and over again, declared that the present system is their curse, that it degrades, demoralises, and prevents them selling their labour. The fourth class, which includes all who maintain themselves otherwise than by manufacture, trade, or bodily labour, have a direct interest in the destruction of monopolies, which circumscribe the sphere of their activity, and shut them out from profitable fields of adventure. The fifth class feel restrictions more injurious than any of the other classes; everything that restricts employment is death to those who have no fixed or certain trade or occupation, but who depend for subsistence on being able "to turn their hands to anything." The sixth class includes retired tradesmen, and those who have small means of their own, or who are supported by their relatives—*men of certain incomes*, to whom high prices amount to deprivation. The seventh class is a small and unimportant section, and it would be difficult to show how they can profit by restriction.

The first class then remains—occupiers of the soil, employing labourers—and to this class alone can it be pretended that the preferential system can be of advantage. We say "pretended," for their advantage is after all but pretence. Their high rents are the consequence of the rise of England as a manufacturing country. What would have been the rent of lands, for example, in the barren counties in which Manchester, Birmingham, Leeds, Glasgow, Aberdeen, Dundee, Belfast, &c., are situated, if manufactures had not grown up and thriven? Not one-fifth, probably, of their present amount. Now, as the rents of lands have risen in much the same proportion as the rates in which manufactures have flourished, so will the rents of lands fall with the decline of manufactures. The landowners have, therefore, a direct interest in the prosperity of manufactures; and yet they allow the manufacturers to address them in the following language:—"We consume all the bread you can produce, and furnish you with our goods in return. We could consume more bread, and could manufacture more goods, if you could let us send our goods to market where more bread is to be had; but like the dog in the manger, you cannot supply us with all we can consume and pay for with our manufactures, and will not permit any one else."

We shall hereafter show the practical evils which the preferential system inflicts on all trades, manufactures, and professions; how, in fact, it injures 95 per cent. of the entire population, and does not in reality benefit the other 5 per cent. in the "long run."

### Statistics of Muscular, Mechanical, and Astronomical Motion.

MAN has the power of imitating almost every motion but that of flight. To effect these, he has, in maturity and health, sixty bones in his head, sixty in his thighs and legs, sixty-two in his arms and hands, and sixty-seven in his trunk. He has, also, 434 muscles. His heart makes sixty-four pulsations in a minute; and therefore 3,840 in an hour, 92,160 in a day. There are also three complete circulations of his blood in the short space of an hour. In respect to the comparative speed of animated beings and of impelled bodies, it may be remarked that size and construction seem to have little influence—nor has comparative strength: though one body giving any quantity of motion to another is said to lose so much of its own. The sloth is by no means a small animal, and yet it can travel only fifty paces in a day; a worm crawls only five inches in fifty seconds; but a lady-bird can fly twenty million times its own length in less than an hour. An elk can run a mile and a half in seven minutes; an antelope a mile in a minute;—the wild mule of Tartary has a speed even greater than that; an eagle can fly eighteen leagues in an hour; and a Canary falcon can even reach 250 leagues in the short space of sixteen hours. A violent wind travels

sixty miles in an hour; sound, 1,142 English feet in a second.—*Bucke.*

The common watch, it is said, beats or ticks 17,160 times in an hour. This is 411,840 a day, and 150,424,560 a year, allowing the year to be 365 days and six hours. Sometimes watches will run, with care, 100 years. In that case it would last to beat 15,042,456,000 times! The watch is made of hard metal; but I can tell you of a curious machine which is made of something not near so hard as brass or steel—it is not much harder than the flesh of your arm—yet it will beat more than 5,000 times an hour, 120,000 times a day, and 43,830,000 times a year. It will sometimes, though not often, last 100 years; and when it does, it beats 4,383,000,000 times. One might think this last machine, soft as it is, would wear out sooner than the other. But it does not. I will tell you one thing more. You have this little machine about you. You need not feel in your pocket, for it is not there. It is in your body, you can feel it beat—it is your heart!—*Anon.*

The mite makes 500 steps in a second, or 30,000 in a minute. Allowing the horse to move at an equal ratio, he would perform 1,022 miles an hour. The journey from London to Birmingham would then occupy but six minutes and a fraction. There is another insect which may in some measure rival the above in the celerity of its motion, and is itself unrivalled in strength in proportion to its size. Although it is generally disliked, and has not a very fair reputation, yet to the eye of the naturalist it is rather a pleasing and interesting object. Its form, as examined by the microscope, is extremely elegant, and has an appearance as if clad in coat of mail. It has a small head, with large eyes, a clean and bright body beset at each segment with numerous sharp and shining bristles. All its motions indicate agility and sprightliness, and its muscular power is so extraordinary, as justly to excite our astonishment; indeed, we know no other animal whose strength can be put in competition with (its name must come out at last) that of a common flea; for on a moderate computation it can leap to a distance at least 200 times the length of its own body. A flea will drag after it a chain 100 times heavier than itself, and will eat ten times its own weight of provisions in a day. Mr. Boverich, an ingenious watch-maker, who some years ago lived in the Strand, London, exhibited to the public a little ivory chaise with four wheels, and all its proper apparatus, and a man sitting on the box, all of which were drawn by a single flea. He made a small landau which opened and shut by springs, with six horses harnessed to it, a coachman sitting on the box, and a dog between his legs, four persons in the carriage, two footmen behind it, and a postilion riding on one of the fore horses, which was also easily drawn along by a flea. He likewise had a chain of brass about two inches long, containing 200 links, with a hook at one end and a padlock and key at the other, which the flea drew very nimbly along. Something of the same kind is now exhibiting in London.—*Edinburgh Encyclopedia.*

We are unable to investigate the mechanism by which the stars are guided in their courses; but we have the power to calculate the velocity which severally distinguish satellites, planets, and comets, the two last of which have double motions and the first a treble one. The fixed stars, too, have motions, as well as a visible increase and decrease of brilliancy. The double, triple, and quadruple, quintuple and multiple stars move round their relative centres of gravity; and the smaller ones revolve round the larger ones, after the manner of satellites. Mr. Pond thinks that his observations entitle him to conclude that some variation, either continued or periodical, takes place in the sidereal system, which, producing but very small deviations in a finite portion of time, has hitherto escaped notice. Every object appears to him to move considerably to the southward. This apparent motion of all may, however, be nothing more than the effect, arising from the actual motion of the sun and its dependants towards the constellation Hercules. The sun is, in fact, a planet; and what we call primaries and secondaries are no other than satellites moving round it. Were the sun stationary, it would, doubtless, have no revolution upon its own axis. The Georgium Sidus travels in its orbit 15,546 miles in an hour; Saturn 22,050; and Jupiter 29,866. Pallas 40,930; Ceres 40,932; Juno 41,170; and Vesta 44,202. Mars 55,166; the Earth 68,092; Venus 80,062; and Mercury 109,452. The comet of 1680, when in its perihelion, moved not less than 1,240,108 miles in an hour. Light travels at the rate of ten millions of miles in a minute, and gravitation is supposed to travel at the still more astonishing rate of eight millions of times quicker than light. Motion is the most effective demonstration of a Sovereign Power. It is detected in the succession of the seasons; in the changes observable in all the visible creation, and in the circulation of nutritive juices in animal bodies; while the heart, from the first to the last moment of life, is in a state of perpetual action. Of all the subjects that can engage the intellect of man, motion is the most inexplicable. For whether it is contemplated in the progress of events, or in the impregnation, birth, growth, death, and corruption of animated bodies: whether it is observed in the gliding of rivers, the phenomena of the winds, or the periodical flux and reflux of the tide, in the Aurora Borealis, in meteors, in the gravitating power of planets, suns, and systems, or in the mysterious circulation of galvanic, electric, and magnetic fluids, the subject involves such a combination of power as at once to astonish and confound the mind. If a person put a large bar magnet to a glass case in which are five hundred magnetic needles, they will all revolve with astonishing rapidity till the magnetic influence is removed. Thus planets may be set in motion. There is a presiding influence by which they revolve, and as long as that influence continues to operate, so long will their motion continue. Should it ever cease to operate the planets will cease to move, and become fixed; sustained in their relative positions by the power, in equilibrio, of attraction and repulsion. No Being but the One can give the impulse, nor can any Being but the One conceive the manner in which that impulse can be given. For height, width, length, and depth, infinity, eternity, omnipresence, are all more easy of conception than the first origin of motion. *Bucke.*

## Fragments for Females.

**INFLUENCE OF WOMEN.**—How often have I seen a company of riotous men, checked all at once into decency by the accidental entrance of an amiable woman; while her good sense and obliging deportment charmed them into at least a temporary conviction that there is nothing so delightful as female conversation. To form the manners of men, nothing contributes so much as the cast of the women they converse with. Those who are most associated with women of virtue and understanding will always be found the most amiable characters. Such society, beyond everything else, rubs off the protrusions that give to many an ungracious roughness; it produces a polish more perfect and pleasing than that which is received by a general commerce with the world. This last is often specious, but commonly superficial; the other is the result of gentler feelings, and a more elegant humanity; the heart itself is moulded, and the habits of undissembled courtesy are formed.—*Fordyce.*

**SARAH OF MARLBOROUGH.**—None of the duchess's charms, when they were at their proudest height, had been so fondly prized by the poor duke, her husband, as her splendid head of hair. Therefore, one day, upon his offending her, by some act of disobedience to her "sovereign will," the bright thought occurred, as she sat considering how she could plague him most, that it would be a hearty vexation to see his favourite tresses cut off. Instantly the deed was done; she cropped them short, and laid them in an ante-chamber he must pass through to enter her apartment; but, to her cruel disappointment, he passed, entered, and repassed, calm enough to provoke a saint, neither angry nor sorrowful, seemingly quite unconscious both of his crime and his punishment. Concluding he must have overlooked the hair, she ran to secure it. It had vanished, and she remained in perplexity the rest of the day. The next, as he continued silent, and her looking-glass spoke the change—a rueful one—she began to think she had for once done a foolish thing. Nothing more ever transpired upon the subject until the duke's death, when she found her beautiful ringlets carefully laid up in a cabinet where he kept whatever he held most precious. We deem this almost affecting. What an adorable vixen she must have been! The duchess survived her illustrious husband not less than twenty-two years, dying at the age of eighty-four, in 1744. The love she had for the duke may in no small degree be imagined from the following anecdote:—Though in her sixty-second year, she still possessed some attractions, inasmuch that she was sought in marriage by the Duke of Somerset. Her answer is highly characteristic, and greatly to be admired:—"Marriage is very unsuitable at my age; but, were I only thirty, I would not permit even the emperor of the world to succeed in that heart which has been, all my life, devoted to John Duke of Marlborough."—*Fraser.*

Jewesses have escaped the curse which alighted upon their fathers, husbands, and sons. Not a Jewess was to be seen among the crowd of priests and rabble who insulted the Son of God, scourged him, crowned him with thorns, and subjected him to ignominy and the agony of the cross. The women of Judea believed in the Saviour, and assisted and soothed him under afflictions. A woman of Bethany poured on his head precious ointment, which she kept in a vase of alabaster. The sinner anointed his feet with perfumed oil, and wiped them with her hair. Christ, on his part, extended his mercy to the Jewesses. He raised from the dead the son of the widow of Nain, and Martha's brother Lazarus. He cured Simon's mother-in-law, and the woman who touched the hem of his garment. To the Samaritan woman he was a spring of living water, and a compassionate judge to the woman caught in sin. The daughters of Jerusalem wept over him; the holy women accompanied him to Calvary, brought him balm and spices, and weeping, sought him in the sepulchre. "Woman, why weepest thou?" His first appearance, after the resurrection, was to Mary Magdalene. He said to her, "Mary." At the sound of his voice Mary Magdalene's eyes were opened, and she answered "Master." The reflection of some beautiful ray must have rested on the brow of the Jewesses.—*Chateaubriand.*

**FLOUNCING.**—In Guernsey, when a young man offers himself to a young lady, and is accepted, the parents of the parties give what is termed a flouncing; that is, they invite their friends to a feast, the young lady is led round the room by her future father-in-law, and introduced to his friends, and afterwards the young man is paraded round in like manner by his future father-in-law; there is then an exchange of rings, and some articles of plate, according to the rank of the parties. After this it is horrid for the damsel to be seen walking with any other male person, and the youth must scarce glance at anything feminine; in this way they court for years. After this ceremony if the gentleman alters his mind, the lady can claim half his property; and if the fickle lass should repent the gentleman can demand half of hers.

The natives of Guernsey keep themselves very secluded; they have three classes of society—the sixties, the forties, and the twenties. The first, in their evening visiting, carry a lantern with three lights; the second one, with two; and third, one.

**EIGHT-AND-THIRTY.**—Eight-and-thirty is a frightful epoch in the life of a woman of fashion. Hot rooms and cosmetics place it on a level with fifty in the lady of a country squire. The struggle between departing youth and departing age is never more awful. A little older, and the case becomes too clear for dispute. At forty she gives up the field, allowing that time has the best of it. But for the five preceding years,—those trying years during which, though no longer pretty, a woman may still be handsome,—the tug of war is terrific. A woman never prizes her beauty half so much as when it is forsaking her; never comprehends the value of raven locks till revealed by the contrast of the first grey hair; never finds out that her waist was slim and her form graceful, till she has been accused of *enbonpoint*. Brother coxcombs! if you would have a proper value set upon your homage, pay your court to a woman of eight-and-thirty. The flutter of a little miss of sixteen is nothing to the agitation with which the poor grateful soul uplifts her head above the waters of oblivion, in which she was succumbing.—*Memoirs of Colman.*

**WIVES.**—Women should be acquainted that no beauty hath any charms but the inward one of the mind; and that a gracefulness in their manners is much more engaging than that of their person; that modesty and meekness are the true and lasting ornaments: for she that has these is qualified as she ought to be for the management of a family, for the education of children, for an affection to her husband, and submitting to a prudent way of living. These only are the charms that render wives amiable, and give them the best title to our respect.

Speaking of the speed of a heirie (a species of camel), Burchardt assured a traveller, that he knew a young man who was passionately fond of a lovely girl whom nothing would satisfy but some oranges; these were not to be procured at Mogadore, and as the lady wanted the best fruit, nothing less than Morocco oranges would satisfy her. The Arab mounted his heirie camel at dawn of day, went to Morocco (about 100 miles from Mogadore), purchased the oranges, and returned that night after the gates were shut, but sent the oranges to the lady by a guard of one of the batteries.

**CARD PLAYING.**—There is nothing that wears out a fine face like the vigils of the card table, and those cutting passions which naturally attend them. Hollow eyes, haggard looks, and pale complexions are the natural indications of a female gamester; her morning sleeps are not able to repay her midnight watchings.—*Guardian.*

**DRESS.**—The plainer the dress, with greater lustre does beauty appear. Virtue is the greatest ornament, and good sense the best equipage.

**DOWRY.**—The best dowry to advance the marriage of a young lady is when she has in her countenance mildness; in her speech wisdom; in her behaviour modesty; and in her life, virtue.—*Fenton's Epistle.*

**MODESTY.**—The first of all virtues is innocence; the next is modesty. If we banish modesty out of the world, she carries away with her half the virtue that is in it.—*Spectator.*

**MARRIAGE.**—In marriage, prefer the person before wealth, virtue before beauty, and the mind before the body; then you have a wife, a friend, and a companion.—*Penn.*

**THE WOMEN OF SMYRNA.**—The following spirited description of the principal street of the city of figs and raisins is from the pen of an American traveller:—The scene was gay, animated, striking, and beautiful, and entirely different from any thing I had ever seen in any one European city. Franks, Jews, Greeks, Turks, and Armenians, in their various and striking costumes, were mingled together in agreeable confusion; and, making all due allowance for the circumstance that I had for some time been debarred the sight of an unveiled woman, I certainly never saw so much beauty, and I never saw a costume so admirably calculated to set on beauty. At the same time, the costume is exceedingly trying to a lady's pretensions. Being no better than one of the uninitiated, I shall not venture upon such dangerous ground as a lady's toilet. I will merely refer to that part which particularly struck me, and that is the head-dress; no odious broad-brimmed hat; no enormous veils enveloping nose, mouth, and eyes; but simply a large gaudy turban, sitting lightly and gracefully on the head, rolled back over the forehead, leaving the whole face completely exposed, and exhibiting clear dark complexions, rosy lips closing over teeth of dazzling whiteness; and then such eyes, large, dark, and rolling! It is a matter of history, and it is confirmed by poetry, that

"The angelic youths of old,  
Burning for maids of mortal mould,  
Bewildered left the glorious skies,  
And lost their heaven for woman's eyes."

This is the country where such things happened; the throne of the Thunderer, high Olympus, is almost in sight, and these are the daughters of the women who worked miracles. If the age of passion, like the age of chivalry, were not over and for ever gone, if this were not emphatically a bank-note world, I would say of the Smyrniotes, above all others, that they are that description of women who could

"Raise a mortal to the skies,  
Or draw an angel down,"

As they walk, too, as if conscious of their high pretensions, as if conscious that the reign of beauty is not yet ended; they under that enchanting turban, charge with the whole artillery of their charms. It is a perfect unmasked battery; nothing can stand before it. I wonder the Sultan allows it. The Turks are as touchy as tinder; they take fire as quick as any of the demi-gods, and a pair of black eyes is at any time enough to put mischief in them. But the Turks are a considerate people. They consider that the Franks, or rather the Greeks, to whom I particularly refer, have periodical fits of insanity, and they go mad twice a year, during Carnival and after Lent; and if at such a time a follower of the Prophet, accidentally straggling in the Frank quarter, should find the current of his blood disturbed, he would sooner die, may he would sooner cut off his beard, than hurt a hair of any one of the light heads that he sees flitting before him. There is something remarkable by the way, in the tenacity with which the Grecian women have sustained the rights and prerogatives of beauty in defiance of Turkish customs and prejudices; while the men have fallen into the habit of their quondam masters, have taken to pipes and coffee, and in many instances to turbans and big trousers, the women have, ever gone with their faces uncovered, and to this day one, and all eschew the veil of the Turkish women. Pleased and amused with myself and every thing I saw, I moved along, unnoticed and unknown, staring, observing, and admiring; among other things, I observed that one of the amiable customs of our own city was in full force here, viz., that of the young gentlemen, with light sticks in their hands, gathering around the door of the fashionable church to stare at the ladies as they go out. I was pleased to find such a mark of civilisation in a land of barbarians, and immediately fell into a thing which seemed so much like home; but, in justice to the Smyrniote ladies, I must say I cannot flatter myself that I stared a single one out of countenance.

## Literary Debris.

**HONEST PRIDE.**—If a man has a right to be proud of any thing it is of a good action, done as it ought to be, without any base interest lurking at the bottom of it.—*Sterne.*

**ANGER.**—To be angry about trifles is mean and childish, to rage and be furious is brutish, and to maintain perpetual wrath is akin to the practice and temper of devils; but to prevent or suppress rising resentment is wise and glorious, is manly and divine.—*Watts.*

**PRIDE.**—Pride is as loud a beggar as want, and a great deal more saucy. When you have bought one fine thing you must buy ten more, that your appearance may be all of a piece; but it is easier to suppress the first desire than to satisfy all that follow it.—*Franklin.*

**CANDOUR.**—The shortest and surest way to live with honour in the world, is to be in reality what we would appear to be; and if we observe we shall find that all humane virtues increase and strengthen themselves by the practice and experience of them.—*Socrates.*

**PERFECTION.**—Aim at perfection in every thing, though in most things it is unattainable; however, they who aim at it, and persevere, will come much nearer to it than those whose laziness and dependency make them give it up as unattainable.—*Chesterfield.*

**GOVERNMENT.**—A man must first govern himself ere he be fit to govern a family; and his family, ere he be fit to bear the government in the commonwealth.—*Sir Walter Raleigh.*

**COMMON SENSE.**—Fine sense and exalted sense are not half so valuable as common sense. There are forty men of wit for one man of sense; and he that will carry nothing about him but gold, will be every day at a loss for want of ready change.—*Pope.*

**CONTENTMENT.**—Climb not too high, lest you fall; nor lie on the ground, lest you be trampled on. Consider yourself as safest when your own legs bear you.—*Dr. John Hammond.*

**YOUTH AND AGE.**—As I approve of a youth that has something of the old man in him, so I am no less pleased with an old man that has something of the youth. He that follows this rule may be old in body, but can never be so in mind.—*Cicero.*

**IGNORANCE.**—Nothing can be more inglorious than a gentleman only by name, whose soul is ignorant, and life immoral.

**PERSEVERANCE.**—The greater the difficulty, the more glory in surmounting it; skillful pilots gain their reputation from storms and tempests.

**ABUSE.**—A gentle reply to scurrilous language is the most severe revenge.

**EXPERIENCE.**—The Scotch have a proverb that a man at 40 is either a fool or a physician, and of a truth it is so, our own observations being the best recipes.

**EDUCATION.**—He that makes his son worthy of esteem by giving him a liberal education, has a far better title to his obedience and duty, than he that gives him a large estate without it.—*Socrates.*

**INDUSTRY.**—As the sweetest rose grows upon the sharpest prickles, so the hardest labours bring forth the sweetest profit.

**WILLS.**—What you leave at your death let it be without controversy, else the lawyers will be your heirs.—*Francis Osborne.*

**PERFECTION.**—He that seeks perfection on earth leaves nothing new for the saints to find in heaven.—*Francis Osborne.*

**CAUTION.**—Open your mouth and purse cautiously, and your stock of wealth and reputation shall, in repute at least, be great.—*Zimmerman.*

**THE JEWS.**—A statistical account of the Jews in Russia has lately been published at St. Petersburg by the Academician Kopper. It appears from it, that the number residing by permission in the 17 governments is 1,054,349, including both sexes. In Volhynia they are most numerous, constituting a 15th part of the whole population. In Poland the greater number is in Warsaw, of which the Jews form one-fourth of the inhabitants; and, indeed, in both Russia and Poland, they are more numerous in the towns than in the country places. In 1837 the total number of Israelites in Poland was 411,307, of whom 338,667 lived in the towns, and 72,630 in the country.

**TRUE NOBILITY.**—There is no nobility like to that of a good heart, for it never stoops to artifice, nor is wanting in good offices where they are seasonable.—*Gracian.*

**INDEPENDENCE.**—To be truly and really independent is to support ourselves by our own exertions.—*Porter.*

**WOMAN.**—A man cannot possess any thing that is better than a good woman, nor any thing that is worse than a bad one.—*Simonides.*

**CHAUCER'S TOMB.**—In the Poet's Corner in Westminster Abbey, let into the wall, under a low depending arch, is to be seen the decayed tomb of the poet Chaucer—one of the first of our countrymen who snatched an evergreen leaf from Apollo's wreath. The date of his obituary, as engraven on his tombstone, is 1400; but the major portion of the letters composing his epitaph are rendered so exceedingly indistinct by the corroding tooth of time, that it is with much difficulty they can be traced and deciphered. From this circumstance, the ancient tomb of Geoffrey Chaucer is, in nine instances out of ten, overlooked by the inquisitive stranger when he enters the Poet's Corner, to ponder over the epitaphs of those who, by their approved virtues or conspicuous abilities and national services, have at different periods of time distinguished themselves in this great country. The Dean and Chapter of Westminster would incur but a very trifling expense, if they were to cause a copy of Chaucer's epitaph to be engraved on a small tablet, and placed over the poet's sarcophagus, as it is very probable, from the present state and condition of his tomb, that in another half century no traces of the inscription will remain visible.

"BY EDUCATION MEN BECOME EASY TO LEAD, BUT DIFFICULT TO DRIVE—EASY TO GOVERN, BUT IMPOSSIBLE TO ENSLAVE."—LORD BROUGHAM.

NUMBER 4.

SATURDAY, JUNE 26, 1841.

PRICE THREE HALFPENCE.

## Shakspeare a Courtier.

AMONG the few demeaning errors with which Shakspeare, as an author, can be truly charged, that of flattery to Elizabeth and her courtiers is the greatest. Were he to be considered as a mere play-writer, this fault would scarcely merit notice; for, in the venal age in which he lived, men of superior education, and greater pretensions, were much more liberal than the Bard of Avon in their adulation of the Queen. Ben Jonson, for instance, the then Cæsar among the dramatic poets of his time, was the most gross and fulsome of flatterers; not to Elizabeth alone, but to James I., a man whose parade of literary acquirements sickened genius from the Court.

But Shakspeare, though the honours and profits of his labours were sufficient to ensure him a comfortable independence and comparative respect, did not in his life acquire that deep-rooted admiration among his countrymen which is now universally awarded to his matchless productions. It was not until the reign of Queen Anne that the full flow of public approbation sealed his name as that of the most highly-gifted author, whose genius had adorned, elevated, and instructed the human race. However presumptuous, therefore, it may now appear to fix our pen upon the faults of Shakspeare, it must at least be serviceable to truth to show, that even he, who possessed the richest and sublimest intellect of recorded ages, was so far the creature of circumstances, and so far governed by the prevailing impulses of our common humanity, as to be compelled at times to descend from the unapproachable excellence of his own genius, to intermix its breathings with the grosser and more earthly calculations of sordidness.

AS Shakspeare became, at the time of Queen Anne, and will ever be, a household god throughout the many and varied regions in which the English language is spoken, it is the more necessary that the few particles of dross should be separated from the fine gold—that the personal commendations which he, in common with the smaller poets of his day, bestowed upon the insatiable vanity of Elizabeth, should be proclaimed as having been dictated by other impulses than the brilliant powers of his imagination—that comprehensive faculty, whose scope embraced all nature, which imprinted on his everlasting page the passions of the human heart, and anticipated the workings of the most prolific brain.

The reign of Elizabeth, by the chroniclers of her own time, and by their copyists, is recorded as the most honourable and prosperous in English history. But more acute and reflecting minds have looked beneath the surface of events, and affirm that there was more real tyranny, and greatly more popular misery and misrule during that showy and glittering reign than even in that of the long-denounced and heartily-detested Richard III. Horace Walpole, in his "Historic Doubts," not only produced much plausible reasoning, but illustrated it by concurrent facts, to prove that the "last of the Plantagenets" was not a tyrant to the people of England. To the faction, which opposed the pretensions of his family, he was remorseless from his youth, pursuing them with his hatred until they were exterminated; but to the great body of his subjects he was humane, just, and charitable—repressing the exactions of those to whom the taxes were farmed, and checking in every possible way the incroachments of the rich upon the privileges or immunities of the poor. Extremely different was the conduct of Henry VII., Shakspeare's Richmond, and Queen Elizabeth's grandfather. With a barbarity equal, at least, to that of the

"crook-backed tyrant," he destroyed every man of eminence who had opposed his claims to the throne; and when seated there he commenced a series of exactions upon the people, which, coupled with his extreme parsimony, speedily made him the richest monarch in Europe. His reign, so full of popular heavings and public discontent, Shakspeare has passed over in silence, leaving an irreparable hiatus in his dramatic history of England. Although the regal life of this monarch would not bear dramatic representation to the honour of the Tudor family, the convenient method of flattery by prophecy is adopted. In the third part of Henry VI., that monarch, on seeing Richmond, while a youth, is made to say—

"Come hither England's hope! If secret powers  
Suggest but truth to my divining thoughts,  
This pretty lad will prove our country's bliss.  
His looks are full of peaceful majesty;  
His head by nature framed to wear a crown,  
His hand to wield a sceptre; and himself  
Likely in time to bless a regal throne."

The mean and paltry Henry VII. of history could never be recognised by this glowing description; had his reign been even a hundredth part as honourable as above predicted, there can be little doubt but the first of the Tudors would have been deified by Shakspeare.

The bustling and energetic Henry VIII., however, has been portrayed, and that in the most favourable light. Not one of the enormities committed by that monster king is hinted at: his infuriate passions and bestial lusts are "quietly inured," whilst all his superficial qualities are vaunted to the utmost. It is, therefore, greatly to be regretted that the author of so many powerful pieces upon English history should have given such a partial portrait of the sensual king.

Elizabeth, inheriting alike the parsimony of her grandfather, and the imperiousness of her father, with no small portion of his animal passions, exacted from her courtiers the most debasing flattery; and all who expected notice or advancement at her hand, were compelled to undergo the meanest of all novitiates—a course of adulation revolting to independence and even common sense. The manner in which Elizabeth is spoken of in Henry VIII., when read after a perusal of impartial history, infuses a feeling of regret—perhaps in some of discontent—that he who wrote for all time should have written so much for the fleeting hour. The trial of Queen Katharine is full of dramatic beauty and effect; but, notwithstanding her heart-touching appeals, the otherwise uninformed reader would be compelled to espouse the quarrel of the king, and thereby be led to justify his marriage with Anne Boleyn, an act, the disgrace of which is only equalled by the succeeding murders and marriages of the unprincipled monarch. In the scene between *Anne Boleyn* and an *Old Lady*, in which there is some womanly talk of births and marriages, the future bride is made to express an oath that she would not be a queen for all the world, the object of the play being to insinuate that she contrived no scheme to throw herself in Henry's way, but that her beauty and virtue alone enticed the King to honour her. The Lord Chamberlain interrupts their discourse, by informing her that his Majesty has created her Marchioness of Pembroke, with a pension of £1000 a-year, all for virtuous goodwill. In scanning the new favourite, the Chamberlain thus speaks to himself—

"I have perused her well,  
Beauty and honour in her are so mingled,  
That they have caught the king; and who knows yet  
But from this lady may proceed a gem  
To lighten all this isle!"

A woman's "honour" entice King Henry to her ferment, and she a waiting-woman on the virtuous and dignified Queen Katharine!

There can be no doubt that the Lady Boleyn was deficient in the sweetest charm of woman, in modesty; and yet she is described in the play as a paragon of every female virtue. The portraits of her yet extant prove her to have been remarkable for a voluptuous cast of countenance; yet a by-stander in the marriage-procession is made to say—

"Heaven bless thee,  
Thou hast the sweetest face I ever look'd on;  
Sir, as I have a soul she is an angel;  
Our king has all the Indies in his arms,  
And more, and richer, when he strains that lady.  
I cannot blame his conscience."

This is no doubt within the license of the drama; but when it is recollected that Elizabeth was vain in the extreme of her small amount of beauty, it became necessary for courtiers to say that she sprang from a beauteous stock. It is indeed within the range of possibility that Shakspeare thought the queen good-looking; but his rapt descriptions of female beauty—his Imogene, Desdemona, Ophelia, Juliet, &c.—were all of a vastly different character and appearance than the masculine countenance of Elizabeth. It is esteemed a small crime, certainly, to flatter a woman's looks, but when that flattery is given for purely selfish purposes it becomes disgusting. But more venal still, because on a more important topic, is the speech of Archbishop Cranmer on the occasion of Elizabeth's baptism.

Cranmer.—Let me speak, sir,  
For Heaven now bids me; and the words I utter  
Let none think flattery, for they'll find them truth.  
This royal infant (heaven still move about her!)  
Though in her cradle, yet now promises  
Upon this land a thousand thousand blessings,  
Which time shall bring to ripeness; She shall be  
(But few now living can behold that goodness)  
A pattern to all princes living with her,  
And all that shall succeed; Sheba was never  
More covetous of wisdom, and fair virtue,  
Than this pure soul shall be; all princely graces,  
That mould up such a mighty piece as this is,  
With all the virtues that attend the good,  
Shall still be doubled on her: truth shall nurse her,  
Holy and heavenly thoughts still counsel her:  
She shall be loved and fear'd: Her own shall bless her:  
Her foes shall like a field of beaten corn,  
And hang their heads with sorrow: Good grow with her:  
In her days, every man shall eat in safety  
Under his own vine, what he plants; and sing  
The merry songs of peace to all his neighbours:  
God shall be truly known; and those about her  
From her shall read the perfect ways of honour,  
And by those claim their greatness, not by blood.  
[Nor shall this peace sleep with her; but as when  
The bird of wonder dies, the maiden phoenix,  
Her ashes new create another heir,  
As great in admiration as herself;  
So shall she leave her blessedness to one,  
(When heaven shall call her from this cloud of darkness,) who,  
From the sacred ashes of her honour,  
Shall star-like rise, as great in fame as she was,  
And so stand fix'd: Peace, plenty, love, truth, terror,  
That were the servants to this chosen infant,  
Shall then be his, and like a vine grow to him;  
Wherever the bright sun of heaven shall shine,  
His honour, and the greatness of his name  
Shall be, and make new nations: He shall flourish,  
And, like a mountain cedar, reach his branches  
To all the plains about him:—Our children's children  
Shall see this and bless Heaven.

K. Henry.—Thou speakest wonders.  
Cranmer.—She shall be, to the happiness of England,  
An aged princess; many days shall see her,  
And yet no day without a deed to crown it.  
'Would I had known no more! but she must die,  
She must, the saints must have her; yet a virgin,  
A most unspotted lily shall she pass  
To the ground, and all the world shall mourn her.

From these splendid lines, replete with poetic beauty, and redolent of sentimental loyalty, the worshipper of truth lifts an unsatisfied eye! Turning from this emphatic declamation even to the glozed page of history, the conscience is smitten with a sense of the painful difference between them. It was a romance long dwelt upon, that Elizabeth was a model of honour, virtue, and all the high and heart-endearing qualities which ennoble woman in the eyes of man; but its constant repetition caused a degree of doubt in the minds of a scandal-loving court, until even the scullion girls became acquainted with the frailties of their mistress. Nor was the greatness of her mind less a fable than the purity of her morals; she was vindictive in the extreme; splenetic, avaricious, mean and cruel; distrustful and intriguing; bound neither by personal nor by national honour; while her vanity, both as to her figure and accomplishments, was beyond parallel. It is not then surprising that during her long reign she was fed by a succession of flatterers, for a court presided over by a vain sovereign is a sink of every meanness and iniquity; but it is to be wondered at that Shakspeare should be found in the menial train. An infant some few days old promising, through the archbishop's heaven-enlightened eye, "to bring upon this land a thousand thousand blessings" is, no doubt, a fact to be believed in royal courts, where a childing Queen cannot sneeze but it is prophetic of some great event. Not long ago the King of the French had a grandson born to him, and the municipality of Paris came running to the Tuileries with a superb sword as a present to the baby, covering the folly of their action with the most fulsome nonsense. This child's play, however, may be well forgiven. Statesmen and politicians must not be blamed when they interfere with matters for which they are peculiarly fitted; their intellectual greatness may easily be measured by the noise they create respecting so natural and commonplace an event as a married woman presenting her husband with children. But Shakspeare was none of these; he must have blushed to himself when he permitted his golden pen to trace the lines—

"She shall be  
A pattern to all princes living with her  
And all that shall succeed."

There is no one of Shakspeare's admirers in England who would wish her present Majesty to take pattern by Elizabeth. Indeed, the candid manner in which our Queen told the Lords of her Privy Council that she must have a husband was more to her honour than all the boasted virginity of Elizabeth, even had ninety-nine of her hundred amours been untrue.

But should Shakspeare, and the historians we have been accustomed to read, have wedded us to an exalted idea of the "most unspotted lily," that prejudice fails us when we come to criticise the successor of the "maiden phoenix." James I. noticed Shakspeare very kindly, and was certainly an extreme admirer of his writings, particularly of those eloquent portions which enunciate the divinity of kings, and the profanity of those who dared to lift a hand, or even an eye, against the Lord's anointed.

The passage marked by brackets [ ] is so distinguished in all the older copies of Shakspeare, probably because it was an interpolation placed there after the death of Elizabeth, who, with a childish ill-nature, would never allow her successor to be spoken of until almost the concluding period of her existence. Then it was that the base head of flatterers, who had ministered to her vanity for years, deserted her in the hour of death, and departed in unseemly haste to proffer their vernal homage to the King of Scotland. That the conduct and ability of this monarch little merited the applause of Shakspeare is abundantly evident from the following summary of his character by Dr. Robertson, the most able and impartial historian of his day:—

"His generosity bordered on profusion, his learning on pedantry, his pacific disposition on pusillanimity, his wisdom on cunning, his friendship on light fancy and boyish fondness. While he imagined that he was only maintaining his own authority, he may perhaps be suspected, in a few of his actions, and still more of his pretensions, to have somewhat encroached on the liberties of his people: While he endeavoured, by an exact neutrality, to acquire the good will of all his neighbours, he was able to preserve fully the esteem and regard of none. His capacity was considerable; but fitter to discourse on general maxims than to conduct any intricate business: His intentions were just; but more adapted to the conduct of private life, than to the government of kingdoms. Awkward in his person and ungainly in his manners, he was ill qualified to command respect; partial and undiscerning in his affections, he was little fitted to acquire general love. Of a feeble temper more than of a frail judgment: exposed to our ridicule from his vanity; but exempt from our hatred by his freedom from pride and arrogance. And upon the whole, it may be pronounced of his character, that all his qualities were sullied with weakness and embellished with humanity. Of political courage he certainly was destitute; and thence chiefly is derived the strong prejudice which prevails against his personal bravery. An inference, however, which must be owned, from general experience, to be extremely fallacious!"

## A Fashionable Marriage.

### CHAPTER I.—THE COURTSHIP.

AMONG the quiet and money-making citizens of London, some few years ago, Mr. Peter Winyett held no despicable rank. He certainly had never been one of the municipal authorities, and during the thirty years that he was considered a prosperous citizen, he only once had been invited to partake of the hospitalities of the Mansion-house. He was known to entertain economical opinions respecting the civic expenditure, and was, moreover, liberal in his political principles. On several occasions, he had been a member of Alderman Wood's election committees, and on all public occasions sustained the character of a consistent and independent Whig. He had lost his wife while his three children were infants; and two sons having died within a short time after, his entire cares and fortunes were devoted to his daughter Mary. Miss Winyett was a sensible and accomplished girl, elegant in her appearance, of comely features, and not over proud of the fortune of which she was the undisputed heiress. She was one of those young ladies who endue without dazzling, and who, although at the West End they may be termed plain, are really the most loveable and interesting of their sex. Not a few of Mr. Winyett's mercantile friends thought of the best means of securing his daughter for one of their sons; and frequently on 'Change, at the ordinary, and even in the omnibus, would a brother merchant descendant on the qualities of Miss Winyett, and the happiness it would give to all his family to become allied to hers. Mr. Winyett, however, was a prudent man, and always replied to these observations, by saying that his daughter's inclination would be his only guide in such a matter. Of the little company into which Miss Winyett was introduced, she never evinced a partiality for any individual; and although nearly nineteen years of age, and heiress to at least eighty thousand pounds, she was absolutely without a suitor.

In the course of some business transactions, Mr. Winyett became acquainted with Josias Vincent, Esq., an attorney of some considerable eminence. This gentleman having met the young lady at her father's house, and learning that no matrimonial engagement was likely to interrupt his schemes, he resolved to make himself the originator of an alliance, at the greatest possible profit to himself. Mr. Vincent had introduced the honourable Lord Swindleton to a money-broker; and, although he had profitably shared in some transactions between these parties, he was aware that a rather heavy bill was on the eve of becoming due, which the broker would not be inclined to renew.

My Lord Swindleton was the only scion of the ancient and noble family of Foulborough. The Earl himself was in his dotage; a martyr to the gout, to gambling, and the gangrene of official disappointment, he lived apart from public life, in impatient expectation of the Whigs being expelled from office, that he or his son might acquire some Government appointment. The family patrimony was completely wasted—mortgages covered every acre of his land; and his plate was carefully preserved at his bankers. The Countess was a lady of haughty manners, and even in her family sustained her imperious character with severity. Deprived of many of the extravagant amusements to which she was attached, and almost hopeless of any of her daughters now making a wealthy conquest (for the youngest was twenty-five), a splenetic temper engendered itself upon her natural pride, and rendered her almost disagreeable to those around her. Her youngest child, the hopeful Lord Swindleton, had run the usual course of profligacy and extravagance, so common to the vicious and uneducated youth of the English aristocracy, and was now, in common with all his family, at a dead stand for want of ready money.

In these circumstances, on hearing the purport of the visit with which he was honoured by Mr. Vincent, the young lord actually resolved as well as promised to think seriously of the matter. He well knew that the imperious temper of his mother, and the sickly pride of his sisters, would rebel against any such match; but, as he knew, also, that a portion of Mr. Winyett's gold would smooth, to a great extent, all opposition from these quarters, he gave himself little trouble on that account. With the usual filial affection of noble youths, he never wasted a thought on the opinion of his father; as the Earl could give him nothing, and could take nothing from him, the young lord considered himself altogether independent of him.

He availed himself, therefore, of the opportunities afforded him by Mr. Vincent; and, by the assiduity of his attentions, and his really elegant manners and courteous urbanity, he soon made an impression on the heart of Miss Winyett. The father of the young lady, led astray by the representations of Mr. Vincent, was made to believe that his daughter alone was the object of the noble lord's visits, and he prided himself on the reflection that his child would have a dowry almost sufficient to cope with the large inheritance of her suitor.

Matters having progressed thus favourably, Mr. Vincent invited the young lord and his creditor to a business dinner, when it was arranged that, provided Mr. Vincent could procure £50,000 to be paid by Mr. Winyett on the morning of the wedding-day, that learned gentleman

was to receive £1,000 for his exertions, and be freed from all liability in the money transactions between the other parties. The money broker, in the meantime, was to renew the pending bill for three months, having increased it from £2,000 to £3,000, which addition was to be his share of the proceeding, the entire sum being paid immediately on the marriage. These preliminaries being arranged, Lord Swindleton next thought of the best manner of introducing the subject to his mother, and resolved to broach the matter to her while confined to her room by a passing attack of sickness.

He accordingly waited on the Countess, and bluntly told her that she must immediately liberate him from his difficulties, or permit him to make the best match he could to assist his shattered income.

"Do you recollect," inquired the Countess, "that the blood of the old Normans flows uncontaminated in your veins?"

"Do you know that the lands they acquired are mortgaged to their full value, both for the Earl's life and my own?" observed the unabashed lord.

"Can a nobleman of your birth, education, and exterior, not make a suitable match from among the peerage?" asked the Countess in a more quiet manner.

"Can your ladyship introduce me to a family whose estate is unburdened, and to which there is not a multitude of existing heirs?"

"Well, then," said the Countess, "among the ancient baronetage, or even the old landed commoners, perhaps you may be more successful."

"My dear mother," said the young lord, "you know all these parties much better than I do; and you are aware that every girl of fortune among them is beset by titled suitors. It would be too long, if not a hopeless task to dislodge the crowd."

"This ought to be a pleasant topic," sighed the Countess; and yet somehow or other it is irksome and disagreeable. Have you cast your eye on any particular family?"

"On no family, certainly; the individual whom I propose to unite with our house is only a merchant's daughter," said his lordship.

"A what!" exclaimed her ladyship.

"A merchant's daughter," repeated the young lord, pretending not to see the agitation into which his mother had thrown herself.

A pause of some disagreeable length now ensued. The Countess leant back on the sofa, shut her eyes, clasped her hands, then stared into the callous countenance of her son, and made preparations for fainting away.

"I shall wait upon your ladyship when you have recovered," said his lordship; "and in the mean time, I bid you adieu, mama."

"Stay, you unfeeling, ungrateful boy!" exclaimed the Countess. You that would dishonour your father's house by contamination with a trader, can have little claim upon my sympathies. To you will shortly be confided the political influence of the family; and although it is somewhat embarrassed at present, an ambassadorial appointment for your father may shortly be expected—you will be made his attaché—and we can leave the country for a few years, when all will be well."

"What dream is this?" coolly inquired the youth. "When and from whom is this ambassadorial appointment to be received?"

"From the new ministry that will shortly be formed," replied the sanguine Countess.

"It is of no use to deceive ourselves longer on that subject, my much honoured mother," said his lordship with much warmth. "The day of the new ministry is as distant as ever; and even although our friends were in office to-morrow, there are two, perhaps three, circumstances which will prevent the accomplishment of your expectations."

"What are these?" plaintively inquired the Countess.

"Why, in the first place, there are so very many of our political friends on the look out, like ourselves, that the distribution of patronage can scarcely be expected to reach us, seeing we have no family interest in the Commons, and only one vote in the Lords, where it is not needed; and, in the second place, since that unhappy vote on the embassy to Russia, Sir Robert will be more careful of his appointments."

"You mentioned a third circumstance, what is it?" inquired the Countess.

"The manifest incapacity of the Earl," coolly replied his lordship.

"You are a cruel and heartless wretch, my lord," said her ladyship. I should not be surprised if you were to become a Whig."

"The father of the young lady of whom I spoke is a Whig," observed the noble lord, with a smile.

"What devils have tempted you to talk and act thus, Alfred?" inquired the Countess, in accents almost agonising.

"Debt, difficulty, and the desire of ease," replied his lordship with the utmost coolness.

"You distract me," said the Countess. "I am unable to the task you would impose upon me. Have you consulted the Earl on the subject?"

"I have not, nor do I think it necessary. It is your office, when satisfied yourself, to inform him of the circumstances."

"If that were your only fault, Alfred, I could overlook it easily," replied the Countess, with some degree

of complaisance; "but really there exist so many insurmountable objections to your purpose, that I hope you will not mention it to me again; nor, indeed, pursue it any further, so far as a family alliance is concerned."

"To conclude the matter with you then, my lady-mother," said his lordship, "I must observe, that as the honours of our family are now completely profitless, it is my intention to discard them altogether. With this girl's fortune I can enjoy life in its most expensive and fashionable modes. Your door may be shut against me, but not another will be closed. My replenished purse will command an entrance everywhere, while your conduct must become the topic of universal scandal, and public attention will be drawn to our family embarrassments—a misfortune which we have as yet avoided. With these prospects and intentions, considering myself no longer a member of your family, madam, I must bid you finally adieu."

"And so then," cried the Countess, starting to her feet, "presumptuous, selfish boy, you would disgrace a family of which you cannot be sufficiently proud, for the sake of a city trader's daughter?"

"No—not at all," replied his lordship.

"For the sake of whom or what, then?" enquired the Countess.

"For her fortune," replied her son, with his usual nonchalance.

"And does not the girl presume on your coronet because of her fortune? A young man of your accomplishments might honour her enough with your company, without allying yourself to her."

"Mother," said his lordship, somewhat indignantly, "I am neither villain enough nor mean enough for that. The girl is not sufficiently voluptuous to be a companion; she is also too rich to be supported; and I could not hold up my face even at Tattersall's, were it supposed that I lived upon the woman I protected. To get hold of her fortune I must be married to her. In all things else I am your humble servant."

"In God's name," said the Countess, "what is the amount of this fortune of which you talk so much?"

"I came to talk of nothing else at present, but you would talk of the girl, of whom I said nothing."

"But the fortune—the fortune," said her ladyship, somewhat impatiently.

"I expect £50,000 on the morning of the ceremony, and as much more on the death of her father."

The Countess mused a short time, calculating seemingly within herself; then looking earnestly in her son's face, while an apparent smile was seen in the perspective of her eyes, she said—"Could you not wait till the old man's death?"

"Perhaps I could, so far as I am immediately concerned; but others will not. Now that you talk of it in a business manner, I will sit by you and explain the whole affair."

So saying, his lordship threw himself upon the sofa, and gave the Countess a rambling account of his embarrassments, dwelling with particular emphasis on the fact that his bay mare was at livery at Tattersall's—that in a few weeks she would have eaten herself out of his possession—and that when he did ride out, his own groom remained behind, while one from the stables followed him in his perambulations.

"Well, then, Alfred, answer me this question truly—How do you intend to marry the girl? By an elopement to Gretna, I suppose."

"No; why should I?"

"Because it might then be given out, that you had been seduced or betrayed into it; and then I could be very angry and forbid you the house for a while; after that I would relent and forgive you, and you might then either give the girl an allowance, or recognise her, as circumstances might determine."

"There you are, impracticable again. You know as well as I do, that these moneyed merchants think themselves equal to any peer, and therefore the girl's father would be as indignant as you could pretend to be. Another thing—the marriage portion must be arranged by legal settlement, which an elopement would prevent, were the girl foolish enough to consent to such a course. But, suppose you had your own way thus far, who would believe otherwise than that it was a marriage of necessity?"

"You are a merciless, wrong-headed boy; you have no regard for your family; none even for me. But I will not submit so easily as I see you now imagine. If I must recognise the girl, I must have an equivalent. You are to receive £50,000 on the marriage day; I have a few engagements of which the Earl is not aware, and your sisters have been deprived of pocket-money for some time. Now, Alfred, bitter as I feel the degradation, I will make a bargain with you; give me a bill for £10,000, and each of your sisters £1,000, and I will give you my advice and the girl my countenance. Nay, do not interrupt me, I will also give you a *dejeuner* on the morning of your marriage in this very house."

"You are somewhat extravagant, I must say," said Alfred, laughing, "and I know you do not expect me to comply; but I shall surprise you. I will give you £5,000, and my sisters £1,000 each, and that is more than any of you deserve—aye, or even could expect."

"Say another £1,000 for the *dejeuner*, and I will accept your niggardly offer."

"One thousand pounds for a breakfast is certainly not more than you have sometimes incurred for a supper

Well, then, suppose I agree, and let me now hear your valuable advice."

"Why, my dear Alfred, as you now display a portion of your own good sense, I will tell you that I need not interfere in the marriage at present. I will obtain the Earl's consent to leave it in my hands, and send a paragraph to the *Morning Post*, which will introduce the matter to our friends. In the mean time, you may procure some opera tickets for me and your sisters. We will be present, as it were by accident, when you can introduce the girl to our notice, and I shall then be able to judge how far I can then proceed without compromising the family."

The morning after this interview, the following paragraph appeared in the fashionable morning paper:—"We understand that the beautiful and accomplished daughter of a highly respectable merchant in the City has recently made a conquest of the heir of the noble house of Foulborough. That illustrious family, in the exercise of the exalted virtue for which it is so eminently distinguished, will not, we believe, present any insuperable objection to the wishes of the noble lord, but leave the interesting affair to the dictates of the young nobleman's honour, integrity, and discretion."

### Scenes and Sketches of Military Life.

PATRICK O'NEIL—THE IRISH GRENADIER.

CHAPTER III.—THE FOURTH FLOGGING—THE KING'S BOOTS—THE FIFTH FLOGGING.

THE regiment remained but a few months in the south of Ireland. It was next ordered for England. We embarked on board a steamer, at a pleasantly-situated village called Middleton, on the banks of the Lea. The steamer took us to the transport lying in that noble basin, the Cove.

After a long and rough voyage we landed at Chatham, and went into barracks there, where we rested a few weeks—we were suddenly moved to relieve a regiment of the Guards at Windsor. The north of England at that time was pretty considerably riotous; the weavers and spinners were crying for bread, and the Guards were sent down to keep quietness.

We found Windsor capital quarters for a soldier, the people, though very shy, after some time became exceedingly obliging; the Guards were not liked by the towns people.

At Windsor private Patrick O'Neil was in his glory. The Castle was undergoing extensive alterations, and a number of Irish stone-cutters *et hoc genus* were employed, and Pat soon had "clouds of friends" amongst them. He assisted them to spend their earnings. He sung songs in capital style for them—told them droll and wild stories—recited his own many wonderful adventures and "hair breadth 'scapes" in foreign lands where he had never been, and told them news from friends in their own country whom he had never seen, and who might be mouldering in their graves for aught he knew or cared, and had always something new and strange where-with to entertain them. With these congenial spirits, and some simple-minded Englishmen, their fellow-workmen, he spent the time pleasantly when off duty, and here also he contrived to pick up a *cher amie*, whose overwhelming love led him into another of those acts of weakness and wanton outrage against order and discipline for which he had already paid so dear.

He was on the Castle guard; his post was the gate next the guard-room, and as he leaned idly against his box about 8 o'clock in the evening, the lady of his love made her appearance through the falling shades of night. She had brought her hero "the cup that cheers but not inebriates," and a small bottle of brandy to cool it. She was doubly welcome to O'Neil, for the night fell chill, and the post was lonely, besides the Castle was not a place that he could love. There was a rusty old-time look about it, and a ghostlike and charnel-house smell of the breeze that blew at night about the old towers and chapel. O'Neil felt himself more comfortable in the society of the lady fair than that of the sentry-box, so leaving his firelock to guard the Castle-gate, and forgetting in the fumes of the tea and brandy his duty, the guard-house, the impending court-martial, and all the horrors of the mangling lash, everything but the kind beauties fair before him vanished. They passed like misty shadows of other days from beneath the arch of the embattled tower, and faded away in the darkness and the distance.

The corporal on going round to relieve the sentries, was not a little astonished to find nothing of O'Neil, but his musket reclining on the wooden surmount. He called—his voice died away in the chapel vaults. He waited for a few moments, he posted the sentry, and returned to the guard, and gave in his report. The officer's report of the following morning contained the full particulars of O'Neil's disappearance.

The old sergeant imagined he had been spirited away by some of the grisly ghosts with which the Castle was said to abound, and the majority of the men of the guard held fast by the same faith. They could not for a moment venture to believe that any thing less than magic, or the powers of the invisible world, could tempt or force a soldier to desert his post under the very nose of royalty. The colonel, however, took a more material view of the subject, and instantly dispatched a patrol in search of the delinquent. They were absent until noon, and then they discovered O'Neil in a house near a piece

of waste ground called "The Acre," at the rear of the town. He was seated at breakfast with his Desdemona, as thoughtless and happy as though crime and punishment were banished altogether from the earth.

He was committed to his old quarters—the guard-house, and brought before a court-martial on the following day. When asked what could have induced him to quit his post, he replied with all the gravity imaginable, and with a face of the purest and most unsophisticated innocence—

"Why, your honours! I can't tell what came over me, good or bad, but only this. I was on duty as usual, and thinking of nothing at all, when a low moaning sort of noise came all at once from behind the sentry box, and my hair began to stand and creep all over my head, and my knees to knock against each other in the strangest way in the world, and then I knew that the noise was nothing that was good. Well, your honours, after about five minutes, I plucked up a bit of courage, and says I to myself, if you were the Devil and Doctor Foster (Faustus) I'll see who you are; so recovering my firelock, I moved quietly round the sentry box, and there your honours, if I didn't see a tall woman all in white; with a white face, and eyes of fire, come walking down the Castle wall before my face. Well, I had scarcely looked on her when the most awful flash of lightning that ever man beheld struck me your honours, knocked the firelock out of my hand, and left me senseless. I don't know how long I remained there your honours, but when I came to myself I found I was in a strange house, and people rubbing my temples, and burning feathers under my nose. They said they found me about two o'clock in the morning, lying as if I was dead, in the middle of the Acre. That's the blessed and holy truth, your honours, so you may punish an innocent man if you please."

The story was not believed. He was sentenced to and received three hundred lashes the next morning.

The duty at Windsor was rather severe; there was an officer's guard for the Castle, the barrack guard, hospital guard, the guard for the royal lodge in the park, and one for Frogmore, where the Princess Augusta then resided. These two last mentioned went on at seven o'clock in the evening, and the sentries were withdrawn, and the guards marched to barracks at seven the succeeding morning. These guards were eagerly sought after by the men, from the comparative indulgence and rest they offered.

The whole number of men for duty was paraded at 10 in the morning. The adjutant selected the cleverest and best-looking men for these guards, and they had nothing more to do until half-past six in the evening, when they were again paraded and marched to their posts. Besides this the guard at the royal lodge had always an excellent supper sent to them, with plenty of beer. O'Neil, though a desperate character, was seldom overlooked in the selection for these duties; indeed no officer with an eye for appearance could overlook him.

In about three months after the last punishment above narrated, he was selected as one for the guard on the royal lodge. His post was at a door at the back of the cottage, and where the sentinel at a certain hour was taken in and regaled with bread, beef, and beer. Unfortunately, he was on the post at this hour, and as usual, was taken in to supper with a servant to wait on him. While the latter left the room on some business, O'Neil cast his eyes about to see if there was anything which might answer his purposes lying loose about. A pair of elegant top boots met his glance—whether they struck his fancy in a particular way, or that he was led on by the *outré* choice of an Irishman, is hard to say; however, it was the work of but an instant for Pat to roll the boots tightly up and force them into his grenadier cap.

The boots were missed shortly after the guard came away; and the following day one of the royal grooms came and made a formal statement of the theft, accusing O'Neil as the only person who could have taken away the property. Patrick was at that time on the Castle guard—always undergoing punishment of one kind or another—he was then doing duty with "a night in bed," that is, guard mounting every second day. He was examined, but denied all knowledge of the affair; his person, knapsack, &c., were all searched, but no trace of the missing boots could be discovered. They were not long, however, concealed; that night a man of the company came out of hospital, and no regular bed in the room being then vacant for him, he was assigned to O'Neil's bed for that night; and, in unrolling the little mattress, out rolled the boots. Poor O'Neil had not had time to make away with them. The sergeant of the room immediately pounced on the prey, and carried them off in triumph to the orderly room. O'Neil was immediately taken off guard, and made a prisoner. A court martial was put in orders for the next day, Patrick brought before it, and convicted on the strongest circumstantial evidence, sentenced, and, for the fifth time in less than the space of one year, received three hundred lashes.

This last feat established O'Neil's reputation on a basis too firm to be shaken by any after-circumstances. His name had now become a bye-word—a matter of history in the regiment "to point a moral or adorn a tale," and the men when wishing to describe a character of extraordinary delinquency, would swear he was "as big a rogue as Paudeen O'Neil, who stole the King's boots."

## False Taste respecting the Female Form.

BEING NO. III. OF THE EXPERIENCES OF BENJAMIN TRUESTEEL, ESQ.

AMONG the charms of female childhood, the healthy glow of the cheek, and the flashing lustre of the eye, are the most delightful; not the less so because they are generally the most evanescent of womanly beauties. Why they are evanescent is a problem young ladies either cannot or will not understand; but they shall plead ignorance no longer, nor shall any mother bewail without knowledge why the vivacity and bloom so suddenly departs from her daughter's countenance. Ladies are not altogether ignorant of an article of female habiliment called stays;—that is the grand enemy, the crushing serpent, which envelops in its destructive folds the vital energies of the human frame, which insinuates a cancer on the rosebud cheek, and spreads a pallor where glorious health and animated looks have danced delighted among maiden features. The most important organs of the human body have their seat immediately beneath the rhinoceros covering, and by tight lacing\* they are so crowded and driven upon each other, that the vital functions are either suspended or disorganised, and strong and healthy girls speedily become peevish, ill-natured mortals, liable to faintness, hysterics, and hypochondriacism. We know there are a number of silly girls who consider the languishing system delightful; who think it is genteel to be weakly, and who abominate a spark of health upon their cheeks as the first, last, and worst sign of vulgarity. Women generally, however, like to be healthy, as well as to look handsome; but how to achieve these two great points of female diplomacy is a subject of much serious thought, of late and longing desires; it is—

"Their thought by day, their dream by night."

Benjamin, to the rescue! Snatch each glowing maid from consumption—restore the beams to the cold clouded eye, give vigour and elasticity to the footstep, bring back the merrily-ringing silver tone to the unimpeded laugh—make smelling bottles useless, and walking hour-glasses unfashionable!

Allow us, gentle ladies all, to introduce to you a young girl as yet guiltless of self-torture. We give you a faint outline; crossed by a diagram, of what she is to be. Her mother has resolved to place her under the tender mercies of the stay-maker, because the eldest daughter of my Lady this, and the youngest of Mrs. that, have done the same. The expanding bust of the poor girl must be "cabined, cribbed, confined," and the growing power of her little palpitating heart rudely checked, merely to make her like her neighbours. The more the pliant sides of the sweet young sacrifice can be crushed the better; the more nearly she can approach the next-to-nothing waist, then of course she will be considered the more elegant—so handsome, so charming—oh! what a delightful creature she will be! Well, there she is; laced and corded as a packing-box would be, formed like a wasp, quite as ill-natured, but neither so agile in her movements, nor so glittering in her eyes, so ready of motion in her head, or so free in the respiration of her lungs. But she is a woman now, and she must bid adieu to the fearless and joyous step with which she used to meet papa of an evening,—the skipping-rope is flung by; the heedless run, the half-giddy swing, the free and graceful bending of the back, the airy motion of the limbs, all are now impossible; she is encased in a coat of mail, swathed in buckram, and bound up with whalebone, as a falling house with props; she feels giddy in the head instead of her heels, spasms become frequent, and the druggist's shop is more frequently visited than the confectioner's. She grows pale as well as tall, and if a good constitution triumphs over all this ill-usage, she at least loses her appetite. Her father sends her to the country for the benefit of fresh air, where, not likely to meet with kindred forms, she now and then neglects her stays of a morning, inhales a portion of the blessed atmosphere, which impels an almost instant healthy action of her lungs; her bust, of course, slightly expands, and on returning home, she is welcomed by the ungracious exclamation of her mama—"La! dear, how stout you have got!"

Another course of tugging, tearing, and pinching must be gone through, and the flesh torn off the waiting-maids'

\* Husbands and fathers, who wish to arm themselves with legal weapons against this practice, will find the subject treated scientifically in No. III. of the *Polytechnic Journal*, a periodical well versed in physical science, and justly capable of arguing the question through all its intricacies.

fingers—or, in the absence of that functionary, off her own—her breath must be held in, and the free pulsation of her heart stopped, that the new stays and the new dress may be set on and off to the best advantage. With a chest as erect as that of an Egyptian mummy, and nearly as motionless, our straight-waistcoated heroine places herself at the piano, but the rapid movement of the arm is suspended; every now and then she thrusts her hand into the hollow of her opposite shoulder, to lift the strap of her stays from her arm, that a more free play may be allowed to her movements. Her face of a sudden gets wonderfully high coloured, a simper appearing on the countenances of the listeners (her mother, of course, excepted), for to them she presents the figure of a double hour-glass, fashion having made music stools provokingly like those who sit upon them. This probation over, the "prison-bound" suddenly recollects that she is under the disagreeable necessity of attending to an appointment which she almost wishes she had not made; and with this small attempt at duplicity off she glides to meet her lover.

The flowing drapery of the dress certainly gives her a light and elegant appearance, yet all her movements are constrained; her spine is locked up within massy bars of steel or whalebone; and her neck is stiffened, if not discoloured, by the manner in which its arteries are fettered on her shoulders. With care because with difficulty she gently places her hand upon the arm of her companion, and struts as stately as a peacock, the wonder of every little girl still in unbonded corsets, and the admiration of those who have not yet, to their unlimited regret, succeeded in stopping their respiration by compression of the bust. Fancy, gentle ladies, that the enamoured youth may be inclined, in a moment of chaste rapture, to place his arm round that steeled and corded waist; the moment that his fingers touch the toil-worn slave-doomed stays a figure like this appears to his fancy; and if you consider that shape in the least approaching to beauty, or in the remotest manner likely to entice the grasp of a lover's arm, the idea of the female form must be changed indeed. It is an exact counterpart of the fashionable exterior which is given above. Lest, however, our fairfideles consider we have dealt unkindly with them, and have exposed to the roughish eye of man the pitiable deformities which a silly woman may have brought upon herself, we present them with copies of the female fashions as they were displayed some years ago, and as they are still portrayed, in the fashionable pictures of the day.

Very handsome, indeed, says one lady; superb, says another; but ah! thoughtless girls, man will not be satisfied with a butterfly; he must have a fair proportion of flesh and blood to grace his table and adorn his hearth. With tears we admit that there is a paltry gang of selfish unthinking men, whose minds are never ennobled by an idea of matrimony, but who buzz like moths around a fashionably-dressed female from the lowest and most degraded motive, viz. that they may be seen in her company. Is it for such miserable attempts at manhood

that woman should torture herself? In too many instances she does so, but a few smart flashes of our indignation will soon put an end to such practices. A man who really loves the sex is not easily led away by appearances; he looks a little beneath the surface, and when he sees his best beloved presenting an appearance so outrageous, he quietly figures to himself what she will be in her bridal robes. With what satisfaction could he or any man smile complacently on such a form as this, which is that of the superb lady disrobed? Answer us honestly, ladies, and at once; say whether or not, dear woman, when so compressed, deformed, and destroyed, can be an agreeable companion, or an object on which the loving eye may dwell delighted. We do not for a moment insinuate that the sweet girls of England are alone guilty of disguising themselves from their Creator, and transforming their fine forms into shapes which nature never contemplated. The French ladies are even more guilty of the absurd and cruel practice, as will be seen from the figure we have copied from a Parisian book of fashions:—

The negligée of the neck and shoulders is broad and expansive enough, sufficiently undisguised, and palpable to feeling as to sight: the demure look would tell us of innocence of thought, and a sublime ignorance of artificial formation; but look at the beautiful tapering of her stomach; was there no labour bestowed in fitting that ornament so neatly on her person? She never placed a piece of tape round her waist, and measured it with the circumference of her gown—never sighed when she found that there still remained an inch or more to compress of her already mangled body ere the folds and plaits of her gorgeous breastplate could be displayed to advantage, the more especially as her dear friend and confidante had her gown made half an inch narrower in the girth than she had. The absence of steel and whalebone from the French corset is amply compensated by the quantities of cotton wool which are suspended at opposing quarters, with the view of presenting an enlarged rotundity beneath the waist; and which, if natural, would make the lady appear exactly thus. It will be observed that the ribs protrude at almost an acute angle, which no compression can ever produce, therefore a load of cotton, nicely overlaid with buckram, is requisite, the whole surmounted by lace and ribbon;—very prettily arranged, and tastefully intermixed, but still improperly because artificially protruding. But the abdomen, how can we describe it and maintain our equanimity of temper? English ladies, we have been told (but we denounce the calumny as false) are in the habit of wearing that detestable appendage to a fashionable dress vulgarly called a bustle; it will be seen that the French females require to wear them "fore and aft," with side protuberances to match, that the swelling rotundity may be given to their figures. If our tittering readers will not, on the instant, tear the iron bars from their stays, and give the lace a little relaxation, let them fall on their knees, and swear by their own vanity never to distort and disgrace their persons with the stuffing and padding so common with the Parisians.

If our idolatrous countrywomen are so much given to worship graven images, let them at least adopt a standard more natural, more healthy, and more becoming. Among the ancients the female form was especially prized for its beauty and symmetry, and every painter and sculptor considered his fame incomplete until he had given to the world a model of some transcendent form; but not one of these artistical elaborations presents the distorted appearance of the prevailing mode; there is no compression of a single muscle, every joint is in full and

active play, and every vein at its free distension. Look, for instance, on the immortal, the breathing statue of the Venus de Medici, sculptured by the most talented of human artists, and compare it with the slender proportions of an imitative Venus of the present day; consider also how the vital organs have room for healthy action in the one, and what torture must be endured by the other. We present a view of the interior of the bust of the natural figure, where every organ has full space in which to perform its functions. The waist not being unnaturally compressed, the ribs are expanded; and the internal vitals left uninjured. The heart, unoppressed by a load which fashion crowds upon it, beats regularly, the blood flows in healthful action through all its intricate canals,

and conveys its vitality unimpeded to the entire system. Beneath is given a portrait of the Venus as she would have been had she laced herself after the manner of the silly girls of our day. If there exists a lady so lost to every idea of the beautiful and harmonious in nature as to imagine that the compressed Venus is more handsome than the other, let her be convinced, at least, of the impropriety of imitating that slenderness of appearance. Compare the space given to the lower ribs, and pause for a moment until she recollects the exact spot where an acute and gnawing pain frequently affects the side.\* Place your finger on the troubled spot, and you will at once recognise it as that where the play of the vital organs is disarranged. Inflammation, and indeed every disease resulting from injurious treatment of the blood-vessels, is a certain concomitant of tight lacing. The original of the Medicean Venus, be it recollected, is said to have lived to the good old age of eighty-four, and that, too, in a climate where womanhood is sooner ripened, and consequently more liable to premature old age. Yet amidst the sunny throng of Italy, the De Medici maintained her beauty to the last; crowds of admirers waited in her train at the age of sixty. Her majestic carriage, her commanding as well as enticing womanliness, was visible to her latest day. At the close of a long life, her noble figure faded not away like a frost-bitten flower, nor grew shrivelled like an autumn leaf; her remains were rather as those of a forest oak, felled by the axe of time. The grandeur of her port was majestic even in death, moulded and proportioned by the unhidden hand of nature. Had she, however, been led away by a taste like that now prevailing, and had presented to the sculptor's eye a figure like the following, think you he would have breathed

upon the marble the vitality of his genius, and left her fame with his own to the admiration of posterity. No; nor would the De Medici have lived in robust health to her goodly old age; she would have been one of the fashionable crowd, hurried into oblivion with millions of her sex, instead of becoming at all times a divinity to genius—the admiration of men, and an example for women.

Ladies, as you love us, and admire yourselves, lace not your waists too tightly, but give the same vent to the pulsations of the heart as you do the vibrations of your tongue. By so doing the life-blood of the system will circulate freely, oppression will be taken from the breath, the early bloom will be restored, and the quick, clear-tinkling of the eye, in which the heart of man so much delighteth, will shine like the morning star upon a happy home and a healthy family.

\* We have, in our observations, said nothing relative to the injury sustained by the spine. On this part of the subject, we shall treat in a future number, illustrating our remarks with engravings, by which the cause of distorted shoulders and crooked sides will be explained.

### The Thames Water.

As much abuse and obloquy have been cast upon the Thames, as a source of supply for London, it will be well to see how the case stands, and how far the statements which have been made with respect to the superior purity of other streams, tributary to the "father of rivers," have been borne out by admitted facts. It has been the fashion, for some years past, to decry the use of Thames water taken from the London district, as being not only totally unfit for domestic purposes, but even prejudicial to the health of those who make daily use of it as a beverage; some writers have even asserted that many of the diseases with which the inhabitants of the metropolis are afflicted, are to be attributed to the daily use of this baneful liquid, which, according to them, so far from being a blessing, is, on the contrary, one of the greatest curses that could have been inflicted on us. Thames water has been described by these alarmists as a "villanous compound," made up of all that is most nauseous and filthy in nature, in such a state of solution and chemical combination, that no process of filtration or purification can render it salubrious, or even potable. It has even been said, by some of the witnesses examined before a Committee of the House of Commons, in 1828, that the very fishes have abjured their native element, when they have arrived in the vicinity of London, and have actually been seen to leap out of the water on to pieces of floating wood, bundles of weeds, &c., or whatever happened to be most convenient, in order, no doubt, to escape from the hated element, and to breathe pure air. It has been further stated, that no part, or, if any, but a very small portion, of the impurities which pass into the Thames, is carried by the action of the tide into the sea, but that the whole is in a state of "oscillation" to and fro near the metropolis; that the impurities, in fact, are carried as far down the river as the tide will carry them, and are again, by the next tide, brought the same distance back! That this is not the case, is self-evident; for, if it were, the Thames must have become long since choked up by the quantities of animal and vegetable matter daily entering it, and its current completely stopped; and yet we find that its depth and velocity have remained the same, or nearly so, for ages.

Further, if the case were as it has been stated, we must imagine that the same body of water has flowed backwards and forwards in the Thames for ever; whereas, we know that there is a continual transmission or interchange of water received from the upper sources of the river, and from the numerous tributary rivers and streams which empty themselves into it during its progress from its sources to the sea. That the Thames must, in fact, carry with it, in its fall to the sea, all the impurities which it has collected in its course, is so self-evident, that the only wonder is how the contrary could ever have been asserted. The tide at London Bridge, under ordinary circumstances, runs upwards about five hours and a half, and downwards, or towards the ocean, about seven hours. This occurring twice in twenty-five hours, causes the difference of high water at London to be an hour later every day. The variations of spring and neap tides, of much or little upland water, from an abundance or sufficiency of rain, are to be considered—still the tide flows downwards during a longer period than it does upwards, and the stream is stronger or more rapid in its course towards the ocean; by which the impurities which it has collected in its course are conveyed away, and a volume of fresh water daily brought into the Thames at London. The result of some experiments that were made in 1834, by the Secretary and the Engineer of the Grand Junction Water Company, in order to understand the current of the flood and ebb tides of the river Thames, showed that the flood of a spring tide ascended to a distance of 10 miles 930 yards above Vauxhall Bridge; and that the ebb of the same tide descended to a distance of 12 miles 260 yards—being a difference of one mile 1,120 yards in favour of the ebb tide. The velocity in this case, each way, was nearly the same; the experiment having been made in the middle of a very dry summer, when there was much less water than usual flowing over the top of Teddington Weir, so that the flood ascended to an unusual height. It is evident, however, that this cannot be the usual course of the tides; indeed, as the tides in the Thames are affected by many extraneous and incidental causes, such as particular winds, either assisting or retarding the influx of tide from the sea on one hand, and a greater or less quantity of land-water on the other, there must be perpetual variations of greater or less amount in the strength both of spring and neap tides. It must be recollected also that, in the latitude of London, westerly and north-westerly winds prevail for at least nine months out of the twelve; and, consequently, the declination or fall of the river being in that direction, contributes powerfully towards cleansing the channel of the river. It has also been found that the drainage of London does not materially affect the middle of

the stream during the ebb, a sample of water taken at London Bridge, during the last hour of the ebb, being nearly as bright as it could have been if taken at Richmond, and it is therefore probable that for a long period of the flood, the centre of the river remains unaffected by drainage water. The commissioners appointed by his late Majesty to inquire into the state of the supply of water to the metropolis, in their report, dated April 21, 1828, give the following passage from the report of Dr. Bostock as to the state of the Thames water in the neighbourhood of London:—"It appears that the water of the Thames, when free from extraneous substances, is in a state of considerable purity, containing only a moderate quantity of saline contents, and those of a kind which cannot be supposed to render it unfit for domestic purposes, or to be injurious to health. But as it approaches the metropolis it becomes loaded with a quantity of filth, which renders it disgusting to the senses, and improper to be employed in the preparation of food. The greater part of this additional matter appears to be only mechanically suspended in it, and separates by mere rest. It requires, however, a considerable length of time to allow of the complete separation, while, on account of its peculiar texture, and comminuted state, it is disposed to be again diffused through the water by a slight degree of agitation, while the gradual accumulation of this matter in the reservoirs must obviously increase the unpleasant odour and flavour of the water, and promote its tendency to the putrid state. Regarding the greatest part of the extraneous matter in the Thames as mechanically mixed with it, we may conceive that a variety of incidental circumstances will affect its quantity in the same situation and under the same circumstances of the tide; but the observations are sufficiently uniform to warrant us in concluding that the water is in the purest state at low tide, and the most loaded with extraneous matter at half-ebb. It would appear, however, that a very considerable part, if not the whole, of this extraneous matter may be removed by filtration through sand, and still more effectually by a mixture of sand and charcoal." The commissioners, after observing on the foregoing passage of Dr. Bostock's report, appear to have arrived at the following conclusions:—"It is obvious," say they, "that water receiving so large a proportion of foreign matters, as we know find their way into the Thames, and are so far impure as to destroy fish, cannot, even when clarified by filtration, be pronounced entirely free from the suspicion of general insalubrity. In reference, also, to this question, we apprehend that there are no grounds for assuming the probability of any improvement in the state of the water drawn from the London district of the river." In 1834, however, six years after this inquiry, it appeared from evidence, taken from the report of the select committee of the House of Commons of that year, that the water of the Thames, so far from having become worse, as had been predicted by some, and contrary to the expectations of the commissioners in 1828, had actually, in that space of time, improved in quality and purity. In a letter from Dr. Bostock to the secretary of the West Middlesex Water Works Company, dated 18th June, 1834, the doctor says:—"From the experience I have had on the subject, I am disposed to think that the water of the Thames, in the neighbourhood of the metropolis, is less impure than it was six years ago. This circumstance has, I understand, been noticed by others, and has been supposed to depend upon the removal of old London Bridge, by which the water has a more free outlet, and therefore carries down a part of the impurities which it formerly retained." Sir John Rennie, also, in his evidence before the committee, given on the 27th day of June, 1834, says:—"I am clearly, however, of opinion, that between London Bridge and Putney Bridge, there is a material improvement in the purity of the water; and I have no doubt but that, as far as the drainage is concerned, the metropolis must be materially improved, and the health of the inhabitants also, in consequence of the improved drainage; and I believe that there is very considerable improvement going on now in the river below London Bridge, in consequence of the increased scour produced by the increased quantity of water passing and repassing twice in twenty-four hours, above the old bridge, more than it did before." Dr. Bostock concludes his letter to the Secretary of the West Middlesex Company as follows:—"The above remarks would lead us to the inference, that so far as the quality of the water is concerned, the Thames when purified either by subsidence or filtration, as may be found necessary or expedient, has this advantage over any smaller stream, that in consequence of its bulk, and of its waters being collected from a greater range of country, it is less liable to be affected by various incidental circumstances, and will therefore be more uniform, not only in its quantity, but likewise in its quality, than any river of less magnitude."

The preceding details have been collated from a sensibly written pamphlet, on the subject of the supply of water to the metropolis by Mr. Peppercome, the whole scope of whose observations goes to the confirmation of the opinion, that Thames water, when properly filtered, as it now is by the water companies, is, for all purposes, of a quality equal, if not superior, to any to be found elsewhere; and we believe captains of ships and their crews, who, after all, are the best judges, would, if examined, give evidence to the same effect.

## Familiar Chapters on Science.

## NO. IV.—THE ELECTRO-MAGNET AND ELECTRICAL CLOCKS.

PERHAPS our readers will laugh when we tell them that by means of electricity, all the church clocks in London might be made, not only to go exactly alike, but also to *strike* the hours at the same moment of time. Nevertheless, such is the fact; and, astonishing as it may appear, it would be quite possible to make the clock bells of the metropolis strike the hour of one all at once, and every other hour in the same way. Electricity, in such a case as this, would be the cause; but the means by which the end would be accomplished is known as the electro-magnet, of which a perfect understanding is necessary in order to be able to comprehend how the result we have mentioned is to be produced.

An electro-magnet is formed by first taking a piece of soft iron in the shape of a small bar, and then coiling round it a considerable length of insulated copper wire. In this state it has no magnetic power whatever; and, if any piece of iron were placed against it, it would fall away for want of attraction on the part of the magnet. But if, from a galvanic battery, a stream of electricity were passed along the wire coiled round the piece of iron, it would immediately become a magnet; and while in this state it would attract and firmly attach to itself any other piece of iron of corresponding weight; and this it would continue to do just so long as the current of electricity was passing through the wires, but not a moment longer; for, directly the electrical stream was cut off, it would cease to possess any attraction whatever. It is this on-and-off magnetic power in the electro-magnet which permits of its being applied towards the production of simultaneous motion in any number of clocks; and our present object is to furnish an account of the plan adopted in order to secure that most remarkable result.

The first thing done is to provide clocks or time-pieces of a peculiar form of construction, having but few "works" inside, and those of the simplest kind. As the right of solely manufacturing these pieces of mechanism belongs to Messrs. Barwise and Bain, the patentees of the invention, their leave to do this must be obtained by amateurs, or others desirous of instituting experiments on the subject, before they can legally commence operations. The electrical clocks have dial-plates similar to those in common use; but the interior arrangements are restricted to the wheels necessary to communicate motion to the hands, with one or two more connecting their action with an electro-magnet affixed to each clock as a constituent part of it. This electro-magnet does the business of a weight or spring. It is attached to the exterior part of the frame-work at the back of the clock, which frame-work also supports a small pendulum-shaped spring, not more than two inches long and three quarters of an inch broad. One end only of this spring is fixed to the frame-work; the other is left free to play backward and forward. Close to the lower end of this spring, that is, the end which is not fastened to anything, the electro-magnet is placed, the distance between the two being about half an inch. The temper of the spring is regulated to that peculiar nicety which permits the electro-magnet, when in action, to overcome its resistance, and to draw it to itself, where it remains fixed until the action of the magnet ceases; when the spring, no longer retained by any attraction in the magnet immediately returns by its own power to the place whence the magnet had drawn it.

We here beg our readers to pause, and to reflect for a minute or two upon what we have just stated. By doing so, they will not fail to discover, in the first place, that if one end of the spring we have been describing be fixed to the back part of a clock, and the other regularly moved to and fro by any power, motion may easily be communicated by its means to the works of the clock; and, in the second place, that if the pendulum-like motion of the spring be properly regulated, the movements of the clock, which depend thereon, will be properly regulated too. This is the whole secret of the matter. There are sixty seconds in a minute; and if the spring can be controlled by the electro-magnet, in such a way as to move backward and forward sixty times in a minute, correct time will be kept by the clock.

The way in which the electro-magnet controls the spring remains to be described. From what we have already said, it will be noted that, in order to produce sixty movements of the spring, it will be necessary to allow the current of electricity to proceed to the magnet sixty times, and to cut it off the same number of times. Thus, at the commencement of a second, the electro-magnet is charged with the electrical current; at the termination of the same second the supply is cut off. While the first lasts, the spring will become attracted to the magnet; when the second happens, the spring retires by its own power. A constant motion of the spring, backward and forward, similar to that of a pendulum, is thus produced: the only points necessary to be attended to being, to supply a sufficient current of elec-

tricity to the electro-magnet, and to turn it on and off sixty times in a minute. Both these things are effected in a way as simple as it is ingenious.

Let us suppose a line of railway with sixty stations, each provided with an electrical clock, and that it is desirable, for business purposes, that all these clocks should exactly correspond in time with the one placed at the terminus. In order to effect this, the clock at the terminus (which goes by the ordinary means of weights or a spring), is provided with a sufficiently powerful galvanic battery, the weekly cost of which is but trifling. From this battery a pair of wires\* is conducted to the metallic frame-work of the clock; and from the same frame-work, sixty other pairs of wires are conveyed along the line of railroad to the sixty clocks, a separate pair of wires being attached to each of the sixty electro-magnets with which they are provided. This done, the electric current is supplied and cut off from the battery to each of the magnets sixty times in a second. The supply is easily understood; because the galvanic battery generates and supplies the fluid unceasingly to the clock at the terminus, from which it is as unceasingly dispatched to the other clocks. But the cutting off the supply to the magnets, once a second, requires a little consideration. Let it be borne in mind that the fluid will only travel upon conducting substances; non-conductors will not convey it. If, then, during its transmission, a non-conducting substance should be made to cross the current at regular intervals, say once a second, it will follow as a matter of course, that the supply of electricity to the electro-magnets will be interrupted in the same ratio. Now, a non-conducting substance is made to interpose itself in the way described in actual practice. To upper part of the pendulum of the clock at the terminus would be affixed a short arm, which would oscillate with itself. As often as the pendulum moved, the arm would move, namely, sixty times in each minute. This arm, by a simple mechanical contrivance, would cut off the supply every time it crossed a certain line on the framework of the clock, and would allow of its return when the line was passed. In this way sixty pulsations per minute of electricity would be simultaneously communicated to each of the electro-magnets in the clocks on the line of road, the rate at which the fluid travels being too rapid for thought. The electro-magnets thus brought into action would communicate motion to the clocks in the way described at the commencement of the chapter; the motions of all of which would be identical with that of the master-clock at the terminus; it being self-evident that, if the vibrations of its pendulum regulate the backward and forward motion of the springs in the other clocks, which in fact they do, a perfect similarity of motion on the dial plates of all must be the result.

This is a most curious, and it promises to be a most valuable, application of the powers of electro-magnetism. To what its discovery may ultimately lead, no one can guess. Meanwhile, the facts it has already unfolded deserve the serious consideration, as much of the man of business, as of the reflective philosopher.

We have confined our description to the means of making sixty clocks "go" together. Similar means, by certain modifications, would make any greater number "go" and "strike" simultaneously.

## Utility of Geological Knowledge.

We have already alluded to the fallacious nature of general opinions, and the unphilosophical character of certain assumptions received and regarded as true. Of these, few are more prevalent, yet none are more unfounded, than the idea that geology is all very well as a merely speculative pursuit, fit to interest the philosopher in his closet, but that it is uninteresting and useless to the great mass of mankind. The reverse of this assumption is so completely the truth, that there is no single science, it may be fairly asserted, which bears so intimate and important a relation to the wants and enjoyments of the human race. It will be sufficient to select a few instances from the mass of illustrations which so extensive a study supplies, to prove the truth of our assertion. In the first place, it is self-evident that the social and commercial condition of entire communities is based upon their geological site and position. To what, as we have already observed in the course of these papers, to what do we owe our own influential position and importance as a nation, but to that peculiar and favourable condition which the varied physical geography of our island so amply supplies, and which, by giving us stores of metals, limestones, salts, and, above all, of coal, enriches us with some of the best bounties of the Creator's hand, and enables us to carry out the objects of commerce and civilization to the very ends of the earth; so as not only to enrich ourselves, but to minister essentially to the wants and enjoyments of the vast family of mankind. Regions the most distant and remote are in this way largely our debtors for much of the good which they enjoy; and on the sultry plains of India and of Arabia, as amid the frozen deserts of the north—as far distant as the Anti-

podes, and at every point between—the natives are clad in garments, and are assisted by tools and implements, which the natural advantages of our country, aided by our national energy and enterprise, enable us so abundantly to supply. Had our geological advantages been less bountifully, less amply afforded to us, not only should we have been unable thus to minister to the wants of others, and, with commercial intercourse, to extend at the same time knowledge and civilization, but we should have been unable to supply our own wants, and should have ourselves continued in a comparatively degraded and uncivilised condition. If, it has been forcibly observed, if the granite formations of Scotland had extended over the whole country, and reached to the South Downs—or if, on the other hand, the chalk of our southern shores had prevailed as far as the Scottish mountains, how different would have been our position and our relative situation as a people. Had the chalk existed throughout the entire island, we should have possessed extensive sheepwalks, and should have been a community of shepherds, grazing our flocks on the hills, and occasionally cultivating a limited and partial vegetation in the valleys and fissures of the chalk; or, on the other hand, had the granite altogether prevailed, we should have possessed a widely different soil, and an altered character of production; we should have been placed in a country, picturesque, it is true, in its general outline, abounding in the alternations of mountain and vale, and hill and glen, relieved by the bounding torrent, the waterfall, and the lake, and embellished with a profuse, though monotonous, vegetation; while the rocks beneath would have afforded occasional supplies of the precious metals, and yielded veins of tin, copper, silver, lead, and gold—but we should have wanted that rich and varied abundance of geological formations which now, by the blessing of an all-wise Providence, yields us stores of the richest and most valuable blessings. We should have been destitute of those sources of supply, which, from the chalk of our southern shores to the granitic formations of the north—from the South Downs of Sussex to the Grampian Hills, and from the clay lands of the east to the mining districts of the west—from the clays of Essex to the mines of Cornwall—yield us a variety of productions admirably calculated for the use and enjoyment of mankind. We must defer to a future number the farther illustration of the usefulness of geology; and our prescribed space will allow us only to adduce a single fact in corroboration of those already mentioned. It is a circumstance singularly illustrating the importance of geological site and position, that nineteen of the most important towns in England, extending from Exeter to Carlisle, and comprising such seats of commerce as Manchester, Liverpool, Birmingham, Coventry, &c., &c., are all situated on one peculiar geological deposit—that deposit being the new red sandstone, which, in addition to its treasures of mineral salt, usually covers the invaluable gift of coal, and thus ministers to the energy and industry of some millions of human beings who are situated along the line of its occurrence; and whose labours and exertions in supplying the wants of their fellow-men we have thus imperfectly attempted to describe.

## Enigma.

The following clever and somewhat tantalising effusion is from the pen of a talented lady, at present engaged at one of the metropolitan theatres:—

From earth's dark mine I date my birth,  
Tho' fashioned am by man,  
Numbers now daily own my worth  
Since first my reign began.

No gaudy tints to me belong;  
Yet, when abroad I'm shown,  
Admiring crowds around me throng,  
And ask me as a loan.

My taper waist the sick admire,  
Say "I possess a charm,"  
Kindle without a smoke a fire;  
E'en frozen bosoms warm.

When I exert my powers divine,  
Tho' strangely it may seem,  
Then stars from out my head do shine—  
Gaze on them, and you'll dream.

E'en lovely ladies joy to see,  
And clasp me to their breast:  
No doubt their lovers envy me,  
And wish themselves so blest.

In various places though I'm found,  
(And claim the poet's lays),  
With vanity I ne'er abound,  
And deaf am I to praise.

The old I serve, expand my charms,  
(To me this class belong);  
They fold me in their aged arms,  
And I their lives prolong.

Let husbands watch me ever so,  
Unblushing I declare,  
Perhaps, when to their beds they go,  
They'll find that I am there.

I serve the old, infirm, and young—  
From them this boon I claim,  
To tell from whence and whom I'm sprung,  
And say, what is my name? J. C. H.

\* Our readers are referred to a chapter in a preceding number, for the reason why a pair of wires is necessary.

## Traits and Sketches of Irish Character.

## THE REBEL'S WIFE.

THE peasantry of Ireland are not more remarkable for the patient endurance of hopeless poverty than they are for conjugal fidelity, and doating, trusting, and confiding affection. Mrs. Hall, however, in her delightful wanderings through Cork, discovered a forlorn and broken-hearted victim to the perfidy and dastard cruelty of her husband. No one can accuse that gifted lady of writing against Ireland or its people; yet, but for her own high character as an authoress, many would be disposed to doubt the truth of a narrative which portrayed the brutal conduct of an Irish husband to a woman so devoted to his welfare, so worthy of his love. "We had been spending the evening with some friends, and were bidding them adieu," says Mrs. Hall, "when our attention was arrested by the tones of a female voice; it was feeble, but very sweet; the burden of the song was that of an old ballad we had heard some fishermen sing on the Shannon two years ago. There was a wail at the termination that seemed in harmony with the faint voice which gave it utterance; it was—

"And has left me all alone for to die."

We paused to listen; but the strain was not renewed. It had made us sad; our adieus were repeated in a quieter tone; and as we proceeded in the calm moonlight we spoke of the poor singer.

Suddenly the melody was recommenced; not in the same place, but nearer town, and we had lost sight of the pretty river-terrace before we overtook her. Our interest in the ballad was now changed to an interest in the woman, for her song was interrupted by heavy, yet suppressed sobs. She was leaning against the gate of a small house, trying to continue it; at length she sunk upon the steps, exclaiming, "I can't, after all, I can't." We placed a coin of trifling value in her hand.

"God bless ye—God bless ye—" she said faintly; "God bless ye, though it's little good this or anything else can do me now; God bless you for it anyhow!" It is never hard to open an Irish heart. A few kind words, almost a kind look, will do it. "And after all," she said, in reply to our inquiries, "and after all, my lady, sure I sung it all along the river for practice, that I might have strength for it when I got here; and now there isn't power in me to say a word, though I know there's one in that house whose heart would answer me, though maybe her lips wouldn't own they'd know me."

We desired the poor creature to call on us the next day. "I can't," she replied, "lady honey, I can't; I'm almost as bare of clothes as a new-born babe. Oh that my soul was as bare of sin!" It was impossible for human words or human voice to convey the idea of more acute misery than was made manifest by this sentence; it sounded like the knell of a broken heart. We managed, however, to see her again, and our interest in Mary Nolan—such was her name—was increased on finding that she was the daughter of a person who had been known to one of us in early childhood.

"I was once," said poor Mary, "not what I am now; I had a bright eye and a mighty gay heart, and I gave the light of the one and the pulse of the other to a boy of this county; and if I tell his name, you won't brathe it, for it would harm her who I thought might have heard and known the song I sung, if I'd the power to tune it rightly; but somehow music is like lead upon a bosom like mine, it crushes it down instead of lifting it up; I've not much to tell; we loved each other well in those days; so well, that when he was led astray by many things that was going on through the country at that time, when he used to be meetin' the boys by night in the Ruins of Kilcrea, or maybe away in the county Limerick, by the dancin' waters of the Shannon, why I thought it right, and many a moon-light meetin' I gave him, and many a gallon of mountain dew I brought him from the hills; and my husband (for he was my husband; and many a one besides the priest knew he was) had a fine voice, and often we sung together, and many a pleasant heart that beat its last in a far country, shook the leaves off the trees with the strength of fine music. Oh! we thought to carry all before us. And at other times the meetins would be silent as the ould graves over which we trod, until the whiskey they took would send them over the country with hot breath and burning eyes; the end came, and soon—but not the end we looked for; my husband (for he was my husband) staid on his keepin' many, many weeks, a starvin' wretched man, wild among the mountains, set by the soldiers as a dog sets a bird in a field of stubble; I have watched with a dry potato and a grain of salt for him the length of a summer day, shifting about so as to keep under the shadow of a rock to steal such as that to him, knowing he was dying of hunger all the time, and seeing his fetch-like before me, yet daren't stretch out my hand to him with a bit to eat. Oh! it was a woful time, but worse woe was after it. When men are set on to hunt each other they have wonderful patience.

"He was took at last; and three days I sate at the gate of the ould jail, though they wouldn't let me in; my trouble came upon me then, and though my heart was broke, my child lived; my husband (for he was my husband) was sentenced to die; I was in the court-house and heard it, and that I can never forget; they say I tore through the crowd, that I fell at the judge's feet and laid my child on his robe, that I asked him to kill us all, that I told him the witnesses swore false, that it was the whiskey I brought him stirred him up, and that I had earned death most; that I was mad—and I do believe that God heated my brain in his mercy, for I do not know what I did. Many weeks after, I found my poor old mother sitting by my side with my baby on her knee; I had been an unfaithful daughter to her, yet when she heard of my trouble, she left her comfortable home in the west, and came to seek her child. Oh! the love of that mother's heart

beat all! She gave me the baby to kiss; I would have asked for its father, but the darkness came over my eyes again, and no voice rose to my lips; only she knew what I meant, and 'Praise God, Mary, ma-vourneen,' she said, 'praise Him, a-vourneen, in yer heart, Mary, for he's not dead, only transported.' I spoke no word, but the tears came thick and fast; I felt my mother wiping them off, and her breath on my cheek like a blessing!"

Poor Mary covered her face with her long shadowy hands, and I saw that the memory of her mother was tugging at her heart.

"She was a good woman," she resumed after a pause—"the heavens be her bed!—She was an honest, industrious good woman—Oh, if I could but think she'd welcome me to glory, I'd die happy; she brought me up well, as far as book-reading went; but she let me grow wilful, and suffered for it in the end; oh! it's hard to suffer for love, and yet mine grew out of that. My poor mother, when I recovered, wanted to take me to her own place, but I could not content myself without my husband. I went to every one who had the knowledge and power of the country, and I asked to be let go out to him; they laughed, and said none but criminals were sent there. I had never kept back my will for any of them; I would not do it now; I forgot all my duties but the one; I became a criminal; I forced those who had jeered to send me out; and when, with my baby still at my breast (for they didn't part us, as they told me they might), I got to the end of the voyage, I found he was almost as far away from me as ever, up the country, while I was to remain near the town. I thought I should have gone mad; I wrote to him; weeks and months passed and I had no answer; I gave so much satisfaction to my master that I was left at liberty. After long slavery I used that liberty to escape to him; I took my girl with me; I roved like a wild animal through as wild a country, but I found him—my first love! the thought of my life; my heart's core, for whose sake I had become a thief—I found him, married to the daughter of one of the overseers; a free man.

"At first he pretended not to know me, but I had kept my marriage lines in my bosom, and showed them to him; he came round, and promised if I would keep quiet a little he would do me justice; he said how well he was off, took his child in his arms, and kissed and blessed it; I saw him do that much, anyhow; he brought us food, and made us rest under a shed close to where he lived; he came again that evening and laid the child on his bosom, and excused himself, as he always could, to me. And I forgot his falsity when I heard his voice and saw his face once more, though the sunshine of love had left it; he asked to look at my marriage lines; I gave them to him; in an instant he tore the paper into scraps; I fell on my knees and would have cursed him, but for my little Mary, she covered my mouth with her sweet innocent face; I could not curse then; the power left my limbs; I fell on the floor, and he stood by and offered me money, and threatened if I did not go, to send me back as a runaway convict. To this day I can hardly believe it was *himself* was in it, with his fine clothes and cowl way; he bid me good night, said he would give me till the morning to consider of it; kissed the little girl, and left us. Weak as I was I crawled after him, and saw his shadow on the grass; I wished for God to direct me and prayed for that; my child and I cried together, and before the day rightly broke, she said, 'Mother, let us go home,' and I got up, as well as I was able, and followed my little girl back to slavery.

"It was long before we reached where we had left, and I was afraid at first they'd be hard on me; but they weren't; and when my time was up they would have kept me there, but I wanted to set my foot on the sod once more, and to see my mother before she died; they would have kept the little girl but she would not leave me.

"When I got sight of ould Ireland, I felt as if my troubles war over; for a little while that lasted. I went to my old home; my mother was dead, though the grass wasn't grown on her grave. All I could do was to kneel on it with my child; what little property she had she had left me, though I was anything but worthy of it; it didn't thrive, and I feared that my poor girl would fall under her mother's ban; this thought was over me day and night; I heard that her father's sister was living near Cork (she knew that he was my husband) and I laid a case before her that I'd give up the child to her, for she had lost all her own; she agreed, on one condition—that I was never to see her more.

"Oh lady, it was hard; and I had to trap away my own child; to invent a rason for leaving her, and then she was to hear I was dead, which I will be soon, please God!—they have changed her name, and for the last four years I've been begging over the poor country, going a round betimes, and making my soul as I ought; but now, God help me, my heart fails me, I do want to see the face of my own child once more; I thought last night if she heard the song she'd know the voice! I was that heart-sore to see her that I think the last breath would have me say if I could just listen to her one word; and yet," she added, "I don't know why; God help me, I don't know why, it was good of the woman to take her, she had no reason to think well of me, or of her father; God reward her; I heard from one who knows, that my poor child would be happy if she knew anything of her mother; and for all that she wouldn't be happy to see me as I am; I oughtn't to break my promise; but sure the love of a mother breaks through stone walls! I mind when I was a girl having taken a bird's nest and put it in a cage, and I tended the young ones with the best of food, but the old birds would come with the first and with the last light—there they war feedin' and cherishin' the young, and I used to tell them their birds war better off than they could make them; but still they'd come, they'd come, and wail and murn—and wail and murn," repeated poor Mary mournfully. Her reason and affection were at variance; but I saw, as is generally the case with her countrywomen, that, if she lived, the love of parent towards child must triumph.

When we returned from Killarney, she had been dead some days; and although we knew the house in which her daughter resided, we had no means of ascertaining if she had seen her mother."

## Herculaneum and Pompeii.

AN interesting and useful addition has been made to our historic literature by the publication of two volumes of "Letters from Italy," written by Miss Catharine Taylor, which not only display much good taste and feeling, but evince the authoress to be well versed in the old histories of the scenes she describes. The following account of a visit to the remarkable cities of Herculaneum and Pompeii is invested with a peculiar charm, and carries the mind of the reader at once to the desolated spot:—"It is well known that the awful eruption of Vesuvius which overwhelmed Herculaneum and Pompeii took place A. D. 79, in the reign of the Emperor Titus. The remembrance of these cities had entirely passed away, and their existence was known but as a tale that is told; until, in 1720, the attention of the Prince d'Elboeuf was attracted to the spot by several valuable relics of antiquity, which he purchased from workmen employed at Portici in digging a well. His curiosity being excited, he began to excavate, and was ultimately rewarded by the discovery of still more beautiful and rare antiquities, amongst which were several statues. The attention of the Government of Naples was aroused by his acquisitions, and he was commanded to desist; the excavations were afterwards carried on by Charles III. of Naples, and Herculaneum was discovered. The king, being engaged at that time in the erection of a palace at Portici, gladly availed himself of the treasures from the buried city to enrich his royal abode. The discovery of Pompeii was also the result of accident, and did not take place until 1748, when some men, at work in the vineyards on the banks of the Sarno, finding several objects of curiosity, were led to make further investigation, and the city was at length revealed.

Herculaneum and Pompeii were overwhelmed and entombed on the same day; their existence was terminated by the same cause and the same agent, an eruption of Vesuvius, which buried Pompeii under a shower of ashes, and obliterated Herculaneum by a flood of lava. The latter, lying nearer to Vesuvius, the destructive torrent, pouring down its sides, inundated every corner and filled every crevice. This has rendered the prosecution of the excavations here difficult and dangerous to the villages built over it; the lava has become as hard as stone, and is consequently worked with great labour. Pompeii on the contrary, to which the lava did not reach, was overwhelmed by ashes, burning stones, and hot water; these materials, being of a lighter nature, lay like a crust over the city, which was easily removed. Thus, while we wandered through the streets of Pompeii in the free open air, gladdened amidst the desolation around by the bright rays of the sun and the cheerful sounds of nature, we were obliged to grope our way through the dark passages of Herculaneum, realising to our imaginations the horrors of the living grave it proved to so many of our fellow-creatures.

As I cannot write you a long or learned description of these cities, I must content myself with endeavouring to relate our adventures during the day we spent there, and to give you as faithfully as I can my own impressions of what I have seen. The morning we had fixed for our excursion to Pompeii and Salerno was beautiful—the sky without a cloud, the sun shining brilliantly, and the air mild and delicious. As we drove out of the city, in the early morning light, country girls met us, throwing nosegays of violets into the carriage, still wet with dew, and filling the air with sweet perfume.

On reaching Portici, we alighted at a gate, over which was inscribed in large letters 'Scalae Ercolano.' With wax tapers in our hands, and attended by a guide, we descended the stairs cut in the lava, and presently reached the level of the ancient city. All was darkness and gloom, and as we threaded the intricate mazes a feeling of indescribable horror seized me. I endeavoured in vain to comprehend the description the guide gave us; I remember being led round the corridors of the theatre, and seeing the well, in sinking which the city was first discovered; but all else was unintelligible to me, and it was with delight that we quitted Herculaneum, and returned to the open day.

How different was Pompeii! I can never lose the impression made upon my mind as we entered the Street of Tombs. The ancients had a superstitious reverence for everything touched by the lightning of Jove; it was with a similar feeling of awe that I regarded this city, which seemed to me a sacred spot: death and ruin had swept through its streets, and the silence of desolation now reigned around. Other and mightier cities have fallen by the hand of time or the sword of barbarians: Rome, Palmyra, Babylon, the glory of them all has passed away. We can trace the causes of their decline, and watch them in their decay as in their rise; but in the dreadful fate of Pompeii their is a deeper and more startling interest. Suddenly, awfully did destruction fall upon it, as a thief in the night, crushing and burying the entire city in a few short hours; in the morning its streets were alive with the crowds eagerly pursuing their pleasure or business, heedless of the coming doom—at night it was a mighty sepulchre! Death in many cases overtook the unconscious inhabitants in the midst of their employments; here the mason's hammer was arrested in the act of striking the chisel; there the sentinel was struck while at his post of duty; one spot is pointed out where the skeleton of a poor mother was found clasping a baby to her breast, unable to shield her child from the ruin which involved them both. In the shops men were actively engaged in the business of life; the loaves were found in the baker's oven, the hot drinks stood on the marble counters of the Thermopolium, prisoners were discovered in their solitary cells, while the ministers of justice sat in the courts above. In many cases men and women, terrified at the approaching torrent, seem to have attempted to escape—some by flight—but whither could they fly? Others sought refuge in the subterranean cellars, but even there death met them. The picture is too painful to realise; everywhere traces of life and activity are visible, but activity suddenly arrested by the touch of death; and you start at the desolation and silence around. The Street of Tombs derives its name from the sepulchral monuments which line it on either side, and at its termination stands the gate of the

city. The Villa of Diomed, which is situated without the walls on this side of the town, although small, is amongst the best preserved houses.

All the private residences are built on nearly the same plan; they surround a court-yard, or, in the larger, two courts are embraced in one house: in the centre is a reservoir for water, generally of white marble; on this we saw the marks of the cords by which the buckets had been drawn up. The sleeping apartments are of such narrow dimensions as to admit of no furniture but a bed, and many of them have no windows. The reception rooms are larger; but even in the houses of the principal citizens these are small compared with modern drawing and dining rooms. In the cellars of Diomed's Villa, under the porticos which surround the garden, seventeen skeletons were found buried in ashes. One female figure had on, when discovered, bracelets, rings, and ornaments of gold; the skeleton moulded away when exposed to the air, leaving only an impression of the bust in the ashes. Another poor wretch was found grasping bags of money and keys in his hands. What reflections do these pictures call up in the mind!

We now entered the city, and at first could not be persuaded to pass a single door unentered; but our guide Saluator soon convinced us that we must confine our attention to the principal objects, as we had much to see, and our time was limited. We had first, however, visited the Thermopolium, or shop in which hot drinks had been sold—the *café*, as Saluator called it; on the marble counter were still seen the marks left by the vessels; the oil and wine shop with the till for money; a public mill and bake-house, where under the oven we saw the beautiful capillaire growing—a strange place in which to find “the plant that loves the waterdrop!” Next door to this was a soap-manufactory, and a little further on stood a house which we recognised by the serpent twined round the door-post as having been inhabited by a disciple of Esculapius.

Continuing our walk towards the Forum, we entered several private houses: on the threshold, in plain black and white mosaic, was the hospitable word “*SALVE*.” The most beautiful house which has yet been excavated is that of the Dramatic Poet: the court is paved with beautiful mosaics, and the walls are covered with frescos. When no inscription leads to the discovery of who the owner of a house was, it is named from the things found in it. Thus the “*Casa della Caccia*” is so called from a very fine fresco representing a lion-hunt; the “*Casa del Fauno*,” from a faun, etc. In the floor of the latter house was found the most beautiful existing specimen of mosaic either ancient or modern: the subject is one of the battles between Alexander and Darius, and the moment chosen is that in which victory has declared in favour of the former, who, mounted on his Bucephalus, is charging the Persians, whilst his antagonist is seen standing in his chariot, surveying with dismay the defeat of his troops. The figure of the vanquished monarch is truly noble; grief for the loss of his friends, who are falling around him mortally wounded, is strongly depicted on his countenance; he grasps convulsively the bow which remains now useless in his hand; but he still retains the dignified demeanour of a king; his fierce rival advances on him, sword in hand, dealing death around, whilst by the head (which alone remains) of his fiery steed, we recognise the indomitable Bucephalus. I can give you no idea of the beauty of this mosaic—the life, the motion, the varied expression of the figures; the wonderful power of the design can only be understood when beheld: it is a study for an artist, and seems rather a fine painting than mosaic work. How valuable is this specimen of art, as proving the wonderful perfection which design as well as sculpture had attained amongst the ancients! The man who could compose such a picture, and breathe such spirit into his figures, might well rank amongst the first artists of the world.

I have already spoken of the frescoes taken from Pompeii and placed in the Museum at Naples: some still remain on the walls where they were originally executed, and are certainly seen here with tenfold interest. I am glad to learn that the king intends to remove no more. Every house, every room is ornamented with them; in some, beautiful arabesques cover the walls, or surround the apartments in graceful cornices; in others are fine paintings, spirited in composition, and retaining a wonderful brilliancy of colour.

After lingering amongst the private houses much longer than our guide thought prudent, we at length approached the Forum. This is certainly the most beautiful part of Pompeii, yet to me it was less interesting than the narrow street we had just left. The view from the Temple of Jupiter, which stands at one end, raised on a high platform of steps, is singularly fine; it commands a sort of bird's eye view of the city, with its branching streets, rows of fallen columns, ruined houses, gates and temples: the roofs of all have given way, and every interior is laid open. We saw from this point how little way beneath the surface of the present soil the city lay buried; the vine-dressers were busily occupied in pruning their vines just above us.

The Basilica, or Court of Justice, stands in the Forum; in the prison beneath it, which we visited, two skeletons were found, with iron fetters upon their limbs—what a fate was theirs! My letter is extending to an immoderate length, and I must hasten to a conclusion, observing briefly that many of the temples which we now saw—dedicated to Isis, Venus, Mercury, Hercules, and other Pagan deities—are beautiful even in their ruin. The two theatres, one devoted to Tragedy and the other to Comedy, preserve their form and the ranges of seats entire, and on the floor of the latter is an inscription inlaid in letters of bronze. Near this spot we sat down, and, having brought our dinner from Naples, ate it beneath the shade of some vines, preferring this to entering the dirty little *locanda*. After dinner we crossed the unexcavated part of the city, to the Amphitheatre. This is a miniature Coliseum, retaining its perfect oval form, and all the seats, many of which are still covered with marble; the Vivarium too remains, and the cages for the wild beasts, in one of which the bones of a lion were discovered. We had now reached the gate at which our carriage awaited us, and, taking leave of our intelligent guide, we left Pompeii with regret.

### Salt Mines in Poland.

MAN is a soaring animal: his imagination dwells in the clouds, and his eye roves delighted through the vast immensity of space, peopling it with worlds and stars, and taxing his brain as to the beings which may them inhabit. Seldom, indeed, it is that the traveller willingly turns his eye from the sun, and descends into the deep dark cavities in the mighty breast of his own Mother Earth; and of the few who have disclosed the secret wonders of that teeming source, none have surpassed in interest the accounts by the visitors to the salt mines in Poland, which descend deeper into the earth than any excavations made by the puny yet untiring hand of man. Mr. Stephens, an active and acute observer, visited these mines a few years ago, and his description of them conveys an idea of their grandeur and extent which renders their delineation equally interesting and amusing. His visit to these wonderful excavations is thus given by him in his *Incidents of Travel*:—

The celebrated salt-mines at Weilitzka lie about twelve miles from Cracow, in the province of Galicia, in part of the kingdom of Poland, which, on the unrighteous partition of that country, fell to the share of Austria. The houses of the village are built of wood, and the first thing that struck me was the almost entire absence of men in the streets, the whole male population being employed in the mines, and then at work below. I rode to the office of the superintendent, and presented my letter, and was received with great civility of manner; but his Polish was perfectly unintelligible. A smutty-faced operative, just out of the mines, accosted me in Latin, and I exchanged a few shots with him, but hailed off on the appearance of a man whom the superintendent had sent for to act as my guide—an old soldier who had served in the campaigns of Napoleon, and, as he said, became an amateur and proficient in fighting and French. He was dressed in miner's costume, fanciful, and embroidered with gold, holding in his hand a steel axe; and having arrayed me in a long white frock, conducted me to a wooden building covering the shaft which forms the principal entrance to the mine. This shaft is ten feet square, and descends perpendicularly more than 200 feet into the bowels of the earth. We arranged ourselves in canvas seats, and several of the miners who were waiting to descend attached themselves to seats at the end of the ropes, with lamps in their hands, about eight or ten feet below us. When my seat left the brink of the shaft, I felt for a moment as if suspended over the portal of a bottomless pit; and as my head descended below the surface, the rope, winding and tapering to a thread, seemed letting me down to the realms of Pluto. But in a few moments we touched bottom. From within a short distance of the surface, the shaft is cut through a solid rock of salt; and from the bottom, passages almost innumerable are cut in every direction through the same bed. We were furnished with guides, who went before us bearing torches, and I followed through the whole labyrinth of passages, forming the largest excavations in Europe, peopled with upwards of 2,000 souls, and giving a complete idea of a subterranean world. These mines are known to have been worked upwards of 600 years, being mentioned in the Polish annals as early as 1237, under Boleslaus the Chaste, and then not as a new discovery; but how much earlier they had existed cannot now be ascertained. The tradition is, that a sister of St. Casimir, having lost a gold ring, prayed to St. Anthony, the patron saint of Cracow, and was advised in a dream, that by digging in such a place she would find a treasure far greater than that she had just lost; and within the place indicated these mines were discovered.

There are four different stories or ranges of apartments; the whole length of the excavations is more than 6,000 feet, or three quarters of an hour's walk, and the greatest breadth more than 2,000 feet; and there are so many turnings and windings that my guide told me, though I hardly think it possible, that the whole length of all the passages cut through this bed of salt amounts to more than 300 miles. Many of the chambers are of immense size. Some are supported by timber, others by vast pillars of salt; several are without any support in the middle, and of vast dimensions, perhaps 80 feet high, and so long and broad as almost to appear a boundless subterranean cavern. In one of the largest is a lake covering the whole area. When the King of Saxony visited this place in 1810, after taking possession of his moiety of the mines as Duke of Warsaw, this portion of them was brilliantly illuminated, and a band of music, floating on the lake, made the roof echo with patriotic airs. We crossed the lake in a flat boat by a rope, the dim light of torches, and the hollow sound of our voices, giving a lively idea of a passage across the Styx; and we had a scene which might have entitled us to a welcome from the prince of the infernals, for our torch bearers quarrelled, and in a scuffle that came near carrying us all with them, one was tumbled into the lake. Our Charon caught him, and without stopping to take him in, hurried across, and as soon as we landed beat them both unmercifully.

From this we entered an immense cavern, in which several hundred men were working with pickaxes and hatchets, cutting out large blocks of salt, and trimming them to suit the size of barrels. With their black faces begrimed with dust and smoke, they looked by the light of the scattered torches like the journeymen of Beelzebub, the prince of darkness, preparing for some great blow-up, or like the spirits of the damned condemned to toil without end. My guide called up a party, who disengaged with their pickaxes a large block of salt from its native bed, and in a few minutes cut and trimmed it to fit the barrels in which they are packed. All doubts to their being creatures of our upper world were removed by the eagerness with which they accepted the money I gave them; and it

will be satisfactory to the advocates of that currency to know that paper money passes readily in these lower regions.

There are more than a thousand chambers or halls, most of which have been abandoned and shut up. In one is a collection of fanciful things, such as rings, books, crosses, &c., cut in the solid rock-salt. Most of the principal chambers had some name printed over them, as the “*Archduke*,” “*Carolina*,” &c. Whenever it was necessary, my guides went ahead and stationed themselves in some conspicuous place, lighting up the dark caverns with the blaze of their torches, struck their flambeaux against the wall, and millions of sparks flashed and floated around and filled the chamber. In one place, at the end of a long dark passage, a door was thrown open, and I was ushered suddenly into a spacious ballroom lighted with torches; and directly in front at the head of the room, was a transparency with coloured lights, in the centre of which were the words “*Excelsus hospiti*,” “*To the illustrious guest*,” which I took to myself, though I believe the greeting was intended for the same royal person for whom the lake chamber was illuminated. Lights were ingeniously arranged around the room, and at the foot, about twenty feet above my head, was a large orchestra. On the occasion referred to, a splendid ball was given in this room; the roof echoed with the sound of music; the nobles and princely ladies flirted and coqueted the same as above ground; and it is said that the splendid dresses of a numerous company, and the blaze of light from the chandeliers reflected upon the surface of the rock-salt, produced an effect of inconceivable brilliancy. My chandeliers were worse than Allan M'Aulay's strapping highlanders with their pine torches, being dirty, ragged, smutty-faced rascals, who threw the light in streaks across the hall. I am always willing to believe, fanciful stories; and if my guide had thrown in a handsome young princess as part of the welcome to the “*Excelsus hospiti*,” I would have subscribed to anything he said; but, in the absence of a consideration, I refused to tax my imagination up to the point he wished. Perhaps the most interesting chamber of all, is the chapel dedicated to that Saint Anthony who brought about the discovery of these mines. It is supposed to be more than 400 years old. The columns with their ornamented capitals, the arches, the images of the Saviour, the Virgin, and saints, the altar and the pulpit, with all their decorations, and the figures of two priests represented at prayers before the shrine of the patron saint, are all carved out of the rock-salt, and to this day grand mass is regularly celebrated in the chapel once every year.

Following my guide through all the different passages and chambers, and constantly meeting miners and seeing squads of men at work, I descended by regular stairs cut in the salt, but in some places worn away and replaced by wood or stone, to the lowest gallery, which is nearly a thousand feet below the surface of the earth. I was then a rather veteran traveller, but up to this time it had been my business to move quietly on the surface of the earth, or when infected with the soaring spirit of travellers, to climb to the top of some lofty tower or loftier cathedral; and I had fulfilled one of the duties of a visitor to the eternal city by perching myself within the great hall of St. Peter's; but here I was far deeper under the earth than I had ever been above it; and at the greatest depth from which the human voice ever rose, I sat down on a lump of salt and soliloquized:—

“Through what varieties of untrod regions,

Through what new scenes and changes must we pass!”

I have since stood upon the top of the Pyramids, and admired the daring genius and industry of man, and at the same time smiled at his feebleness, when, from the mighty pile, I saw in the dark ranges of mountains, the sandy desert, the valley of the Nile, and the river of Egypt, the hand of the world's great Architect; but I never felt man's feebleness more than here; for all these immense excavations, the work of more than six hundred years, were but as the work of ants by the roadside. The whole of the immense mass above me, and around, and below, to an unknown extent was of salt; a wonderful phenomenon in the history of the globe. All the different strata have been examined by scientific men. The uppermost bed at the surface is sand; the second clay, occasionally mixed with sand and gravel, and containing a petrification of marine bodies; the third is calcareous stone; and from these circumstances it has been conjectured that this spot was formerly covered by the sea, and that the salt is a gradual deposit, formed by the evaporation of its waters. I was disappointed in some of the particulars which had fastened themselves upon my imagination. I had heard and read glowing accounts of the brilliancy and luminous splendour of the passages and chambers, compared by some to the lustre of precious stones; but the salt is of a dark grey colour, almost black, and although sometimes glittering when the light was thrown upon it, I do not believe it could ever be lighted up to shine with any extraordinary or dazzling brightness. Early travellers, too, had reported that these mines contained several villages inhabited by colonies of miners, who lived constantly below; and that many were born and died there, who never saw the light of day; but all this is entirely untrue. The miners descend every morning and return every night, and live in the village above. None of them ever sleep below. There are, however, two horses which were foaled in the mines, and have never been on the surface of the earth. I looked at these horses with great interest. They were growing old before their time; other horses had perhaps gone down, and told them stories of a world above, which they would never know. It was late in the afternoon when I was hoisted up the shaft. These mines do not need the embellishment of fiction. They are, indeed, a wonderful spectacle, and I am satisfied that no traveller ever visited them without recurring to it as a day of extraordinary interest.

PRICE THREE HALFPENCE.

### The Lost Nation.

THE historical inquiries of the learned have done much to expose the futile claims of the old nations of Asia to high antiquity, and have almost proved that they were not the originators of the arts and sciences for which they became not unjustly celebrated. It is now an admitted theory, that the Chaldeans, Egyptians, Persians, Indians, and Chinese, were all taught from one great source, every record of which is now irretrievably lost. The sameness existing in the customs of the nations mentioned is, of itself, a visible and existing proof that some early communicating power must have taught these great and distant countries the same arts—must have planted in them an equal amount of knowledge—and given them certain fixed principles and data which to guide them in the march of improvement. A few comparative remarks will amply prove the truth of this idea.

Babylon, the most learned of all the antique nations, preserved no date of its origin; two thousand and five hundred years, however, before the Christian era, the Chaldeans invaded the Babylonian territory. The conquerors incorporated themselves with the vanquished, adopting the priests, who kept themselves separate. They became the soothsayers, astrologers, and magicians of Babylon, and retained the name of Chaldeans. These men were well versed in astronomy, knew the periods of eclipses, and the migrations of comets. They were evidently the remains of a polished people, who had never been driven from their own country by violence, but stirred up by Providence to become enlighteners of the human race. But from whence did they derive their knowledge?

The Brahmins of India, the custodiers of the Indian faith, believe in the unity of God and in the immortality of the soul. Their mythology, disgraced as it is by the most childish and puny doctrines, debased too by shameful practices, and inhuman sacrifices and tortures, yet contains the germs of a pure and lofty philosophy, which must have been taught them ere the inventions of ignorant men became superadded to their faith. Man, when sublimer truths and doctrines are shown to him, will accept them, casts off the trammels of superstition, being inconsistent with his newer lessons. When beginning to decay from a previous refinement, he adopts every possible incongruous folly which may please his fancy, or minister to his prejudices. Who taught the Brahmins the same creed as the Chaldeans?

The nations named by us, in building their temples, placed them fronting the east; they all worshipped the sun, or the sun, and the first rays of the morning-light beamed into the porch of their temples as a glad messenger from the Deity. Their chronology, instead of being calculated by centuries, was regulated by a period of sixty years; they all divided the circle into three hundred and sixty degrees, and the zodiac into twelve. The week was universally divided into seven days; and the Indians, the Chinese, and the Egyptians, designated the days in precisely the same order, by the same names, and from the same planets. This could not have been the result of chance, as the order of the days is entirely arbitrary. Who taught these general and far-pervading facts?

The rods of measure used by these ancient races had one common standard. Although ignorant of many countries in their own hemisphere, as well as of each other, and totally uninformed as to the existence of the American continent, the circumference of the earth was calculated by them all at precisely the same rotundity.

Every kind of measurement, however diversified and apparently of an opposing character, can be resolved to one great original source, viz., the grand cubit which is preserved upon the Nilometer at Cairo, which explains the height and depth of the rising and falling of the Nile. This could not have been the result of separate inventions, but must have been derived from a common teacher, older and better informed than them all.

It is needless to suppose that, in remote times, an unrestricted or even partial intercourse prevailed among the nations of Asia. All history exclaims against such a hypothesis. These countries either shut themselves up from without, or went forward to destroy, not to instruct. They were without the means of long travel, knew nothing of the countries through which they would have had to pass, and were particularly deficient in the arts of ship-building and navigation. There exists even no legend by which it might be supposed that the Chaldeans, the most ancient of all, ever visited any other country than Babylon. Each of the nations must have been intruded upon by separate instructing agents, and these agents have derived their knowledge from the same fountain.

Let us suppose a case: Time in its revolutions may well be supposed to witness as many changes in futurity as it has done in by-gone years. Connecting links of nations may be swept away, records lost, and traditions changed in their application; still in Europe the soil would teem with relics of a common standard, and a discovery might be made by which the most simple articles of domestic use, as well as the most intricate points of law and jurisprudence, would be found to have been equally employed by all. Would it, then, be disbelieved that, in early times, a strong and warlike people spread their conquests throughout Europe—that they carried with them the seeds of civilization, and left a common law on which posterity might build a code of justiciary enactments? It would not. Nor should it in the instance we have attempted to elucidate, with respect to the old civilized countries of Asia. That such a people has existed, is published by the works and traditions of all the elder nations, although inquiry had long been fruitlessly exerted to discover from whence the enlightener and civilizer came. The French Institute, the most learned body of Europe, have now in their archives an elaborate document from the pen of a M. Bailly, which places the locality of that wonderful people in the 49th or 50th degree of north latitude, to the north of Tartary, and in the country now known as Siberia! A number of remarkable instances are given in proof of this startling hypothesis, of which the following are a condensed enumeration of the principal facts:—

All old historians agree as to the once populousness of that region: the Chinese admit that they came from that quarter; so do the Danes, the Scandinavians, and the Japanese. Nature is more abundant in Siberia than in any other portion of the globe; this article is producible only from animal substances—hence the population of the district must have been remarkably great. The observations of the stars, as given by Ptolemy from the ancients, must have been made in a country where the longest day was of sixteen hours—that is, in the 49th or 50th degree; in the age of Ptolemy, however, no European nation inhabited that latitude in the least acquainted with astronomy; hence it must have been an Asiatic people, and these must have resided in the southern regions of Siberia.

Zoroaster, the founder of the Persian mythology, said

that the longest day in summer is equal to that of double the shortest day in winter. This is not the case where Zoroaster lived; it applies only to a country 20 degrees to the north of Ispahan—to the same district of Siberia. The measurement of the circumference of the earth, already noticed, as given by all the old nations, is not taken from their particular latitudes, but from one where the degree is precisely of its length, in the 49th or 50th latitude.

Another question now forces itself on our attention, which is—Does the country situated in the latitude mentioned present any appearances of having been immensely populated—of having been in possession of the arts and sciences to a great extent—of its inhabitants being polished and acquainted with luxuries?

The hypothesis of M. Bailly is supported even in this, although existing witnesses could scarcely have been expected in that now desolate and neglected country. The Empress Catharine of Russia ordered a survey of Siberia, and discoveries were made which indicated that it had been inhabited by a people enjoying considerable refinement. Mines were discovered which must have been wrought, although there exists no tradition of such being the case. Mining instruments have been found in the excavations, which are of forms and materials indicating a long antiquity; huge hammers made of stone, pick-axes and wedges of copper. In the mountains there are many antique burying places, in which knives, daggers, and points of arrows, made of copper, are found. In others, ornaments of gold and copper have been discovered, some of them embossed with figures of animals, and all of exquisite workmanship. Of the antiquity of the mines they present of themselves the most incontestable evidence of a prodigious old age. The props by which they were supported are completely petrified, and encrusted with gold and copper ore. These props, therefore, have existed so long, that the wondrous earth must have gone through all its tedious operations of change; the materials of which they were made being changed and converted into a like substance with that taken from the excavations. That same operation of the earth's power has completely changed the stones and other materials of which the houses must have been built; not a vestige of stone remains; it has all gone to decay, crumbled by the action of the elements; thus again indicating a period so remote as to justify the assertion, that from the now desert wilds of Siberia sprung, perhaps, the oldest civilised nation of the earth,—that by its emigrants were succeeding kingdoms taught the first rudiments of that knowledge with which now the world is full.

Thus it is often with the noblest efforts of genius. He who discovers and improves is robbed alike of the honour and profit of his invention, while his imitators flourish in their fortunes, and give their names to the blessings of posterity. Yet a period will come when their honour shall be extinguished, as it was with the Persian magi, the Egyptian priest, and the Chaldean soothsayer. The broad domain of Asia, which once formed the world, now lies prostrate at the feet of the most insignificant quarter of the globe. Africa has not awakened from its long and heavy slumber; America is active, diligent, and eager in the race. Still that small corner of the world, washed by the northern Atlantic, bounded by the Mediterranean, and lost in its eastern confines among the tameless Turks and untutored Russians, holds the keys of power, and sways the empire of the world. Shall man ever be independent on his native clod? Shall the natural boundaries of states ever say

to the encroaching robber, "Thus and no further shalt thou go?" Will man ever be content with his own happiness, nor seek to add the glare of fire and blood to his name, that it may be read with curses when his ashes shall have been lost in a wilderness of earth, and his motives have become an enigma unsolvable except by the final trump of fate? Ere an answer can be given to these profound questions, we must travel through the mystic history of Egypt, the glory of Greece, the renown of Italy, the progress of Mahomet, and the silk-worm changes of the Goth, through all gradations, to the proud interests known as the Lion of hale Old England.

### Napoleon and his Contemporaries.

#### PART II.—THE VANQUISHED.

##### VI.

A cloud pass'd o'er the Soldier's glitt'ring path;  
The tide of vengeance heaved like ocean's swell.  
The martial child of England's gather'd wrath  
Came forth, the pride of upstart France to quell;  
Till lone in Elba did the soldier dwell.  
Yet, lo! a king for yet a hundred days,  
He sought the legions that had loved him well.  
He came, he saw, he conquered by one phrase:  
"Behold your Emperor!" Thus genius empire sways.

The Duke of Wellington, after several years of severe struggling, having succeeded in driving the French from the Peninsula, sustained his high reputation as a general at the battle of Leipsic, the result of which was the banishment of Napoleon to Elba, the restoration of the Bourbon family to the throne of France, and the proclamation of peace throughout Europe. Feastings, illuminations, and almost every possible manner of rejoicing, however, were succeeded by the startling intelligence that Napoleon had escaped, and had reached Fontainebleau, where, with that romantic daring so characteristic of the true soldier, he appeared with only a few attendants. The whole disposable army was instantly called out against him; but the magic of his presence was sufficient; the sword was only lifted to do him reverence. "Behold your Emperor!" exclaimed Napoleon, and the joyous shouts of the charmed soldiery answered him with welcoming triumph. It has since been proved that more than one assassin was hired to destroy him on his way to Paris, but although he was surrounded by soldiers, artisans, and canaille, in indescribable intermixture, no hand could nerve itself for the execution of the deed.

##### VII.

The Bourbon fled to England's friendly shore,  
While crowds beset the Soldier on his way.  
The streets of Paris saw his face once more:  
Alike bright swords and brighter eyes were gay.  
The very children sent their sires away;  
And fearless maidens bade their lovers go  
To share the honours of his battle-day.  
The Soldier had returned! But swarm'd the foe,  
Impell'd by deadly hate to crush their hero low.

The eagerness of the French people to support the Emperor in his march towards Paris cannot be better explained than by a few anecdotes of those remarkable days. On the 26th of February, Napoleon left Elba in a small brig, carrying 26 guns, and with 400 men of his guard. The other vessels contained 500 men. With this force he entered Cannes, on the 28th, where he was received with enthusiasm. Proceeding on his journey towards the capital, on the 6th of March, at St. Bonnet, the inhabitants, seeing the small number of his troops, had fears, and proposed to the Emperor to sound the tocsin to assemble the villagers, and accompany him *en masse*:—"No," said the Emperor, "your sentiments convince me that I am not deceived. They are to me a sure guarantee of the sentiments of my soldiers. Those whom I shall meet will range themselves on my side; the more there is of them the more my success will be secured. Remain, therefore, tranquil at home."

On the 7th, he was met by an advanced guard, consisting of 700 men, who came to arrest his progress. The Emperor went to the spot where they were drawn up, and said "that the first soldier who wished to kill his Emperor might do it;" a unanimous cry of *Vive l'Empereur* was their answer. This brave regiment had been under the orders of the Emperor from his first campaign in Italy. The guard and the soldiers embraced. The soldiers of the 5th immediately tore off their cockade, and requested, with enthusiasm and tears in their eyes, the tri-coloured cockade. When they were arranged in order of battle, the Emperor said to them—"I come with a handful of brave men, because I reckon on the people and on you—the throne of the Bourbons is illegitimate, because it has not been raised by the nation; it is contrary to the national will, because it is contrary to the interests of our country, and exists only for the interests of a few families. Ask your fathers, ask all the inhabitants who arrive here from the environs, and you will learn from their own mouths the true situation of affairs; they are menaced with the return of tithes, of privileges, of feudal rights, and of all the abuse from which your successes had delivered them. Is it not true, peasants?" "Yes, Sire," answered all of them with a unanimous cry, "they wish to chain us to the soil—you come as the angel of the Lord to save us!"

In the evening another regiment came over to him on his way to Grenoble, at which place he was welcomed alike by the populace and the garrison. It was remarked at a review next day, that every one of the 6,000 men were provided with a national cockade, and each with an old

and used cockade, for, in discontinuing their tri-coloured cockade, they had hidden it at the bottom of their knapsacks; not one was purchased, at least in Grenoble. It is the same, said they in passing before the Emperor, it is the same that we wore at Austerlitz. This, said others, we had at Marengo.

At Lyons the Count d'Artois had done everything to secure the troops. He was ignorant that nothing is possible in France to an agent of a foreign power, and one who is not on the side of national honour and the cause of the people. Passing in front of the 13th regiment of dragoons, he said to a brave soldier, covered with scars and decorated with three chevrons, "Let us march, comrade; shout, therefore, *Vive le Roi*!" "No, monsieur, replied this brave dragoon, "no soldier will fight against his father. I can only answer you by crying *Vive l'Empereur*!" The Count d'Artois mounted his carriage and quitted Lyons, escorted by a singlegend'arme. At nine o'clock at night the Emperor traversed the Guillotiere almost alone, but surrounded by an immense population.

On the morning of the 20th he reached Fontainebleau, where he learned that the Bourbons had fled from Paris; at nine at night he was in the palace of the Tuileries.

##### VIII.

Upon thy field, harrowing Waterloo,\*  
The soldi'r yielded to superior fate;  
The warring eagle, which so lately flew  
With prideful wing, and eye with life elate,  
To the high pinnacle of power and state,  
Lay stricken to the dust;—but not a tear  
Was shed for him by his imperial mate,  
Though the discarded yet esteem'd him dear,  
And would with him have gone to his isle-prison drear.

The generous-hearted Josephine, on the ir retrievable fall of her dear-loved hero, publicly called upon Maria Louisa to state whether she intended to accompany her husband to St. Helena, as, if not, it was her intention to claim her prior rights of wedlock, and share with him his banishment. Maria Louisa placed herself in the hands of her father, one of Napoleon's legitimate enemies; and he, with his allies, not only prevented any reply from the "animated bust" of German porcelain, but prohibited Josephine from carrying her purpose into effect. The romantic enthusiastic, however, while she regretted her disappointment, had the satisfaction of learning that the lonely tenant of Longwood thought and spoke of her with all the affection of his early life. The Parisians, too, on the return of the Emperor's remains, placed them in silence before a triumphal bust of the departed good and gentle Josephine, while the living "Austria's mournful flower" was forgotten, or remembered only to be passed over in neglect.

##### IX.

England! it shall be spoken to thy shame,  
That sent him to a baleful sea-girt rock,  
Proving thy terror at his very name;  
As if thy throne dared not abide the shock  
Of his unarm'd presence. 'Twas mean to mock  
The poor request, he in thy land might stay:  
True, thine own vaunted hero never spoke  
One word of kindness for him, or for Ney:  
Unlike great-hearted Sussex—his the spotless bay!

This hero is rich in the world's wealth, high in its honours, emblazoned in its renown; has commanded armies, led them to victory; swayed the rod of power, been listened to by applauding senates, and given law to millions. When victory sat upon his brow, and a congress of sovereigns returned him thanks—when a returned monarch accepted from him the crown which his armies had wrested from the usurper—at a moment when with them his will was law—a wife, whose husband's life awaited his nod, petitioned with tears for his intercession; and though it was written as plain as words could speak, in the convention at the capitulation of Paris that the lives of all yielding enemies should be spared, this husband was condemned to die. Because that treaty did not say in as many words that this great man

\* Night came: but it brought no respite to the shattered army of Napoleon; and the moon rose upon the "broken host" to light the victors to their prey. The British, forgetting their fatigue, pressed on the rear of the flying enemy; and the roads, covered with the dead and dying, and obstructed by broken equipages and deserted guns, became almost impassable to the fugitives—and hence the slaughter from Waterloo to Genappe was frightful. But, wearied with blood, (for the French, throwing away their arms to expedite their flight, offered no resistance), and exhausted with hunger and fatigue, the British pursuit relaxed, and between Rossomme and Genappe it ceased altogether. The infantry bivouacked for the night around the farm-houses of Caillou and Belle Alliance, and the light cavalry halted one mile further on, abandoning the work of death to their fresher and more sanguinary allies. Nothing indeed, could surpass the desperate and unrelenting animosity of the Prussians towards the French. Repose and plunder were sacrificed to revenge; the memory of former defeat, insult, and oppression, now produced a dreadful retaliation, and overpowered every feeling of humanity. The *ex vicis* was pronounced, and thousands, beside those who perished in the field, fell that night beneath the Prussian lance and sabre. In vain a feeble effort was made by the French to barricade the streets of Genappe, and interrupt the progress of the conquerors. Blucher forced the passage with his cannon; and so entirely had the defeat of Waterloo extinguished the spirit, and destroyed the discipline, of the remnant of Napoleon's army, that the wild hurrah of the pursuers, or the very blast of a Prussian trumpet, became the signal for flight and terror."—*Stories of Waterloo.*

was to be umpire of its decisions in this particular case he spurned the prayer of a kneeling wife, and left a brave and dauntless soldier to his fate. Mercy cried in vain—it was not in the bond, and he had no interest in her bereavement. He had fulfilled the duties which had been assigned him, and he would perform no more. He had paid to the uttermost all legal claims upon his services—mercy was no creditor of his. He had been honest to the letter of all his obligations, and he knew could feel, of nothing more.—Resulting from the same events, another incident arose which is more gratifying to human nature, more cordial to the feeling heart. When that mighty genius, whose name alarmed the world, became the prisoner of Britain, and the estates of Parliament were called upon to decide as to his keeping, there were found but two to protest against the proposition of sending a native of Europe to reside on an unhealthy island between the tropics. Lord Holland with his usual manliness, entered his protest against "Bonaparte's Detention Bill," and was seconded by the Duke of Sussex. Though a father, and that father a king, frowned upon him; though a brother, and that brother the governing regent of the country, forbade him his presence; though ministers and peers, and even the common people, cried aloud for the captive being chained to that unhealthy rock, and agreed to the most unfeeling and flinty-hearted of the British generals being made his keeper; the Duke of Sussex protested against this mockery of banishment, contending that it must end in the prisoner's speedy death. The result proved the truth of this protest.

##### X.

The lion fretted in his guarded cage,  
The vulture batten'd on his rusty chain,  
The hero groan'd in disappointed rage—  
He was a Soldier once; but not again  
A drop of blood his swordless hand should stain:  
His own was festering in its restless core.  
Diseased of body, cursed by sleepless brain,  
He stood upon his rock, and there would pore,  
Envyng the wild bird which stretch'd its wing from shore.

That Napoleon was subjected to the most galling mental torture at St. Helena is no longer denied; and Sir Hudson Lowe, as the instrument of that infliction, is now debarred from polite society. But why should any servant of Government be so treated? He, as a soldier, merely fulfilled his instructions. It is those who appointed him that should reap public execration; but the public, unfortunately, is a superficial thinker, and punishes or approves at first hand. Better had it been that Napoleon remained a prisoner of state in England, or been permitted to emigrate to America. In this country he would have been quite as safe as on his ocean rock; in America his ambition might have had a new and fertile opening. He might have reclaimed the warlike savages, and with them founded an empire which would have produced magnificent results, both to humanity and civilization. At the time, however, of Napoleon's expatriation, men's minds were too feverish to trust him; he had proved himself incapable of living quietly, and the elements of European society were of too combustible a nature to permit him to mix among them again.

##### XI.

At length the prisoner obtained release;  
His spirit wing'd itself away. Ah! where?  
In life he never knew the joys of peace.  
He was a prince of wrath, which hath no share  
In that pure land where men and angels wear  
Robes of eternal righteousness. Yet God  
Is merciful, and promised hath to spare!  
The Soldier did return—to earth, a clod  
Unremembered—though kings had worshipp'd at his nod.

When England first interfered with France, the national clergy, and perhaps a great majority of their dissenting brethren, were and had been long engaged in praying down the Pope, the errors of whose church they charitably declared had filled the world with abominations. The triumphs of Napoleon in Italy brought down the power of the Pope, and many single-hearted people thought that the righteous prayers of their pastors had been efficacious. But, lo! a mandate came from head-quarters, from those who have bishoprics, deaneries, and other apostolic places in their gift—to omit the Pope in their anathemas, which were all required for the national enemy of England. Even the *douce* clergymen of the church of Scotland not only forgot to denounce "black prelacy and the scarlet lady" but discovered from the prophet Daniel, that Bonaparte was one of the promised monsters who were to flourish for a season, only to be cut down and hurled to everlasting wrath. They kindly nominated him the arch-enemy of man—the man of sin—the emissary of the evil one—against whom it was their first duty to call down the choicest punishments of heaven. At the period of Napoleon's death, this rabid and unchristian spirit had greatly worn itself out—the Pope had been reinstated to his former paragonomic eminence—yet many alluded to the event as one in which the hand of the retributive angel might be traced; few evinced that Christian virtue which "covereth a multitude of sins." The rashness, the impiety, of questioning the after-fate of a fellow being is one of the iniquities of man for which the intolerant clergy are mainly responsible,—it is a sin utterly incompatible with the possession of a meek and quiet spirit, which, in the sight of Omniscience, is of great price.

## Burns Illustrated and Explained.

## CHAPTER II.—MEMORANDA IN THE LIFE OF BURNS.

The poet was born in a clay cottage, on the 5th of January, 1759, in the midst of storm and tempest. This frail tenement, built by his father's hands, was blown down on the night of the poet's birth, and the mother and her infant were with difficulty removed to a place of safety. His father, thoroughly animated by a Scotsman's desire to have his children educated, combined with four or five persons in his own humble rank of life, to engage a teacher for their sons, boarding him alternately at their houses. At fifteen, Robert was reckoned a man upon his father's little farm; and it was then his greatest pride to excel in the labours of the field. In an epistle to Mrs. Dunlop, dated March 1787, and referring to this period of his life, he says—

When first among the yellow corn,  
A man I reckoned was,  
And wi' the lave ilk merry morn  
Could rank my rig and lass.

It was the custom in Scotland in reaping the harvest to place a man and woman together, who cut down their allotted rig or strip in the field. Of course, the more expert reapers would be further a-field than the others; and those who were behind fell out of the rank or straight line of reapers. It was, therefore, a matter of pride for the man to keep his rig or strip, and his female companion, as well on in the rank as possible. It was this lass that first set his brain on fire, and kindled the muse of love and poetry; and in the same epistle to Mrs. Dunlop he goes on to say—

Even then a wish, I mind its power,  
A wish that to my latest hour,  
Shall strongly heave my breast;  
That I, for puir auld Scotland's sake,  
Some useful plan or book could make,  
Or sing a sang at least.

Whether or not this simple wish has been fulfilled, the yet uncreated millions of futurity may safely be left to determine.

At eighteen, having, to use his own words, "committed the sin of rhyme," he commenced to learn the trade of flax-dressing, but, unluckily, his little shop caught fire, amidst the festivities of a new year's morning, and sent him home again to his father's house. His farm proving utterly unproductive, old William Burns removed to another, which he possessed for seven years. No written engagement had been entered into, and a misunderstanding taking place, the matter was submitted to arbitration, which ended in the entire ruin of the family. Burns's father died in a happy moment, escaping by his death the cold horrors of a jail. Their little property was sequestered, and the widow and her children driven forth to the mercy of an un pitying world; but the stern independence of her first-born stood the widowed-mother's friend; with undaunted heart he and his brother united their little means together; every disposable article in their possession was converted into money, small indeed in amount; a farm was taken at Mossiel at a rent of £90 a-year, which became a joint-stock property in the whole family. They had no servant. Robert and his brother Gilbert did the whole work of the farm, and allowed themselves £7 per annum of wages as pocket money; and during the four years this slavery continued, the expenditure of the poet did not exceed his income. During this latter period he became acquainted with "Bonny Jean;" he saw her "lightly tripping on the dewy-green," admired and loved her; but he was poor—and they became imprudent. Her father, discovering his daughter's situation, though veiled by a supposed private marriage, (which, by the law of Scotland, legally binds man and wife together) caused the document of acknowledgment to be destroyed, forbade Burns her presence, and even encouraged his daughter with the hope that a better marriage might yet be in store for her. With feelings harrowed in the extreme, the unfortunate Burns, giving up his share of the farm to his brother Gilbert, sought and procured a situation as under-overseer on an estate in Jamaica; but he could not wait till his employers' ship was ready to sail, as two messengers, at the suit of the father of his Jean, were earnestly inquiring after him, to compel him to support or procure security for the sustenance of his child. He could not pay his passage by any trading vessel, for his funds were exhausted. With a heart almost broken, he looked abroad,—he was desolate, and nigh despair. Then it was he wrote his wild-toned "Farewell to Ayrshire."

Scenes of woe and scenes of pleasure,  
Scenes that former thoughts renew;  
Scenes of woe and scenes of pleasure,  
Now a sad and last adieu!  
Bonny Down, sac sweet at gloamin,  
Fare thee weel before I gang;  
Bonny Down, where early roaming,  
First I weaved the rustic sang.

His boyhood hopes, his wildly-cherished romance, that he would acquire, some time in life, an eminence—a name in his native land, had faded from his eyes—had been buried in his bosom's core. Buried, however, to

receive a glorious resurrection. For his darling hope, though apparently crushed for ever, was at that moment on the eve of accomplishment. By the advice of one or two friends, he formed the daring resolution, as a last means of escape, to publish his poems, and if possible realise the twenty pounds required to wait him from his native shore. His preparations for printing and sailing were carried on simultaneously. The first edition of his poems was printed in Kilmarnock, a small town in the west of Scotland, in the year 1786; and they were received in a manner much beyond his expectation. That poverty which prevented his immediate departure from Scotland had, indeed, been the means of preserving him to his country. He was advised by his friends to proceed to Edinburgh, where he was introduced to the most learned and eminent men of the day; who, in turn introduced him into fashionable and polite society. He became at once the fashion and wonder of the day; but the intoxication of the hour unnerved neither his hand nor his heart. He conducted himself with becoming modesty, with propriety, and with judgment. He neither obtruded himself upon the notice of the great, nor shrunk abashed from their inquisitive recognition. Subscription lists had been opened, a new edition of his poems was published, and Burns, and the story of his intended expatriation, became the city's universal talk. He received one hundred pounds for the copyright of one edition of his works, and the profits of all the copies subscribed for. This occurred in March, 1787, and in June he returned to his brother's farm at Mossiel, with a blaze of glory round him, rendered still more striking by the recollection of the adverse circumstances which had compelled him to leave it. His aged mother met him at the door, and with an exclamation of "O, Robert!" she fainted in his arms. The son of her proud aspirations had returned to his humble home another man. His family affections were the same; but his prospects were bright, his honour high; and she was his mother—he her son! And who can estimate a mother's heart that yearns upon that offspring which is commanding the admiration of the world. Could the wreck of the clay-built hut—the storm and tempest of his natal hour, be present to her foreboding eye? She had watched his infant years, had seen his manhood bloom; and she also lived to see Death take him for his own, and wept with Scotland for her son.

On his speedy return to Edinburgh he found himself proprietor of £500, and with an honest generosity, so peculiarly characteristic of him, he presented £200 to his brother to assist the family. During the summer he had been allowed to renew his intimacy with Jean; but that fatal imprudence which had made him regard her as his wife, though in her father's house, again caused a breach between him and her friends, and the object of his affection was ultimately driven forth a homeless exile by an exasperated sire. Burns was now the father of two children, with some little money, but no pursuit before him. He induced his relatives to protect his children and their mother for a little space of time, and he then began to look seriously after a settlement in life. None of those who had feasted and admired him consulted him as to his future prospects or welfare. He visited, he pleased; but that sturdy ungainly independence of spirit stooped not to ask a favour; although it was the earnest wish of his heart—his morning and evening prayer, that he could honestly and consistently procure some situation, whereby he might be enabled to live at ease and comfort, and devote himself to his poetic studies. Disappointed in this hope, the propriety that marked his former visit to Edinburgh deserted him in this; he visited the bacchanal orgies of a portion of his friends much oftener than the staid and stately society of his more elevated acquaintance. It was also at this time that he visited the grave of Fergusson, and raised a stone to his memory. Ultimately, a friend, Mr. Miller, of Dalswinton, made him an offer of a choice of farms, and with the eye of a poet rather than the discretion of a farmer, he chose that of Elliesland, in the county of Dumfries, whither he repaired in May, 1788. With his own hands he assisted the labourers to build a dwelling-house, and publicly acknowledging "Jean" as his lawful wife, with joy and gladness he brought her to his home, and settled himself down as on the road to happiness and comparative independence. But Elliesland was unproductive—the improved system of agriculture, which of late years has totally changed the face of the country, had not been introduced into Scotland; and, with bitter feelings, he felt himself compelled to solicit an appointment in the excise, to which was attached a salary of thirty-five pounds a year. Yes! and the British Government, which claims to be the most liberal in the world, acceded to the request! Mr. Pitt, the heaven-born minister, who squandered millions by the hundred, and who had said of the poems of Burns, that, since the days of Shakspeare, none to him had the appearance of so sweetly coming from nature, had nothing better to offer to this poet after his own heart than the servile duties of an exciseman. The eagle heart, which soared to excellence on earth and beauty in the path of heaven, was doomed to fret and agonize its rich and warm imaginings over contraband tallow and illicitly manufactured salt! He who loved nature in her wildest moods and most romantic aspects, was not to look upon the sea with a poet's eye, but with the vigilance of a coast guard officer. Aye, and his reward was with him, £35 a year! Even yet, he

cherished the hope of procuring a treasury warrant to make him a supervisor, by which he might ultimately become a collector, and thus secure a livelihood. But he hoped in vain! The British Government was never known to confer a favour undeserved, nor to use its patronage for improper purposes, nor confer its honours on improper persons. A slight departure from this vaunted rule would have saved the poet's life for many a year, and the gift, how well it would have been repaid! The witchery of his muse, and the originality of his genius, could reasonably have been expected to make a fair return for the haven he wished when he said, that "To thee sweet Poesy, delightful maid, I might consecrate my future days."

Burns continued his duties as a gauger, as the excise officers are called in that part of the country, and occasionally corresponded with his friends, scattering his pieces as he wrote them to the winds of heaven, leaving their publication or not to the discretion of the parties receiving them. His name thus continued before the public through the medium of the newspapers and other periodicals. About this period, also, Mr. Thomson, of Edinburgh, commenced the publication of the ancient melodies of Scotland, and wrote to Burns to supply him with purer words to the old tunes, that the doggerel rhymes attached to them might be removed. He stated, "We will esteem your poetical assistance a particular favour, besides paying any reasonable price you shall please to demand for it." In his answer to this letter Burns cheerfully agreed to furnish the songs, but declared that to "talk of money, wages, fee, or hire would be downright prostitution of soul. A proof of each of the songs I compose I will receive as a favour." This was, indeed, a false spirit of independence—it was a mistaken pride, which few of his poetical successors have imitated. It was to this collection that he furnished the majority of his songs—those love-lorn, plaintive, soul-enchanting compositions, which speedily flew round the earth, and waked the sources of love and pleasure in many a homely hut, on many a distant strand—which aroused an undying echo in the deep dark woods of America, and smoothed with thoughts of home and peace the sultry shores of India's continent and Australia's distant isle.

When the first volume of the melodies was completed, Mr. Thomson sent a copy of the work, and what he called a small mark of his gratitude (£5), requesting the liberty to repeat it as he might find convenient:—"Do not return it, for heaven's sake," said he "for if you do our correspondence is at an end." Burns returned in answer, "I assure you, my dear Sir, that you truly hurt me with your pecuniary parcel. It degrades me in my own eyes. However, to return it would savour of affectation; but as to any more traffic of that debtor and creditor kind, I swear by that honour which crowns the upright statue of Robert Burns's integrity, on the least notion of it, I will indignantly spurn the by-past transaction, and from that moment commence entire stranger to you. Burns's character for generosity of sentiment and independence of mind, will, I trust, long out-live any of his wants which the cold unfeeling ore can supply; at least, I will take care that such a character he will deserve. Thank you for my copy of the publication." Sometime later, having received from Mr. Thomson a copy of a rival publication in London, he offered to return this latter, as he had promised, in a moment of forgetfulness whether he was rich or poor, a copy of Mr. Thomson's Melodies to a lady. This extreme sensitiveness is, indeed surprising, and almost inclines to the conclusion that either it was affectation or the effect of hypochondriacism, which latter, though the most charitable and nearest the truth, is also the most afflicting. Mr. Thomson sent him three copies, with an earnest request to return no books, but to ask for them freely. It may be stated that Burns was highly delighted with the engraved illustrations to this work—the lover in the "Cottager's Saturday Night" was a chance likeness of himself, and the child assiduously employed in cutting off the cat's tail while the old man is reading the Bible, was stated by him to be an exact portraiture of his second son, then such a child as in the picture, but late a Major in the East India Company's Service, and now an Inspector of Factories in Scotland.

The humiliation, death, and exhumation of the poet form a topic sufficiently interesting to supply another chapter.

## Love and the Rainbow.

As Love saw a rainbow once gloriously bending  
Its arch in a watery cloud of the skies,  
"What pleasure," he cried, "for a God to be blending  
The hue of his wings with those beautiful dyes."  
So joyfully viewing the loveliness o'er him,  
He chased it, in eagerness round it to play;  
But still the bright vision retreated before him,  
Till rainbow and cloud had both melted away!  
Then Venus said to him, "My child, do not weary  
Your wings and your feet in a project so vain,  
The hues of the rainbow, so brilliant and airy,  
But shine for a moment to vanish again.  
And thus it is ever fond Love is deluded  
To follow what's fairest but hardest to gain,  
And after he long, and in vain, hath pursued it,  
It mocks his embraces and leaves him in pain."

## Familiar Chapters on Science.

NO. V.—PHOTOGRAPHY.

In these "familiar chapters" we would, if we could, very willingly confine ourselves to a description of scientific matters, such only as might be practised, or experimented upon, in the domestic circle. But an adherence to this plan would so completely limit the sphere of our observations and instructions, that the door to a vast field of interesting inquiry would be closed, and our task end in an almost nothingless result. We shall, therefore, now and then, enter into a consideration of subjects which require for their consideration various kinds of expensive and delicate apparatus in connexion with experienced manipulation, either of which is seldom found in private life; premising, however, that we shall entertain no question the explanation of which will not be both agreeable and useful.

Our present subject is Photography, which signifies the production of pictures by the action of light. We intend, however, to confine ourselves here to that part of the process which relates to the taking portraits from the life. The merit of the discovery of this art belongs to two French gentlemen, M. Niepce and M. Daguerre; the first of whom originated the thing, and the other improved it. The vast importance of this discovery to the arts and sciences was easily foreseen, and the resources and facilities it would afford for their study were incalculable. A bill for rewarding its authors was generously proposed by Louis Philippe, and adopted by a special commission charged with its examination, on condition that the secret should be published for the benefit of the whole world. Strange, however, as it may appear, it is a fact recorded by Daguerre himself, that whilst the French minister of the interior was urging upon the Chamber of Deputies, as a reason why this extraordinary and liberal measure should be adopted by them, that, "unfortunately for the authors of this beautiful discovery, it was impossible for them to bring their labours into the market, and thus indemnify themselves for the sacrifices incurred, as the invention did not admit of being secured by patent." Daguerre himself was actually contradicting this statement of the minister by commissioning an agent in London to take out a patent for this country, the only one in which he did so. The consequences of this hateful act of the mercenary Frenchman necessarily put a stop to anything like speculation here; but such was not the case in America, to which country the honour is due of having first successfully applied the discovery to the taking of portraits from the life. The apparatus by which this is effected has been patented by Mr. Beard, an English gentleman, who has spared no expense in bringing it to its present state of perfection. The invention itself is, however, a communication from a foreigner, residing abroad, Mr. Wolcott, of New York, and it consists of very important improvements on the process of Daguerre, the particulars of which we now propose to explain.

The science of optics offers two modes, by means of which images or pictures of objects may be fixed upon a plate by the action of light. The first of these is by refraction through a lens; this is the process of M. Daguerre. The other is by direct reflection from a mirror, which is the mode adopted by Mr. Wolcott. The plates employed for the portraits are generally constructed of copper, uniformly coated with a surface of pure silver; and the effect to be produced will depend, in a very great degree, on the perfect polish the plate is capable of sustaining, as also upon the uniformity or flatness of its surface. These plates, after being polished and cleaned, are subjected to diluted nitric acid, one part of acid to sixteen of water, applied by moistening a piece of clean cotton wool, and gently rubbing the surface with it. This is then wiped off, and the plate is dried by using several pieces of cotton. In the next place it is carefully polished by means of pounce, which is shaken over its surface from a linen bag, and applied with cotton. Daguerre recommends this operation to be performed three or four times. After the above mentioned processes have been accomplished carefully, and with every attention to cleanliness, the plate is then exposed in a box to the vapour of iodine, a very volatile substance, which, uniting with the silver, forms a coating of a pale yellow or golden tinge of iodine of silver. The plate, after this process has been duly performed, is in a fit state to be introduced into a camera obscura, wherein the formation of the picture upon the plate takes place, every requisite attention having been paid during the operation to keeping it in the dark—a precaution absolutely necessary for success. An ingenious contrivance has been constructed to effect this object. It consists of a frame or narrow box, into which the prepared plate is placed, and it is provided with two doors or flaps that can readily be opened in the interior of the camera at the wish of the manipulator. This done, the camera is properly adjusted; the person whose portrait is to be taken is placed opposite the instrument, the doors are opened, and the rays of light from the object to be copied are brought to a delicate focus on the plate. After it has remained in this position for a given time, much depending on the state of the atmosphere, time of day, power of the sun, and other minutiae which practical experience alone can

decide, the plate is removed in the dark by means of the box previously mentioned, and submitted to a mercury box, the quicksilver having been previously heated to about 690° Fahr. The image is now obtained upon the plate, and the next step is to fix it there, for in its present state an exposure to the light would quickly remove the whole of it. This, however, is easily done by washing it with a weak solution of the hyposulphate of soda, which dissolves off the iodine of silver, and leaves the portrait finished, the general appearance of which is that of an exquisite engraving.

It is necessary to add, however, that Nature in this, her own process, is no flatterer, the countenance being given "exactly like life." For the information of our scientific readers, we will further state, that although the rationale of the process is still considered to be in some doubt, it is evident that the action of the light decomposes the iodine of silver, and the vapours of mercury probably penetrate between the crystals of iodine, forming an amalgam of iodine of mercury, which constitutes the white or light parts of the picture.

By the process of Daguerre, the time necessary for the production of a portrait varies from ten to fifteen minutes, a period not only much too long, but by no means at command under the most favourable circumstances. By means, of Mr. Wolcott's plan, as improved upon, last autumn by Mr. Goddard, representations of individuals are now obtained in two minutes in foggy weather, and in from five to ten seconds under other circumstances. The writer of this paper had three separate portraits of himself, in three different positions, taken in less than two minutes by Mr. Goddard, the gentleman just named. The morning is generally considered to be the best adapted for the purpose; the portraits are then done in from half to three-quarters of a minute. In the middle of the day, from five to ten seconds only will be necessary; but as the sun goes down, a much longer time will be required.

## A Natural History Ramble in June.

Come, come, let us tarry no longer or we shall lose the finest part of the day. The sun is out; and the trees as they nod their heads seem to beckon us away; the birds call us to their haunts: and the butterflies as they flit past the cottage door tempt us to follow them. Am I too sentimental? How can I help it. If we enjoy Nature's ever-changing panorama, her magnificent flower-shows, and her "right merrie" band of musicians, let us express the delight we experience without reserve; yea, let us be poetical if we can. Admire and praise Dame Nature to the full, but without mawkish flattery, and tepid to one but she will make a poet of you as she did of Bloomfield, Burns, and others too numerous to mention when one is in a hurry to be off. What, you are ready at last. "Where shall we go?" do you say. So long as our walk is a rural one no matter the direction we go in. Take an answer to thine eager enquiry from one John Nevay, an almost unknown poetical ploughman, whose "Peasant" reposes in my coat pocket ready to throw me out a line should I sink into the too profound depths of prose. Harkee, sir, what this man of unclean shoes but bright mind says unto thee:—

"Go where thou wilt in all the rural reign,  
And beauty charms the eye, music the ear,—  
Or by the stream, or in the green domain  
Of ancient wood—to contemplation dear,—  
Or on the broider'd wold,—or in the grove,—  
Or on the hill, where shepherd chaunts his song of love."

Straight onwards, till we are tired a little, and then think of "home again;" and truly "welcome" shalt thou be to it, my "royal Charlie." Let me be thy cicerone over the fields; but let it be provided always that thou shalt not blame me if I "prattle out of fashion" somewhat, that is to say do not think me insufferable merely because I touch not on church or state, and am not able to tell thee how much filthy lucre it would take to buy you a hay-stack. To begin then. In the first place you will be so good as to observe, or rather to agree with me, that the increased heat of the sun has caused many plants to burst from their seeds, strike their colours, and diffuse their choice perfumery around us; and the grass has attained a considerable height, and moved by every breeze

"The vivid verdure runs  
And swells, and deepens, to the cherished eye."

Most of the larger trees are now in the broad leaf, and their thick out-spreading boughs afford to man, and other creatures, a pleasant screen from the hot sun and a goodly shelter from the sudden shower. The hawthorn fences have become stoutish, and by the presence of a variety of intertwining and prickly plants, afford concealment and protection to the unfledged young of many a bird. The pensive traveller now often stops to admire the rich colours of the wild roses that blush amid the green hedges, and eagerly seeks for the most beautiful of all, and having found it, he plucks it, either as an ornament for his coat, in which he (unlike Shakespeare's Mister Three-Farthings), really dares "stick a rose." Give me the wild rose of the English road-side, and you may have all the infinity of roses of Chiswick and Covent Garden. Had my voice the power, I would call all the flowers out of the hotbeds to their wild homes again, and teach them to know their proper places, and to mind their proper times and seasons. By cultivating

and educating the flowers they become too proud and too extravagant to keep company with the more humble more unsophisticated, and more pleasing, darling, little "simples" that are content to live and die on the poor man's common, or by the side of his lowly hut. Educate the nettle if thou wilt, and by all means teach it not to sting; but send not that vegetable schoolmaster, called a florist, among our wild flowers. But a truce to digression,—at least until the next time, for how can a lover of nature ramble about without digressing? Impossible. See, how prettily, how elegantly (that is, negligently) these banks and dry ditches are bedecked with the drooping scarlet flowers of the fox-glove and the deadly nightshade; how the waving corn fields are richly variegated with the scarlet flowers of the poppy and the pimpernel; and how their borders sparkle with the azure shining heads of the spiny blue bottle. From his nest among the corn, up springs the light-hearted skylark, and welcomes the sun, and us too, with a gladdening song, warbled during his ascent to the airy summit of his flight. Now having gained the very height of his ambition, and given us "all the tunes that he can play," down he is falling like a stone. A parachute!—a parachute!—his kingdom for a parachute!—or he'll be "literally smashed to atoms" in the turnip field! Bravo! his wings have expanded, and he has descended safe, sound, and not at all frightened. We may now hear the songs of birds in very great perfection, and from morn till night the fields resound with them, and we recognise, occasionally, the voices of some that only sing for a short portion of the year; but this does not make us the less admire such familiar notes as are audible all the year round. Thus, we listen—at least I do,—with as much attention and delight as ever to the bold, pert, well-fed, and nearly "round" robin, whose hymn-like song is continually breaking in

"Amid the glee  
Which swells in general harmony  
Each tuneful throat."

He is a general favourite, and, from his bold and affable disposition, which permits him in the winter to hop fearlessly into the cottage or the palace (like the "boy Jones") for food and shelter, and also from his introduction into a number of pathetic poems and tales, especially that which is read by all children in the wood, though by none in the London University, he has obtained more respect than any bird in our very ornithological empire. He is, however, less social with, and trustful of, man, at this season than in the winter, for his parental duties are now so important and urgent that they engross all his time, all the warmth of his heart and body, and render him, unquestionably, rather shy and fearful; for too well he knows that oft the hand that compassionately threw him crumbs in winter, will unfeelingly mar his paternal hopes in summer. Take the song home in thine ear, but take not the nest in thine hand.

On the surface of the field which we are now approaching, rest a flock of rooks, while up in the tree close by, is perched one of the sable company to mark and announce the advance of hostile intruders. This black guard sees us coming, and sounds his harsh tocsin of alarm, which instantly induces this feathered parliament to rise lest they suffer from gunpowder, treason, and plot. They have unanimously adjourned to a distant tree, and will continue their sitting there until our disagreeable faces are far out of their sight, and then they will resume their proceedings,—regulated of course by the Diet of Worms.

Behold,—and look with a poet's or a painter's eye,—a picturesque scene. A gipsy tent, full of that curious and somewhat enviable race of wanderers. I admire them for their fine swarthy countenances, their weather-braving natures, and I envy them the scenery they have so much leisure to enjoy, while you, my companions, careless of the proverb that all is vanity and vexation of spirit, do little else than toil for gold amidst the city's noise. Gipsies may in legal phraseology be "vagabonds," and have their petty faults as other folks have, but they have a thousand merits.

"No false desires, no pride-created wants  
Disturb the peaceful current of their time,  
Nor through the restless ever-tortured maze  
Of pleasure or ambition, bid it rage."

Above the field, close at hand, the sharp-eyed kestrel, borne on his silent, waving, wings, performs his elegant evolutions. One moment he is seen moving in circles, the next

"With slow and wary course  
Gliding, or hanging like a cloudy speck,—  
Or sinking slow with gentle tremulous wing,—  
Or like an arrow rapidly darting down."

What an animated scene this flower-bordered pond presents! On its clear surface dance the whirligig-beetles, shining, as they move, like so many Lilliputian waltzers adorned with bright jewellery; the boat-flies, by means of their oar-shaped legs, are rowing themselves along on their backs, while the toads and efts are skulking about below: the net-winged dragon-fly is skimming across the water's surface with all the elegance of a swallow, and sometimes leaving the pond in order to pursue some unfortunate butterfly, who being captured after a smart chase, falls a prey to his epicurean appetite. Who knows but what a dish of splendid butterflies are better eaten than the tongues of melodious nightingales, or the green fat of the portly turtle? Give them a trial, ye entomologists, and

let us know what sort of eating "a purple emperor" or a "painted lady" is. But let us quit this pond and proceed to the hill before us. As we walk across the fields the timid grasshoppers, alarmed at our foot-steps, cease their chirping and nimbly hop out of our way; swarms of gnats follow us dancing over our heads; various moths and butterflies cross and recross our path; and the bee, burdened with delicious sweets, chides us with a loud buzz for intruding on his haunts.

After a little puffing and blowing we have climbed up to the summit of the hill, and now what a grand and extensive prospect presents itself to our sight! The country, smiling in its variegated dress, is seen extending miles and miles around us, until it seems to join the very clouds that linger at the horizon, and almost appear like mountains in the distance. The shining, silent river, with many a white sail upon it, shows itself here and there as it runs its devious course between the sandy banks, graced with ranks of silvery willows. The lordly castle of other days, now a mere ruin, partly concealed in the embrace of the climbing ivy, still holds up its proud turrets towards high heaven. Peeping above the top of yonder grove we see the spire of the village church, surmounted with a glittering weather-cock, on which a clerical rook has perched himself. In the fields, on our right-hand, the cows are quietly grazing, while in those before us they are frolicsomenly skipping about, and advancing towards the milk-maid who is carrying their warm milk to the dairy. Large flocks of sheep, now divested of their fleecy coats by the shearer, are quietly moving about in distant fields, and the gentle tinkling of their bells, heard at intervals, comes pleasantly to the ear while we are descending the hill.

This old lodge to some gentleman's house, has a pretty appearance, covered, as it is, with the jasmine and the honeysuckle, whose flowers are perfuming the air with the sweetest odours. In its little garden we see, and in flower too, the delicious-scented eglantine, sweet-williams, columbines, wall-flowers, larkspur, nasturtiums, stock-gilliflowers, candy-tuft, pinks, and many others. In the middle of the garden stands a bee-hive, and its busy inmates are issuing from it to fly once more in search of the honey-yielding flowers. On the wooden palings over which we are leaning the prowling wolf-spider is meditating the capture of a fly that has incautiously alighted a few inches before him. Observe how cunningly and gradually the hungry knave approaches his unsuspecting victim. "Fee fo fum" says the spider, "I smell the blood of an English"—fly. Now within a convenient distance for the attack, he raises his front claws, surveys his distance, and with one hearty spring he pounces plump upon his prey. He has him tight within his dreadful grasp, and unmoved by the shrill imploring cry of his vainly-struggling captive, squeezes him unpiteously, and carries him away to some favourite retreat in which he will feast on him without any interruption. I knew a tender-hearted young lady who used to employ her time in rescuing poor flies from the clutches of spiders; and she, pretty simpleton, thought these acts practical proofs of her humanity towards dumb animals. She never reflected that her kindness towards the flies was cruelty towards the spiders, who she thus left to starve for the want of a dinner. In the same spirit of inadvertent tenderness, she would pull the frogs out of the water lest they should be drowned. Thus, you see, unless we reflect upon what we are about, we may be exceedingly cruel when we mean to be very humane. But let us be moving; the sun is setting; and we must think of home.

See how plentifully this oak is hung with what are called oak-apples, or, more correctly speaking, with galls. Detach one from the tree, and open it carefully with your pen-knife, and you will find in its centre a circular cavity containing a small grub, which is the larva of a species of gall-fly. In what manner these galls are formed has not hitherto been discovered; but that they are produced by some operation performed on the plant by the insect, is certain. At this time of the year a great variety of galls may be observed upon different trees and shrubs, and many of them are very curious and beautiful. On the oak alone may often be found several sorts of galls, besides the common oak-apple. Those on the leaves of the oak resemble small globular warts; and those at the ends of its branches resemble diminutive artichokes; and those on its pendant catkins resemble bunches of small arrants.

The sun has long since set, and the shades of evening are coming o'er us; so let us resume our homeward course.

What a lovely night! Thousands of stars are glittering in the heavens; and the silvery moon diffuses a soft fulgent light on all around. The cool and gentle wind nakes sport with the leafy boughs of the trees, and bears o us now and then the sounds of distant music, and the fragrance of the new-mown hay. The nimble frogs are hopping about the dewy grass, o'er which numbers of moths are tripping, and thus affording a plenteous supply of food to the leather-winged bat; the hooting owl is bounding upon the mice that have now come forth to commit their nocturnal depredations; the nightingale is pouring forth her melody; the cuckoo is yet making his woods echo with her monotonous cry, which is sometimes heard till ten o'clock or so; the careless dorples and cockchafers are flying about in great numbers; and we have, at last, reached home. Scrape your shoes, and come in to supper.

## A Fashionable Marriage.

### CHAPTER II.—THE RECOGNITION.

HAD the Countess of Foulborough been in the habit of reflecting before she spoke, she would have been aware that for Lord Swindleton to procure a number of opera admissions was a somewhat difficult task. The family was due two years' subscription to the theatre, and had not made a visit for the present season. The demands on the purse of his Lordship always kept it at the lowest ebb, and he actually sat down with a serious mind to contemplate how the desired tickets could be best procured. The paragraph which had been supplied to the morning paper by the Countess presented the only means he could think of, and he adopted it with little compunction, well knowing that less embarrassed families than his had not scorned to avail themselves of the "Liberty of the Press." He therefore despatched a familiar note to the editor of the *Fashionable World*, soliciting his order of admission to the opera. That provided for two. He despatched another copy of the note to the *Age* and *John Bull*, fully calculating that he would be equally successful there. He was mortified, however, to learn by their answers that the manager of her Majesty's Theatre did not allow editors of weekly papers to write in their friends to the opera, or they should have been most happy, &c. &c. He applied to the *Morning Herald* with some misgiving, aware that the conductor of that journal would be chagrined at the paragraph respecting him not being sent in the first instance to his paper. "Grandmama's Gazette," as the *Herald* is irreverently called, however, readily accommodated him. Thus, the Countess, his two sisters, and their unsalaried governess were provided for. For himself and his deluded he magnanimously resolved to present purchased tickets.

The evening arrived, the Countess and her daughters were decorated with all their jewels at liberty, and looked around them as if they conferred an obligation on the theatre by their presence. Lord Swindleton and Miss Winyett had seated themselves immediately opposite. He pointed out to her various members of the nobility, who all seemed employed in a like manner; eye-glasses were in constant requisition, and haughty dames stared straight forward, unabashed by the inquiring looks which were set upon them. In the course of the evening the young lady said to her assiduous and noble attendant, "Pray, my Lord, what rude and inquisitive ladies are those in the opposite box. They have been staring alternately at me through their glasses, and talking and laughing to each other, for an hour."

"Where?" inquired his Lordship, colouring, and looking every where but to the proper quarter.

On the box being pointedly shown him, he affected great surprise, assured Miss Winyett she must have been mistaken, as these ladies were no other than his honoured mother and his sisters. Miss Winyett remained silent; she sincerely wished that she had not called the attention of his Lordship to the matter, as she felt satisfied that their observation of her had been made in a manner the reverse of kindly. Lord Swindleton had expected the young lady to make some further remarks, and felt hurt at her silence, as it left him no alternative but to propose a direct introduction, instead of having it in his power to do so casually yet agreeably. He therefore informed her, with all the happy insinuating eloquence he could throw into his conversation, that he would be most happy to introduce her to the Countess on the termination of the opera. Miss Winyett lifted up her clear blue eyes, looked thoughtfully, and almost tremblingly into his countenance. She tried, but failed, to speak; a "big round tear" glistened in the corner of each eye. The feelings of that moment were plainly apparent in her features; pride, fear, expectation and doubt, appealed eloquently to the unimpassioned lord. For an instant the titled scoundrel felt a pang of remorse. He thought upon his bay mare, and his resoluteness of purpose returned.

At the conclusion of the opera a general stir pervaded the theatre; ladies flung themselves from their seats, with a swing, into the passage, and sailed along to the lobby. The Countess rose in one of her majestic attitudes, smiled blandly to her son, and, by a gracious inclination of her head, assured Miss Winyett that she had been observed.

"We are waited upon," said his Lordship. "The Countess expects you. Allow me to present you to her."

Miss Winyett took his arm in silence, and walked on. "They met; 'twas in a crowd." A galaxy of beauty and fashion, as the newspapers describe a cluster of scandal-dealing ladies, was collected round the Countess. Her son had been observed, and they were resolved to witness the manner in which the "city girl who had entrapped young Swindleton," was received by the mother and sisters. The crowd opened, and his Lordship advanced to his mother.

"Allow me, Countess, to introduce to you Miss Winyett, the lady of whom you have frequently heard me speak."

"This is not kind," my Lord, said the Countess with a smile; "I should have had this pleasure to myself; and not, as it now is, shared by so many kind and condescending friends."

The group of ladies looked at each other. If ever unbelief was painted on the human countenance, it was strongly displayed by all present.

"Lady Clara, Miss Winyett; Miss Winyett, my sister the Lady Clara."

The Lady Clara half bowed, half curtsied, and then turned round to talk to some one else.

"Lady Louisa, Miss Winyett; Miss Winyett, my sister the Lady Louisa."

The Lady Louisa followed the example of her sister.

Miss Winyett felt a suffusion of blood upon her face; her ears tingled; her heart beat audibly to herself; and her knees cleaved to each other for support. Every eye was bent upon her, and even his Lordship began to be embarrassed.

"How unfortunate it is," said the Countess, "that this very pleasant interview should not have taken place elsewhere. My Lord, I hope you will take an early opportunity of introducing our dear friend to your family in proper form. I shall be at home to-morrow; and now I bid you good evening."

"Why, mama, you will surely remain to see the ballet," said the Lady Louisa.

"We might as well as remain here," added the Lady Clara.

"I am surprised at you, ladies," whispered the Countess. "This interesting girl has claimed our attention, and I am certain she appreciates the prospect of becoming allied to our house."

A general though suppressed titter from the crowd of listeners now brought a flush to the cheek of the Countess. For a moment her pride tempted her to resent the affront, but the dread of getting up a scene, and a desire to make Miss Winyett believe that her company was solicited by the best families, compelled her to be silent. Her temper, however, was so far ruffled as to make her forget that she came to the theatre in a hack, that her son might have the use of the carriage; and, seeing one of her two footmen near the door, she desired him to call the carriage.

After one or two profound bows to the ladies in his vicinity, Lord Swindleton proceeded to reassure the harassed girl that his mother was highly pleased with her, and that there now existed no doubt respecting the acquiescence of his family to what his heart was most fondly bent upon.

"How plain she is," said a pert young lady in the rear, in an audible whisper.

"Quite good enough for him," said another in a suppressed tone.

"Presumes on the produce of her father's till, of course," observed a third.

"And, (a hem!) attracted by its contents," added a fourth.

"Who, who?" hurriedly inquired the bevy, with a titter.

"Why any one that dares not look at us," rejoined the witty lady, with a most plebeian laugh.

Lord Swindleton, his ears burning with rage and shame, had now reached the door: the space was crowded with lacqueys escorting their employers to their carriages; he looked in vain for his attendant; every officer connected with the establishment was busily engaged in assisting the departing ladies, and he had no other alternative than to propose leaving Miss Winyett until he could have his carriage called. He looked round, every chair and sofa was occupied, and he was thus compelled to leave her in the promenade. No sooner was he gone, than every eye-glass was raised to look at the "city girl."

"Poor girl," said a fat Dowager Marchioness, "she cannot have ever been here before. They ought to get a police-constable to guard her."

"I wonder the city trumpeter don't call her carriage," said a matron, at which remark her five daughters giggled delightfully.

"Will the Lord Mayor's coach be in waiting?" said a well-dressed booby, talking in a manner intended to be playful.

"There is an omnibus, I know," replied another exquisite, "for I saw one at the corner of the building as I entered the theatre."

These and other remarks, with a general titter and continual stare from all parts, as Miss Winyett paced the room, made her stay most disagreeable. She frequently and earnestly looked towards the door. While so engaged the booby already mentioned stepped up to her with a mincing walk, and inquired if she had lost her way.

"No!" mildly replied Miss Winyett; "I am waiting on Lord Swindleton."

"Waiting on Lord Swindleton," said the heartless fop; "why I thought you had contrived to make him wait upon you."

This stupid attempt at wit being delivered in a style between a laugh and a jeer, was responded to by a titter. Miss Winyett looked in vain for a compassionate countenance. She burst into a flood of tears, which converted the giggle into a laugh. Overcome by her feelings, she swooned away, falling heavily on the floor.

A general scream then burst from the ladies: all rushed towards the door: none assayed to lift the prostrate girl. There were present many who had on claims to nobility of blood, who were even of more lowly descent than Miss Winyett; but they knew that to attend to her would betray them, and they crowded out with the rest. At that moment no attendant was in the room, nor could any enter in consequence of the hurry of those seeking egress.

Lord Swindleton at length learned that the Countess had driven off in the carriage; he, therefore, called a hack, and after waiting till it was within hail, he returned to the saloon. On his way he was met by a number of flurried ladies; one of those more elderly than the rest, seized him by the arm, and told him that his city lady had fainted, and would likely require his assistance.

Scarcely knowing whether or not to credit the intelligence, he pushed his way through the crowd, gained the scene of his irritation and her insult, and found Miss Winyett on a sofa, attended by some of the menials of the theatre. Her face was besprinkled with water, and the small current of blood might be seen gradually and faintly colouring her cheek. Her eyes were wide open, but fixed and glaring, without movement or speculation. A shock from her brain drove her eye-balls from one corner to another; she groaned bitterly and in pain. Her arms and feet were dreadfully convulsed, and told how violently the blood was acting upon her heart.

Enraged, desperate, and scarcely knowing what he did, his lordship gazed upon his victim—then at those holding her down. "Lord Swindleton's carriage!" exclaimed a burly official outside the door. He lifted her in his arms, carried her hurriedly through the lobbies, contrived to seat her in the vehicle, and told the coachman to drive to the family residence. The motion of the carriage assisted the action of the blood: her eyes became less distended; the stiffness of her limbs grew more relaxed, and with a deep and solemn moan, she opened her eyes. She instantly met the gaze of his Lordship; she became conscious of sitting on his knee, and, hiding her face in his breast, burst into tears.

His Lordship tried to soothe her. But the heart which is unwarmed by a glow of virtuous affection is incapable of that true sympathy which conveys love and assurance while in distress. Under like circumstances, an untutored mechanic, did he truly love, would have become suddenly eloquent, and spoken as if inspired—ay, even although in happier moments his teeth chattered, and his tongue refused to utter what he most desired to say. Glad was his Lordship, then, when he was set down in—Square. He assisted his trembling charge to the parlour; left her with the assurance that the Countess would wait upon her instantly, and, ascending in haste to the drawing-room, threw himself into the midst of his female relatives.

"You are mad—stupidly mad; all of you. You have nigh ruined the only prospect I have of redemption. She has fainted, in consequence of being insulted in the saloon. I have brought her here. Forget your foolish pride for an evening, and there is no sum I shall refuse you."

This hurried and emphatic declaration of his Lordship was heard coolly and listlessly until the last sentence. Then the Countess and her daughters rose with kindly haste. "You are a good boy, my lord," said his mother; "I shall explain all to you in time. Let us hasten to her relief."

However callous-hearted and immovable to the calls of charity and affection, the Countess was a consummate actress. The superficial education of the aristocracy, though it breathes no genial influence on the disposition or temper, enables them to appear in the most advantageous colours. Smooth of speech, and delicately-assiduous in manner, the Countess and her daughters appeared by their conduct to be entirely different creatures from those seen in the theatre, and the unsophisticated heart of the virtuous maiden was speedily reassured and comforted. A messenger was despatched in all haste to her father's residence, with a note in the handwriting of the Countess, conveying in kind and affectionate terms a slight hint of Miss Winyett's sudden indisposition; it also conveyed the information that the young lady would remain with her for the evening, and concluded by inviting him to breakfast in the morning. The Ladies Clara and Louisa playfully quarrelled as to which of them should have charge of the sweet girl during the night; and Lord Swindleton left them with a kinder "good night" than he had ever been known to utter.

### Scenes and Sketches of Military Life.

PATRICK O'NEIL—THE IRISH GRENADIER.

CHAP. IV.—A RECEPTACLE FOR STOLEN GOODS—THE EMBARKATION—HOW TO UPSET A SHIP AND CREW.

THE classic and elegant Canning was, at this time (1826), at the helm of the old ship Constitution. The affairs of Portugal were then in such a state as called for the interference of British men and money, and accordingly, "a little army" was ordered to make a descent upon that kingdom. The—regiment was one of the first sent to Portsmouth for embarkation.

The first day's march was from Windsor to Bagshot, which, not being able to afford accommodation for all the men, a number of them, amongst which was O'Neil, were dispersed in different villages on the route, with orders to join at a small town where the regiment was to halt for breakfast.

Here a question arises, which I should like to see reasonably replied to. Why, in Ireland, is every householder obliged to accommodate soldiers on billet, while, in England, only one portion of the inhabitants (the licensed victuallers) is compelled to bear such a troublesome burden? And why are soldiers allowed but 1s 5d per day on the march through Ireland, while, in Eng-

land, with sundry other privileges, they are allowed 2s 4d?

When the regiment fell into rank after breakfast in the street of the little town, and while the sergeants were calling over the names of the men, the landlady of the house where O'Neil had been billeted made her appearance, and complained to the captain that she had been robbed of a rich India shawl, and that she could accuse no person but the soldier.

O'Neil, fully accoutred, instantly "fell out," and was taken by two sergeants to a private room, where he was stripped, the captain superintending the search. His knapsack, pouch, cap, boots, and clothes, were all subjected to the strictest scrutiny, but no trace of the missing property could be discovered. He denied all knowledge of such an affair, and loudly asserting his innocence, complained of the wrong and injury inflicted on his character in the face of the whole regiment.

"My good woman," said the captain on his return, "we have searched him in the closest and strictest manner, but without success; and I can assure you if he has taken the shawl, he has not got it about him."

"He had no one to give it to since he left my house," replied the woman, "for I never took my eyes off him since."

"I could not ask you to be present at the search," said the captain again, "but I pledge you my honour he was examined to the very skin, and I was present myself, so that if he had it, it could not have escaped me."

"Well, then," said she, "all I can say is, that it was either the devil or the souldier as took the shawl, and I suppose I must leave it atween them."

"Never mind her, your honour," said O'Neil; "poor woman, she is not in her proper senses this mornin'; she was saying her prayers in the bar at rather an early hour, and piety that way is bad for the memory. Go home, dear; you'll find your shawl when you're not looking for it. Go home and say your prayers again."

Before the men dispersed to their billets that evening, the captain desired O'Neil to follow him to the hotel, where the officers took up their quarters. He took him into a room, and turning round, he locked the door. O'Neil eyed these preparations with a furtive and jealous eye, but made no remark.

"Now, O'Neil," said the captain, "you took the woman's shawl, and you have it; that I am certain of; but pay attention. You have excited my curiosity; I pledge you my word that I shall never mention a word of this matter to injure you; but show me where you have hid it."

"Me have it, your honour!" replied O'Neil, rather surprised. "Oh Lord! your honour, how can you say such a thing after this mornin'!"

"O'Neil," said the captain again, I know you too well; it's no use to sham Abraham with me. I again pledge my word that if you confide in me your secret, you shall come to no hurt through me. Satisfy my curiosity; where have you concealed the article?"

"Why, your honour," reiterated Pat, with the most provoking simplicity, "now, barring you imagined I was a witch or a fairy, how could you think I could have an inch of such a thing after the severe rummaging that the sergeant gave my kit and myself before your face?"

"I see you are determined not to trust my honour," said the captain in an angry and disappointed tone. "I have pledged my word; you refuse to gratify me; but now I fairly warn you, I shall set a watch on you, and if you are caught you must suffer."

O'Neil paused; the threat had more effect than the captain's plighted honour.

"I know your honour," he began, "is a true gentleman, and not like some that"—the captain waved his hand—"and I know your honour's word is as good as some of their oaths, and I have your honour's word and honour."

"I pledge both word and honour," replied the captain, "I was determined, if I detected you this morning, to hand you over for punishment. You have completely baffled me; you have excited my curiosity very much; gratify it so far, and you have nothing to fear from me. Take care of yourself."

"Leave that to me, your honour," said Pat, drawing his turn-screw from his pouch and the ramrod from his musket; and taking the "worm" used for drawing the ball from a piece when loaded, he screwed it on the end of his ramrod, and inserting the latter into the barrel of his musket, after a few turns he drew forth slowly before the eyes of the astonished officer, fold after fold, volume after volume, a large, beautiful, and valuable India shawl.

"That will do, O'Neil," said the captain with a smile; "I am satisfied; go away; but I advise you, as a friend, to take care of yourself. And, as I may know where to search next time, let this act as a warning."

The shawl was in an instant once more invisible—O'Neil touched his cap and vanished.

Though O'Neil loved marching through England very well, it was never his intention to proceed with the regiment on foreign service. So, before we arrived at Portsmouth, he had to be consigned to the baggage waggon—an old sore leg having very conveniently swelled to a most enormous size in one night, rendering him almost unable to move; and, while the troops embarked, O'Neil was comfortably reclining in the general

hospital, where he remained until his leg got well. He then joined the depot of the regiment stationed at Chatham.

The regiment was about six months in Portugal when, a number of the men dying from fever and dysentery, caused by long and harassing marches under a burning sun, and through a woody country, and excess in drinking new wine and eating unripe fruit, a detachment was ordered out to join from the depot.

In the letters sent by the men in Portugal to their companions at home, they gave the most extraordinary description of the country. It was a paradise to the Irish portion of it; spirituous liquors were so cheap, and wine so plenty. A short extract from one of these precious epistles may amuse.

"DEAR JEM,—I suppose because I kem out with the reegmint to these furrin parts, you thought we were all transported—and, faith, so we are, and with joy too—for if this be war, that we never have peace, I pray. I wish you were here for half an hour, until you'd see the counthry, and go back agen to die with vexation. Its the finest place ever myself set my fut in—it bates Con-naught all to nothing. Did you ever see raisins growing on the bushes in Connemara? They grow here for all the world like blackberries. Did you ever dbrink wine in the county Mayo, barrin' the docther orthered you a sup when you war sick? Faix you might swim in it here; and the gin, and rum, and brandy as plenty as butter-milk; and then they call their whiskey *Aquardint* by way of being grand. The apples, oranges, lemons, and melons, and them sort of vegetables, are as thick and as cheap as praties; and the sun is so hot that it splits the pavin' stones.

"But the quarest thing of all is the langedge they talk—neither English, or Irish, or good Latin—and the little yellow devils in the streets gabble away at it like a parcel of geese; and it often makes me wonder how a big fellow like me can't speak a word of it. We have but one parade in the day, and that's before sun-rise; the duty is nothing, and we have a pint of wine a man every day, and live like princes; for any reasonable man could get as blind as a piper for tuppence."

The men's minds were so excited by such descriptions, that, with the exception of a few who were recommended by the doctor, the draft entirely consisted of volunteers, amongst the foremost of which was Patrick O'Neil.

As we have before remarked, O'Neil was seldom without a *cher amie*, and on the occasion of his embarkation, the boat which conveyed him from Chatham to the transport, lying off Sheerness, was accompanied on its voyage by another, in which was seated the sorrowing love of Patrick, and a fair bevy of sympathising companions. Gin and rum were smuggled on board the soldiers' boat, and they drank toasts by signal, telegraphed their fond farewells so often, and with such good will, that by the time they gained the deck of the transport, O'Neil and some of his comrades were fully half-seas over. The lady lingered in the boat mauldin with love and liquor, and loath to wave her last adieu. O'Neil peered over the bulwarks, and busy Memory before his mind's eye unrolled her fairy panorama of past enjoyments—happy hours now, perhaps, never to be recalled—bye-gone pleasures vanished for ever. It was at this moment that a scene on the deck of the vessel caught his eye. One of his fellow soldiers, a thin, meagre, sickly being, whom the doctor recommended for the voyage, was seated on the deck beside his wife enjoying his evening repast, both apparently happy with each other. O'Neil looked a moment in half drunken surprise, and the sight of their comfort was too much for his overcharged and desolate heart—his outraged affections; he felt he was an injured man. He staggered up to the officer commanding the party, and drawing up his tall figure to its full height, with great gravity and steadiness he saluted him.

"Well, O'Neil, what's the matter?—what do you want?" enquired the officer.

"Lieutenant St. A—b—n," hiccuped O'Neil, "I don't come to ask a favour of your honour, but, as I've always considered myself as good a soldier as any in the regiment for a private soldier, or, for the matter of that, for a non-commissioned officer either, I only want the same rights as another man."

"Indeed, O Neil, if you could conduct yourself something better, you might pass muster with most of your comrades," replied the lieutenant, a simple-minded quiet young man.

"Have I ever skulked from my duty or imposed on my comrades, unless when I couldn't help it?" still demanded O'Neil.

"You're an unfortunate vagabond, O'Neil, but against your soldieryship I have nothing to say. You have only injured yourself."

"Well, your honour, myself suffered for it. I never threw my crimes on the shoulders of a comrade."

"Then why don't you leave off your d—d habits and live quietly?" said the lieutenant.

"Because I never get fair play," said O'Neil "I never get justice. Other men are indulged; I never am; I am a marked man in the regiment. Now, Lieutenant St. A—b—n, look at that fellow," pointing to the man and his wife on deck; "there's a sneaking, half-dead-and-alive, good-for-nothing humbug—in hospital a month and out a week, leaving his comrades to do his duty, and scheming on the service. Now, that fellow

never mounted a half dozen guards since he first handled a firelock. Yet, look at him, there he is with his wife, snug and easy, while my poor woman is breaking her heart outside there, and daren't come near me. That's the sort of fair play for good men in the — regiment."

"You must be aware, O'Neil," replied the quiet officer, "that the woman won her lot to accompany the detachment."

"That's easily managed, we all know," said O'Neil again; "but I have one request to ask, Lieutenant St. A-b-n :—will you allow my wife on board?"

"Against orders—no such thing—go away, O'Neil; I begin to think you have been drinking, sir."

"You won't, won't you?" said the drunken ruffian. "Now, just mind what you say—I don't come to ask it as a favour—will you let my wife on board, or will you not? Just say yes or no."

"No, sir—get about your business; here, sergeant—!"

"Then, by the powers of powder, you won't have O'Neil!" and seizing the bulwarks, he vaulted overboard. He sunk, but on his again rising to the surface, he was seized by some men in a boat—a rope was lowered and lashed around his body, the tackle manned, and Pat was hauled, all dripping, like a captured triton, from the briny flood. He kicked and plunged manfully, and as he swung in mid air, between sea and sky, he grappled the rope with both hands, and, placing his feet firmly against the side of the vessel, he shouted at the top of his voice, "Won't you let in my wife? By the powers of powder, if you don't, I'll upset every mother's sowl of you into the middle of the ocean!"

The screams of the women were terrifying, until Patrick was hauled on board, where he was placed in confinement until the vessel sailed for Lisbon.

### Anecdotes of Wolves.

THESE destructive animals, which at one time spread their ravages over Europe, are now nearly confined to the northern regions. In Russia, we learn from a recent traveller, they still greatly abound, and every means are adopted to assist in their destruction. The following anecdotes contain, in a small space, a great variety of adventure, much incident, and create not a little interest in the dangers arising from wolf hunting :—

I was presented, the other day, with the skin of a large wolf, which was killed last winter in rather a curious way, in a neighbouring gentleman's house. The house, which is small, is situated in a retired spot on the outskirts of a large wood, which extends up to the very door. There were some puppies about, which must have attracted the wolf, and, emboldened by famine, he followed one of them into the house, a step which eventually proved as fatal to himself as to his prey; but he at least had the satisfaction of one more feast before he died. The house-door opened into a small ante-room, on one side of which was the kitchen, and on the other a room, in which the cook's wife either lived or was in some way employed. This woman came in, and calling to her husband in the kitchen to say that she had seen a strange dog follow one of the puppies into the house, she went into her own room; as it was dusk the mistake of the woman was easily made. The cook, upon his wife's information, looked out of the kitchen, and saw that there was a wolf worrying the puppy: he therefore called to the people in the yard, who pulled to the outer door, so that the animal could not escape, and who then fetched a gun which they handed in through the window to the cook. The wolf was now alarmed; and when the man opened the door cautiously, and thrust forward the gun to shoot, the beast rushed at him, and seizing the barrel of the gun in his teeth, almost pulled it out of the cook's hands. He, however, recovered it, and retreating, shut the door upon the animal. The latter, after a few minutes, lay down, and when the cook looked forth again, he saw the wolf crouched against his wife's door. He called to her to make a noise inside, upon which the beast got up, and moving a little on one side, received a shot in the head, which the cook followed up by beating out his brains with the butt-end of the gun. The unfortunate puppy was found half eaten in the corner of the room.

Wolves are exceedingly fond of dog's flesh, and they sometimes make use of a very cunning stratagem to obtain it. A wolf or two will approach a village in the day-time, upon which all the dogs run out and begin to bark at them; the wolves then pretend to be frightened, and retire, upon which the dogs take courage and advance; at length, by alternately stopping and running away, the wolves entice a few of the more adventurous curs to a considerable distance from the village, when they suddenly turn round upon their foremost pursuers and carry them off.

Most parts of Russia are sadly infested by these animals, which commit great depredations among the cattle. They are, generally speaking, afraid of human beings, but they occasionally pick up a child in the woods, and instances are by no means wanting of their attacking even grown-up men when the weather is very severe. These misfortunes occasionally happen in the neighbourhood of Petersburg, where the wolves are extremely numerous and very daring. At the country-house of a near relation of M—'s, about twelve miles from Petersburg, a man was, a year or two ago, attacked in the garden by a single wolf and severely wounded, escaping with difficulty with his life. The same place was the scene of another curious wolf-adventure. A disturbance was heard at night outside the house (I suppose among the dogs); however, several people went out to see what was the matter, but they discovered nothing, and though they supposed that a wolf had been there, they came back into the house. Presently, however, they missed one of the servants, a lad of eighteen,

who had been one of the first to sally forth. As he did not return, they became alarmed, and went out again with lanterns to search for him: they were not long before they found him stretched on the ground, apparently dead, with a wolf lying dead by his side; the man, however, was only in a swoon, and soon recovered on being raised up. As soon as he was able to give an account of himself, it appeared, that on the first alarm he had run out of the house with a large stick in his hand, and had been immediately attacked by the wolf, which so terrified him, that aiming one instinctive blow at his enemy, he had fallen down in the senseless state in which he was found; the single blow of his heavy stick had, however, by an extraordinary accident, hit the wolf on the head and killed him.

When seven or eight of these animals are collected together in the winter, they are often sufficiently dangerous, and it is said that a single wolf, on meeting with a man in a lonely place, will sometimes commence howling, until his friends around assemble as at the sound of a dinner bell in sufficient numbers to venture on the attack. They will sometimes even assail travellers on the high road. A friend of mine told me that once, between Moscow and Petersburg, he was journeying in an open sledge, it being excessively cold, and he was pursued for some miles by a pack of wolves who ran by the side of the sledge, jumping up at it, and so close, that his valet, who was sitting by his side, stabbed at the brutes with a dagger and wounded some of them; but the wolves did not give up the pursuit till they met a long string of sledges, which alarmed them.

The wolf prefers living in small brushwood covers near a village, to inhabiting large forests; these, however, are the fastnesses of his race, and the existence of these immense tracts of wood and desert in Russia would perhaps defeat any attempt to rid the country of those ferocious beasts. It is, however, difficult to believe, that such a pest might not in some measure be put down if exertion were systematically made; without combination, however, the thing is impossible, and in most parts of the country the wolves are rarely molested; indeed, the peasants often have a prejudice against so doing, as they think it only exasperates the animals and makes them more fierce and dangerous: I need not say that this is a most absurd notion, and where it prevails, the beasts become only more daring by impunity. They often show themselves in broad daylight, but I have never seen one since I have been in the country.

There are various ways of destroying wolves; sometimes this is done by poison, the best being nux vomica, since it does not, like arsenic, injure the fur, which is some consideration, for a wolf's skin raw is worth from eight to ten shillings. A calf, or some other dead animal, is well impregnated with nux vomica, and laid in a retired spot in a wood; the wolves find it, and feast on it, and the effect of the poison is very rapid. I have heard of six wolves being destroyed in this manner in one night; four were found dead on the spot, and two others were discovered afterwards at a little distance.

Every one has heard of the mode of catching these animals in pitfalls, by placing a lamb or a pig as a bait, on the top of a post rising out of the pit: they have in Russia a kind of trap, which is exceedingly simple, but which I never heard of before I came into the country. A small circle is inclosed with a palisade or some other fence, too high for a wolf to leap or climb over; this fence is again surrounded by another of the same kind, leaving a narrow space between the two: the outer fence has a door, which opens inwards, so as to fill up the space between the two palisades when it is set open. A lamb or a pig is placed at night in the inner circle, and being alone and cold, it naturally bleats, or grunts and squeals; the noise attracts the wolf, who enters the door which is open, and finding the inner fence still between him and his prey, prowls round it in hopes of discovering an opening. When he arrives at the door, having made the circuit of the place, he pushes against it, and thus shuts it to, and imprisons himself; for the space in which he is, being narrow, and his back bone very inflexible, he cannot turn, and the door is of course so hung as to shut from a very light pressure.

You have heard of the plan of shooting wolves on a moonlight night in winter, when two or three sportsmen place themselves, well-armed, in a sledge, and are driven through the roads and tracks in the woods. As they go along, they pull the ears of a young pig which they take with them, and make it squeal, while behind the sledge trails a long rope, with a wisp of straw at the end of it. The wolf hears the pig squeal, and seeing the bundle of straw dancing along over the snow in the moonlight, make a dash at it, mistaking it for his prey, and thus presents a fair mark to the guns in the sledge. This sport, like all others, has its vicissitudes; sometimes the disappointment is incurred of a blank night, and sometimes, on the other hand, too much game is started, and the amusement becomes somewhat dangerous. If the sportsmen have not time to pick up the wolves they kill, the others tear the bodies of their dead companions, and, becoming furious, will attack the sledges. A gentleman who lives near here, and whom we often see, met with an adventure of this kind some time ago, and after making his pig squeal for some hours in vain, at length unexpectedly attracted such a troop of wolves that he was obliged to fly for safety, and trust to his horses' heels, and he was pursued by twelve or fourteen of the beasts even into the village.

The peasants sometimes build a hut in a wood, and throw the carcasses of dead horses, and other animals, near the spot, to attract the wolves: they then go before night, and ensconce themselves in the hut, in hopes of getting a shot at a wolf, through loop-holes which they leave in the walls of their sheltering place. Unless, however, they make the hut very firm and strong, they occasionally run some risk. I have been told a story of a man, whose baits drew around him one night an unusual number of wolves: he kept firing away from his lurking place, sometimes killing, sometimes wounding, and sometimes missing, till at last he had expended all his ammunition—still he was surrounded by enemies, who, becoming infuriated, attacked his fortress, and tried to make their way in. The garrison was defenceless, but the building was strong and resisted the assault, nor did the wolves succeed better by attempting to mine

and work a way under the walls; strong stakes, which had been providently driven in on every side, frustrated their endeavours: the besiegers, therefore, changed their tactics, and converted the assault into a close blockade, hoping to starve out the enemy. Through whichever of his loop-holes the poor man looked out, his eyes encountered those of a wolf seated like a dog on his haunches, and keeping patient watch. When morning came he expected these sentinels to depart; but, no, they were far too inveterate, and though some went away some still remained, and kept close guard all day. All that night he was imprisoned, and it was not till the following day that he was released; whether the wolves got tired of waiting, or whether his friends, knowing the expedition on which he had set out, came in search of him, I do not remember.

### Practical Application of Geology.

WE are indebted for the following ample summary of illustrative facts, in relation to the uses of Geology, to the *British Queen*, a newspaper which, in addition to its general news, always contains an able article on science :—"So numerous and important are the uses of this science, that there is, in fact, scarcely a want or necessity of human life to which it does not bear an intimate and important relation. It will, therefore, be requisite to select from the mass of instances a few which will be sufficient to prove the utility of this instructive department of knowledge. The miner is, perhaps, the first in the list of those who are benefited by the instruction which geology affords, and which teaches him not only that rocks, apparently barren and unproductive, contain mines and veins of wealth and value, but further informs him of the precise nature of the mineral substances which each distinct geological deposit is likely to contain. It unfolds the fact that granite is the usual deposit of tin, while copper is to be sought in the slaty rocks which overlie the granitic deposits; it teaches that the carboniferous limestone is the accustomed abode of lead; and that these and other metallic substances usually exist in veins and filaments, interspersed amid the fissures of the rocks in which they are discovered. Geology next solves a problem more important and more valuable than these, and teaches the all-important lesson as to where coal is and is not to be found. It is a well-known fact, that the coal fields of the British isles are more productive and more conducive to the happiness of mankind than the mines of Peru; and our stores of fuel richer and more valuable than veins of silver and of gold. So peculiar, however, is this deposit, so delicate in its nature, and so fraught with disappointment and uncertainty as to its occurrence, that its existence or non-existence in a certain locality constitutes a question as difficult as it is important. This question geology enables us to solve on a few simple but important principles; and so certain, and, it may be said, so infallible, is the information which the science supplies on the subject, that where researches after coal have been undertaken in defiance of geological principles, and in opposition to the expressed opinion of geologists, such undertakings have issued in disappointment, and not unfrequently in ruin; the fact being, that the occurrence of coal is limited to those few deposits with which it is found in juxtaposition, and that it is in vain to look for it elsewhere. The civil engineer, and constructor of roads and railways, is alike instructed by the information which this study supplies; and many of the stupendous cuttings and tunnels in our great national undertakings of this nature it is well known, could never have been achieved and perfected without that insight into the structure of the earth, and the nature of its deposits, which geology reveals to the student. In the very instance of mending roads, a knowledge of this science, and its associate study mineralogy, has produced a considerable improvement in the mode of operation. Formerly, it was thought sufficient to throw down so many stones upon a road, without reference to their nature or power of durability, or resistance to pressure. Subsequently, granite was preferred, as affording, it was conceived, the strongest material. Experience, however, speedily showed that granite, owing to its compound nature, being made up of mica, quartz, and felspar, was much less firm, and yielding far more easily to pressure, than a rock of more homogeneous and simple structure; and consequently stone of this latter description has recently been employed on our roads. The farmer and cultivator of the soil derives much instructive information from the light which geology affords on the nature of the underlying soils, and the character of the soil which in many instances results from the decomposition of the rocks beneath. In many cases it enables the agriculturist to discover stores of lime and mineral manure where they were not conceived to exist; and in the single instance of Artesian wells, it blesses a whole district with the invaluable boon of water. The nature of this operation is now so generally known, that a brief outline of its nature will be all that is required to convey an idea of its benefits. Where deposits of a light and porous nature occur in hollows and depressions of firmer and older rocks, accumulations of water flow into the most porous of these beds, and reservoirs of water are formed, which are prevented from rising to the top by the pressure of the strata lying above. In this emergency, the geologist or engineer, by boring through the upper deposits, releases the water which is forced by its own impetus to the surface, and affords a grateful and highly beneficial supply. This method having first been tried in the province of Artois in France, the name of Artesian was applied to these operations; they have subsequently been tried in this country with the most gratifying success, and the latest and most important proof of the value of the discovery has been afforded in the plain of Grenelle, near Paris, where borings of prodigious depth have been effected, and have produced a copious supply of excellent and pure water."

### Deference to Public Opinion.

THE following elaborate summary of historical events is from the pen of a talented author, in America, whose works on Political Ethics have created no small sensation among the inquiring inhabitants of the Western hemisphere. The anecdotes, instructive and amusing in themselves, are so intimately blended with correct opinion, and brought so harmoniously to bear upon the one great topic—the power of public opinion—that even in less republican countries than America their recital cannot fail to teach men to think and act for themselves. The author, Francis Lieber, is an expatriated German, who left the country of the Old Allemanni in consequence of the despotism of the Austrian Government. He studied the English language in America, and produced the works we have mentioned in that acquired tongue to the satisfaction of some of the most learned judges of the land. Thus are the best treasures of countries driven into foreign lands by the folly of those who ought to cherish and protect, instead of sending them forth like wild beasts of the field, to seek shelter in solitude or among strangers!

Public opinion had abolished torture long ago in Denmark, yet but lately it was abolished by written law. The code of Charles V., still the penal law of several parts of Germany, prescribes most severe and frequently cruel punishments, entirely at variance with the spirit of the age, which is but a different name for public opinion, applied to a larger society and considered as to a given period. The consequence has been, that all manuals of German penal law give the respective punishments fixed by the code of Charles, and those which are awarded according to "practice." Yet this "practice" has never been legislatively enacted. No one, according to law, shall be present at the debates of the British parliament, except members. This is the positive law. There are galleries built for the public, and convenient places for reporters: this is the public opinion. Let any one, let the ministers, let the monarch, dare to insist upon that law. The British constitution, that is, the law, says, that the king may veto any bill that has passed through both houses: British public opinion prevents the monarch from making direct use of the privilege, at least he has not withheld his approval for now nearly two centuries. A law banishes all members of the Bonaparte family from France. Lately one of them visited the King of the French, at the Tuilleries; all the papers mentioned it. Why are so many things absolutely impossible, in spite of all the law that might be cited in favour of it? Because public opinion decides thus, that is, in many cases, common sense, which must always decide on the application of rules, whether they be furnished by grammar, architecture, or politics.

When Queen Victoria went, on December 23d, 1837, to the lords, to give assent to various bills, the clerk called out after the title of one had been read, *le Roi le veut* (the king wills it), instead of *la Reine le veut* (the queen, &c.). The clerk, according to the papers, did not correct himself. Now suppose a lawyer were to build an argument upon this bill's never having become a law, because it had never received the royal assent, there being at the time no king in England. He might bring most powerful arguments in favour of the necessity of observing strict forms, the more urgent the more important the respective spheres of action are; he might quote innumerable precedents of mere violated forms having defeated otherwise legal measures; he might bring powerful analogy within a hair's-breadth of his case, and yet would he be able to move his case one step? Every one would laugh; or if not, so much the worse for the state of public opinion.

There is to this day a law on the statute-book of South Carolina, unrepealed by the authority which made it, to the effect that every male of age shall go to church well armed. The dangerous state of the country at the time required it against the Indians. Suppose a conscientious citizen were to appear in church with a brace of pistols, cutlass, and rifle. The whole community with one voice would set him down as deranged; he would lose all public confidence, and would most materially injure his family, besides that he would disturb public worship. Suppose, on the other hand, any public officer were to take it into his head to fine a citizen for not having appeared well armed in church, according to the old law. Would he not be scouted by judge, jury, people—by every one? And the law does stand repealed by the irresistible sense and sentiment of the community. This does by no means preclude cases of strict adherence to an obsolete law, for the very purpose of drawing public attention to it, and effecting a final implicit expression of repeal by public authority. For laws, though obsolete, and universally acknowledged to be so, may still be of a character which renders them either dangerous or inconvenient in special cases. Or they may, in their character, be iniquitous, and the public morality may demand their erasure merely on the score of public propriety, decorum, or morality.

We are apt to believe that from the want of publicity, absolute states are not ruled by public opinion. It is true, that public opinion does not act upon so many subjects, but it is in Asia as powerful as in Europe, on those subjects on which it acts at all. Let an Eastern monarch attempt anything against the opinion of his people at large; for instance, attempt public irreverence against the Prophet. The King of Denmark was, by the fundamental law of 1660, absolute in every way. The fancy of a man brought up in a constitutional country, cannot invent a law which provides, in so detailed a manner, for the monarch's being above all law, and that nothing whatsoever shall ever be binding for him, or limit his power, not even he himself. So far the theory or the letter; but was the Danish King really at liberty to do what he liked? Suppose he had attempted so mean a thing as the prohibition of the Danish national dish called *grit*, would his absolute power have supported him? Theoretically, the King of Prussia was absolute when he ordered his minister, by cabinet order of July 13, 1798, to lay certain proposals of a union between Lutherans and Calvinists, before the public, and report to him, "when public opinion has decided upon their expediency," &c. March 25, 1813, the emperor of Russia and king of Prussia issued a proclamation, which contains this pas-

sage: "Their majesties expect a faithful and complete co-operation of every German prince, and they are pleased to suppose, that none will be found among them ready to be and remain a traitor to the cause of Germany, so that thereby he should deserve to be annihilated by the power of public opinion and the force of arms, which have been taken up" (against Napoleon).

At times, we see a man apparently act directly against public opinion. Richelieu saw the enormous extent to which duels were then carried in broad daylight. He dared to execute according to law two noblemen (Bouteville and Chappelles) for this offence. The whole society seemed vehemently opposed to him, but would he have been able to carry his point, had it not, after all, in a still larger society been felt that he was right?—It is one of the greatest traits of a noble citizen to be able to see one layer of public opinion through another; or, if he does not see it, to trust in God that it must be there, and act accordingly.

Napoleon, a good authority as to the practical operation of public opinion, said, "Public opinion is an invisible, mysterious power, which nothing can resist; nothing is more moveable, more vague, more powerful; and capricious as it is, it is nevertheless true, reasonable, just, far more frequently than one is apt to think."

When one of the blackest crimes that soil the pages of history, the massacre of St. Bartholomew, had been perpetrated with unexampled treachery, cruelty and disgusting vice and villany, by Catharine of Medici and Charles IX., on August 24, 1572, the king, after a long and cold-blooded consultation between his wicked mother and Anjou, as to the invention of the best means of justifying themselves, proceeded, on August 26th, to parliament, and there added to this stupendous wrong the solemn lie, after having heard high-mass, that all had been done to save themselves from a vast, yet timely discovered conspiracy of the Huguenots. Their bodies were weltering in blood and could not gainsay the falsehood, but on August 24, the day of carnage itself, the king and queen sent a declaration into all the provinces, that the whole had been done against their will by the Guises. Nay, though Philip II of Spain, celebrated this event by the performance of a drama, representing the Triumph of the Church Militant, and Pope Gregory XIII. ordered a solemn Te Deum to be performed in the church of St. Louis, Charles IX. or his wily mother, found it necessary to order, even two months after the bloody deed, the torturing and execution of an old nobleman, Briquemant, and of Cavannes, one of the royal councillors, as having been accessories; so that the appearance of truth as to a Huguenot conspiracy might be kept up.

The most striking instance of the pressing necessity of justifying public acts is perhaps offered by Louis XIV., who used to handle fraud like algebraic letters. He, who had a clerk of the department of foreign affairs hung, for having betrayed state secrets, and at the same moment sent money to the privy secretary of the Spanish prime minister to buy his secrets; he, whose minister de Lionne wrote to chevalier de Gremouville, French ambassador at Vienna, "The king finds that you are the most impudent minister on earth. But in this piece his majesty bestows upon you the highest possible praise you can wish for;" this same king, who broke treaties while almost in the act of concluding them, who never hesitated at cruelty or falsehood, if expedient, still was obliged to pay his tribute, in the cloak of hypocrisy, to political morality.

All the endeavours of this monarch in foreign politics were directed to this sole object, to place a branch of his house upon the throne of Spain, after the extinction of the Austrian-Spanish branch should have taken place. Neither time nor money, patience, cunning, treachery, deceit, and fraud, nor corruption of any kind, were spared. The road to this great object was opened as early as in the treaty of the Pyrenees, for even then all possible precautions were resorted to in order to nullify at the proper time all the renunciations which Maria Theresa, a Spanish infant, and wife to Louis XIV., had been obliged to make with regard to the Spanish succession at the time when her marriage contract was formed. The French cabinet proceeded systematically to collect all sorts of pretences, to use them at the desired period. Why did not the French cabinet quietly wait until the death of the Spanish monarch, and then strive to place a French prince on the Spanish throne by mere force of arms, without alleging one lawful reason? Because there is that mighty voice in every man's bosom which tells him that there is such a thing as right and wrong, and that, though it may be in our way, though the individual may have made up his mind to disregard this difference, he knows the world will not; nay more, that by openly proclaiming this disregard, he would take away the only ground upon which a claim could be made: for a claim pre-supposes a right; a right pre-supposes the ethic ground upon which it must rest.

The Indians of South America appeared to the conquering Spaniards to be possessed of but very inferior claims when compared with their own. Not even the common laws of humanity were considered sacred toward the aborigines, and yet did the Spaniard feel the necessity of some justification before his own conscience; even his cruel conquest he wished to found upon some right, some moral basis. From the time of Alonzo de Ojeda a manifesto in Spanish was read to every newly-discovered tribe, in which, at great length, the rights of the Pope, as viceregent of God, were exhibited; how he had presented the Spanish crown with all the Americas, and how the Indians, therefore, owed allegiance to it, and a refusal of which would be visited by extirpation. The manifesto had been drawn up with great care by the united effort of divines and lawyers.

Frederic the Great found it necessary to justify himself respecting the part he had taken in the unhallowed partition of Poland. When provinces or colonies rise against their mother countries, they issue justificatory manifestos; the sultan, some years ago, published an elaborate justification of the conduct of his government toward the Greeks. And it is to be remarked here again, that the more civilised the nations, the more they acknowledge the necessity of vindicating their acts on ethic grounds. The rude alone make their sword the tongue of the balance of justice, or bow without murmur to the stronger.

### Varieties.

**LENGTH OF DAYS.**—At Berlin and London, the longest day has sixteen and a half hours; at Stockholm and Upsal, the longest has eighteen and a half hours; and the shortest five and a half; at Hamburg, and Dantzic, and Stettin the longest has seventeen hours, and the shortest seven; at St. Petersburg and Tobolsk, the longest has nineteen, and the shortest five hours; at Torneo, in Finland, the longest day has twenty-one hours and a half, and the shortest two and a half; at Waderbus, in Norway, the day lasts from the 21st of May to the 22nd of July, without interruption; and in Spitzbergen the longest day lasts three months and a half.

**FEMALE DUELLING.**—The most celebrated female duellist was the actor Maudin, one of the performers at the Opera. Lerone, the famous fencing master, was one of her lovers, and from him she received many valuable lessons. Being insulted one day by an actor of the name of Dumény, she called him out: but as he refused to give her satisfaction, she carried away his watch and his snuff-box as trophies of her victory. Another performer having presumed to offend her, on his declining a meeting, was obliged to kneel down before her and implore forgiveness. One evening at a ball, having behaved in a very rude manner to a lady, she was requested to leave the room, which she did on condition that those gentlemen who had warmly espoused the offended lady's cause should accompany her. To this proposal they agreed—when, after a hard combat, she killed them all, and quietly returned to the ball room. Louis XIV. granted her a pardon and she withdrew to Brussels, where she became the Mistress of the Elector of Bavaria. However, she soon returned to the Parisian opera and died in 1707, at the age of 37. Under the regency a pistol meeting took place between the Marquise de Nesle and the Countess Polignac for the possession of the Duc de Richelieu—and in more modern times, so late indeed as 1827, a Madame B—, at St. Rambert, received a challenge to fight with pistols—and about the same period, a lady of Caateauroux, whose husband had received a slap in the face without resenting the insult, called out the offender, and fighting him with swords, severely wounded him.—*Millingen's History of Duelling.*

**BESSARABIA.**—This country has been for 30 years under the Russian dominion, but the province has still a special administration. All sort of vagabonds, all the runaway serfs, and deserters, &c., endeavour to reach the Dniester as speedily as possible, and think themselves safe as soon as they have that river behind them. The country, therefore, swarms with foreigners, whose presence is not very agreeable nor advantageous to the native inhabitants. The authorities, however, receive their visitors, if not with open arms, at least without any scruple, as they wish to increase the population, and create new interests in the province. Some towns are occasionally made places of refuge; Akerman is, for instance, an asylum for the raggamuffins of every kind who may choose to arrive without passports and incorporate themselves among the regular inhabitants. The number of vagabonds are promptly transformed into respectable citizens. This explains the extraordinary augmentation of the population of the towns, and also the interesting phenomenon, that in the several very densely populated districts of Bessarabia not a single death has for many years occurred. A statistical economist, who knows nothing of the internal arrangements of the province, must be sadly puzzled to account for the extraordinary tenacity and vigour of the vital powers, the healthful influence of the climate, and the astonishing greatness of the average duration of human life in Bessarabia. The problem is, however, easily solved, when the contrivance of the civic authorities to increase the numbers within their municipal jurisdiction is understood. A refugee appears and prays to be enrolled as a Mesnehanin—that is, a citizen of the town. He is at first told, "That is a matter of course, friend: you have no passport, too; but wait awhile, and we will see what can be done for you." The refugee waits until one of the civic community dies, and then he is summoned to appear again before the Red Table, in the magisterial office. Now the business proceeds thus: "What is your name?" "Ivan Gritshow." "What age?"—"25." "Well young man, attend to what I am going to say—"Mitrophan Kalenko died yesterday aged 50; if you wish to be a citizen, you must take upon yourself his name and his age; then we will allow you to be substituted for him, and will give you his certificate and other documents." Ivan Gritshow joyfully consents, and becomes all at once a respectable citizen of a very respectable age. The departed Mitrophan still lives under this metamorphosis on the civic register, and, probably after two or three other renewals of his existence, dies at the patriarchal age of 150. We need, therefore, no longer marvel at the frequent accounts of deaths in Russia of persons exceeding 100 years of age.

**A HEROD DEFEATED BY THE SEA.**—The Emperor Justinian II., remembering that hostilities had been practised against him by the natives of the Bosphorus, sent an army into their country for the purpose of destroying them. Some were slain by the sword; some were thrown into the sea; and a vast number burnt alive. When Justinian heard, however, that his soldiers had spared the children, out of regard to their tender age, such was the excess of his rage, that he ordered them to be brought to Constantinople, that he might enjoy the superlative delight of seeing them all massacred. Ships were despatched; 73,000 children were forcibly embarked; and they would all, assuredly, have perished by the sword, under the walls of the tyrant's palace, had not a storm arisen, soon after the ships had left the various ports, and drowned them. When this accident was reported to Justinian, he broke out into the most violent expressions of rage, that his thirst for revenge should have been so imperfectly gratified!

SATURDAY, JULY 10, 1841.

PRICE THREE HALFPENCE.

## The Price of Labour and the Price of Bread.

It has long been a favourite axiom with one class in Great Britain, that every country should supply itself, at whatever cost, with the necessities of life, and trust to foreigners for those commodities only which might be dispensed with in cases of necessity. The reason given to induce the adoption of this maxim was, that a self-feeding country was more independent than any other, and that, in the event of war, it had resources within itself beyond the power of the enemy to curtail or destroy. These dogmas obtained, at one time, an unfortunate credence among a large portion of the community, and hence the party most interested in their success became the leading power in the State. Inquiry, however, although it may be stifled for a time, can never be wholly destroyed. Some men, more daring than others, began to consider what luxuries really were, and whether the articles deemed superfluities in this country were such in the place from which they had been exported. Wine, for instance, has ever been a luxury in England to the industrial classes, while in Portugal it is as common as our beer. It then became a question whether other articles, almost as great luxuries to the poor, but plentiful enough in other countries, should not also be exported for our use. Wheat, for example, is frequently plentiful in Poland that it is given to swine, whilst the labouring population of England, Ireland, and Scotland, with difficulty procure potatoes or rye-bread. To suppose an invasion this fact was likely to make upon the common prejudice at home, it became necessary to add some new lacy to the old doctrines, by which the dominants might retain their high position in society and the State. The glorious independence of our country," the "disgrace depending upon foreigners for a supply of food," and their magniloquent expressions, had lost their hold upon the public mind, and a cunningly-devised fable was advanced to their stead. This was no other than the bold and false assertion, that the wages of the labouring population must fall in proportion to the reduction in the price of bread! The propounders of this theory are at no loss for predictions and prophecies; but, although the whole civilised world teems with alterations in the price of bread, and with fluctuations in the price of labour, they have hitherto made no appeal to facts. It is the duty, therefore, of the impartial journalist, to marshal such an array of facts as will enable those more immediately interested in the question to think and act for themselves.

At this moment, in London, the labouring population are buying bread at one price, although they are suffering under various degrees of non-employment. Carpenters and the building trades are in their zenith for the season: compositors are at their further distance from the meridian of prosperity. Tailors are on the wane; engineers maintain their firmness; shoemakers live in hopes of improvement; the silk-weavers have become acquainted with despair. If the labourers in one handicraft are somewhat prosperous, others are equally depressed; and all this is without the smallest relation to a dependence on the price of bread. The employment of our artisans depends alone on the demand for their articles of manufacture; and the amount of their wages is controlled only by the quantity of employment to be given them, compared with the number of applicants demanding that employment. If there are more candidates for work than there is work to give them, their own competition for labour will reduce wages. If there are fewer artisans to be procured than is necessary to complete the work in a given time, the competition of employers to procure labourers will induce a higher rate of wages. This is the whole round of the rise and fall in the price of labour: where employment is steady, wages will be high; where it is precarious, so will be the remuneration. The price of bread has, therefore, no effect whatever upon the profits of the manufacturer, nor upon the wages of his workmen.

But, say the theorists, if you lower the price of wheat, you will ruin the home market, which is the manufacturer's best customer. Now, in this assertion there is a

double duplicity. By the home market, the grasping party mean the landed interest, the county gentlemen, who gain by the high price of bread; whereas, in fact, the home market includes all classes and grades of the people in the country, for they all live by and upon each other; and the only topic to be considered is, do they so live by and upon each other honestly, or the reverse.

For every gentleman profitably interested in the high price of bread, there are at least a hundred artisans equally interested in its reduction. This computation of those in the adverse interest, though manifestly too low, will sufficiently illustrate the fallacy of the home market and the best customer. By the high price of bread, we are told, the one will be able to expend more for the benefit of those around him. Well; will he eat more bread, or wear more clothes? No; he has sufficient of those already; but he will drink more wine, keep more horses, and perhaps clear off a portion of the incumbrances which eat up the profits of his estate. On the other hand, the hundred, by saving a little of their expenditure while bread is cheap, will get a hundred new coats, a hundred hats, and a hundred pair of shoes; their wives will get a hundred new gowns, with an unmentionable quantity of cotton and flannel; their children—who shall attempt to number them!—will be better fed, better clad, and sent to school. Little girls will once more be seen with ribbons round their waists, and their mothers will be adorned with a shawl of lace. The operatives of Coventry and Nottingham will be astonished with an order to go back to their looms; for of this all classes may be assured, that the mechanics of the kingdom will support home manufactures as far as they can, although others prefer foreign articles—on no other account than because, in polite society, Brussels sounds more genteel than Nottingham. Additional articles of household furniture would be required; for every mechanic's wife lives in the perpetual hope of improving the appearance of her parlour, and of making it at least as respectable as that of Mrs. So-and-so. Let us, therefore, ask the tailors of Great Britain and Ireland, the most numerous operative brotherhood in the country, this one question—If every ninety-nine men out of a hundred in the realm were to order a new coat, would not the quantity of your employment be increased, and the price for that quantity be enhanced? That would be one result of cheap bread. Other handicrafts may follow out this speculation as far as they choose; for the further it proceeds, the more good will it effect through all the ramifications of the "home market."

A great outcry is also made that, to lower the price of corn in this country to that paid on the Continent, would infallibly lead to a like equalisation of wages. Now, what is the fact? The wages of artisans on the Continent are kept low, not because bread is cheap, but on account of the newness of manufactures—of their want of skill and energy, and by the want of capital among the speculating manufacturers whereby to push their trade. Year after year, however, the wages of these artisans have been raised as trade progresses; and should our corn enactments continue to prevent us from meeting the continental producer in the markets—should they go on, as they have, in pushing us from the two Americas—the dreaded equalisation of wages will assuredly take place. It is only by a fair opening being granted to the superior skill of the British artisan, that he will be enabled to keep up his wages, and compel the foreign manufacturer to raise the remuneration of his labourers, as an incentive to their industry.

The man who could take a load of Sheffield cutlery to Poland, if he would only condescend to take wheat in return, might not only fix his own prices, but be received as a public benefactor. The hedges there are left unploughed, the soil is improperly tilled, and great wooden spades prevent a due amount of labour being expended on draining and other necessary occupations. A knife and fork would be luxury to a serf, and a pair of scissors a prize of surpassing magnitude to his helpmate. The

Americans, who are now and then inclined to rebel against paying in hard cash for all the printed goods they receive from England, would feel obliged to the manufacturers of these goods if they would accept in return a few millions of casks of flour. Were this flour taken to Liverpool and Manchester, instead of dishonoured bills, as is frequently the case, we wonder if it would have the effect of stopping the mills, or reducing the wages! It would be a wonder indeed did it not act exactly in the reverse. Instances of this kind might be adduced as relating to every portion of the globe. British enterprise has only to obtain a fair field and no favour, and new markets will spring up, to the advantage of the commercial, manufacturing, and labouring interests.

Again, insinuate the exclusives, if you reduce the price of bread, you will throw land out of cultivation; and the agricultural population will remove into the towns, and snatch employment from the hands of its present possessors. What did these same exclusives say when they partially adopted Mr. Huskisson's plans, and admitted foreign silks, by which the weavers of Spitalfields were thrown out of employment to a man? They said this: "It is a pity, but matters will soon find their level!" Have these weavers thrown themselves upon any other operative profession? No; they cling with the tenacity of a fond existence to the only employment for which they have been trained; they patiently endure the sufferings which a partial law has inflicted on them, and wait only for that justice which should have been accorded them at the outset—to be placed on an equality with their competitors, upon which British skill and industry would speedily reassert its pre-eminence. They also complain, and justly, that the very parties who keep up the price of bread, who call themselves the home market, are those who patronise foreign in preference to British silks; who drink foreign wines, but will not allow the poor to eat foreign bread.

Respecting the agricultural population, however, let us inquire how they are treated by their privileged masters or protectors. It is admitted on all hands, as a matter of course, that when a plentiful harvest blesses the soil of Britain, bread is comparatively cheap. Well, does this fall in the price of bread reduce the wages of agricultural labour? So far from that being the case, this very cheapness increases the income of the labourer, as well as enables him to expend it more profitably. A good harvest merely implies more and longer employment; there is more reaping, binding, thrashing, and winnowing; there is also more grinding, baking, and eating! The wages of the agricultural labourer, therefore, rise in a plentiful harvest; and the "double duplicity" exists in this, that during a bad harvest, which makes bread dear, there is less agricultural labour, and, consequently, lower wages: thus practically proving a fact, the reverse of what is stated, that cheap bread reduces wages.

How they could be thrown out of employment by the prosperity of the great majority of their labouring brethren, or how they could affect in any way the expanding market of manufacturing industry, has not yet been explained, and most likely never will; for this reason, that its taking place is not consistent either with political economy or common sense. Be it remembered, the very parties who now call out "Remember the agricultural labourers," drove them from their fields, when they thought it would be more profitable to convert the tillage into sheep-walks, and sent them off in shoals—uncomforted, unblest—to Canada or Australia.

Should the expanded trade of Britain bring to our shores so great a quantity of corn, that the produce of the poorer lands will not be able to compete with it in price, then these lands must revert to their natural state, be laid out in pasture, and the price of meat be reduced. This is the great anticipated fear by which it is supposed "myriads of agricultural labourers will be thrown idle!" Let us for a moment take the alarmists at their word; how great is the advantage enjoyed by the unemployed agriculturist over

the idle mechanic! By the politic conduct of Lord John Russell, one of the finest territories in the world is opened for agricultural exertion—the prolific soil of New Zealand pants for labourers to drag its riches forth, and a wealthy colony already demands more assistance from home. There the plough is wanted, not the sword. Safety combines with full employment to render life a pleasure even to those who, in their native land, considered it a burden. New Zealand could employ, at tenfold wages, every agricultural labourer in England; but it is yet too young for an unlimited supply of artisans, except, perhaps, those of the building professions. Its own young population may gradually supply it with mechanics; but its broad fields and bold acclivities demand instant labour. An outlet is there presented of which no nation, in any period of time, could ever boast, or of which it could avail itself so promptly and so profitably.

There never was such a circumstance as a universal bad harvest: if in England the crops were deficient, they were more abundant elsewhere: the earth will bring forth her fruits, although man may not stretch forth his hand to take them. Unrestricted intercourse among nations is the great panacea for partial failures. It is the only remedy for glutted markets; it is the best enlightener of the human mind; it is the only effectual destroyer of national prejudice; and he or they who assist towards the universal recognition of the great principle it involves, will be as great benefactors to the human race, as heroes and warriors have been destructive to their species, injurious to their country, and reprehensible in the sight of Him who gave the earth and the fulness thereof to all his creatures.

#### Old Girard of Philadelphia.

OLD Stephen Girard of Philadelphia, was a remarkable man; as yet no one has filled a larger space in the mercantile history of the United States, few have displayed a character more original and striking, or passed a life coloured by events of deeper interest and importance.

He was born about 1750, at Bourdeaux; without education, friendless and penniless, he commenced life a cabin boy in a West Indian vessel. In that service his temper was soured by the ridicule of his associates in consequence of the loss of an eye. From the West Indies he found his way to New York, and procured the command of a coasting vessel between that place and New Orleans: his frugality quickly made him the owner of the ship and cargo. In 1769, he was found an obscure and petty trader in Water-street, Philadelphia, where he was regarded as a thrifty and quiet man, of odd habits, dirty person, and disagreeable manners.

In that city he became attached to a servant girl familiarly called Polly Lunn, but so humble were his circumstances then, that her friends opposed their union. This difficulty was, however, encountered with success, and Polly became his wife. Girard's austere and morose temper was not likely to produce domestic bliss. Polly was careless and wilful; the marriage was therefore unhappy. Girard's worldly substance, however, increased; he became in a small way a sea captain, a ship owner, and a store keeper. He entered into a partnership with a Mr. Hazlehurst, and they commenced a trade with St. Domingo. Their two brigs were taken by the English and sent to Jamaica. Misfortune never damped Girard's determination to obtain wealth; he dissolved the partnership and commenced the world anew.

The war of independence suspended Girard's nautical ventures; and he became a great bottler of claret and cider. On the approach of the British to Philadelphia, he retired to Mount Holly, and increased his funds by supplying the American troops. On the evacuation of the city he returned to Water-street, opened larger stores, and continued his former penurious course of life, unmoved by the ridicule caused by his personal appearance. Coarse, ungainly, and rough, his low but sturdy form presented a vulgar aspect, which was heightened by the dingy and dark colour of his skin, unchangeable by the play of a single passion; and the loss of his eye added to his forbidden aspect. Shabbily attired and mean in habits, he trudged the streets, and was known to his fellow-citizens as "Old Girard."

In 1780 he again entered into the New Orleans and St. Domingo trade, and quickly increased his gains to such an extent that he was enabled to extend his enterprises greatly. Ten years passed away and Girard was one of the richest citizens of Philadelphia.

The domestic unhappiness of old Girard and his wife had been increasing for years. In 1790 he was relieved of his burthen—Mary Girard was admitted as an insane patient into the Pennsylvania hospital. There she remained until 1815, when she died.

On receiving information of her death her husband selected the place of interment, and requested that as soon as all the arrangements for the funeral had been completed, he should be called. At the close of the day, her coffin was seen moving along the avenue to the grave, and was there deposited after the manner of the Quakers. Among the attendants was her husband, whose countenance remained unchanged as monumental bronze, while the body was being interred. He shed no tears, and after bending over the remains of his wife, as if to take a last look, he departed, exclaiming in the voice of a stoic, "It is very well!"

One of those circumstances now occurred in Girard's life which prove that truth is stranger than fiction. Two of his vessels were in the principal port of St. Domingo, when the well-known insurrection in that island broke out. On that sudden and fearful outbreak of negro revenge, the planters rushed to the docks and deposited their treasures in the ships they found there, and returned for their families and remaining disposable wealth. How the planters were massacred is notorious; the depositors never again appeared; the vessels of Girard were laden with property of immense value, whose owners could not be found. The planters and their families were swept away amid that pillage and devastation from which St. Domingo has not yet recovered. Fifty thousand dollars were thus added to Girard's fortune.

With this addition, Girard, in 1791, commenced the building of those beautiful vessels, which are still the pride of Philadelphia, and which have engaged so largely in trade with Calcutta and China. The names of these vessels, while they indicate the national prepossessions of their owner, show also the political and religious bent of his mind; they were called *Montesquieu*, *Helvetius*, *Voltaire*, and *Rousseau*.

In 1793, Philadelphia was ravaged with the yellow fever, and converted into a charnel-house. Whole streets were left tenantless, except by dead bodies, forsaken by the living. The hearse was the only vehicle to be seen traversing them. The obsequies of an ordinary funeral were now deemed unnecessary to those whose interment would previously have attracted crowds. Friends deserted friends; physicians ceased to visit the sick; attendants could not be bribed to nurse the sufferers; despair, fear, and death, reigned supreme. While the pestilence was at its height, an individual of low and square stature was seen alighting from a coach at the door of the hospital, where the most loathsome victims of the disease had been huddled together. The man entered this living tomb, and soon returned, bearing in his arms a form that appeared to be suffering in the last stage of fever—a being whose countenance was suffused with that saffron colour which was the harbinger of death. The body was carefully and tenderly placed in the coach, and the carriage drove away. That man was *Old Stephen Girard*. During the prevalence of the pestilence, he continued a constant attendant in the hospital, performing all those offices which hire or reward could not then purchase. Girard was a selfish and unfeeling man, but his conduct at this period was worthy of a Howard.

In May, 1812, Girard took advantage of the ill-feeling that then prevailed against the then Bank of the United States, and commenced the banking operations of the *Old Girard Bank*, with a capital of one million and two hundred thousand dollars. The bulk of the business of the Bank of the United States, the charter of which was subsequently withdrawn, was transferred to the new institution. The Girard Bank conferred extensive and solid benefits upon the community. It was Girard's policy to grant accommodation to small traders, and to encourage beginners; while his bank being instituted at a time when the state banks were suspended, it neutralised the temporary inconvenience which would otherwise have arisen from a withdrawal of the paper circulation, and diffused abroad the benefit of a sound currency. Girard, however, granted no undue accommodation; he discounted no fictitious paper; he renewed no bills. Girard did more than private good; he supported public credit, and aided the state in a great and pressing emergency. While public credit was shaken to the centre by the dissolution of the old bank, the country was involved in difficulties springing from its exhausted finances and the expenses of a war with Great Britain. In this stress Old Girard advanced large sums to the Government, and, in fact, supplied to it the place of state banks. In the midst of general discredit, Old Girard's resources were never doubted—and, during the suspension of specie payments, in 1817, not a single note of the Old Girard Bank was depreciated; he redeemed them all with hard cash, and thus effectually contributed to the restoration of specie payments.

Shortly after the establishment of his bank, an interesting circumstance occurred, which enabled him to accomplish an enterprise which was of great importance to Philadelphia. His own vessel, the *Montesquieu*, was captured at the mouth of the Delaware by a British frigate, and, as this ship had a cargo of 200,000 dollars—consisting of teas, nankeens, and silks from Canton—it was determined by the captors, in preference to the hazard of being re-captured by an American ship, in the attempt to carry the prize to a British port, to send a flag of truce to Girard, in order to give him the offer of a ransom. The old banker accepted the offer, and drew from his well-stored vaults the sum of ninety-three thousand dollars in doubloons, which were transmitted to the British commander, and his well-stored argosy was soon seen coming into port with her rich cargo; which, notwithstanding the price of the ransom, is supposed, by the advance in the price of the teas, &c., to have added half a million of dollars to his fortune.

In 1816 the Bank of the United States was chartered; old Girard had no jealousy of a rival establishment in Philadelphia; he was an active promoter of the new national establishment, and was chosen one of its original directors. The early prosperity of the institution has been greatly attributed, not only to the clear-

sighted, far-seeing, and sagacious views of management which Girard impressed on the direction, but to his generous forbearance and liberality as a creditor.

Public spirit was indeed one of the characteristics of the old man. At one time he freely subscribed 110,000 dollars for the navigation of the Schuylkill; at another he lent the same company twice that sum. When the state of Pennsylvania became embarrassed by an injudicious system of public improvements, he made a voluntary loan to it of 100,000 dollars. And when, in 1831, the country generally laboured under embarrassment from a scarcity of specie, he drew upon Barings, of London, bills for £22,000, which he disposed of to the Bank of the United States. This act reduced the value of bills, and the rate of exchange suddenly fell and relieved the country materially. He erected new and handsome blocks of buildings in his adopted city, and beautified and adorned its streets and squares. He subscribed 200,000 dollars to a railway in its vicinity, and gave 10,000 dollars towards the erection of the Philadelphia Exchange.

Old Girard had commenced life with a determination to become rich; he was so now "beyond the visions of human avarice." In his arduous and toilsome struggle after wealth, he had been at first contented with the minute gains of an obscure retail trader; he had been willing to perform any labour to secure and increase those gains; he had practised the most rigid economy; he had shut his heart to all the pleasures and blandishments of life; he had demanded the last farthing of every one, if that farthing was his due; he had barred out all those impulses which might in small objects take money from his purse; he had used men as mere tools to accomplish his great end; he had paid what the law awarded, no more, however just the demand; he deserted "in his utmost need," his long-tried and faithful cashier, who had been the cause of much of his good fortune; he manifested the utmost indifference to his death, made not the least provision for his family, expressed no sentiment of regret at his loss, or gratitude for the solid services which he had performed.

"Like monumental bronze, unchanged his look;  
A soul which pity never touched or shook—  
Trained from his lowly cradle to his bier  
The fierce extremes of good and ill to brook;  
Unchanging, fearing but the charge of fear—  
A stoic of the mart, a man without a tear."

But the man who could thus violate the ordinary impulse of nature was, when large objects connected with his commercial views were to be obtained, foremost in the liberal aids which were granted for their accomplishment. He who would haggle and chaffer for a penny, would bestow thousands for the pecuniary relief of fiscal pressure; and while he curtailed the watchman of his bank of his customary Christmas present, he would freely give large sums for the local improvements of his adopted city and state. The leading feature of his character was ambition. Denied by the scantiness of his education the means of reaching distinction by his mental qualifications, and by the vulgarity of his frame by personal qualifications, he sought it through the application of money. Money was to him power; through it he attained that eminence which he coveted.

In political sentiment Girard was a Republican; he fostered and encouraged those institutions of his adopted country, which had not only afforded him a home, but had given him the most ample means of realising a great fortune. His religious opinions he borrowed from his native country; they were of the school of Rousseau and Voltaire, and so deeply did he venerate the character of these teachers, that their marble busts were the only works of art that adorned his narrow chamber, and a complete set of the writings of the latter, together with a few practical works on gardening, the business of his otherwise unemployed hours, constituted the library of his mansion. His respect for these authors he was unwilling to disguise, and it was evinced by the names of those fine vessels which were the pride of Philadelphia. His opinions were, however, merely speculative; he derived no practical lessons from them. Indeed, his life displayed the utmost extremes of character. A total disbeliever in Christianity, he bestowed, even during his life-time, large sums upon different Christian societies; and although he would grant large aids to great objects, he withheld all assistance from personal objects of benevolence, however deserving. No beggar sought his alms—no hunger was satisfied at his door.

His habits were active to the last. He rose before the lark, and soundly rated his workmen who allowed him to gain precedence of them in time. When one of the Barings was in Philadelphia, a few years before his death, he supposed that he might excite an agreeable surprise to Mr. Girard by informing him of the safe arrival of his ship, *Voltaire*, from Calcutta. Accordingly, he proceeded to the banker's farm in Passyunk, and immediately sought for Girard. "Where is Mr. Girard?" enquired his friend. "In the hay-loft," he was told. The banker was sent for, and came to his visitor, with his coat off and his shirt sleeves rolled up, and his person covered with hay seeds. "I came to inform you," said the Englishman, "that your ship, *Voltaire*, has safely arrived." "I knew that she would reach port safely," replied Girard; "my ships always arrive safely; she is a good ship. Mr. Baring, you must excuse me—I am much engaged in my hay!" and he again mounted to his loft.

In 1829, Girard was eighty years of age; his course of unceasing and severe labour was almost run. In 1830, he nearly lost the use of his remaining eye, and was frequently seen groping in the vestibule of his bank, disregarding the assistance of others. This temerity shortened his life. Crossing one day a street, a waggon rapidly drove close past him, and nearly carried off one of his ears, and severely bruised his face; he was struck down by the force of the concussion, and dreadfully shaken. By this accident the whole of his right ear was nearly lost, and his eye was completely closed; from the time of its occurrence his flesh gradually wasted away, and his health rapidly declined. Girard professed to regard death with the utmost indifference. In December 1832 he was attacked with influenza; the disease gradually undermined his remaining strength, and on the 26th of that month he expired in a small back room of the third story of his house in Water-street, Philadelphia.

The annual income of "Old Girard," at the time of his decease, is said to have exceeded £200,000, a sum, we may venture to assert, no private merchant in England has at his disposal.

Girard left his millions—the savings and accumulations of his years of toil—to that community, in the midst of which he had gathered them, and amongst whom he had gained a name. In his will he styled himself "mariner and merchant;" by it he gave a few individual legacies, and those principally to the masters of his vessels, and his apprentices. He bequeathed large sums to almost all the charitable institutions of Philadelphia, and gave an estate in Louisiana to the city of New Orleans. To the "Commonwealth of Pennsylvania" he bestowed 300,000 dollars for the purposes of internal improvement; and, as much as was deemed necessary, of the sum of two millions of dollars, he devised for the erection of an orphan college, a foundation of a peculiar and original structure, besides other bounties of a like nature.

An ancient Greek attempted to send his name down to immortality by setting fire to the Temple of Apollo; in like manner Girard endeavoured to render his name imperishable, in the recollection of his country, by his charitable bequests. He wrote his epitaph in those extensive and handsome squares which adorn his adopted city, in the public works and eleemosynary establishments of his adopted state; and erected his monument in a marble-roofed palace for the education of the orphan poor. He may have succeeded in his intention, and good may, doubtless, spring from the application of his bequests; but his life, even at its close, offers no example to be followed; and it may be doubted whether the charity of Old Girard is of that description which the apostle has declared "covereth a multitude of sins."

### BURNS Illustrated and Explained.

#### CHAPTER III.—THE HUMILIATION, DEATH, AND EXHUMATION OF THE POET.

In the course of the correspondence with Mr. Thomson, the French revolution burst upon the world with its wild and whirling vehemence, and Burns, though an officer under Government, warmly, and somewhat imprudently, advocated the cause and supported the measures of the Directory. His salary had by this time been raised to £70 per annum, and, through the instrumentality of a friend of some note, Mr. Graham of Fintry, his name was on the list for promotion to a superintendence. In an engagement with a smuggling vessel, in which he assisted, he is said by Mr. Lockhart to have captured two brass cannon, which, with a complimentary letter, he sent to the new French Government. This indiscretion was speedily reported to headquarters. An inquiry was instituted into his conduct; and though there was a talk as to his dismissal, he to the last vehemently denied that he had solicited to be retained. His name, however, was struck from the promotion list. He was ordered to be reprimanded, and was told by a sub-official that it was his duty to act and not to think!

Great God of nature and of man, who imparted thy lustrous image to all human kind—who gave the powers of thought and utterance to man whereby to assert his lordship over brutes! what daring impiety—what profound mockery of thy goodness, to prevent the workings of thy free and glorious gift, by the excess of which alone a man may rise above his fellows—can elevate his kind, improve his country, and illuminate the world! Not on the rich, the titled, nor the proud, are Nature's noblest gifts bestowed. No!—nor by these high and haughty ones are they discerned, encouraged, or appreciated in others. Genius may descend to flatter power and worship wealth, and power and wealth may reward the parasite according to his talent; but it has ever been, and ever will be, that the truly independent man—he who, confident of his own powers, and satisfied in his mental resources, seeks no adventitious aid, ever finds the mean in soul prepared to traduce his labours, and, in the adverse hour, to blacken and destroy his reputation. And such it was with Burns. He whose soft and heart-thrilling melodies were moving all Scotland into a delirium of delight, was sickened to the core by the ignoble challenge of some Mr. Worldlywiseman. He who, by his invocation of ethereal fire, had animated duller minds to the beauties and perfections of all nature, as contrasted with the trashy and maudlin attempts of anile art; he whose heroic heart had ever battled with misfortune

and smiled at disappointment, now sighed from its keen recesses at the contumely thus cast upon him; and well might he have inquired of himself, in an agony of impassioned bitterness:—

"If I'm design'd von lordling's slave,  
By nature's law design'd,  
Why was an independent wish  
E'er planted in my mind?"

In the discharge of his duties, in the excise he shortly after caught a severe cold which brought on rheumatism and fever; these, with depression of spirits, broke up the man, but the poet lived exuberant as ever. He continued transmitting songs to Mr. Thomson till his malady overpowered him. In April 1796, after a silence of two months, he wrote to that gentleman as follows:—

"Alas! my dear Thomson, I fear it will be some time before I tune my lyre again. By Babel's streams I have sat and wept, almost ever since I wrote you last. I have only known existence by the pressure of the heavy hand of sickness, and have counted time by the repercussions of pain! Rheumatism, cold, and fever have formed to me a terrible combination. I close my eyes in misery and open them without hope. I look on the vernal day, and say with poor Ferguson—

'Say wherefore has an all-indulgent heaven  
Light to the comfortless and wretched given?'"

Two more letters reached Mr. Thomson in May and June, and on the 12th July he received the following:—

"After all my boasted independence, cursed necessity compels me to implore you for five pounds. A cruel haberdasher [a draper] to whom I owe an account, taking it into his head I am dying, has commenced a process, and will infallibly put me into jail. Do, for God's sake, send me that sum, and that by return of post. Forgive me this earnestness, but the horrors of a jail have made me half-distracted. I do not ask all this gratuitously—for, upon returning health, I hereby promise and engage to furnish you with £5 worth of the neatest song genius you have seen. Forgive me—forgive me."

The money was sent on the instant; but, alas! health returned no more. Burns had too many friends in Dumfries to make the catastrophe of a jail at all possible; but his extreme sensitiveness prevented his application to any of them. He had been removed to the Solway for the benefit of sea-bathing, which he imagined would be beneficial to him. A fortnight's trial brought no relief, and he returned to his humble hearth to leave it no more alive. On the 18th he was welcomed home again by his wife and children; but his dull and clouded eye—that luminous organ, which long had sparkled love to her and all mankind—forbade the warm flushings of hope to kindle to a smile. While thus prostrated with disease, he wrote some of his most beautiful and tender effusions. Among these may be mentioned his tribute to a young girl whose solicitude for his health induced her to watch his couch alternately with his wife. That song, the last he composed, contains two lines, a description of the heroine, than which no language possesses a more delicate or rapturous encomium upon love and beauty:—

"Thou art sweet as the smile when fond lovers meet,  
And soft as their parting tear, Jessie."

This was Jessie Lewars, a girl of fifteen, and the kind spirit which dictated her small attentions to the dying bard shall be remembered and appreciated with the existence of the poet himself. On the 22d of July, 1796, in the thirty-fourth year of his age, he breathed his last, and that spirit, which yearned with the mighty workings of his genius returned to Him who gave it.

The intelligence of the death of Burns flew like wild-fire through the land. He was buried with military honours by the Dumfriesshire Volunteers, of which corps he had been a member, and all ranks throughout the country strove to do honour to his memory. Like other benefits and blessings, his value was only appreciated when it was lost; but the heartfelt sorrow which was awakened by his death ceased not with the gratuitous tear.

Mrs. Burns, whose widowed pangs were checked before her husband's funeral by the pains of maternity, and who gave birth to a son ere the echo of the farewell shot over his grave had died away, was speedily and specially attended to. Subscriptions were poured in from all quarters of Scotland—London and Liverpool generously aiding in the holy task. The works of the bard, which had been flung from his pen with prodigal extravagance, were collected and published, and the produce speedily enabled Mrs. Burns to decline all further voluntary assistance. For thirty-eight years she continued to reside in Dumfries, living an unostentatious life of quiet benevolence; by her conduct and her conversation, she jealously and carefully attended to the reputation of her name and of her husband's honour. On her death, in 1834, the mausoleum was opened, and the light of day again saw the remnant of the poet. He was seen lying in his coffin, shrouded as of yesterday; his face was entire, and the texture of his features could not only be recognised, but the hue of a skin once animated was declared to be visible. This might have been fancy in the fond worshippers who gazed upon his relics; but the impatient ardour of one of them at once and for ever dispelled the illusion. A living finger was applied to the remains, and the form and features instantly vanished—a handful of shapeless dust alone remaining of what appeared a perfect corpse. A cast was secretly taken of the unmoistened portion of his skull, and the phrenological inquirers intimated to the world that Burns must have been a man of genius. He and his Jean now rest quietly together. May their ashes never be again dis-

turbed—and the memory of their loves and lives be green in the hearts of those who admire the impassioned writings of the bard—and these are not a few!

There are many interesting episodes in his life which have not been here alluded to, but they will fall to be noticed in the succeeding notices of his various pieces. There are two subjects, however, for noticing which a better opportunity may not present itself, and which may be here briefly alluded to. The first is, an assertion, which was conveyed after his death, that he was imprudent and given to dissipation. This has been positively contradicted by those who knew him best, although it was always admitted that he was hilarious in company, and enjoyed to the life an evening's entertainment. Every stranger of note passing through Dumfries must of necessity call upon Burns and enjoy his company; for his spirits were in one continual flow, and his conversation engaging in the extreme. This not only trenchanted on his time, but overreached his income, at all times slender; but though he died poor, he was not in debt, the obdurate draper having the unenviable honour of being almost his only creditor, and the family prospect of Mrs. Burns at the time will at once account for the incumbrance of that solitary item of debt which has been recorded against him.

The second assertion against his honour arises almost entirely as a consequence from the first—that he neglected his children. This is positively untrue. If there was one object dearer to his heart than another it was the welfare of his children. If there was one thing in which he delighted more than woman's smile, and which he loved more than her kindness of heart and sweetness of temper (for these he admired much more than personal beauty), it was the society and prattle of his offspring. He not only personally instructed them, but most carefully abstained from any observation in their hearing which might awaken too hastily one loose idea in their minds; and, much as he was addicted to company, and much as he was seduced into bacchanalian revels, he at all times avoided being seen by his children otherwise than as the serious thinking, properly acting father, whose example they were to follow. It might be said of him from Rogers:—

"He lived a model in his life to show.

That, when he died, and through the world they go,  
Some men might pause and say, while some admire,  
They are his sons, and worthy of their sire!"

To re-awaken or improve the knowledge of his works among those who have read and admired them in their native land; to explain and illustrate them to those who can with difficulty comprehend the idiom in which they are written, is the object of the illustrations intended to be given of the principal poems of Burns, portraying subjects at once intricate and interesting; beautifully diversified with glorious imagery, and animated with the highest, truest, and most ennobling passion—or accompanied with a free and homely humour, as innocent as natural—as happy as it is rational—as instructive as it is correct.

#### ADDRESS TO THE SHADE OF THE PEASANT POET.

Nature bath her Nobility,  
And thou of them wert one,  
Though her loved daughter, Poesy,  
Had claim'd thee not a son.  
But Nature would take back the gift  
That she to earth had given,  
For thou hadst taught mankind to lift  
Their homes some nearer heaven.

But as the flowers with love retain  
The tints that life hath lent;  
And as the wild bee sucks again  
The sweetness with them blent;  
So shall thy strains of love and mirth  
Their truthful notes prolong,  
And trying thee and cottage hearth  
Delight to hear thy song.

The voice that sighed by Bonny Doune,  
And sung of lovely Jean,  
Though hush'd before its manhood-noon  
As it had never been,  
The music of its tones shall wake  
Through many lands and years,  
In woman's heart, for man's dear sake,  
Love's rainbow hopes and fears.

The minnow sported in the brook,  
Temptation's bait it eyed;  
His little prize the angler took—  
It quiver'd, quietly died.  
So thou, when welcom'd first to fame,  
In fashion's vortex whirl'd;  
It gave thee, much indeed,—a name,  
But left thee to the world.

The lion roll'd his eyes of flame,  
He 'gainst his hunters stood,  
And met his death as well became  
The monarch of the wood.  
So thou, by adverse fortune cross'd,  
Bore up against her frown;  
Though high on ruin's breakers toss'd  
Thou undismayed look'd down.

The imprison'd eagle burst the bars  
Which curb'd his daring wing;  
He sought the region of the stars,  
Air's still unconquer'd king.  
So thou, victorious over fate,  
Destroy'd her poison'd quiver,  
Unbent her bow, subdued her hate,  
The Poor Man's Poet ever.

# Traits and Sketches of Irish Character.

## THE SISTER LOVERS.

It has been said that only a woman can read the female mind—that only she can tell of its inward beatings, and show the virtuous resolves and high-souled emotions of a bursting bosom or a disappointed heart. Mrs. Hall, of all others, has proved that her pen can well elicit that "one touch" which "makes the whole world kin;" which makes us almost forget the country for the creature, and compels us to admire the heroines of humble life she pictures to us with that fondness and devotion to which alone "the tried, the tempted, but the virtuous still," have claim. In the following story all the exquisite qualities of the Irish character are portrayed with an ease and truthfulness unmatched by any author of the day:—

"We stood, in the month of June, on the Quay of Cork to see some emigrants embark in one of the steamers for Falmouth, on their way to Australia. The band of exiles amounted to two hundred, and an immense crowd had assembled to bid them a long and last adieu. The scene was touching to a degree; it was impossible to witness it without heart-pain and tears. Mothers hung upon the necks of their athletic sons; young girls clung to elder sisters; fathers—old white-headed men—fell upon their knees, with arms uplifted to heaven, imploring the protecting care of the Almighty on their departing children. "Och," exclaimed one aged woman, "all's gone from me in the wide world when you're gone! Sure you were all I had left!—of seven sons—but you! Oh Dennis, Dennis, never forget your mother—your mother!—don't avourneen—your poor old mother, Dennis!" and Dennis, a young man—though the sun was shining on his grey hair—supported "his mother" in his arms until she fainted, and then he lifted her into a small car that had conveyed his baggage to the vessel, and kissing a weeping young woman who leaned against the horse, he said, "I'll send home for you both, Peggy, in the rise of next year; and ye'll be a child to her from this out, till then, and then avourneen you'll be my own." When we looked again the young man was gone, and "Peggy" had wound her arms round the old woman, while another girl held a broken cup of water to her lips. Amid the din, the noise, the turmoil, the people pressing and rolling in vast masses towards the place of embarkation like the waves of the troubled sea, there were many such sad episodes. Men, old men too, embracing each other and crying like children. Several passed, bearing most carefully little relics of their homes—the branch of a favorite hawthorn tree, whose sweet blossoms and green leaves were already withered, or a bunch of meadow-sweet. Many had a long switch of the "witch hazel," doubtless to encircle the ground whereon they slept in a foreign land, so as, according to the universal superstition, to prevent the approach of any venomous reptile or poisonous insect. One girl we saw with a gay little goldfinch in a cage—she and her sister were town-bred, and told us they had learned "lace-work" from the good ladies at the convent, "that looked so beautiful on the banks of the Cork river," and then they burst out weeping again, and clung together as if to assure each other that, sad as it was to leave their country, they would be together in exile.

On the deck of the steamer there was less confusion than might have been expected. The hour of departure was at hand—the police had torn asunder several who at the last would not be separated—and as many as could find room were leaning over the side speechless, yet eloquent in gesture, expressing their adieus to their friends and relatives on shore. In the midst of the agitation, a fair-headed boy and girl were sitting tranquilly, yet sadly, watching over a very white Angora cat that was carefully packed in a basket. "We are going out to papa and mama with nurse," they said, in an unmitigated brogue; "but we are sorry to leave dear Ireland for all that." Their father had, we imagine, been a prosperous settler. "Oh, Ireland, mavourneen—oh, my own dear country—and is it myself that's for leaving you after giving ye the sweat of my brow and the love of my heart for forty years!" said a strong man, whose features were convulsed with emotion while he grasped his children tightly to his bosom. "And remember your promise, Mogue, remember your promise; not to let my bones rest in the strange country, Mogue," said his wife; "but to send me home when I'm dead to my own people in Kilreia—that's my consolation."

It is impossible to describe the final parting. Shrieks and prayer, blessings and lamentations, mingled in "one great cry" from those on the quay, and those on shipboard, until a band stationed in the fore-castle struck up St. Patrick's day. "Bate the brains out of the big drum, or ye'll not stifle the women's cries," said one of the sailors to the drummer. We left the vessel and her crowd of clean well-dressed, and perfectly sober emigrants with deep regret, that, while there are in Ireland so many miles of unreclaimed land, such a freight should be conveyed from her shores. The communicating plank was withdrawn; the steamer moved forward majestically on its way. Some, overcome with emotion, fell down on the deck; others waved hats, handkerchiefs, and hands, to their friends; the band played louder; and the crowds on shore rushed forward simultaneously, determined to see the last of those they loved. We heard a voice exclaim, "Dennis, Dennis, don't forget your mother—your poor old mother!"

The evening that succeeded this agitating morning was calm and balmy. We desired to examine the scene of the morning's turmoil, and drove along the quay; it was lonely and deserted save by a few stragglers. We continued our drive until the signs of immediate traffic were widely scattered. We passed through the village of Douglas, once famous for its sail-cloth manufactory, and proceeded onward until the Cork river widened into a mimic sea, called Lough Mahon. We drove slowly, enjoying the rare and exquisitely varied landscape, until our attention was attracted by a woman standing by the water's brink, whose eyes were looking towards the sea-path where it leads to

the broad Atlantic. There was something firm and statue-like in her figure, and her face had an earnest intense expression, that accorded with her high Spanish features and dark hair; a large shawl enveloped her head and draped her shoulders; her legs and feet were bare. We drove on about a mile further, and when we returned she was there still, on the same spot, with the same fixed and earnest gaze over the waters. This excited our curiosity, and the information we received was a very striking and gratifying illustration of the devotedness of woman's love.

"I have known her," said an old fisherman, "for four-and-twenty years—almost ever since she was born, and I must say—'Ay! there ye stand, Grace Connell, and a better woman never looked with a tearful eye, or a batin heart, along the waters.' And what do you think her distress is now? an troth—like all tender people—the trouble is seldom altogether away from her; she could only look to herself, the kind have a pulse for all the world. Grace Connell doesn't to say belong to Cork, but her father came here soon after she was born, a widow-man with only her; he settled down in the Cove, and it wasn't long till he married again. And Grace's stepmother was kinder, I believe, than most of her like; anyhow when she died—which she did after being a wife about two years—Grace, and she little more than a slip of a child, took wonderfully to the baby the stepmother left, and every one wondered how one so young managed an infant so well. Grace would mend her father's nets and things, keep all clean and comfortable, and yet find time to be with her little sister in summer shade and winter sunshine; finding out what best she'd like, what best would do her good, and learning her all she knew—not much to be sure—but her all. Nell grew up the contrary to Grace in all things, a giddy goose of a puss of a girl, yet the purtiest ever seen in Cove; and the hand of God was heavy over them, for while they were both young, the father died. But Grace Connell kept herself and her sister well, for she's wonderful handy and industrious; and as was natural, in Ireland anyhow, Grace got a sweetheart, a fine handsome steady boy as you'd meet in a day's walk, and a clever hand at his trade. Now if Grace was steady, John Casey was steadier ten times over, and every one said they were just made for each other. And they took on at the 'courting' different to most, because they agreed to wait till John was out of his time before they got married. Weeks and months passed, and Nell grew up beautiful, a wild half-sailor sort of a girl, who could furl a sail or scull a boat, and sing *say* songs, and, all the while, was as shy and as proud as Barry Oge himself. Grace sometimes had a misgiving in her own mind that John was not as fond of her as he used to be; but then he had a quiet English sort of dry way with him, that led her off the notion again. One Sunday evening in particular, they, that is Grace and Nelly and John, were down nearly opposite where you saw Grace standing. Grace was sitting on the strand, and John by her side. While Nell was amusing herself climbing among the cliffs, and singing like a wild bird, two or three times they warned her not to be so venturesome, but she'd only laugh at them and be the more fearless; and soon Grace saw that John was watching Nell instead of listening to her, and a heavy cloud came over her, and both remained silent. All of a sudden, as Nell was reaching over the edge to pull some sea-pinks, she fell in; the rocks were sharp just there, and the water deep—and when Grace got to the spot, Nell was floating out with the tide, and the water red with her blood. John was a fine swimmer, and with a word, which even then Grace felt, he jumped in and brought her to shore in his arms in a few minutes; but before the sun set that had shone upon those three, Grace saw by him in his madness as he hung over her still senseless sister, that it was Nell he loved now—as he once said he had loved Grace. 'I don't wonder at it,' said Grace Connell to my wife, who was her mother's own first cousin, 'I didn't wonder at his changing, for that night when I caught sight of myself in the glass, after looking at that fair young creature as she lay like a bruised water-lily on our little bed—I thought how much there was in the differ; and sure I couldn't be angry that she twined round poor John's heart, when I knew how she had twined round mine; didn't we both help to rear her as I may say, and the only dread in life I shall have, I know, when I get over the disappointment, will be that she won't love John as long and as steadily as I have done.' "My wife," added the old man, "is any thing but tender-hearted, yet she cried like a child to hear Grace talk that way; so steady in herself, and all the time a breaking heart painted in every feature of her face. The next day she gave back all promises to John; and what made her stronger in her resolution than anything else, was, finding that Nelly had a childish fancy for him unbenownst to herself; it was no wonder that she should, for John certainly was as handsome a boy as ever crossed a chapel-green; but he must have been as blind as a star-fish to prefer her to Grace; it was a queer thing—I always think it as wonderful a thing as ever I heard tell of—that creature watching and tending the restless tiresome girl, nursing her and improving her as well as she knew how—and for what? to make her a fit wife for the man she had looked upon as her husband for more than five years, and loving him all the time. My wife spoke to her once about it: 'Let me alone,' she says, 'every one knows what's right if they ask their own heart, and loving them both, sure I've nothing left me in the world to seek for or pray for, but just the happiness of them two.' Well, after a good deal of tacking about, it was laid out a year and a half ago that John was to go off to Australia, and when he had got settled a bit, send home for Nelly, and that she was to go out with his own sister; and they were to be married there; it was a wonderful thing to see how Grace bore it, and how she slaved to keep up everything for Nelly; and when the letter came at last from John, for Nell and his sister to go out in the next ship, I never shall forget the face of poor Grace, all flushed as it was, coming to my wife, and the letter open in her hand—and she read every word of it; how everything had prospered that he took in hand, and how John prayed her to go out with Nell, and called her 'sister,' and how Grace almost choked at the word, and—'No,' says she, 'never! I will do all I can to make

them happy to the end of my days, as I have done, but I stay there, with them; God forgive me," she said, "I could not do that." "Now," continued the old man, "what look to it is this, from the time Grace got that letter until this blessed morning, all her thought was what she could make out to send that sister away in the best manner I am sure, as I am of the light of heaven, that since she was born she never did think of herself—no; you saw her every bit of finery, every stitch that could serve her sister has she deprived herself of—for what? to make that sister better in the eyes of him who ought to have been her husband. To see them two girls as I saw them this morning, Nelly dressed like any lady, and those that had time whispering of her beauty—and poor Grace—as she is now with nothing but the downright love of every heart that knows her to keep her from being alone in the world; to see her with her fine spirit and high-up thoughts that are as pure as God's breath in the heavens—to see her dressed like a beggar, without even shoes on her feet, stripped, as one may say, for the sake of them that wracked her happiness. And then the parting—how she kept up her own sister's and his sister's hearts to the last minute; and how she followed the steamer further than any of the people; and stood, when it left her sight, on that spot, looking out for hours, as if to see, poor girl, what she will never see again. 'Let me alone,' says she, and I reasoning with her, 'let me alone; after to-day I'll be as I always was.' Ah, then, it would be a heavy lead and a long line that would get to the bottom of her heart's love," added the old fisherman, "and if any of us could have the satisfaction of hearing her complain—but no, not she, not a murmur—only all cheerful, patient, loving, sweetness; yet I'm afraid that all this time there's a canker in her own heart. And there's my son, who would kiss the print of her bare foot in a dirty road. She won't look at him," said the old man pettishly; "but I don't care whether she does or not, Grace Connell shall never want a FATHER."

## Application of Geology to Architecture.

THE talented writer upon Geology in the *British Queen* thus proves the value and necessity of a practical acquaintance with that interesting science to many branches of art; and to none more than that of architecture, the professors of which have too long neglected the quality and enduring character of the material of which their fabrics are composed:—

Having pointed out the usefulness of this science to the miner, the engineer, and the agriculturist, we shall find it no less useful in other pursuits. Architecture is a science alike interested in this study; and the attention of our leading architects has recently been drawn to its importance, on account of the defective quality of many of the building-stones employed in our public edifices, and the necessity which is felt of procuring a better material. Many of our modern structures, owing to this cause, are in a state of premature decay; where ancient edifices have become dilapidated, the new material employed to restore them has frequently proved so defective, that the whole has speedily formed one ruin; and, in short, the evil has proved one of so much magnitude, that when it became necessary to rebuild the Houses of Parliament, government, grown wiser by experience, appointed a commission consisting of geologists and practical men. Mr. Barry, the distinguished architect, Mr. Delabèche, and Dr. Smith, geologists, and Mr. Smith, mason, who were instructed to visit the stone-producing districts, and select that material which should appear best adapted for the construction of the future senate house of our country. Their choice, after long and patient investigation, fell, it is well known, on a variety of magnesian limestone; a kind of stone little known or employed previously beyond the limited sphere of its natural occurrence, but which, when thus recommended, contributes a valuable and additional supply for the purpose of the builder's art. The circumstance of the appointment of such a commission affords, in itself, a convincing proof of the importance of this science, and its utility as regards one of the most valuable and beautiful of the arts. The same observation would apply to sculpture; for it is known that many of the most beautiful statues of ancient or modern ages have alike been disfigured by the stained and unsightly appearance of the stone; or frequently have crumbled and mouldered away, to the injury or defacement of their finest features, or most delicate lineaments, owing to the like unworthy nature of the material. The artist and the painter would alike be benefited by an acquaintance with, at least, the general principles of a science which constitutes the physical geography of a country, and determines the character of its scenery and aspect. It is a well-known fact, that several paintings, highly valuable in other respects, are spoiled to the eye of taste by their representing absolute impossibilities, and depicting scenes which could never exist in the localities assigned to them; the natural conditions of the district being utterly at variance with such appearances. To render this illustration as familiar as possible, let us imagine that a painter, called on to depict some event in our native annals, occurring in the northern district of our isle, suppose the hills of Derbyshire, or the mountains of Cumberland, were to attribute to this northern region all the softer features which characterise our southern scenery; or, on the other hand, that if called on to represent some event which happened in our southern district, and he were to give to the gentle, undulating features of such a country all the abrupt, precipitous features of mountain scenery—how absurd and untrue to nature would his delineations in either case appear. Yet it is a fact, that the productions of several of our most celebrated artists are irreparably injured to the mind and eye of taste, by faults as gross as these. Indeed, so essential is a knowledge of at least an outline of the earth, and the laws which regulate its external configuration, now found to be, that an acquaintance with these subjects is made to form a part of professional education; and a painter now studies the anatomy of the earth as he does that of the human frame.

## Phenomena of Climate.

THE following rather curious detail is a translated extract from a letter of the German traveller, Russeger, who, since his return from Egypt, has visited Norway, and, we believe, about to publish a work on the geological and natural phenomena of that interesting country:—"The coast of Norway, as regards climate and atmospheric phenomena, is undoubtedly one of the most striking regions in the world. We were at this moment precisely in the same degree of latitude as the northernmost part of Iceland, and still corn grows here. Nay, more, this is the case as far as 70 deg. latitude. At Alten, which lies higher than the most northern colonies of Greenland, one sees corn cultivated, and thick woods of larch. How is it with the other parts of the earth lying in these latitudes? with Asia and America? They are congealed with eternal frost and snow, and uninhabitable by the human race. In Norway, in the 71st degree of lat. stands a town of 600 inhabitants, Hammerfest, being the most northerly town on the face of the globe. Again, in the 70th degree, lie the extensive copper-works of Kaafford, which, excepting the coal mines of Spitzbergen, are the northernmost underground works in existence. Even at the North Cape human beings are found residing. Whilst Russia, in the winter, possesses not a single haven that is not blocked up, while the Baltic and Cattegat are frozen over, and Iceland completely girt in with ice, in not a single port of Norway, on the contrary, is ice to be seen; at Roeraas, in the winter, the quicksilver often freezes, whilst in the Alps it is often at — 24 deg. R.; in the African deserts, as I have myself experienced, it stands frequently in the morning at zero; here in Norway, at Tromsø, between latitudes 69 deg. and 70 deg., the thermometer rarely falls during the winter lower than 12 R.; and even within the Arctic circle the temperature is seldom lower than + 2 deg. or + 1 deg. R." Having stated these singular facts, our traveller essays to explain the cause of the Scandinavian coast being thus apparently exempted from the general law of nature, "that warmth decreases in proportion as we approach the poles." "Is it," he says, "from the fact of the coast being sheltered from the winds?—this is certainly not the case, as not unfrequently it lies open to nearly all the winds from the northern hemisphere—or is it to be attributed to a warm current of air flowing from the equator to the pole, as some have supposed? No; all observations that have hitherto been made are against such a supposition. A continual elevation-process in the earth, such as can be proved to exist in Sweden, is also unquestionably at work along the coasts of Norway. A marine alluvial stratum is perceptible along the coast from Finland to the North Cape, and extraordinary old water-marks are visible 500 feet above the present sea level, both at Drontheim and elsewhere. It is obvious, therefore, that these points must formerly have been covered by the sea. An elevation-process, I say, of this nature, together with the necessarily concomitant development of subterranean heat, is nearly the only solution of this important phenomenon."

## Russian Bears.

BEARS, although they abound in the forests of Russia, are not to be met with, like wolves, in every part of the country; there are numerous districts in which they are never heard of, for they shun cultivation and human dwellings, and are only to be found in deep and extensive forests. In some of those places where bears abound, there are men who make it their business in the winter to go in pursuit of them alone, and armed only with a strong knife and a spear, with which implements, by courage and dexterity, they succeed in destroying them. Many years ago an English, or rather, I believe, a Scotch gentleman, who was settled in this country, and who was a great sportsman, was shooting small game in the woods in the north of Russia, when he heard the snoring of an animal, and looking round, after a little while, discovered the head of an enormous bear sleeping. Having only small shot in his gun, he retreated quietly, breaking the twigs as he went, in order that he might be able to find the spot again. He then made the best of his way to his temporary residence, a small cottage not far off, and proceeded immediately to cast a dozen balls; as soon as he was ready, he with some difficulty induced a peasant to accompany him with an axe and a dog to the spot where he had seen the bear, and which he easily found again. The noise which he made in approaching roused the animal, but as it raised its head, the sportsman fired and killed it at one shot; he called in triumph to his attendant, who had kept a respectful distance, but in the middle of his exultation, a second bear came forth from behind the first. He was somewhat taken by surprise; however, he fired the second barrel and broke the animal's leg, when, lo! from the same prolific lair, a third bear appeared on the scene. The dog, however, came up and attracted its attention, while our hero took to his heels and ran away; his only object, however, was to gain time for reloading his gun, and as soon as he had accomplished this necessary operation, he gallantly returned to the charge, and killed with his first barrel the third bear, which was still engaged with the dog, and with his second the wounded animal; having thus killed three bears single-handed in four shots. The peasant, as soon as he saw that they were all prostrate, ventured forward for the first time, and began most valiantly to hack away with his axe at the vanquished foe. The large bear was the dam, and, as I am assured, an enormous beast, and the two others were cubs of a year old, quite grown enough to be dangerous. In the Government of Novogorod, which abounds in forests, and is much infested by these animals, the peasants have, I am told, a most singular method of ridding themselves of their disagreeable neighbours. They find the young ones in the spring, and watching their opportunity, carry them off in the absence of their parents. They then fasten them on a raft by nailing their feet to it, and set them afloat on the river. The old bears hear their cries, and follow the raft down the stream; at length the young ones die, and their parents become furious, and attack whatever they meet; but they are now at a considerable distance from their original haunts, so that those who were the authors of their misfortune are not those who suffer from their vengeance. I was told this story by a

lady, who assured me she had herself seen a raft floating with the young bears dead upon it. The Russians have some singular notions about bears; among other stories they say that a fashionable pair of bears relieve themselves from the troubles of education by employing a preceptor for their young ones, a bear of inferior rank, who is weak and requires protection, and who takes charge of the young family while their parents go out to catch food. The bear leader, who is called in Russ, *Pestoon*, or pedagogue, takes his charge to play in the sun, on the outskirts of the wood, keeping watch himself, and warning them by a cry, if any danger approaches. This sensible custom appears not to have been as yet introduced among the Novogorod bears, since it would otherwise prove a great protection to their progeny against the cruelties practised upon them in that part of the country.—*Travels in Russia.*

## Song Birds in Cages.

KEEPING birds in cages seems to be a practice having some cruelty about it—a sort of imprisonment, hence the very phrase of putting a man into a cage. Yet the practice of keeping song birds in cages is always traceable to a kindly feeling towards these interesting creatures, and also to a natural, though selfish desire. It is the custom with man to take to himself, to bring into closer and more frequent fellowship, whatever can charm and solace him. Hence we find that he takes unto himself a wife; he brings the beautiful and fragrant flowers from their native fields to his home, and catches the feathered songsters of the distant groves, that their songs may enliven his domestic hearth. He admires the bird's song and plumage, and would not imprison it if he could help it; but, unfortunately, the wild birds would, otherwise, soon entice it away: therefore, a cage or prison is absolutely necessary. A fair lady of our acquaintance calls her mother's bird-cage, the Marshalsea,—a wicked pun on *Ma, shall see*. But, if cages are prisons, the little birds know they are innocent little captives, and we may get over all compunction about the matter by calling to mind the lines of the elegant Lovelace,—

"Stone walls do not a prison make,  
Nor iron bars a cage;  
Minds innocent and quiet take  
That for an hermitage."

Shakspeare reconciles one to the notion that a bird in a cage can be happy and amuse itself—perhaps have a *lark*. In his play of *Cymbeline* he makes Arviragus, dwelling in the rocky cave, say—

"Our cage  
We make a quire, as doth the prison bird,  
And sing our boncage freely."

Poor old Lear, resigned to anything, says to Cordelia—

"Come, let's away to prison,  
We two alone will sing like birds i'th'cage."

Still more to the point is Henry the Sixth's parting speech to the Lieutenant of the Tower of London—

"Nay, be thou care, I'll well requite thy kindness;  
For that it made my imprisonment a pleasure:  
Ay, such a pleasure as in-caged birds  
Conceive, when, after many moody thoughts,  
At last, by notes of household harmony,  
They quite forget the loss of liberty."

But if we keep birds in cages, let us, in common gratitude for their songs, make the little captives as comfortable as we possibly can, so that they shall have little cause to repeat the imploring words of Sterne's stalling, "Let me out! let me out!" Never let a caged bird have to sing for its supper in vain.

To the student of ornithology, a collection of caged birds is not only pleasing but useful, for he is thus better enabled to learn their different notes, the distinguishing burdens of their songs, and their peculiar attitudes, antipathies, articles of food, and many other facts which will at once indicate to him the exact species of whatever birds he may meet with in their native haunts. By this means, also, the ornithologist can ascertain what species are injurious to our crops and plantations, and what kinds there are which, on the contrary, prove a protection to them by killing the destructive insects; and, surely, no one will censure an ornithologist for keeping caged birds with a view to acquire such knowledge, if it be remembered how often and how extensively the produce of our orchards, gardens, and fields, suffers from the ravages of particular species of birds, and also from insects. After a few days, moreover, most wild birds become reconciled to confinement, and so accustomed to their new quarters, and so much attached to their owners that, in some instances, they will not avail themselves of any opportunities for escape. Your contented bird considers himself as one of the family. He is a minstrel in your service, and he sings his merry songs with all his power of voice to prove to you that he is a jolly cock. Having said this much on the debatable question of their being any excuse for keeping birds in cages, let us draw your attention to a few matters which relate exclusively to the condition and welfare of this class of prisoners. With regard to such as are not in solitary confinement, but are shut up with companions, it has been remarked by the Rev. W. Herbert, "that many birds which are quite kindly disposed to other birds, will not tolerate the presence of another of their own sex and species. The redstart fights with his brother nestling in the same cage, as he is full-grown; he will not tolerate the presence of a stone-chat, or whin-chat, whose habits are very similar to his own; but he does not attack a nightingale, and behaves decently in a cage full of seed-eating birds. A nightingale, which had lived two years in a cage full of birds, in perfect amity with them, and which even suffered the brown wrens to jump and rub themselves upon its back, instantly made a violent attack upon another nightingale which was put into the cage. Two robins will never live peaceably together, but will fight until the weaker is killed or removed."

It is a curious fact, that hen-birds, when they become aged, not only assume the male plumage, but begin to sing. Did nature intend by this that the old hens should be able to soothe their aged partners with some retrospective

song—a sort of "John Anderson, my Joe, John?" Perhaps so. However, some hens strike up even before they reach their teens. Thus, Mr. Sweet kept a hen nightingale four years without her ever attempting to sing; but on the fifth year she took to music, and frequently sang a pretty soft note. He had also a hen willow-wren that sang while quite a young one. In April 1833, a hen blackcap was observed perched near her nest, and singing with as much energy as a cock. In another instance, a hen song-thrush was so very excellent a singer, that it had been thought to be a cock, until it was two years old, when it began to lay eggs, and so revealed the deception it had practised. But both sexes of some species, as of the bulfinch, and probably of the redbreast, sing naturally.

The mandibles of caged birds, especially of those which are over-fed, are apt to grow across each other, or to become unnaturally lengthened. In the redbreast, redstart, and some others, the lower mandible of the beak is more apt to reach an unnatural extent than the upper one, and many instances of this fact have been observed in those birds. The lower mandible of a pied wagtail grew so rapidly that it was necessary to cut off nearly a quarter of an inch of it every three or four weeks. The lower mandible of a twite, or mountain linnet, continued growing even more rapidly for upwards of a year. In the bulfinch and ox-eye, the upper mandible has been observed to grow in this way. Both mandibles of the goldfinch and of the siskin are apt to grow very unequally; but in one of the former species the lower mandible continued to protrude for eight months before the upper one began. The mandibles of a caged siskin have been known to cross each other, so as to greatly inconvenience it. The bill of the tree-sparrow also, has been known to extend beyond its proper length. As the bill of a full-grown bird, when once it begins to grow beyond its natural length, is sure to continue growing, and will, if permitted, become so awkwardly long, as to prevent the bird feeding, it is absolutely necessary, in such cases, to cut the beak; but this operation must be performed very carefully, for if the bill be cut within its natural length the bird may bleed to death—a fate which happened, from a neglect of this caution, to the siskin above mentioned.

German paste is an article so much used to feed song-birds on, that it may be well to mention that a much better sort than any to be purchased, can be made by following the receipt about to be mentioned. Take four fresh eggs, boiled very hard; a quarter of a pound of white peasmeal, and about a table spoonful of salad oil, which must be quite good and not in the least rancid. Having grated the eggs very fine, and then mixed them with the meal and salad oil, press the whole composition through a cullander, whereby it will fall into small grains. Put these grains into a frying-pan placed over a gentle fire, and stir them carefully with a broad knife until they are partially roasted, that is, until they have assumed a fine yellowish brown colour.

The Rev. W. Herbert remarks that "it is a very curious natural provision that the dung of all nestlings is enclosed in a thin membrane, which enables the old birds to carry it away in their bills, which they do regularly each time they bring food to the nest. The young, even before they can see, instinctively protrude their hind quarters to eject the dung from the nest; but if the parent did not carry it away, there would be a congeries of dirt under the nest, which would not only be uncleanly, but would attract attention, and discover their retreat. So long as young birds are kept to their nest in a basket or box, this membrane covering continues; if they are let out to perch it ceases; but if they are shut down again in the nest or basket, it re-appears. The warmth and quiescence of the nest certainly occasions it, but principally the quiescence; yet how it should have that effect I cannot understand." As further evidence of this membrane covering depending, in its formation on a state of quiescence, it may be mentioned that it has been observed round the dung of an adult cock hawfinch, which was obliged to rest quiet, owing to his having nearly lost the use of his limbs. Any one who breeds canaries, or other birds in cages, may readily observe this really curious envelope, which, doubtless, was intended by the Creator as a bag for the removal of excrement from the nest.

As yet we have spoken particularly of birds kept in ordinary cages, one or two together. But if we would be thoroughly entertained with captive birds we must have them in a large aviary, where they can have plenty of room, not only to fly about and to sing,—but room enough, as the proverb says, to swing a cat, if she should show her frightful face inside it. Mr. Edward Blyth, who kept almost all our blithe songster at Tooting, in Surrey, assures us that "an aviary containing twenty birds requires no more attention than a cage containing only one," and he very properly recommends that it be daily cleaned and replenished with fresh food and water. Of aviaries we will speak more at large on a future occasion, but just now a sparrow-pudding demands our immediate attention.

WOULD YOU GAIN SUCH A PRIZE?—In Salency, a small village in Picardy, there still remains an interesting custom. It is called "the festival of the rose." On a certain day of every year the young women of the village assemble. After a solemn trial before competent judges, that young woman who has conducted herself most discreetly, and gives the most affecting proofs of the general innocence and simplicity of her character, is decorated with a crown, which thenceforward becomes an object of pride to all her family. The crown is a hat covered with roses. It frequently constitutes the whole wealth of the wearer; but instances are far from being unfrequent, in which it has been esteemed the most honourable recommendation to a wealthy suitor. This custom was instituted by St. Medard, in the fifteenth century. He was the sole proprietor of the village; and his sister the fortunate winner of the original prize. The Samites, too, had a fine custom among them. It was that of convening the youth in one place every year, where they underwent a trial of virtue; and the one who was declared to have the most merit, had the privilege of selecting the most virtuous maiden from among the entire republic, for a wife.

## Scenes and Sketches of Military Life.

PATRICK O'NEIL—THE IRISH GRENADEER.

CHAP. V.—THE MURDER—MAKING MONEY—THE REVENGE.

It is rather to be deplored than wondered at that the morals of our soldiery are at so very low an ebb; but while the present system of military government remains unaltered, we may in vain look for a change for the better. The men composing the great bulk of the British army are mostly drawn from the unemployed and the uneducated portion of our countrymen—men frequently driven into the army to escape the consequences of a guilty career, or raw inexperienced youths, fresh from the plough-tail or the harvest-field. They enter one of the very worst schools in the world—a school where the sole virtue inculcated is the successful escape from deserved punishment. The idea of talking of the school-room and schoolmaster-serjeant of the regiment, is a complete folly. Some old and useless serjeant, some pursy favourite unfit for anything else, if he can scrawl his name on paper, is the person chosen. To his room in the day-time straggle a few pert and idle children, who are made to sit in a row and repeat some questions and answers from a catechism. No trouble is taken to induce an attendance, and no care or attention is bestowed on those who do attend. Good and bad are mingled in the barrack-room—live and associate together—and that is the school that forms the man. There they see that the bad and vicious man, so that he has expertness and cunning to keep himself free from punishment, is looked upon with a more favourable eye than even the sober and well-conducted. Add to this, the custom prevalent in most regiments of attaching the recruits as comrades to the old soldiers, for the alleged purpose of having them taught the management of their accoutrements, and a ready method of clearing up their appointments, the best recommendation in the eye of your officer being a plentiful use of pipeclay, rottenstone, and blacking.

When O'Neil joined, the regiment was quartered at Belem, in a barracks, in the street leading from the church of San Jeronimo, at the side of the Tagus, to the Adjuda Palace. Here he had a recruit, who joined on the same detachment, placed with him as his comrade; for notwithstanding the evil report attendant on Pat's name, he was still considered one of the most eligible soldiers in the regiment—that is, he was smart and clean, and his fitness for the character of a mentor was never once taken into consideration in such an appointment. Pat was to teach him the use of blacking, pipeclay, and rottenstone; how to pack his knapsack and fold his great coat, and for which services he, by the right of old usage, held himself entitled to the privileges of spending his disciple's "mess-coppers," and directing and regulating his amusements.

There was a *casa d'vinha* (wine-house) nearly opposite the barrack-gate, and it was much frequented for some time by the soldiers in the evening, for here they could sit carousing till the last roll of the *reveille* before moving for the barracks. Here, one evening, about two months after his arrival in Portugal, Pat and his protegee, with some half-dozen of the greatest scapegallows in the regiment, were seated at their wine and rum. They had just begun to feel its true inspiration, and to luxuriate in its glories; to glow into friendship, mirth, and music, when the chilling discovery that not a man in company had another farthing in his possession cast a gloom like that of midnight on the horizon of their enjoyment.

"That's a bad job," exclaimed O'Neil, "and we have a full hour yet to the beat off. What's to be done?—are you all cleaned out?"

"I haven't a single vint," cried one. "Nor I." "Nor I," exclaimed all.

"We can't go in so soon," said another. "Come, O'Neil, think of something."

"Well," said O'Neil, "as you are determined to have a jolly booze, if you have the spirit to stand a tug, and the stuff not to 'peach after, I'll put you up to a plan for flaming theould Portugee negur of a landlord."

They were in the mood for mischief, and they swore by wholesale to stick to him to the last, and to suffer death sooner than budge after.

"Oh!" said Pat, with the usual carelessness "as for the matter of that, its only a trifle of an old trick—let us have a bottle a man, one after another, and when all is finished, kick up a row amongst ourselves and bolt for the barracks; and, of course, as we are not to pay for it, we may as well have the best and do it genteel."

"The best he has of course, they repeated"—"the best"—"the best," and the proposition was carried without a dissentient voice.

The *Padrone* was ordered to bring in "an *ungraffe d'vinha branca*" (a bottle of the pale wine, as distinguished from the *vinho tinta*, or black strap); and one bottle was called for after another until the call went the round of the table, and the drums were heard beating off in the barracks.

"Come, boys," said O'Neil, starting to his feet as the last bottle waned low; "it's time to begin; here's for the devilment—ho!" and with a wild yell, he struck the man opposite to him a blow on the nose, that made the blood fly about over the table. A general *mellée* ensued—they struck at each other with a hearty good will, and shouted and swore, and tore away like fiends, still managing to urge the tide of battle towards the doorway. The Portuguese was afraid to mix amongst them.

His tables and seats were knocked about, his bottles and glasses broken, and the whole house in uproar and confusion. Still, as the soldiers fought and shouted like madmen, they were warily attaining their object—keeping together, and clinging in a knot, they urged forward.

"Now for a rush, boys," said O'Neil. "Away, and the devil take the hindmost;" and, with a loud scream of exultation, he dashed through the doorway. The others rushed after him; the passage was rather narrow, and they jammed and jolted each other for an instant—that instant showed the ruse to the astonished Portuguese, who, with an execration and a scream, bared his knife, and plunged after them into the passage. The soldiers had just cleared the doorway—the recruit, O'Neil's comrade, was the last; he had one foot outside the threshold, when the revengeful knife of the *Padrone* entered his body, and he fell with a terrific cry head-long into the street.

A crowd of soldiers and civilians gathered about the writhing soldier—the manslayer had vanished. The wounded man was carried to the hospital, but he died before morning.

An investigation was held, but nothing could be elicited; no one could be found to acknowledge having been in the house—no one saw the man stabbed—no one could tell who were with him; and the Portuguese were silent as to the occasion, lest it should lead to the detection of their countryman. So between the confusion of languages, and the prevarication and contradiction of witnesses, nothing tangible or satisfactory could be ascertained on the subject of the murder.

In a week or two the unlucky affair was forgotten by all except O'Neil, who was heard frequently to mutter threats of deadly revenge against "the Portugee that kilt his comrade," and deeply he swore never to leave the country until he exacted a full satisfaction from "the butcher."

He, however, kept himself very quiet for a few months, and seldom went outside the barrack gate, and his comrades frequently taunted him with being afraid to venture on his old haunts since the death of his comrade. On these occasions his brow would lour and darken, his eyes flash, and his lips move with suppressed curses; and clenching his hand, he would vehemently hit the table and cry "You'll drive me mad;—let's be quiet, will you, or I must do what I don't wish—be still ye hell hounds; I'm bad enough as I am."

O'Neil, as we have remarked, being always in debt, had never a halfpenny to spend among his comrades; this kept him necessarily within the barracks, and retarded a plan which he had projected to gratify his thirst of vengeance, but even for this he found a remedy. His quick eye soon discovered that the rinf (a copper coin about the value of a halfpenny) was exactly the size of and nearly similar in its impressions to the *crusado nova* (new cross, value two shillings and two pence, and named from a large cross displayed on one side), and upon this similarity he laid his scheme for procuring money.

He took some quicksilver from a piece of broken looking glass, and with it soon turned the vint into a pure silver coloured coin;—the deception was almost perfect, few even in open day could distinguish any difference between it and the *crusado nova*. Having furnished himself with three or four of these counterfeits, O'Neil would leave the barracks in the evening, and walking into some not much frequented quarter, there look out for a customer; and when he saw one whose appearance he liked, he would beckon him on one side, and producing a shirt or trousers out of his cap, would enquire in a whisper—for he began to jabber the words of the Portuguese, picked up by the men in their intercourse with the people. "*Cares de chemisa, Senhor?*" (do you want a shirt, sir).

"*Sim, Senhor, que cares!*" (yes, sir, how much do you want for it?) was the ready reply.

"*Une crusado nova*," was the invariable price.

The article being worth three times the amount, there was little higgling about the bargain, and O'Neil, transferring the chemisa to the Portuguese, received the *crusado nova*.

While the buyer was congratulating himself on acquiring so cheap a prize, Pat allowed, but a momentary enjoyment; but, making after him, as if repenting of his bargain, he demanded back the goods, and tendered the buyer his money again; taking care to slip him one of the counterfeits, instead of the sterling coin.

In this way he collected a few *crusadoes*, and when he thought he had sufficient for his purpose, he set about putting his concerted plan of revenge into execution.

He invited seven or eight of the most quarrelsome and drunken characters in the regiment to be his companions for the evening, and they set out together from the barracks determined on having a substantial drinking-match. They at first strayed to some wine-houses down about the water's side, but as the hour of return drew nigh, O'Neil led them from house to house, drinking in each until they reached the *Casa d'vinho* where the young Englishman received his death blow. Some of his companions objected to going in, alleging that, since the murder of their comrade, the soldiers had avoided the house.

"Pshaw," cried O'Neil, who, though to appearance the most inebriated of the crew, had dexterously passed the glass and was really quite sober. "Pshaw, do you think I am as big a fool or a coward as the rest of you?"

—come along—we wont stop over an hour, and then the barracks are just at hand—come in."

They were soon seated, and O'Neil called for a bottle of wine. The landlord—the manslayer—brought it in himself, and refused to draw the cork until he was paid for the wine, for, since the fatal night referred to, he had never allowed soldiers to drink without being first paid for the liquor. This roused the indignation of the soldiers, who swore they would not drink in the house where such a beggarly custom prevailed.

"Sit down you fools," cried O'Neil; "you might go farther and speed worse; 'tis capital wine," he added, smacking his lips, having paid the landlord and filled out a measure, "'tis all the same I imagine to pay first as last, only the same money spent; but I think the wine in this country could be greatly improved if they brewed it a little stronger; 'tis but weak stuff after all."

It was voted *nem. con.* that the Portuguese would considerably improve the quality of their wine "if they'd only brew it a little stronger."

Pat proposed, by way of amendment—"What do you think of mixing it, boys," he said, "I know they keep special fine spirits in this house, and to my thinking good wine and good spirits must be rare drinking."

To this they all eagerly assented. Pat's word was law. He had money and was spending it freely, and he had a right to be indulged in any harmless whim. If he came by the money badly, it was no concern of theirs, and surely they could not interfere.

*Meia Canada d'Agrna ardente*\* was added to the wine and the mixture pronounced excellent; and they laughed and sang as boon companions ever do over their cups.

"Now watch me, lads," cried Pat; "see how I'll fix this Portugee negur for making us pay beforehand."

The bottle containing the wine is of more value than the wine itself; and Pat let loose the laughing devil in his eye at the landlord, as he entered with the "tother bottle." The landlord stretched over his hand for the empty bottle, which Pat reached towards him, but just as his fingers touched it—crash it went on the flagged floor, and O'Neil jumping up, cursed and swore at the *Padrone* as if it had all been his fault; and the soldiers laughed loud at the punishment inflicted by O'Neil, and affirmed it was a famous joke.

But this was not the game O'Neil had in view. He plied his comrades with the potent mixture, and when he observed signs of ill-temper arising amongst them, as their rude natures became excited, and their brains confused, he smiled exultingly. He soon easily fomented a quarrel, and in a very short time a most uproarious scene of riot raged through the apartment. Tables and benches were upset and broken—blood drawn—wine spilled—bottles and glasses smashed, while O'Neil, like the master spirit of evil, stood looking on quite composedly.

At length the *Padrone* made his appearance, and with wild gesticulations and loud exclamations lamenting his loss, he endeavoured to part the combatants. A gleam of demoniac joy flashed over the countenance of O'Neil when he saw him enter. His teeth became firmly set, and his lips white and compressed over them. Bayonets were already in the hands of some of the men who struggled with others more inclined to see fair fighting, while good knock-down-blows were rapidly exchanged amongst the others. All the ups and downs of a real Donnybrook fight were exhibited, and the shouts and oaths were frightful and stunning. The *Padrone* was hustled about, unheeded as the confusion rolled towards the corner in which O'Neil stood enjoying the scene. As the Portuguese approached him, he cowered beneath the table and bared his bayonet, crouching like a tiger in his lair. He waited for the doomed man to come within his fatal spring;—and he did come. He was jolted against the table, and before he could recover his equilibrium, the glittering weapon of O'Neil passed from side to side through his body. A thrilling scream escaped the wretched man as he staggered forward amongst the infuriated soldiers, beneath whose feet he fell weltering, while O'Neil, still calm and firm, resumed his erect position behind the table, with his bayonet in its sheath.

"Ho! ye hell hounds!" he roared out high above all the noise, "which of ye done that? He's done for. Work for the hangman ye have made. No less than murder. Fly, devils; fly!"

The men had ceased fighting, and stood gaping at the writhing and gory wretch at their feet; but, roused by O'Neil, and seeing him spring over the table and dash through the doorway, they rushed after him, and succeeded in gaining the street, and the barracks, without being pursued.

In a few minutes, however, a crowd of wild-looking, yelling Portuguese were collected about the arena, and the intelligence of the murder was immediately conveyed to the orderly room. "Turn out the whole," was shouted, the men fell in, in line; their names were hastily called over, and as the officer went down the front, O'Neil looked as self-possessed and as sober as any member of Parliament; while those who had been along with him were drunken and bloody. A number of these men, with others who came in late and drunk, were placed in confinement, but not the slightest suspicion attached to O'Neil.

A court of inquiry was held. The Portuguese were examined through an interpreter, but they differed so in their statements, and pitched so entirely upon the wrong

\* *Canada*—a measure about a quart. *Meia Canada*, half a *Canada*.

men as the perpetrators—that they only served to render the affair a complete gordian knot. No clue could be found to the truth. If a Portuguese swore he saw one man engaged in the affray, a dozen soldiers were ready to swear the man never left his barrack-room during the evening, or was at least a mile distant from the place. O'Neil was never pointed at as being one of the party. His name was never even whispered in conjunction with the murder. The combatants of the evening, believing it was one of themselves who did the deed, were fearful to speak, lest, as he was only a looker on, he could point out the actual man. Nothing was done. No one was tried, and the affair died away like the former one. No individual could be rightly accused of the crime, and where suspicion might be inclined to rest, proof was wanting.

### Innovations of Fashion.

In a former article we gave a sketch of the rise and progress of the fashions from the earliest date to the commencement of the 12th century; the Protean metamorphoses which they have undergone since that period will form the subject of the following observations. The rage for wigs which prevailed in France at the last mentioned epoch, was of short duration; it then became the fashion for ladies to wear large veils, which descended from the head over the shoulders, almost entirely concealing the hair; queens and princesses added a diadem on the top of the veil. Widows wore a band, which covered the forehead, encircled the face, and concealed the neck and bosom. Young females left the face, neck, and hair more exposed, and wore sometimes a species of ear-rings (*clagues oreilles*), of large dimensions, and somewhat overloaded with pearls and precious stones.

Under Philip-le-Bel and his successors, ladies adopted a head-dress in the form of a sugar-loaf, of incredible height, and from which hung a gauze veil. The hair was more seen, and may in fact be compared to the coiffure of the Cauchos of the present day. Isabeau de Baviere, wife of Charles VI., wore a two-cocked bonnet, much elevated above the head, and ornamented with long strips of fringed crepe. Jean Juvenal mentions as one of the causes of her imprisonment at Tours, the obstinacy with which (notwithstanding the miseries of war) she continued to wear those high cocked bonnets and two large ears (*oreilles*), one at each side, instead of ear-rings.

In 1430, bonnets no longer exhibited more than one point; but to compensate for the loss, they were overladen with monstrous borders. In the reign of Charles VII., head-dresses lost a considerable extent of their elevation. Under Louis XII., the entire edifice disappeared; the only covering for the head then in vogue amongst ladies was a chaperon or capuchot, ornamented with pearls and precious stones, both sides of which descended on the shoulders; under this capuchot a coiffe of fine linen was worn. This head-dress much resembled that worn by the Sisters of Mercy (*Sœurs de la Miséricorde*).

When Francis I. came to the throne, ladies began to adopt the fashion of having their hair curled, and wore a small toque a l'Espagnole.

Under Henry II. the curling system progressed; the hair was then arranged in small ringlets at each side of the forehead, or turned up in one large curl (*en toupet bouclé*), extending from one ear to the other; elegant *laques* were also worn at the same period.

In the time of Charles IX., the curls were interspersed with pearls and precious stones.

Under the reign of Henry III., fashion decided in favour of a small bonnet, inclining to one side, over the left ear, and ornamented at the top with an *aigrette*, or plume of feathers.

It was in the reign of Henry IV. that white powder first came into use. Lesfolies cites as an extraordinary circumstance the fact of his having seen, in 1593, some nuns (*religieuses*) walking with their hair curled, and powdered with white powder. It was the fashion, also, at that period to wear coiffures à la Gabrielle.

Dating from the reign of Louis XIV., a great variety was observable in head-dresses. The origin of one of them, the coiffure à la Fontanges, was somewhat singular. It appears that, during a hunting-party at Vincennes, Mlle. de Fontanges had her head-dress put out of order by a sudden gust of wind: in order to prevent further derangement of her locks, the fair Amazon took care of her garments and tied it round her forehead. Louis XIV. thought her so handsome in this novel species of coiffure, that he requested her to wear it all day. Next morning, all the ladies appeared at court with a ribbon tied across the forehead, and which was named the Fontange band.

In 1784, when the new political ideas had already begun to ferment, the ladies took a share in the effervescence, and adopted what were called *discount bank* (*aisse d'escompte*) bonnets; which, similar to the establishment just named, had nothing at bottom, or, in other words, were open at both ends.

During the Republic, and under the Empire, the hair underwent all the Grecian fashions; and the head was covered with a hat or bonnet, made of silk or other material, similar to what is worn at the present day,

excepting the difference of form or size, which the change of season dictates.

The coiffures à la giraffe, at one time, not only invaded but disfigured the heads of the fair sex; now-a-days, the hair is tied behind, and each individual selects the coiffure which she thinks most becoming.

The various Protean changes of coiffure having thus at length been detailed, the description will now turn upon the modifications which have been introduced from time immemorial for protecting and ornamenting the other extremity, namely, the feet, which fashion had also subjected to its despotic, and, in many instances, severe decrees.

It is the opinion of ancient writers upon this subject, that females had continued for a long time to walk barefooted; the Egyptians insisted on their wives' observance of this custom, in order to make them understand that they were destined to remain within doors, and occupy themselves with internal affairs. They, however, by degrees, succeeded in adopting the same kind of shoes worn by their husbands, and which were made of papyrus. The Greeks and Romans wore sandals made of leather, the bark of trees, of iron, gold, silver, and brass; in Spain, plants were plaited or woven into a sort of tissue, and made into shoes; the Indians and Chinese employed *jouc* (reeds), silk, and wood, for the same purpose.

Rome lays claim to the honour of having given origin to shoes with heels; the Emperor Augustus adopted this fashion in order to lengthen his short stature. The priests wore heeled shoes on the days of sacrifice, and they were in fashion with ladies of distinction, who appeared in them on fete-days. Amongst the Romans, shoes were either red or white.

In France the ladies have almost invariably used the same kind of shoes (*une chaussure uniforme*); their long training-gowns prevented them from adopting the ridiculous fashions introduced with respect to men's shoes, particularly the *souliers à la poulaine*.

In the reign of Philip-le-Bel, citizens' wives wore grey shoes, the same colour as their dresses; and on this account they were named *grisettes*—an appellation now given to a different class of females.

Pope Zacharia prohibited dancing, under pain of excommunication; and one of his successors granted plenary indulgence to all young females who wore shoes with such thick soles and high heels that it would be impossible to dance in them.

Under Francis I., the fashion of high-heeled shoes was introduced from Spain; it spread rapidly and was in special vogue during the succeeding reigns, and until the revolution. It was to relieve the feet from this fatiguing kind of chaussure (shoeing) that slippers and pantofles were invented so as to be worn at home.

The Turkish women wore *babouches*, a sort of shoe made quite open, lined with satin, and ornamented with precious stones and gold embroidery.

The Chinese adopted the strange custom of compressing their daughters' feet with bandages; this plan was put in practice whilst they were of tender age, so that the toes were forced under the foot, so that they could not increase in growth. In consequence of this unnatural system, the Chinese women cannot walk without stumbling, and are fatigued after a few steps.

The shoes worn by ladies in France at the present day, are, in general, of nearly the same form: and from the fineness and suppleness of the leather used in their manufacture, a most convenient, and at the same time, elegant, mode of chaussure, has acquired almost universal approbation. But it is essential to observe, that the same shoe should never be used for both feet indifferently: the shoemaker ought to take the exact measure of the sole of the foot placed flat upon the ground, taking care in all cases to make the shoe somewhat longer than the measurement indicated; thus the shoe will not only appear more elegant but be more conveniently worn. In rainy weather, ladies put on a second shoe of light but firm material; they are called *clagues*, and are worn over the others. This is an excellent precaution, as it preserves the feet perfectly dry and warm in moist and cold seasons. The clogs (*socles*), with their wooden soles, formerly in use, were less liable to allow the wet to penetrate, but were much more fatiguing. From the height and narrowness of clog heels, sprains were of frequent occurrence; and the hinge part of the clog was subject to break, from any sudden movement of the foot. The *clagues*, or second shoe, can be made as perfect as possible, by rendering the leather impermeable by processes now generally known, and by covering the first sole with several layers of a thick solution of India rubber in the oil of petroleum.

For some years back, ladies have also been in the habit of wearing half boots (*bottines*), laced in front or at the side. There can be no objection to their use, if not drawn too tight at the upper part—a practice which causes painful numbness of the foot. Ladies desirous of avoiding colds, in returning from the opera or balls, in winter, would do well to put on, the moment they retire, a pair of large boots or buskins lined with padded satin, fur, or other warm material. By this simple method, many serious diseases may be prevented.

For a long period, females had no other covering on their legs than the bands of tapes fastening their sandals, and which crossed for several turns over the leg. But as soon as the art of knitting was discovered, the wife

made stockings for her husband and herself, or purchased them at the hosiers'; but only in rare instances, as they were sold at an enormous price when first manufactured.

Henry II. was the first person in France who wore silk stockings, and it was upon the occasion of the marriage of his sister with Emanuel Philibert of Savoy.

In the reign of Louis XIV., ladies wore green stockings, with pink clocks. During the following reign, women's stockings were the same colour as their dresses. It is only since the invention of machinery for weaving stockings that they have come into general use.

With respect to this invention, it appears that a journeyman locksmith belonging to Lower Normandy forwarded to Colbert a pair of silk stockings made in a loom, requesting that they might be presented to Louis XIV., by whom they were much admired. The hosiers of Paris, alarmed at this discovery, bribed his Majesty's valet-de-chambre: the latter, having provided himself with a pair of scissors, made several small clips in the stocking, and, when the king put them on the next time, he perceived that they had gone into holes in several places: he consequently rejected the invention. The workman, outraged at this treatment, repaired to England, where he was received in the most satisfactory manner.

From England, stockings thus manufactured were imported into France; and, subsequently, the machine for weaving them was also brought over. The first manufactory of stockings by machinery was established in France in 1656, at the Chateau de Madrid, at the Bois de Boulogne, near Paris.

The use of rings, it appears, is of most ancient date; for we find it mentioned in the Bible that Jacob made a present of a ring to Tamar, his daughter-in-law.

The Greeks always wore the conjugal ring on the fourth finger of the left hand, as they believe that it contained a nerve which went direct to the heart; it was for this reason that the fourth was named the *annular* finger. At a later period, rings were worn on all the fingers.

When Rome became mistress of the world, the rage for costly rings was most excessive; and no expense which luxury could tolerate was spared: rings were made of gold and precious stones, and engraved with various devices and emblems, so as to be used as seals.

In France, in former times, lovers "who were forced to marry," submitted to the ceremony in the church of Sainte-Marine, Paris; the priest placed on their finger a ring composed of reed or straw.

The Turkish women wear rings on all their toes. This custom was in fashion at Rome, in the time of Augustus.

In America, the women belonging to the Aborigines wear rings in their noses, lips, and ears.

Magnetised rings were formerly sold for the cure of headaches; an imposture which ought only to have deceived the ignorant, as it is impossible to magnetise a ring; and if such rings had ever any effect, it must be attributed to the imagination, and not to magnetism.

The use of stays (corsets) is of very ancient date; the Greeks and Romans rendered the waist tight by means of small bands, which passed under the bosom, to prevent their excessive development. But the *Bayaderes* excel all other women in the universe in the convenient method they have adopted for giving a proper shape to their waists, being at the same time suitable to their general health, and to the beauty of the figure. Their waist is supported by a belt or *ceinture*, and their bosoms are covered by a kind of elastic tissue, transparent, and of a light pink colour; it confines the bosom in an exact manner, and is fastened behind the back. They hardly ever take off this portion of their dress, not even at night; and by this means they preserve the delicacy of the form until an advanced age.

Montague relates that the ladies in his time tightened the waist by means of wooden pins, but which had the effect of making the skin rough and callous. Shortly after that period, stays became regular cuirasses, armed with whalebone and steel plates. This fashion spread to all parts of Europe. It was at the same period that the Emperor Joseph II. issued a wise law, by which he forbade the use of stays with whalebone and iron plates in all houses devoted to the education of girls, and commanded that every woman condemned to a degrading punishment, should in future wear stays of the above description, and hoops. This law, however rigorous, was ineffectual in removing the evil—the fashion continued; and what all the power of the Emperor failed to effect, is obtained at the present day by the efforts of reason alone. Stays, as now constructed, and when not too tightly laced, are not likely to prove injurious to health; but young girls should never be allowed to wear them. There is no necessity to form their shape—nature, if let alone, will do that better than any stays; moreover, one of the most frequent causes of distortion of the spine in young females, is the premature compression exercised by the stays on parts not yet sufficiently developed. The uneasiness resulting from its unnatural pressure makes girls always elevate the right shoulder, in order to relieve it from so uncomfortable a position. Stays should only support the figure, but never press upon the chest. Too slender a figure is ungraceful; and those who have the misfortune to be thus formed, should wear their clothes extremely loose, and take much exercise in the open air, so that the internal organs and the limbs may be sufficiently developed for the preservation of health.

### A Visit to the Coliseum.

THIS remarkable building, an outline of which is given in our illustrated title, immediately to the right of the Pyramids, is thus described by Miss Catharine Taylor:—"We climbed by a flight of wooden stairs to the first and second tiers of seats, and followed the spacious corridors, until the broken arches beneath stopped our further progress; originally there were six of these corridors, rising one above the other, but only four remain, and the upper one of these is inaccessible. In the lowest circle, called the Podium, seats were reserved for the emperor and his nobles. The three galleries above were occupied by the senators, the fifth by the people, and the sixth was set apart for the Roman women. The view from the highest point is very striking; we looked down on the grass-grown arena, and then on its circling arches, as they stood out against the clear blue sky, while streams of golden light fell through them on the crumbling walls and broken columns. The mighty city lay before us in its silent desolation; on one side, the arches of Nero's 'Golden House,' behind them, the dark ruins of the Baths of Titus, the Palace of the Cæsars with its long lines of tottering walls, and the arches of Titus and Constantine. There was something almost sublime in the scene; I stood lost in thought, picturing to myself this mighty building as it existed centuries ago, and peopling its walls with assembled multitudes. The scene seemed to transport me in thought back to the days when Rome was in all her greatness. But my eye was caught by the large black cross in the centre of the arena, at the foot of which knelt a peasant-girl and a mendicant friar; the dream vanished, and I turned to gather the wild-flowers which spring among the ruins.

The Flavian Amphitheatre, as this building was originally called, was erected by Vespasian and his son Titus, soon after their return from the conquest of Jerusalem. It is a singular fact that to Vespasian, a man of avaricious disposition, Rome was indebted for the erection of this Amphitheatre and the Temple of Peace, the magnificence of which was almost unrivalled. The unfortunate Jews who had been brought captives to Rome were employed in the erection of the Coliseum, which was completed in four years. At the feasts given at its dedication, during the reign of Titus, it is said that five thousand wild beasts were slaughtered in the games. The form of the Amphitheatre is oval, and its size so stupendous, that it was capable of containing a hundred thousand spectators. The walls were encrusted with costly marbles, and enriched with ornaments of gold and amber. The network which enclosed the Podium, to protect those who sat there from the fury of the wild beasts, was of gold wire; an awning, sometimes of silk, was stretched across the immense building; the air was scented with oriental perfumes, and fountains sprinkled around their cool, refreshing waters; everything in short that tended to luxury, or to the gratification of the senses, was collected here.

The games to which this Amphitheatre was appropriated were of the most cruel and sanguinary character. Combats of gladiators and wild beasts, which generally terminated in death, were frequent. Men were regularly trained for these games; some fought for hire, but these were few in number, compared with the captives and slaves who were forcibly compelled to enter the lists.\*

As vice and profligacy increased under the imperial sway, it was found necessary, in order to silence the clamours of the people, to feed their passion for amusements; every succeeding emperor invented new and exciting pleasures, and the giant tenants of the eastern deserts were brought into the amphitheatre. The blood-thirsty love of novelty was gratified by strange and unheard-of encounters; the harmless but unwieldy hippopotamus was opposed to the fury of the tiger, and the trembling deer fell an easy prey to the hyena. The arena was sometimes filled with water, and a mimic warfare was carried on; these mock-fights were called *Naumachia*. But the fiercer sports of the Amphitheatre were more welcome to the people; and so great was their eagerness to witness them, that the Romans hastened there in crowds, before daylight, to secure seats. All pity, all feelings of humanity, were lost in the excitement of the moment; even a woman forgot her sex, to share the absorbing interest of these sanguinary sports. The signal for the commencement of the games was generally given by one of the Vestal Virgins, for whom seats were reserved in the Podium.

But enough of these cruel pastimes; they were one of the many causes which tended to the degradation of the

\* The indignant remarks of Byron on these inhuman pastimes force themselves on our imagination. After describing the ruin as it appears, he thus moralises:—

And here the buzz of eager nations ran,  
In murmur'd pity, or loud-voiced applause,  
As man was slaughter'd by his fellow man.  
And wherefore slaughter'd? wherefore, but because  
Such was the bloody Circus' genial laws,  
And the imperial pleasure.—Wherefore not?  
What matters where we fall to fill the maws  
Of worms—on battle-places or listed spots?  
Both are but theatres where the chief actors rot.

Then the gladiator, and the agony of his dying hour!  
The fearful shout of brutal applause, which rejoiced the  
victor and sickened the fallen!

He heard it, but he heeded not—his eyes  
Were with his heart, and that was far away;  
He reek'd not of the life he lost nor prize,  
But where his rude hut by the Danube lay—  
There were his young barbarians all at play,  
Butcher'd to make a Roman holiday!—  
All this rush'd with his blood,—shall he expire  
And unavenged?—Arise! ye Goths, and glut your ire!

Yes! the Goth came, and laid Italy and Rome beneath  
their barbarian feet, spreading like locusts on the land,  
and crushing, with all the foul iniquities of voluptuous life,  
the liberty, the learning, which had adorned the victim-  
country for centuries.

Roman character. Constantine in vain endeavoured to suppress them; and the world was indebted for their abolition to Telemachus, a benevolent and courageous monk, who, regardless of danger, stepped into the arena to separate two gladiators. The people, infuriated at this interruption of their pleasure, overwhelmed him with a shower of stones. The Emperor Honorius interposed, but too late to save his life. This tragical event, however, led to the prohibition of the games, and Papal Rome soon after venerated Telemachus as a saint.

In the civil warfare which was carried on in Rome during the Middle Ages, this amphitheatre—which, in spite of the ravages of the barbarian armies, remained entire, though stripped of its marbles and precious ornaments—was converted by some of the powerful nobles into a fortress. It was successively occupied by the Frangipani and Savelli families, and suffered much injury during that period. But it was yet more wantonly devoted to destruction by the Popes, many of whom, in their eagerness to enrich themselves and their families, cared little by what means their object was obtained. Paul the Third yielded an unwilling consent to the entreaty of his nephew, Cardinal Farnese, to be allowed to supply themselves with materials for a palace from the ruins. The permission to plunder was limited to the space of twelve hours; but the ruthless Cardinal turned four thousand men into the amphitheatre, and the work of devastation went on so rapidly, that stones sufficient to build the Farnese Palace were obtained. It is not very creditable to Michael Angelo that he was its architect—thus sanctioning the demolition of one of the noblest monuments of antiquity.

Other families share in the disgrace of despoiling the Coliseum, and amongst them the Barberini; and it was not until the middle of the last century that its destruction was arrested by Benedict the Fourteenth, who, regarding the spot as sanctified by the blood of the Christian martyrs who had perished there, consecrated it, and erected on the highest point of its walls a cross. This now stands in the arena, around which are also placed at intervals fourteen small shrines, each containing a picture which represents some traditional circumstance attending the progress of our Saviour to Golgotha. These shrines, which are called the 'Via Crucis,' are found in all Catholic countries, and are regarded with much veneration. I have often observed people passing from one to another, uttering a short prayer at each. To visit them is often imposed as a duty or a penance. One man alone, the custode, or keeper, inhabits the ruins during the day; at night a Papal guard patrols them; a capuchin friar is sometimes to be seen in the enclosure, with his box for 'elemosine per le anime in purgatorio!' These, with the birds which make their nests amongst the crumbling fragments of the corridors, are now the only tenants of this mighty building. Truly, as Forsyth says, the Coliseum, 'as it now stands, is a striking image of Rome itself: decayed, vacant, serious, yet grand—half grey and half green, erect on one side, and fallen on the other—with consecrated ground in its bosom, inhabited by a headman, visited by every caste; for moralists, antiquaries, painters, architects, devotees, all meet here, to meditate, to examine, to draw to measure and to pray.'

### Gleanings.

**A BOY HERO.**—Simple occurrences and fine sentiments frequently survive the memory of great battles. Vellore has been a theatre for every species of military outrage; yet the following instance of manly fortitude in a boy will be remembered when all those outrages are entirely forgotten. The son of Colonel Lang, Governor of Vellore, having been taken prisoner by Hyder Ali, he was ordered into the presence of the despot, who desired him to sit down and write a letter to his father, offering him a splendid establishment if he would surrender the city, of which he was governor; but, in case he refused, the son should be sacrificed. The boy coolly rejected the service; and upon Hyder's pressing him with many threats, he burst into tears, and exclaimed, "If you consider me base enough to write such a letter, on what ground can you think so meanly of my father? You may cut me to a thousand pieces; but you cannot make him a traitor?"

**AN AMERICAN IN GREECE.**—In Europe, and even in England, I had often found extreme ignorance of my own country; but here I was astonished to find, among men so familiar with all parts of the Old World, such total lack of information about the New. A gentleman opposite me, wearing the uniform of the King of Bavaria, asked me if I had ever been in America. I told him that I was born, and, as they say in Kentucky, "raised" there. He begged my pardon, but doubtfully suggested, "You are not black?" and I was obliged to explain to him that in our section of America the Indian had almost entirely disappeared, and that his place was occupied by the descendants of the Gaul and the Briton. I was forthwith received into the fraternity, for my home was farther away than any of them had ever been; my friend opposite considered me a bijou, asked me innumerable questions, and seemed to be constantly watching for the breaking out of the cannibal spirit, as if expecting to see me bite my neighbour. At first I had felt myself rather a small affair; but, before separating, "l'American," or "le sauvage," or, finally "le cannibal," found himself something of a "lion."—*Stephens.*

**MODERN DANCING.**—We go to a ball. Mercy upon us! is this what you call dancing? A man of thirty years of age, and with legs as thick as a gate post, stands up in the middle of the room, and gapes and fumbles with his gloves, looking all the time as if he were burying his grandmother. At a given signal the unwieldy animal puts himself into motion; he throws out his arms, crouches up his shoulders, and without moving a muscle of his face, kicks out his legs, to the manifest risk of the bystanders, and then goes back to his place, puffing and blowing like an otter after a half hour's burst. And this is dancing!

I know one who is wiser than Voltaire, and has more understanding than Napoleon himself, and all ministers who ever were, are, or will be, and this one is public opinion.—*Talleyrand.*

**SUPERSTITION AN ENEMY TO ART.**—Tacitus gives a curious account of a proposition, that was made in the Roman Senate, to divert the course of those rivers and lakes which emptied themselves into the Tiber; and which, at certain seasons of the year, causing that river to overflow its banks, occasioned great loss to those citizens of Rome, who possessed houses and lands in its immediate neighbourhood. Petitions being presented from the Florentines, the Interamnates, and the Rheatinæ, against the proposition, it was abandoned. One of the causes of this abandonment arose out of an argument, employed by the Rheatinæ: "Nature," they observed, "having made the best provision for the conveniences of mankind in directing the course of rivers, it would be highly unbecoming in the Romans to alter their direction; and the more so, since their allies had long been in the habit of consecrating woods, altars, and priests to the river of their country." This curious and effective argument was naturally call to recollection a singular anecdote, which was related by Signor Hypolito de Vinci, who afterwards honourably distinguished himself in the service of his country, and who fell, covered with wounds and glory, in the battle of Vimere, a martyr to his enthusiasm, and an honour to the human race. A celebrated engineer, some years previous to the compulsory resignation of the late Ferdinand of Spain, proposed to the Spanish Government a plan, which had for its object the rendering of the Tagus navigable to Madrid. After mature deliberation, the ingenuity of the engineer, and the advantages derivable from his project, were acknowledged by the ministry; but the execution they thought proper to decline. On the engineer's inquiring the cause of so extraordinary a refusal, they returned for answer, that if it had been the intention of Nature, that the Tagus should be navigable so high into Spain as Madrid, she would have rendered it so herself; to presume to improve what Nature had left imperfect would be scandalous and impious! The plan was, however, afterwards adopted; as was that of M. le Maur for forming a canal from the mountains of Guadarama to the Tagus, and from that river to the Guadina and the Guadalquivir, thus opening a ready communication between Madrid, Toledo, Cordova, and Seville.—*Bucke.*

**A LEGEND OF CHIOFF.**—The origin of this city is involved in obscurity. Its name is said to be derived from Kiovi, a Sarmatian word signifying heights or mountains; and its inhabitants, a Sarmatian tribe, were denominated Kivi, or mountaineers. It is known to have been a place of consequence in the fifth century, when the Suevi, driven from their settlements on the Danube, established themselves there and at Novogorod. In the beginning of the tenth century it was the capital, and the most celebrated city in Russia or in that part of Europe. Boleslaus the Terrible notched upon its "golden gate" his "miraculous sword," called by the monks "the sword of God," and the Poles entered and plundered it of its riches. In the latter part of the same century, the capital of Russia again fell before the conquering arms of the Poles. Kieve was at that time the foster-child of Constantinople and the Eastern empire. The voluptuous Greeks had stored it with all the luxuries of Asia; the noble architecture of Athens was festooned with the gaudy tapestry of Lydia, and the rough metal of Russian swords embossed with the polished gold of Ophir and Persia. Boleslaus II., shut up within the 'golden gate' of this city of voluptuousness, quaffed the bowl of pleasure till its intoxicating draught degraded all the nobler energies of his nature. His army of warriors followed his example, and slept away month after month on the soft couches of Kieve; and in the language of the historian, as if they had eaten of the fabled fruit of the lotus-tree, at length forgot that their houses were without masters, their wives without husbands, and their children without parents. But these tender relations were not in like manner oblivious; and after seven years' absence, the Poles were roused from their trance of pleasure by the tidings of a revolt among the women at home, who, tired of waiting their return, in revenge gave themselves up to the embraces of their slaves. Burning under the disgrace, the Poles hurried home to wreak their vengeance on wives and paramours; but they met at Warsaw a bloody resistance; the women, maddened by despair, urged on their lovers, many of them fighting in person, and seeking out on the battle-field their faithless husbands—an awful warning to married men!

### The Love of Woman.

A woman's love, deep in the heart,  
Is like the violet flower,  
Which lifts its modest head apart  
In some sequester'd bower.  
And blest is he on whom that bloom  
Reflects its gentle sweets;  
He heeds not life's oppressive gloom,  
Nor all the care he meets.

A woman's love is like a spring  
Amid the wild alone—  
A burning wild, o'er which the wing  
Of cloud is seldom thrown;—  
And blest is he who meets that fount  
Beneath the sultry day;  
How gladly should his spirits mount,  
How pleasant be his way!

A woman's love is like a rock,  
Which every tempest braves,  
And stands secure amidst the shock  
Of ocean's wildest waves.  
And blest is he to whom repose  
Beneath its shade is given;  
The world, with all its cares and woes,  
Seems less like earth than heaven.

## The Fabled Continent.

THROUGH a far remote antiquity there existed an imperfect idea that a large portion of the earth had been suddenly submerged in the ocean, and the most renowned of the early philosophers strove to give the lost continent a real habitation and a name. That this idea might with any have been no other than a legendary account of the fuge may, in our days, be generally inferred; but in some of the eastern countries the opinion of a lost continent long retained its ground after a knowledge of the world had been acquired, and its occurrence fixed at an earlier date than that of the submersion of a vast tract of country beneath the wild waves of the Atlantic.

Among the places fixed upon by the Greek poets as the locality of the famed Hesperian Gardens, where Hercules plucked a golden fruit—(now, alas! supposed to have been only oranges)—those of Cape de Verd were fixed upon, though others placed them in Andalusia, some in India, some in Ethiopia, and some in Siberia. The Cape de Verds were also known in later times by the name of the Fortunate Islands, and are described by Plutarch as being so in number, separated only by a narrow channel, at the distance of ten thousand furlongs from the African coast. The air fell seldom, and always moderately; soft breezes filled the air, which scattered the rich dews, so that the soil was not only prepared for sowing and planting, but it simultaneously produced the richest fruits, and that in such abundance, that the inhabitants had only to indulge themselves in the enjoyment of luxurious ease. The air, as the historian, is so pleasant, that even the barbarians give them to be the Elysian fields described by Homer. Virgil also alluded to them as a happy land, where the tilled earth yielded splendid fruit, the vines flourished abundantly, where honey flowed from the trees, and the murmuring streams rolled pleasantly down the mountains. Other poets, not content with this description, added shores of coral, adorned with pearls and gorgeous shells. In connexion with these islands Plato states that they were supposed to be the remains of the lost Atlantis, and which he estimated to have been as large as Syria and Asia Minor. He also informs us that in the splendour of its architecture, in the richness of its minerals, and the beauty of its flowers and diversified landscapes, as well as in the proficiency there attained in the arts and sciences, it was surpassed by no country in the world. This information also derived from Socrates, who learned it from a philosopher named Critias; the latter had been told so by his grandfather, who derived his information from Solon, the traveller of Athens, and who was indebted for his knowledge of the Atlantis to the Egyptian priests! This direct testimony is of little value as to the existence of the continent, but it proves the general prevalence of the idea of its loss, and also informs us to whom the world is indebted for so much of its fabulous as well as actual history.

It is related of the Ethiopians that they were acquainted with seven islands in the Atlantic, the inhabitants of which cherished a tradition that there once existed an island much larger than the others, and on which the smaller were dependent. Some speculative theorists supposed that the fabled continent existed from Ireland or the Azores to America; and Buffon, limiting his belief to an *if*, considers that all the islands in that part of the ocean are the summit of its mountains.

The Carthaginians knew of the Fortunate Islands, and were so impressed with the glowing description they received of them from their adventurous countrymen, that great numbers desired to visit or to emigrate to these fair islands of the blest. The Senate were, however, friends to emigration, and considered that their countrymen were better at home than they could be anywhere else. They accordingly enacted a law, by which it was declared that any one landing on these islands should suffer death.

Aristotle, the most learned philosopher of his day, divided the idea of the habitable globe being formed of

islands and continents; he declared the whole earth to form but one island, surrounded by the Atlantic sea. He considered that there might be other islands in opposite directions from the portion of the earth known to him, but all these were invisible.

These eastern philosophers, it will be seen, always cast their learned eyes to the west when talking of the sea, although they were not ignorant of the existence of India, and the broad countries around it. All of them appeared to have heard that another continent had been seen in times long antecedent to their existence, but no known navigators having proceeded further west than the islands spoken of, a somewhat large poetical license was taken with the geography of the earth, and the sea was declared to have swallowed the solid land, which, with its numerous inhabitants, went down into the mighty deep in a single night. So wonderful a story could not fail in acquiring listeners, and the invention of every voyager from the wonderful regions would no doubt be taxed to supply his eager inquirers with information. When men set out in search of a particular object, they generally discover something like it, or some of its remains, or the place where it must have existed. But here the continent was not to be discovered; a single island was sufficient for the purpose. This was once a towering mountain, high in air ascending, green in its slopes, and misty on its summit; now it is a rocky plain, immersed in the ocean's bed, with its base beyond the depth of plummet's sound!

This conclusion being arrived at, it required only a slight stretch of fancy to discover some remains of the continent itself. The Carthaginians, undoubtedly the greatest seamen of their day, proceeded along the coast of Africa, as far as Teneriffe, and certainly made the most of its description. Not that they wilfully led the vulgar astray as to its appearance, but having themselves looked on it with wondering and awe-struck eyes, their inflated account appears in our day approaching too near the marvellous. They describe it as an immense mountain, its head lost in the clouds, and yet from its summit they observed flames burst forth, which illuminated the sea to an incalculable distance. Proceeding westward, some degrees south of the Canary Islands, the Carthaginians found the sea impassable in consequence of an immense congregation of weeds. This could, therefore, be no other than the plants of the submerged continent, and the legend became more and more impressed in the belief of the ancients. Between the parallels of 18 and 33 degrees of north latitude, there exists a large assemblage of marine plants, which stretch in a bush-like appearance over an extent of water calculated at not less than fifty thousand square leagues, appearing on the surface of the ocean like a vast meadow under water, while here and there a more ambitious branch rises above the level shroud, like a solitary furze upon a moorland waste. This is called the Grassy Sea, and to this day attests the fact of its having been visited by the Carthaginians. That nation is gone, swept from the face of the earth, yet the plant remains a marvel to all who visit it. Among the weeds are frequently caught small sea insects and animals, which incline spectators to the belief that the water must be shallow. It is unfathomable! Still even in our day there are learned men, with more of poetry than philosophy in their composition certainly, who dwell on the idea of a continent having sunk in the abyss.\*

\* Combining this idea with the prominent changes on the earth's surface, and the rise and decline in fortune of the human race, Beattie, in his celebrated poem of "The Minstrel," says—

"Of chance or change, oh! let not man complain,  
Else shall he never, never, cease to wail.  
For from the imperial dome, to where the swain  
Rears his lone cottage in the silent dale,  
All feel the force of Fortune's fickle gale.  
Art, empire, earth itself, to change are doom'd;  
Earthquakes to heaven have raised the humble vale,  
And gulphs the mountain's mighty mass entomb'd,  
And where the Atlantic rolls wide continents have bloom'd."

Columbus, to whom alone pertains the unapproachable honour of the being first in mind, as well as person, who traversed the vast Atlantic, and convinced himself that land existed beyond its shores, looked upon the Grassy Sea with terror and dismay. To a person willing to believe that a large tract of land had sunk into the deep, the marine phenomena at first view presents apparent evidence of the idea not being altogether a fable; and it was not then surprising that Columbus might for a moment tremble for the success of his project. He knew so far had the navigators of antiquity proceeded—that there they had been satisfied of the truth of the most wonderful legend to which the world listened—that there they had turned the prow of their venturous bark, and sought their home again. Still to the west stretched out a world of water; far as the eye could see the ocean waste extended. The outline of geographical science which the great discoverer had figured to himself, however, was not satisfied. He knew that to the far East which he had left an ocean must sit its limits; and he was confident that to that East he would come did he proceed round directly westward. He considered, with Aristotle, that the Atlantic bordered the great island of the earth, and that stretching across its vast expanse he would come, in all probability, to the most eastern confines of India, to which by land no known human being had yet proceeded. How greatly was he deceived! The continent or which the old world dreamed lay between him and his fancied result, and beyond that continent, another, a broader, and more trackless ocean lay, ere the shores of India could be reached.

Whether or not some ship had visited America, and, losing its reckoning in the wild desert of the Atlantic waves, had, on its return, fixed the position of the continent so much too near its eastern verge, is an idea as far remote from proof as the existence of the Atlantis itself; but it is at least more consonant with the character of the earth and man. Even these islands, although made the fabled abode of the gods, crowned with beauty, and full of enjoyments, became lost to the middle ages. Homer was supposed to have used them as a fable, as an unapproachable locality, to which the gods alone could waft themselves, so distant were they from the habitations of human kind. When the kingdoms of the world were shattered by the destruction of the Roman Empire, and the dark ages spread their mantle upon the mental energies of nations—when countries confined themselves to their territories, and sought neither friendship nor commerce with their neighbours, all knowledge respecting what were afterwards called the Fortunate Islands was lost. It was not until the Genoese proceeded in search of new climates that they were again discovered. The Pope, as Emperor of the World, bestowed them on a Spanish noble, who thus obtained the title of "Prince of the Fortunate Islands." It is not, therefore, too great a stretch of fancy, especially when placed in opposition with the romance of a submerged continent, to suppose that some wanderers on the deep had traversed, to some extent, the shores of the Western hemisphere ere Egypt became a marvel to the world, or Homer a tutor to the poetic tribe.

That the earth has been subjected to mighty changes is undoubted; that continents and seas on the deluge changed positions may be true; and that every record of the antediluvian world became covered by the mass of waters, may not be altogether fabulous. These imaginations carry us, however, further back than even the idea of the Atlantis, for its loss, if lost it was, took place when the other portions of the world stood still and felt no change. It has been calculated, that were the earth to stay one moment in its swift career round the sun, that the Atlantic would be thrown into the Pacific, covering America in the twinkling of an eye; while the Pacific, with a wing swifter than light or thought, would hurl its destructive way across our hemisphere, and fall into the bed of the Atlantic. From what a wild and destructive change are we preserved by the order and intelligence of Omnipotence!

As a small excavation filled with powder will, shake a

rock to pieces, so a subterranean fire of small extent will cause the earth to quake, and prostrate its artificial erections to the ground. As a pebble thrown into a vessel filled with water will cause its overflow—(see the good old story of the crow that wished to drink out of a half-filled jar)—so the ocean has its limits, fixed by a greater and more powerful hand than the potter controlling his clay; and into it no continent could fall without its shores spreading out on all sides upon the resisting land. Such an event could not take place without shaking and disturbing the whole earth, to such an extent, that not a stone would be left upon another, nor a human being be able to breathe in the agitated atmosphere. A bow has been set in the firmament. "I will not again destroy the earth for man's sake," saith the Lord.

### Burns Illustrated and Explained.

#### CHAPTER IV.—TAM O'SHANTER.

THE days of witchcraft have departed, and the wild belief which disturbed the village quiet has given place to milder superstitions if not to positive improvement. The rustic intellect is no longer distracted by the terrors of supernatural visitation, and though in some less cultivated districts a dim belief may exist as to the midnight wanderings of disembodied spirits, and the churchyard be still invested with its grisly horrors, the general faith in Satanic agency and necromantic charms is numbered with the things that were. Poor old women are suffered to live and die in peace, provided always that they keep their poverty to themselves, and urge not too frequently their claim for existence upon their generous and charitable relations. Time was, however, when no accident befel the meanest hind but it was considered the potent workings of the Evil One, conveyed by his purchased instruments of mortal clay. If an ox was stolen, or a sheep had strayed, it must have been wafted away by the spell of witchcraft to grace a supper of the unhallowed host; if a field of corn was destroyed by mildew, or a fruit tree became barren, it was nothing else than the spell of devilry; and he was a daring man indeed who presumed to rise up against the legion of enemies by which he was surrounded: ruin was inevitable, death was sure. Therefore a timorous discretion became at all times the better part of valour, and soft words and fair gifts were presented to the feared and hated one—the suspected witch—that the charm might be removed. Nay, it was no uncommon circumstance, if a bridegroom had been twelve months a husband without becoming a father, to impute the failure, not to natural causes, but to the interference of some slighted lover, who had purchased the offices of the village witch—for every hamlet was honoured with the presence of a direct ambassador from Satan;—there was no other resource, therefore, than to bribe with a higher price the good services of the charmer; and a stricter obedience was at all times given to the orders of the so-called witch than to the mandates of reason, or the less ludicrous dictates of common sense. It is not to be wondered at, then, that many when they found themselves dubbed warlocks and witches by the common herd, and suffered all the penalties of such election—spurned in public and all acknowledged intercourse denied them—that they at once accepted the proffered price of their services, and enriched themselves from the credulity of their neighbours.

Witches were supposed to be women who had sold their existence in the life to come to the Old Enemy of Mankind for the privilege of working their will in this world,—of wreaking their malice and revenge on their neighbours. Warlocks were men of the same character; for, of course, it could never be supposed that women would retire from mundane society without a portion of the other sex accompanying them. But warlocks were at all times comparatively few, the reason assigned by the believers in witchcraft for which was, that Satan was more partial to the softer sex, and delighted in the company of the ugly and the old, whom the world had thrown off from mixing in its pleasures. The true reason, however, may be found in the fact, that old men generally are less helpless than friendless, solitary, decayed women, and consequently less guilty of encroaching on the charity of the selfish—less likely to become a burden, and of course less spoken of in terms of unkindness and reproach.

But witches, though living apparently alone and poor, surrounded by wretchedness, and pressed down by want, were at all times supposed to be a social, high-living, deep-drinking community. Their poverty was considered but a flimsy veil to cover their gluttonous enormities;—the staff which supported their tottering frame was to the vulgar more powerful than the rod of Moses, which became a serpent—and the solitary cat, the only living thing that held open communion with them, was none other than a special and protecting messenger from the nether world. Even ladies of high quality were suspected of an unholy intercourse with the Prince of Darkness, especially if they could read books in an unknown tongue; and female children who had the witch-glamour in their eyes were a doomed race;—they were hooted on the village-green—shunned in the school—avoided during all the sweet courting time; were without a helpmate—were soon old and sooner poor—they were the witches of the next generation. This uncomfortable and distressing belief, however, had its accommodations,

Did a man desire to part with his wife, he had only to accuse her of witchcraft, and adduce some instances of her intimacy with the foul fiend, and she was speedily sent to fulfil her supposed engagement in the darkened regions. Did a shepherd fail to give a due account of his flock—was a corner of a corn-field stripped, or a barn-yard desolated of its poultry—it was witchcraft! And who more earnest in denouncing that unhallowed crime than those whose duty it was to have protected the stolen property? Nay, a man could not get intoxicated over night, but his wife was harrowed next morning by a fearful tale of his having been waylaid by witches, who took his money, tore his clothes, and left him insensible in the mire. Thus, then, if witchcraft was a general curse, it was also a general excuse, of both of which the present generation are deprived. Our old women are disarmed of their terrors, they wield the spell of power no more. They have ceased to be consulted by inquisitive damsels as to the colour of their future husbands' hair; they receive no bribes to plant the seeds of love in a saucy maiden's heart, and the despised and rejected lover must plead his cause alone. Let us wish therefore that the true and honest hearted, however awkward in their speech, may never plead in vain—and that every girl who desires a partner through the maze of life may procure one according to her wish.

The admirable poem of "Tam o'Shanter" is the only tale of witchcraft written by Burns. He had more faith in the native witchery of woman than in any foreign power she could call to her aid. He delighted not in the degrading superstitions of the untaught, in the grovelling mysteries of those who neither thought nor reasoned, but took their faith from the prevailing ignorance of the time. The tale was written to illustrate an account of the ruins of Alloway Kirk, a venerable building adjoining the place where the poet spent his youth. The poem was the labour of a single day, written long after he had left the scene which it describes; it was a gift from memory to the chequered enjoyments of his boyhood, flung from his muse with the strength and energy of old acquaintanceship. It embodies the popular belief respecting the fate of those who dare to gaze upon the revels of the Satanic corps; and, in addition to its mixture of the horrible and humorous, it combines the mellifluous poetry of life with the harsher prose of human existence—it shadows forth the gross pleasures of man, and the petulant temper of woman, subliming even these topics by the loftiest reflections on the evanescent enjoyments of the human race.

It was an old Scottish custom, on market days, for the vendors of all commodities (called chapmen) to expose their wares on the public street, for the accommodation of their country customers; bales of cloth and muslins, shoes and hardware, were heaped in loving intermixture in each booth, while its front was gaily adorned with the best specimens of the articles to be had within. It is on the afternoon of such a market day that the tale of Tam o'Shanter commences. The huckster brotherhood begin to leave the street, the business of the day being concluded. The ever dry dram-drinker salutes his companion, while the more sober "take the gate"—take the road home, to enjoy the evening at their own fireside. The jovial marketer, however, has farther business of importance to transact; the cold has to be shaken from his bones, and an interrupted acquaintanceship is about to be renewed. The wife and home are alike forgotten, and the dark and lonesome way, with its dangerous interruptions, laid aside for future reflection.

When chapman billies leave the street,  
And drouty neighbours neebors meet;  
As market days are wearing late,  
And folk begin to take the gate;  
While we sit bousing at the nappy,  
And getting fou [drunk] and unco happy,  
We think na of the lang Scots miles,  
The mosses, waters, slaps, and stiles  
That lie between us and our hame,  
Where sits our sulky sullen dame,  
Gatherin' her brows like gatherin' storm,  
Nursin' her wrath to keep it warm.

This sulky sullen dame, with a few others, has likely been willing away the afternoon in a neighbour's house; talking of the merits of their respective husbands; this one never said an unkind word to her; that one never had been contradicted; one had never seen her husband the worse of liquor; another was not against him enjoying himself, especially at home; and Kate, much as she has abused her husband to his face, feels herself constrained to add a good word in his favour, declaring that he is the most attentive and docile creature in the world. One by one they are called away by their respective spouses, and Kate is at last compelled to leave, not by the arrival of her own but of each associate's husband, and she retires alone, the only wife among them that has not welcomed home her liege lord. She looks on her vacant fireside, and thinks how her neighbours are enjoying themselves. The cat is driven off a chair with an unkind interjection, and she mutters to herself something about dying and having nobody to care for her. Nine o'clock strikes, and then ten; she has been to the door twice, and would go again but a storm has commenced, and she half-audibly wishes that she may never see him more. The cat has gone to sleep on the hob; the fire gets somewhat low, but she will rather endure the cold than put some coal on it. She recollects that it is only a fortnight since he was out so late, and that a week before that, and a fortnight before that again, he came home in not the most

dignified manner. One neighbour had bought his wife a shawl, and another a new gown, each of the times he was out so late, but he brought her nothing, and she will therefore submit to it no longer; she will leave his house the moment he comes home. Then again she thinks he may have fallen from his horse and been killed, or he may have been waylaid and murdered, and though he is a worthless fellow, "a gude-for-naething ne'er-do-weel," he is still her husband, and the only stay she has in the world. Then the rain comes battering on the window, the wind moans, and a dog barks a cheerless death-howl in the barn yard. Therefore she puts on a good fire, lest some strangers may bring him home, and they might think she was not attentive to him. But—yes, that fearful but—but let him come home alive and well, and she will burst upon him like a fury—he will not stay at market again so late, she will warrant.

This truth fand honest Tam o'Shanter,  
As he frae Ayr ae night did canter  
(Auld Ayr, whom ne'er a town surpasses  
For honest men and bonny lasses!)

And this truth, no doubt, have many others discovered who have forgot their serious promise to be early home, and who, in the potent pride of practical inspiration, have dared to walk in with an independent strut, as if they were sole master of the domicile.

O! Tam hadst thou but been sae wise  
As ta'en thy ain wife Kate's advice;  
She'd tauld thee weel thou wast a skellum,  
A bleatherin', blustering, drunken biellum;  
That frae November till October,  
Ae market-day thou wastna sober,  
That ilka melder wi' the miller  
Thou sat as lang as thou hadst siller;  
That every naig was ca'd a shoe on,  
Thou and the smith gart roaring fou on;  
That at the Lord's house e'en on Sunday  
Thou drank wi' Kirtan Jean till Monday.  
She prophesied that, late or soon,  
Thou wad be found deep drowned in Doon,  
Or cast wi' warlocks in the mirk,  
By Alloway's auld haunted kirk.

Now Tam could not have forgotten all this train of his frailties, for it had been told him late and early—had embodied the music of his scolding dame's voice at every meal, and been the accompaniment to every one of his indulgencies—and yet on this, as on every other occasion, he came not home, and the reason is somewhat obvious. Recrimination never improved a man, nor is threatening spleen the best inducement to return to the scene of strife. It is of no use to tell a man that his conduct generates ill-nature, and that the said ill-nature will have vent. Man is as stubborn and headstrong as a mule in the hands of an uncomfortable wife;—it only she, who, all gentleness herself, speaks kindly at all times and seasons, that can command the obedient and attentive conduct of her spouse. The high-toned curtain-lecture may spoil a night's sleep, but it will never induce him to retire more early to that desecrated place of rest.

Ah gentle dames! it gars me greet  
To think how many counsels sweet;  
How many lengthened sage advices  
The husband frae the wife despises.

The irony of these few lines is most acute. We are to suppose an outrageous virago, addressed by the soothing appellation of "gentle dame," and a disagreeable rehearsal of her husband's faults, with a running commentary thereon, as sweet counsel; and because it is despised it makes the poet cry;—him, who cared as little for the lengthened sage advice of a woman who forgot her place as he admired and cherished and dearly loved the kindness and attention of her who was his wife indeed—who excused his faults on account of his better qualities—who dwelt longest on the most pleasant portion of their lives, and never recurred to that which ought to be forgotten;—him, who, while he has sung in the sweetest and most tender strains the priceless value and enduring worth of "rapture-giving woman," has also left a record of his disapprobation of female conduct when departing from its sphere in the following lines:—

Cursed be that man, the poorest wretch in life,  
The crouching vassal to the tyrant wife;  
Who has no will but in her high permission;  
Who has no sixpence but in her possession;  
Who must to her his dear friend's secret tell;  
Who dreads a curtain lecture worse than hell.  
Were such the wife had fallen to my part,  
I'd break her spirit or I'd break her heart;  
I'd charm her with the magic of a switch;  
I'd kiss her maids, and kick the perverse —

There is scarcely a more degrading position in which man—vain, lordly man—can be placed than to be compelled against his will to listen to a despotic female lawgiver. Nay, even though his behaviour be not what it should be, he only adds to the meanness of his character by having his rule of conduct laid down by her whose highest pride it should be to listen to his will, and strive to his pleasure. It is men like these who degrade the high and ennobled attributes of the masculine creation, who drag down to their own mean level the generous efforts of kindly woman, and derange the whole economy of conjugal life. The highest place for woman is to walk by her husband's side—her greatest merit to cling with fondness there. The lowest place for man is to be second at home—his greatest shame that his own conduct has made him so. It is, indeed, too true that when man forgets his dignity, woman neglects her honour.

for both are in his keeping, and both will remain secure only so long as the lord of the creation bears himself as such—not in heartless tyranny, not in prideful sway, but in the discreet assumption of his natural station, his first duty in which is kindness unto gentle woman, for she was sent to make his sojourn on the earth more pleasant by her smile.

But to our tale:—Ae market night  
Tam had got planted unco right,  
Fast by an ingle bleezing finely,  
Wi' reaming swats that drank divinely;  
And at his elbow Souter Johnny,  
His ancient, trusty, drouthy cronie;  
Tam lo'ed him like a very brither,  
They had been fou for weeks thegither.  
The night dave on wi' sange and clatter,  
And ay the yill was growing better.  
The landlady and Tam grew gracious,  
Wi' favours secret, sweet and precious;  
The Souter tauld his queerest stories,  
The landlord's laugh was ready chorus;  
The storm without might rair and rustle,  
Tam didna mind the storm a whistle.  
Care, mad to see a man sae happy,  
E'en drowned himself among the nappy;  
As bees flee hame wi' lades o' treasure,  
The minutes wing'd their way wi' pleasure.  
Kings may be blest, but Tam was glorious,  
O'er a' the ills o' life victorious.

Tam was determined to enjoy himself—to have a hearty and jovial carousal with his old companion, and he had taken good care that a certain lady should not be a cause of interruption. He is far from home, and it is impossible for her to introduce an extemporaneous scene, as described in Macneil's exquisite ballad of "Watty and Meg." Watty, a wife-managed husband, somehow or other had contrived to retain a fourpenny piece in his breeches-pocket, unknown to his domestic governess. Instead of coming quietly home at six o'clock from his labour, to hold the child by particular desire, or make himself otherwise generally useful, he dropped in like a spectre to a roadside public-house, and magnanimously resolved to be a man even if it were for that night only. But, unfortunately, he had reckoned without his host, for ere he has been long seated, an inward consternation tells him that a well-known voice is inquiring for him outside, and ere he can depart another way, like a car with a coward tail, the kind and generous partner of his lot bursts in upon him with this kindly greeting:—

O ye drunken beast o' Bethel,  
Drink's your night and day's desire;  
Rise this precious hour, or faith I'll  
Fling the whisky in the fire.  
Watty heard her tongue unhalloved,  
Paid his groat wi' little din;  
Left the house, while Maggie followed,  
Flying [scolding] a' the road behind.\*

Against such interruptions as these Tam was secure. "Souter Johnny,"—[Anglice, "Shoemaker John,"]—was a rare jocund fellow, whose song and story kept the table, and all that it contained, in motion. The reaming swats—the ale with a flowing cream—rich, thick, and substantial to the palate, and generous to the brain, drank divinely. The cronies sought not the expensive liquors of the wealthy; such spiritless potations suited not their stomachs—it required the home-brewed, unmix'd blood of strengthening malt to warm their imaginations—to kindle into its former flame the recollection of their friendship. All the exquisite delights of former meetings rose upon their memory, as each foamy tankard went its downward way, till at length the sparkling love of ancient fellowship merged in a spirituous glow of social brotherhood; they shook each other by the hand so fiercely, and looked so peeringly into each other's faces, that they at length wondered how they should have been so long separated—they, who had been "fou for weeks thegither." The song went round, and every song had a chorus, and uproarious ones they were. The ale, most wonderful of all, grew better instead of worse, and Tam, in the pride of his heated brain, fancied that the landlady had taken a peculiar notion to him. Of course, "as lang as he had sillar," the landlady scorned not to encourage his delusion, while her obsequious mate gave his ready laugh to all that was said and done. His snuff-box, a sheep's horn rimmed with silver, and a pebble on the lid, is in one hand, and a tankard in the other. Tam has just asked him to taste, and he is waiting to see whether it will be necessary to laugh at the Souter's wit, which is something about the next landlord, and he having no reckoning to pay. The storm is enjoying itself outside, alternating its chill sighing moan with its angry howl, telling them, but to no purpose, that it is waiting on their departure, and will be glad to accompany them home. Even "Care," that merciless creditor, who duns all mankind with his unasked visitations, has lost his hold

\* Another scene of this description is alluded to in the song "Cauld Kail in Aberdeen," where the rencontre is thus described:—

"She gat him ance at Willie Sharp's;  
And at what we maist did laugh at,  
She brake the bicker, scait the drink,  
And tightly cuff'd his haffet."

That is, she broke the wooden cap containing the liquor, spilt the precious beverage, and exerted her muscular energies on the temples of him she had promised to love, honour, and obey.

on them, and in a fit of desperation commits suicide in the tasteful liquor. How worthy of a higher occasion are the lines which follow:—

As bees flee hame wi' lades of treasure,  
The minutes wing'd their way wi' pleasure.

It is a pleasant sound, upon the silent hill's rough sunny side, to hear the song of triumph from the laden bee; he went forth a fierce marauder, muttering sourly to himself his hatred to all nature; he sullenly disported among the flowers, drinking with greedy lips the nectar from their bosoms; he becomes intoxicated however, with repeated sippings; even to him the ale is growing better, and he latterly returns at peace with himself and all the world, shouting with stentorian lungs some favourite ditty, and calling on his less elevated associates as he passes along to help him with the chorus; he is, indeed, a drunken man, but he goes home undaunted by no fear of a sulky dame, for he brings a portion of his earnings to the common store. This is the only difference between him and honest Tam; but Tam has forgotten that such a difference exists, and is as independent as social glee can make him. To him, there is neither care nor sorrow upon earth; bright and sunny pictures open up before him; he treads with a conqueror's heel on the animosities of man, he drowns in a flowing cup the wrath of woman, and esteems himself blessed indeed. No ill can reach him—no pain come near; his swimming eyes behold nothing but happiness—his untuned ear is struck with nought but joy.

But pleasures are like poppies spread,  
You seize the flower—it's bloom is shed;  
Or like the snow-falls in the river,  
A moment white, then melts for ever;  
Or like the borealis race,  
That fit ere you can point their place;  
Or like the rainbow's lovely form,  
Evanishing amid the storm.  
Nae man can tether time nor tide—  
The hour approaches—Tam maun ride;  
That hour o' night's black arch the key stane,  
That dreary hour he mounts his beast in;  
An' sic a night he taks the road in,  
As ne'er poor sinner was abroad in.

There could not be a more apt illustration of the pleasures of our bacchanals than the first the poet has given. Pleasures are spread like poppies. It looks a substantial flower—its deep, dark red colour seems of a lasting hue—its leaves are gaily spread like a venal wanton prodigal of her beauties. It hangs gracefully on its stem; elegance and splendour of dress, depth and richness of colour, luxurious ease, and pleasure even to wantonness, are its characteristics; but put forth your hand and you pluck a worthless flower. The veins of the leaf dry up and shrivel on the instant; the deep hue has already faded, and the gracefully spreading bud becomes shapeless; nothing is left but a strong odour, the effluvia of the intoxicating drug manufactured from the plant, which is only to be compared to the nauseating reminiscences which follow a deep debauch. More tender are the illustrations which follow. It is more than beautiful, it is intellectually and spiritually moral, to witness the graceful fall of the snow-flake, its rapid undulations in the air, and its momentary sparkle on the breast of the darkened water, with which it commingles, and of which it becomes a portion for ever! How different, and yet how equally true is the likeness of pleasure to the gleams of the Northern Lights, those restless streams of light that flood along the sky, illuminating the dark expanse with morning's brilliancy, yet cold and cheerless as the ice from which they are reflected. The pleasures of the carousal must, therefore, have as cold an end. The smile of the landlady accompanies them no farther than the door; the landlord's laugh has already died away. That hour of night's black arch the keystone, twelve o'clock, a dreadfully late hour in the country, has summoned Tam to mount his good grey mare, and the angry storm greets him with a boisterous welcome, as if to bring to his remembrance the tempest which awaited him at home.

The wind blew as 'twad blawn its last,  
The rattling showers rose on the blast,  
The speedy gleams the darkness swallowed,  
Loud, deep, and laag the thunder bellowed.

Amidst all which Tam rode homeward, but what befel him by the way must not be told till the next chapter.

### The Evening Cloud.

BY PROFESSOR WILSON.

A cloud lay cradled near the setting sun:  
A gleam of crimson tinged its braided snow.  
Long had I watched the glory moving on  
O'er the soft radiance of the lake below.  
Tranquil its spirit seemed, and floated slow:  
E'en in its very motion there was rest;  
While every breath of eve, that chanced to blow,  
Wafted the traveller to the beauteous West.  
Emblem, methought, of the departed soul,  
To whose white robe the gleam of light is given;  
And, by the breath of mercy, made to roll  
Right onward to the golden gates of Heaven,  
Where to the eye of Faith its peaceful lies,  
And tells to Man his glorious destinies.

### Automata.

THE following account of the most celebrated automata will be read with interest, and not the less so when it is known that the secret springs which regulate the motions of "Punch and Judah" were the earliest of all mechanical attempts, and that from them have been derived all the wonderful engines which superseded manual labour.

**Drawing and Writing Automata.**—Various pieces of mechanism of wonderful ingenuity have been constructed for the purposes of drawing and writing. One of these, invented by M. Le Droz, the son of the celebrated Droz of Chaux le Fonds, has been described by Mr. Collinson. The figure was the size of life. It held in its hand a metallic style, and when a spring was touched so as to release a detent, the figure immediately began to draw upon a card of Dutch vellum previously laid under its hand. After the drawing was executed on the first card, the figure rested. Other five cards were then put in in succession, and upon these it delineated in the same manner different subjects. On the first card it drew 'elegant portraits and likenesses of the king and queen facing each other,' and Mr. Collinson remarks that it was curious to observe with what precision the figure lifted up its pencil in its transition from one point of the drawing to another without making the slightest mistake.

**Maillardet's conjurer.**—M. Maillardet has executed an automaton which both writes and draws. The figure of a boy kneeling on one knee holds a pencil in his hand. When the figure begins to work, an attendant dips the pencil in ink, and adjusts the drawing-paper upon a brass tablet. Upon touching a spring, the figure proceeds to write, and when the line is finished its hand returns to dot and stroke the letters when necessary. In this manner it executes four beautiful pieces of writing in French and English, and three landscapes, all of which occupy about one hour. One of the most popular pieces of mechanism we have seen is the magician constructed by M. Maillardet for the purpose of answering certain given questions. A figure, dressed like a magician, appears seated at the bottom of a wall, holding a wand in one hand, and a book in the other. A number of questions ready prepared are inscribed on oval medallions, and the spectator takes any of these which he chooses, and to which he wishes an answer, and having placed it in a drawer ready to receive it, the drawer shuts with a spring till the answer is returned. The magician then rises from his seat, bows his head, describes circles with his wand, and consulting the book as if in deep thought, he lifts it towards his face. Having thus appeared to ponder over the proposed question, he raises his wand, and striking with it the wall above his head, two folding-doors fly open, and display an appropriate answer to the question. The doors again close, the magician resumes his original position, and the drawer opens to return the medallion. There are twenty of these medallions, all containing different questions, to which the magician returns the most suitable and striking answers. The medallions are thin plates of brass of an elliptical form, exactly resembling each other. Some of the medallions have a question inscribed on each side, both of which the magician answers in succession. If the drawer is shut without a medallion being put into it, the magician rises, consults his book, shakes his head, and resumes his seat. The folding-doors remain shut, and the drawer is returned empty. If two medallions are put into the drawer together, an answer is returned only to the lower one. When the machinery is wound up, the movements continue about an hour, during which time about fifty questions may be answered. The inventor stated that the means by which the different medallions acted upon the machinery, so as to produce the proper answers to the questions which they contained, were extremely simple. The same artist has constructed various other automata, representing insects and other animals. One of these was a spider entirely made of steel, which exhibited all the movements of the animal. It ran on the surface of a table during three minutes, and, to prevent it from running off, its course always tended towards the centre of the table. He constructed likewise a caterpillar, a lizard, a mouse, and a serpent. The serpent crawls about in every direction, opens its mouth, hisses, and darts out its tongue.

**Benefits derived from the Passion for Automata.**—Ingenuous and beautiful as all these pieces of mechanism are, and surprising as their effects appear even to scientific spectators, the principal object of their inventors was to astonish and amuse the public. We should form an erroneous judgment, however, if we supposed that this was the only result of the ingenuity which they displayed. The passion for automatic exhibitions which characterised the 18th century, gave rise to the most ingenious mechanical devices, and introduced among the higher orders of artists habits of nice and accurate execution in the formation of the most delicate pieces of machinery. The same combination of the mechanical powers which made the spider crawl, or which waved the tiny rod of the magician, contributed, in future years, to purposes of higher import. Those wheels and pinions, which almost eluded our senses by their minuteness, re-appeared in the stupendous mechanism of our spinning-machines and our steam-engines. The elements of the tumbling puppet were revived in the chronometer, which now conducts navies through the ocean; and the shapeless wheel which directed the hand of the drawing automaton, has served in the present age to guide the movements of the tannour engine. Those mechanical wonders which in one century enriched only the conjurer who used them, contributed in another to augment the wealth of the nation; and those automatic toys which once amused the vulgar, are now employed in extending the power and promoting the civilisation of our species. In whatever way, indeed, the power of genius may invent or combine, and to whatever low or even ludicrous purposes that invention or combination may be originally applied, society receives a gift which it can never lose; and though the value of the seed may not be at once recognised, and though it may lie long unproductive in the ungenial till of human knowledge, it will, some time or other, evolve its germ, and yield to mankind its natural and abundant harvest.

### To the Unforgotten.

WHEN my wild youth was in its prime,  
Ere this dark world had stained my soul,  
When golden hopes and dreams sublime  
For ever o'er my fancy stole,  
Then glorious visions came of one,  
With lip of love and heart of truth,  
And since, through woe and bliss, alone  
I've worshipp'd this bright dream of youth.

I made a vision'd paradise,  
Where I would rove with one like thee,  
Ere the bright day-star's golden rise,  
Till night's dark pall hung o'er the sea.  
An angel with an eye of pride,  
Bright flashing with a spirit high,  
Hast words to gentle tones allied,  
And music from her own pure sky!

'Twas but a dream—yet still the form  
Lived in my heart—walked by my side—  
And still I deemed some seraph warm  
Had left her crowning sphere of pride  
To bless my visions!—but I woke  
With aching heart and burning brow;  
The shadow fled!—my altar broke;  
Another hath my idol now.

Yes! all I've ever dreamt or felt,  
Or hoped or wished of soul's delight,  
For whom at morn I've praying knelt,  
For whom I've sighed and wept at night;  
For whom I've sought mid clouds of care,  
O'er earth and ocean tempest toss'd;  
Whose image blest me mid despair,  
Is now another's—to me lost.

Why should I speak of this to thee?  
Why talk of dreams and visions past?  
Why prate of present misery?—  
It is the first time and the last.  
Yet could I bare my heart and show  
Its every pulse thro' wild for thee,  
Though love thou may'st not give, I know  
Thou canst not cease to think of me.

### Wood Pavement.

THE substitution of wood for stone, as a pavement for streets, appears to be now so generally desired by the resident householders and shopkeepers of the principal thoroughfares of London, that a few observations on an ingenious plan, which has but recently been brought before the public, may prove interesting to our readers.

The plan we allude to is the invention of Mr. Benjamin Rankin; and the manufacture of the pavement is carried on by Messrs. Esdailes and Margrave, at their saw-mills in the City-road; the latter firm being also proprietors of the patent, or rather licences, for the metropolitan districts.

The grand advantage possessed by this new wood pavement over any other yet laid down, is the secure foothold for the horse which it unquestionably provides; this primary quality being an inevitable consequence of its peculiar mechanical construction. That the nature of this construction may be fully understood we have introduced some diagrams, as well of the individual parts of the pavement, as of its general appearance when finished and laid down.

The blocks of which Mr. Rankin's pavement is composed are all cut from one length of timber, each side of which is four inches across. There are two classes of blocks: one set is used for the foundation of the pavement, and the other for its surface, the latter only being subject to wear and tear, as the under tier of blocks can never by any chance be brought into contact with what passes over the surface. Before being cut into blocks, each length of timber is grooved and tongued, and both the upper and lower blocks are cut from the same piece. An examination of the subjoined drawings will fully explain the way in which these various operations are conducted.

Fig. 1.

Figure 1 represents the piece of timber after it has been grooved, the shaded part describing the grooves. Figure 2 represents the same piece of timber after it has been tongued, the white parts indicating the situation of the tongues. The grooves are made on one side, and the tongues on the side immediately opposite; both operations being conducted with great rapidity by steam machinery at the saw mills. The other two sides of the piece of timber are plain. The length thus prepared is ready to be cut into blocks, a process which is also rapidly effected by the saw, and the previous arrangement of which will best be understood by an examination of the

Fig. 2.

Fig. 3.

annexed diagram. A small piece is first removed from each end of the length. These two pieces are cut to waste, but this is the only waste that takes place; and whether the piece of timber be a short or long one, there is exactly the same waste in both. If short lengths are used, the waste will become an item of consideration in the calculation of prime cost; if long lengths are introduced, it will hardly be worth any consideration. The two shaded parts in the figure, c and d, indicate the shape of the pieces cut to waste.

It will be observed that there are six blocks sectionally described in the engraving, the intersecting marks indicating the direction of the saw. Of these six blocks, three belong to the upper set, and three to the under. These are separately known as key blocks and base blocks, the key blocks forming the surface of the pavement. Those particularised as A A A are base blocks; the others B B B are key blocks. The dotted lines between a and b point out the bases of the lower tier of blocks, which are placed upon the ground; also the bases of the upper set, which are placed upon the lower blocks contrarily to their position, the wedge part of the upper blocks being

directed downward, and their bases forming the surface of the pavement. After the blocks are thus cut from the length of timber, some further operations are necessary to prepare them for pavement. In the case of the base blocks, and for a reason we shall presently explain, three of its edges are chamfered or squared. In order that the nature and extent of that chamfering may be seen, we here

introduce two diagrams of a base block. Fig. 1 presents the grooved side, a and b describing the grooves; and Fig. 2 the tongued side, a and b A indicating the tongues. The letters A A A in both figures show where and how the blocks have been squared; and the letter B in each, points out the removal of a certain portion of the apex.

In like manner the annexed engravings of the upper block exhibit its shape when finished. Figure 3 is its grooved side, a and b being the grooves; and in Fig. 4, a indicates the position of the tongue. It will be observed, that no portion of the extreme end of this block has been removed, but that the base (forming the surface of the pavement as before stated) has been chamfered to some extent, and at a certain angle. We invite particular attention to this chamfering, because the secure foothold for the horse depends altogether upon it. The letters A A in each block describe the extent and position of the chamfer.

Every block of both sets is, therefore, identically alike; and the tonguing and grooving we have explained, permit of their being locked together in such a way, that although the pavement may be easily taken to pieces, and relaid as often as occasion may require, the same blocks serving; when once properly laid down, it is immovable, no matter whether the foundation beneath be good or bad.

The way in which the separate blocks are put together, is explained in the following representation of five blocks interlocked.

As the piece of timber from which the blocks are cut is grooved on one side, and tongued on the side opposite, it follows, as a matter of fact, that every block of both sets must also have the grooves on one of its sides, and tongues on the other. The position of grooves and tongues we have already shown in the preceding illustrations. The

tongue of one block fits into the groove of another in such a way that when joined together the second stands in advance of the first half its width. By uniting a third block to the first, on the side opposite to that where the second is placed, a like result is produced; and by adding a fourth between the second and third, it will be found that a wedge-shaped hollow exists in the surface of the blocks, although the base is uniform. Into this hollow a upper or key block is driven, its tongue and grooves corresponding with those of the base blocks. By this process it becomes firmly united with each of the four lower blocks, the whole of which it also binds together by its interlocking parts already mentioned. The diagram in the preceding column, represents five blocks so united; and every part of the pavement is constructed exactly in the same way, the general appearance of which, when laid down, is well represented in the annexed drawing, which is looked at from the column-rule.

This pavement possesses many valuable qualities. Its mechanical construction secures durability, and a firm and unchanging position, solely in consequence of the arrangement of its individual parts. If examined in detail, it will be found that no sinking can possibly take place, even if the foundation beneath it should altogether give way, because the principle of the arch has been adhered to in its design. Let a treble row of the base blocks be interlocked between two abutments, such as the kerbs of a street, their chamfered sides being placed together, as they are in fact; and afterwards let the upper blocks be driven home into their proper places. This done, whatever foundation was used to construct it upon, may be entirely removed without interfering with the pavement, the surface of which will remain as unbroken as before; nor will any weight passing over it have power to disarrange its parts. In fact, pressure does but consolidate the mass, a proof of which may be seen at the Royal Polytechnic Institution, where an experimental piece is laid down without any foundation at all; nevertheless, it is immovable. Durability, a primary recommendation in the case of a wood pavement, is the result of that arrangement of the blocks, which first of all secures the fibre of the wood being placed nearly perpendicular, the best position for strength and resistance, and afterwards permits repairs to be conducted by the removal and replacement of the upper blocks solely, the under ones never needing any repair, because no part of the foundation or supporting tier can ever come into contact with wheels or the feet of horses, the upper blocks alone constituting the surface. The saving of expense by this plan must be extensive.

The removal of part of the pavement for the purpose of admitting gas or water pipes underneath is effected without any other charge than that for labour, because all that is wanted is a small lever with which to lift up one or two of the key blocks; the rest may be taken to pieces by the hand. The replacement is managed with equal facility; the blocks are returned to their original places, and the pavement completed again with a hammer; and, however insecure or unsound the ground which was disturbed may have been left by the workmen, the surface of the pavement will remain unaffected for the reason we have just stated.

A wood pavement which unites durability, unchangeableness of position, and great facility of laying down and taking up, with the provision of a secure foothold for the horse, is entitled to serious consideration on the part of all those who are interested in its introduction. The advantages of wood over stone are manifest, if slipperiness can be obviated. Mr. Rankin's pavement does obviate slipperiness; effectually too; and the means by which this grand end is secured, instead of involving a sacrifice of some or any of the other necessary qualities in a pavement of wood, are absolutely those which create them. Let this be remembered.

The Corporation of London will, we understand, shortly make trial of this new wood pavement in a locality and upon a scale which shall leave no doubt as to the result of the experiment. This is the right way to do the thing. Experience is the only real index in matters of this kind; but that it will add the weight of its testimony in favour of the plan we have no doubt whatever. Government ought to permit this experiment to be made with duty-free timber.

## Christmas-day in St. Peter's.

IN the admirable Letters from Italy, by Miss Catharine Taylor, there are a great variety of graphic descriptions, well-arranged anecdotes, and apt reflections, connected with the buildings and scenes in Rome and other Italian cities. Her account of the High Festival at St. Peter's, in celebration of the nativity, affords a fair estimate of the varied powers of writing possessed by the fair authoress.

"We were in St. Peter's yesterday before eight o'clock, and were I think the first party that arrived. Congratulating ourselves on our good fortune in having the choice of places, we took our station on the raised seats appropriated to the ladies near the high altar, which was separated from the rest of the church by a high screen covered with crimson cloth. Two thrones were erected within this inclosure for the Pope; one opposite to the altar, raised on steps, the other at the side. Around were the seats destined for the cardinals, foreign princes, and ambassadors. We had just time to see all this, when a body of Swiss Guards, in their harlequin dresses of red, yellow, and black, came towards the spot where we were sitting, and we were speedily made to understand, by gesture more than speech (for these Guards know scarcely a word of Italian), that we must quit our comfortable places. We obeyed reluctantly, and were thinking very disconsolately on the possibility of standing two hours in a crowd of ladies now assembled round the entrance to the inclosure, when our servant came to tell us that he had spoken to a sacristan, who had promised to admit us into one of the small galleries, of which there are four beneath the dome. Nothing could be better than this situation; here we were quietly seated, without any bustle, looking down on the expecting crowd of ladies, who were not admitted to their places until long afterwards. Permission being once granted them to enter, in they rushed, each one struggling and pushing her way, in no very ladylike manner; the guard, in vain attempting to moderate their eagerness, was completely overpowered by them. I felt ashamed, for they were most of them, our countrywomen.

We had still an hour and a half to wait; but there was so much to amuse and interest us in the novel scene, that time flew without our knowing it. Every moment offered something new and strange. Now a cardinal, with his long train of servants, crossed the aisle in his bright scarlet robes—or returned, having exchanged them for a more sumptuous dress of white satin and gold. Now an ambassador, with his suit, was ushered through the crowd with all imaginable pomp. Here a priest, returning from a side altar, appeared from one of the arches, bearing the Host in his hand—there, a group of peasants in their bright festal garments, or a solitary friar pacing slowly along the aisle. In a confessional opposite to us sat a Dominican friar, listening amidst all this gorgeous array to the tale of penitence which a woman was pouring into his ear. Presently the Guarda Nobile arrived; this is the body-guard of his Holiness, and consists of the sons of noble Roman families; their dress is splendid,—scarlet and silver, with graceful plumes of drooping feathers. They took their station near the altar, at the top of the avenue of soldiers, which now reached to the great western door.

At ten o'clock the cannon of Sant' Angelo announced the approach of the procession: the wide portals were thrown open, and from the far end of the noble aisle we saw it slowly advancing, at first like a moving mass of satin and feathers. By degrees, however, we discerned the figures of which it was composed: first came attendants, bearing on crimson velvet cushions the various Papal mitres and tiaras, the gold staff and cross, and the insignia of the temporal power of the Pope. Bishops and cardinals followed, each with his train of priests and servants. Two men next appeared, with large fans of white peacocks' feathers, immediately preceding the Santo Padre; these fans are carried before the Pope, and the eyes on the feathers are considered emblematical of those of the whole human race, which are directed to him as the vicergerent of God on earth. His Holiness was seated in a chair of crimson and gold, borne on the shoulders of twelve men in sumptuous liveries; over his head floated a canopy of white satin, supported on lances carried by the Palferieri, as the persons selected for this office are called. He was dressed in magnificent robes of white satin embroidered with gold, and on his head was the triple crown: bestowing his benediction on the people, by making the sign of the cross in the air, he passed on to the high altar, where, descending from his aerial throne, he knelt for a minute at a splendid Prie-Dieu, and was then conducted to his chair of state. At this moment the mass began, the choristers chanting a glorious Kyrie Eleison. The cardinals each knelt in turn before the footstool of the Pope, and kissed his hand; the bishops followed, and kneeling pressed their lips to his knee, while all their attendant priests saluted the cross embroidered on his slipper. Each, as he retired, bowed first to the Pope, as the representative of God on earth, and then to the right and left, as to the Son and Holy Ghost. Then the cardinals, receiving from the priests at the altar various parts of the Pope's dress, proceeded to divest him of his original robes. Ten were employed in this ceremony, who, stripping him of all his gay attire, left him sitting in a plain dress of white linen. I could not help smiling to see the grave old cardinals acting the part of valets, as they now unrobed, and again dressed up, their master like a puppet in satin and gold. At length the weighty task was accomplished, and the Mass proceeded.

I cannot follow the Mass through all the accompanying genuflections, the walking to and from the altar, the crowning and uncrowning of the Pope. Wearing out at last, I sat with my eyes closed, listening to the beautiful music; there was no organ, but the voices were rich and melodious, as they poured forth strains of delicious harmony. At last the Pope arose, and supported by two cardinals approached the altar; clouds of incense ascended from the fuming censers as he elevated the Host. That was a moment never to be forgotten: the whole multitude was prostrate, every head was bent in adoration; the arms of the soldiers fell to the ground with a clanging sound,

and a deathlike silence followed. I scarcely dared to breathe; when from the far end of the long aisle the full and silvery notes of a trumpet stole upon my ear like sounds from heaven. Amidst assembled thousands the Pope alone was standing; three times he raised the cup, while a stream of glowing sunshine, falling on his uncovered head, seemed to light up the altar: then he replaced the chalice; the people rose, and loud hosannas resounded through the mighty dome. There was a power in the scene at that moment which even my heretic heart acknowledged; I forgot the weak emblem which was the object of adoration, and my thoughts rose to Him who is the sole fountain of light, and life, and all things."

## The Zoology of July.

"From bright'ning fields of ether fair disclosed,  
Child of the sun, refulgent Summer comes;  
In pride of youth, and felt through nature's depth;  
He comes, attended by the sultry hours  
And ever-fanning breezes on his way."—Thomson.

JULY is generally the warmest month in the year. Rain usually falls about the middle of the month, and continues for some time, thus inducing many old ladies and gentlemen to respect the popular superstition concerning Saint Swithin christening the apples ere they arrive at their future state of dumplings. They say that, if it rains on the fourteenth day, the pluvial powers will play to the tune of "Long to reign over us" for forty days, for "the rain it raineth every day." But what has all this to do with the Zoology of July?—some one asks. Why, equally as much to do with it as "malt has to do with beer." Were it not for the effects produced by heat and rain many things which animals do at this season would not be done by them, and several pleasures as well as inconveniences which they experience would not be felt at all. In noticing what now takes place among animals we shall proceed systematically, beginning with civilised man, a species distinguished from all others by his habit of wearing a shirt.

It is in this month, then, that man begins to suffer from the heat, and accordingly he acquires, in the course of nature, a lighter coat, and frequently it is the case that a pair of white ducks form an attachment to his legs, an ornithological mystery very well known to the students of *Taylor's Classics*. Gentlemen's black hats change to white in this month, and the gentle delicate hands of the policemen obtain snow white integuments, vulgarly called gloves. In this month fluids evaporate so provokingly quick that our poor bodies are all a-thirst, and the tee-totalers, gin-drinkers, wine-bibbers, and other savage tribes, do nothing but drink from morning till night. We, more enlightened and temperate, adopt the advice given in Shaw's Memoirs, that is to say, we take a quantity of very fresh butter with our bread at breakfast, as the best thing to prevent the occurrence of thirst during the hotter part of the day; we drink as little as possible of anything, and do not yield to the first sensation of thirst, and avoid drinking water as we would castor oil.

Cows, during the intense heat, enter pools to cool themselves, and also to escape from the attack of bot-flies and other annoying insects. Pigs and foxes also do the same. The common squirrel loses the furry tufts, or brushes, on its ears, and acquires its summer dress, which is much coarser and more uniformly red than that of winter.

The grampus, *Phocæna orca*, according to Dr. Fleming, goes nearly as far up the Frith of Tay as the salt water reaches, almost every tide at flood, during this month and August, in pursuit of salmon, of which it devours great numbers. This cetacean has been regarded not only as the most formidable enemy of the larger whales, attacking them in numerous bands with the utmost fury, and worrying them even to death; but it has been accused of pursuing the common whale, and harassing this huge creature till, in its terrors and agony, it opens its mouth, when the fell grampus seizes its tongue, and devours that precious morsel. Professor Bell remarks that "the truth appears to be, as far as creditable testimony can be obtained, that the grampus is extremely voracious, following the shoals of various species of fish, and devouring great numbers of them; and from its great size, and the astonishing rapidity of its course, pursuing and preying even upon the smallest cetaceans,—for John Hunter found a portion of a porpoise in the stomach of one which he examined. Grampus associate at times in small companies of six or eight, but are less gregarious than most other dolphins."

The titlark and the duncock cease to sing about the middle of the month; and the blackbird, blackcap, babillard, and grasshopper-warbler cease about the end of the month. Most of the skylarks, song-thrushes, and nightingales, redbreasts, garden-warblers, linnets, green-finches, and goldfinches, also become silent in the course of this month; and those few individuals of these species which continue to sing are such as are late in moulting. All their earlier broods, however, begin to warble softly, or to record, as the bird-catchers term it; and continue to do so even during their moulting, if their health be unaffected at that time. Woodlarks and yellow-hammers are still singing; and the golden-crested wren, the house-martin, the bittern, the quail, and the stone-curvelet utter their peculiar notes. White, or barn owls, sparrow-hawks, flushers, goldfinches, and reed warblers (*Salicaria arundinacea*) hatch their young. The first of these, the barn owl, hatches them towards the end of the month. She has also been known to have young ones in September, and even so late as December. This appears to be owing to the fact that she sometimes begins to sit upon only two eggs, and then, after having hatched these, laying two more, and then laying again after hatching these, instead of sitting on the whole lot, from three to five, at once. Eggs and young birds are, therefore, frequently found together in her nest. Mr. Blyth records the rather singular fact of one individual being observed to lay her eggs at three separate periods, till at last her nest contained six young ones of different ages, and all of which were reared. They remain in the nest a long time, and are covered at first with a thick white down, and assume very slowly their first set of feathers, which they do not moult until the second autumn.

Gilbert White observed that this species brought a mouse to the young nestlings about every five minutes, beginning at sunset; and this fact alone should plead in favour of so useful a bird. The young reed-warblers leave their nest very soon after they are hatched, hanging and climbing with perfect security among the reeds by their very sharp claws. Young swifts leave their nests about the middle or latter end of the month. The common whitethroat and its young ones frequent gardens to feed upon the smaller fruits and berries, as well as upon soft insects. The chaffinch (*Trochilus rufa*) haunts cherry orchards and gardens, and eats the fruit; starlings congregate during this and next month, and loiter about sheep pastures in search of worms and insects; and hundreds of wheatears, in daily succession, visit the extensive downs between Eastbourne and Beechy-head, more particularly from the end of this month to the middle of September. The black-headed gull begins to moult. Adult cuckoos migrate from the country towards the end of this month, or the beginning of next.

Shoals of small young coal-whiting appear on the Yorkshire coast at the beginning of the month, and shoals of pilchards appear on the Cornish coast at about the middle. The bonito, or striped-bellied tunney, is sometimes, but very rarely, found on that coast in July. The black bream becomes most abundant on the Kentish, Sussex, and Cornish coasts during this and next month. Young coal-fish also appear on the Cornish coast. Bleak become numerous in the Severn, near Gloucester.

Whitebait appear in immense numbers in the Thames, about Blackwall and Greenwich. The thornback (*Raja clavata*) brings forth its young; and about the second week in the month, the Twaite shad (*Alosa finta*) deposits its spawn in the Thames "when," according to that excellent authority, Mr. Yarrell, "numbers may be seen and heard frisking at or near the surface. In the language of fishermen, the shad are said to thrash the water with their tails—they appear to disencumber themselves of the natural roe by violent muscular action; and on a calm still evening or night the noise they make may be heard at some distance." Having spawned in the freshwater, this species returns to the sea by the end of the month. Herrings are in full roe, and continue to be so until the winter. The fry of the *Hemiramphus Europæus* appears in the harbour of Polperro, Cornwall.

The trout, the chub, and the grayling are now seen to dart at insects flying over the water.

The toad and the edible frog (*Rana esculenta*) lie in wait at the side of ponds to catch insects.

The fresh-looking specimens of the *brimstone-butterfly*, which are seen in this month, are supposed to be the first brood; and those which are observed in the earlier months are such as have survived the winter. That beautiful little butterfly, the *Polyommatus Artaxerxes*, may be found in some localities, and the best time to capture specimens is early in the morning, when they are found resting on the culms of the grass. The lead-boring beetle (*Cerambyx bájulus*) does much damage now by boring through the lead-work on house-tops to make its exit through the roof. Mr. J. H. Fennell noticed that this beetle, when held by the body, rubs its head and thorax together, and so, like the wasp-beetle (*Clytus arietis*), produces a noise similar to that of a barking-toy, and loud enough to be heard from one end to the other of a large room. A species of scale-insect (*Coccus*), whose eggs are of a beautiful pink, and enveloped in a mass of brown cotton-like web, now commits great ravages on currant bushes, hawthorns, &c. The golden-tailed moth and the brown-tailed moth deposit their eggs in this and the next month. To protect her eggs from the summer heat the female of either species covers them over with down which she pulls off the extremity of her abdomen. The wheat-fly now deposits her eggs in the glumes of the florets of wheat. The grub of the grey dock weevil constructs its reticulated and globular cocoon on the seed-spikes of docks. The caterpillars of various moths and butterflies may be found. Great quantities of living specimens of the mollusk, called *bulthorns* (*Ianthus fragilis*), and of another species (*I. erigua*) are now and then driven by the waves of the sea and a south-west wind into the small coves about the Land's End, Cornwall.

Much more might be said on animals in this month, but the above remarks will suffice to show that there are numerous interesting objects and phenomena just now to engage the attention of any one who wishes to extend his acquaintance with the natural history of our island.

## Coral.

THE notions which are commonly entertained on the subject of zoophytes, and their mode of organisation and growth, are extremely inaccurate and erroneous. Persons speak of coral insects building their cells, as if these erections were constructed in the same manner as the bee erects her edifice of wax, constituting places of abode in the animal itself. The fact is, that the substance usually termed the coral is the support of the fleshy or gelatinous substance which constitutes the animal portion, affording pores in which the polypi reside, and from which they protrude for the purpose of obtaining food by preying on the animalculæ existing in the waters. The coral is in fact the skeleton of the creature, fulfilling the same office as the bones of our own frame, secreted and formed in the same manner; varied in form, and, in the case of the stony corals, from the same elementary substance—lime. Occasionally the axis or support is of the nature of wood, occasionally of horn, resembling the nails in the human frame; while the form is alike diversified, and is flexible, bending, jointed, or articulated. The essential conditions, however, remain in all instances the same; and we universally observe a skeleton or solid support, and a fleshy or jelly-like covering, the abode of polypi and small worms. The smaller and less important varieties abound in the British ocean and other seas of Europe; becoming more frequent and abundant in the Mediterranean, and increasing in proportion as we approach towards the south. The large stony corals are chiefly restricted to the vicinity of the equator, and within thirty degrees north and south of the line they exist in such numbers and extent, as to modify, to a very considerable

degree, the physical geography of those regions. The history of their operations is briefly this:—The animal substance, after a due period of existence, dies and passes away, but leaves its stony base or skeleton behind. During life, however, it gives birth to creatures of like nature with itself, which, accumulating on the stony mass, leave behind in turn their calcareous skeleton; and the process goes on until, by successive accumulations of this nature, coral reefs are formed, which, rising above the water, constitute new islands and fresh abodes for the use of man. Some of the largest islands in the Southern Pacific Ocean are no more than coral reefs; and so extensive and incessant are the operations of this apparently trivial creature, as to constitute one of the most powerful agencies in the circle of geological phenomena. The investigation into the early formations show that creatures of the same class have been in active operation from the earliest periods of the physical history of our earth; and we find that the hills of Devon and the mountains of Derbyshire are, for the most part, only fossil reefs of coral—the operation of animalculæ similar to those now employed in constructing the reefs and islands of the southern hemisphere, and in modifying the geography of those regions, as they have already changed that of our own island.—*British Queen.*

### Scenes and Sketches of Military Life.

PATRICK O'NEIL—THE IRISH GRENADEER.

THE PROVOST MARSHAL—REASON AND INSTINCT—THE SIXTH FLOGGING.

WITH the exception of a little "scrimmage," as he called it, with the Provost Marshal, O'Neil had no other affair worthy of notice in this impartial detail while the troops remained in Portugal. The "scrimmage," trifling as he deemed it, was nearly bringing him once more within the embraces of the triangles.

Some readers, perhaps, may wish to know what the duties of a Provost Marshal are. He is the police general of the camp and quarters while troops are on foreign service; he is the chief constable of the army; the commissioned Jack Ketch of the division. If any of the men are found straying beyond a certain distance from the quarters, or encampment, or caught disorderly in the vicinity, it is his business to inflict summary chastisement on the offender, and return him to his regiment. He is constantly prowling about, with a guard in attendance, to seize on those who may be found transgressing; and if a criminal is to suffer capital punishment he has the arranging of the scene, and the carrying of the sentence (if it is hanging) into execution, if he cannot find any one to act under him.

The man who filled this very important situation in Portugal had been a drum-major in either the 10th or 11th Regiment of Foot, and obtained the post and a commission in Gibraltar when those regiments were ordered to join the expedition at Lisbon.

There was a narrow lonely lane that ran round the rear of the barracks, where a sentinel was posted to prevent the men from scaling the wall, and getting into the town at night. This was O'Neil's post one day. Near the sentry box was a wretched looking cabin, over the door of which a bush was displayed by way of invitation to thirsty mortals, and answering all the purposes of the red, white, yellow, and black lions over the doors of our alehouses. The Provost Marshal, in riding past the end of the lane, unattended by his usual guard, looked down and saw the post deserted. He pulled up, and kept watch with much attention, and in the course of a few moments he saw a large grenadier cap peer out from the door, and quickly disappear again. He did not stir; in a minute or two the hairy cap was again protruded and rapidly drawn back; then the bare head of an old hag peered forth, took a glance and disappeared. He stood still, and at last had the satisfaction of seeing O'Neil step out, shoulder his musket, and walk up and down in front of his sentry-box with the greatest gravity, and the most soldier-like regularity. He now rode up—

"What's your name, sir?" said he, addressing O'Neil.

"What's that to you?" said O'Neil, gruffly.

"Why have you left your post to go into a wine-house?" he demanded.

"It's agin orders for a man to hold discourse while on sentry," said O'Neil. "Go about your business, or you may get me into trouble."

"Why, I again ask you, sir, have you left your post to go into that wine-house?" he demanded, his choleric rising at the impudent coolness of O'Neil.

"You're a liar," said Pat with the greatest effrontery; "I was in no wine-house."

"Do you call me a liar, sir?" he shouted, almost choked with rage.

"Aye, indeed," said O'Neil, "a most impudent lying fellow; and only I think you're a little the worse for liquor, I might lose my temper with you; but it's useless getting vexed with a man so far gone as you seem to be, so go away like a decent gentleman."

"Do you know who you're talking to? Do you know who I am, you scoundrel?" he again shouted, rising a foot from the saddle with wrath extreme.

"Did you come to annoy me in my duty, with your drunken capers?" demanded Pat in his turn, and eyeing the Provost Marshal with the most provoking calmness. "If you did, I tell you, as a friend, not to carry it too far, or you'll find yourself in the wrong box."

"Do you know who I am, you scamp?" he again asked with an oath and a roar. "I will have the flesh cut from your bones—I will you rascal. Do you know

me, sir?" with a double emphasis on the word me—all the dignity and terror of his office concentrated to give it effect.

"Know you!" said Pat, scrutinizing him with a scornful glance from head to foot—beginning with the stirrup leather and slowly going up to the top of his hat. "Know you! now how should you and I ever become acquainted? No, no; I keep good company. Evil communication, you know, my little gentleman. Yet now that I take a closer squint at you, I think I have seen you before—that is, you were pointed out to me at a distance—are you not the chap that hung a man at Thomas once?"

"You ruffian, I will have you flayed alive," he foamed out, his face bursting almost with passion. "I'll report you this instant—I'll have you shot, you dog—I'll have you hanged, you scoundrel—I'll hang you myself—I'll—I'll—" and unable to utter another word he turned round his horse to ride off, but Pat seized the bridle and wheeled the horse back again. "Easy, easy, my gay little chap," he said, "Pon my soul, as I told you, you're carrying the joke too far, and if you came here to amuse yourself, abusing a decent man and good soldier, upon his post, too, I'll just keep you here awhile to amuse me now. Come down, my little man—come down off your little horse—come down quietly, or I'll lift you off with the bayonet. You're such pleasant company entirely, that I must keep you until the relief comes round."

The Provost Marshal stormed, and swore, and threatened, but it was of no use. Pat dragged him off his horse, and chucked him into the sentry-box.

"Now, not another word out of your head," said he, as he fastened the bridle to a nail; "be just as mute as a mouse with that dirty tongue of yours, or I'll skewer it to the sentry-box with this bit of steel; and if you attempt to run away, it's little I'd think of sending a leaden messenger after you, that would put an end to your race for ever. You're as safe as if the old gentleman below had you by the hair of the head, until the corporal takes you in charge."

O'Neil held him prisoner until the corporal came round with the relief; he then delivered him, with a long and serious charge about how he came up drunk, and began abusing him "without rhyme or reason," and how he made sundry attempts to ride him down, &c.; "but I let him know," added Pat, "that if he didn't know his duty, I knew mine. O, Lord! but he was mighty tidy when he came up, but he's a good deal better now, though not quite sober yet."

As soon as they came to the barracks the colonel was made acquainted with the affair, and he sent for both to the orderly-room. The Provost Marshal, burning with shame and rage, told his story with a rapid voice and violent gesture. O'Neil, with the greatest coolness, made his charge, insisting that the tale of the Provost Marshal was all a revengeful invention, in order to escape degradation; and have him punished for spite, "and all for only doing his duty." The people of the little wine-house were sent for, and interrogated—but they knew nothing of the affair, only that they heard a noise, and on looking out saw the official in a great passion, and the soldado in no passion at all; and then that they saw the soldado put the official into the sentry-box as a prisoner—they knew no more. On being asked was the soldier in their house during his two hours on duty, they shrugged their shoulders and shook their heads, and unanimously answered "noa, noa." Did they give him anything to drink during the day?

"Noa, noa natha," (No, nothing.)

"And a very good reason, too," said O'Neil; "I had no money to pay for it."

O'Neil's story was quite as good as that of the Provost Marshal, both being unsupported by evidence; the officer was Pat's prisoner, and his charge should be first taken into consideration, and he was ready at any moment to swear to the truth of what he asserted. Nothing could be done; the official could make nothing of the affair, as he took the wrong method of proceeding, for instead of coming into personal collision with O'Neil, he should have gone directly and reported him; while O'Neil from the first saw his advantage, and was determined to seize on it; but, like the cat with its prey, he played with him before he put his fangs upon him. The officer was released, and O'Neil sent to his duty; but his "scrimmage" with the Provost Marshal, and his manner of relating it, often made the barrack-room ring with laughter for a long time after.

Patrick O'Neil, as our readers must have understood before this, was an Irishman. He possessed, in a very high degree, all the ease, good humour, quickness, and drollery of his countrymen. In the deepest of his troubles he was ever gay and careless, and he bore all his misfortunes, as he called them, with a light-hearted heroism that would have been exceedingly commendable in any other man, or under other circumstances. He had a rude ready wit, a smartness of repartee, and a flow of badinage rarely equalled; to these he added a grotesqueness of fancy, and an originality of expression, which gave a strange richness to his style, and that rendered his conversation racy in the extreme, and infinitely entertaining; but with these were mixed up all the vices ascribed to

\* The melancholy story here alluded to has already appeared in the *Dublin University Magazine*, being furnished by our contributor, and which we shall take occasion to repeat.

his country, for he was fickle, reckless, and revengeful, combining a most fearless daring, with an almost fiendish cunning. Amongst his companions he was hated but by few, for while he was good tempered and pleasant, all dreaded to incur his displeasure.

The following guard-room story is highly characteristic of the man. "You may all consave, boys, the sort of gaffer I was when I was young, seeing the fine, sensible, steady, good charactered sort of a man I am now that I am old;—but we'll not disturb the dead, for I buried my character some time ago under the walls of the old castle at C—k—r. Well, you see, when I was about fifteen or sixteen years of age, I was murderin' fond of game-cocks and cock-fighting all out. I had the finest breed that could be found in the whole country, and real beauties they were to look at, and real devils to fighting. You may talk of your parrots and parraquets, and gold-finches and birds of paradise, but to my mind the purtiest bird that ever shook a feather is a handsome game cock. Just to look at them, with breast and wing as black as a raven, a hackle as red as thunder and lightning, and a beak and claws as yellow and as crooked as a hawk. Now, my poor old mother never liked that I should follow the cockfighting life at all, because she said it was likely to lead me into bad company, so she never encouraged the birds about the house, good or bad; but that was nothing to the scheming tricks of a villainous pair of magpies that built their nest, year after year, in a tree not far from our house. They were the greatest thieves that ever hopped a twig, the very wool and hair that fresh lined their nest every summer, they stole from other birds; and they were unnathural brutes besides, for though they were very industrious when their young wanted nursing, and plundered far and near for them, yet the moment they could fly, they beat them off like savage Turks, and wouldn't let one of them come near the place again. If ever the devil had chickens of his own rearing, these magpies belonged to the clutch. Now my mother, poor woman, wouldn't let any person disturb these vagabonds, for she said they were old neighbours of hers, and that she knew them, and they knew her, and that they never touched her chickens or young ducks, or goslings, and true enough it was; they knew her ducks and goslings as well as she did herself, and never harmed one of them; but, the moment mine made their appearance, they had them whipt up like winking; they wouldn't leave me a feather out of twelve or thirteen in a week. One of them would come before the hen, and give a skreech and flutter as if he was going to eat her up, while the other would hide behind a stump or a stone. The hen, having the right drop in her, would make a dash at her enemy and then the other villain behind her back would hop out and whip up one of the chickens, and away they'd both fly, cackling to one another, as if they were laughing at the success of their roguery. These tricks used to put me mad, and I came to a determination to have revenge, and may be you think I hadn't? By the blessed fire that burns before me, as cunning as they were, I took them in. You see, when I knew they were near hatching, I climbed up into the nest one morning when they were plundering through the country, and took down the eggs without cracking one of them. I slipped them nicely into a little saucepan of water, and put them down on the fire, and boiled them until they were as hard as marbles. I then took them back to the nest. The old hen magpie was a fine big fat bird when she began to hatch her eggs, and she was hatching all the summer till she wasn't the size of a tom-tit (the titmouse) and she died in the beginning of winter, and the other old thief took himself away, and never came back again."

After the murder of the Portuguese, O'Neil seemed to take breath for a while. He behaved with much more caution than was his wont: he seldom went out, and shunned mixing in the follies of his old companions. He also knew that the Provost-Marshal was on the watch to catch him, and that he would strain a point to bring him within his power, and that he could expect no mercy if once caught; and he felt a sort of gratified semi-revenge in disappointing him.

The troops were ordered home in the spring of 1828, and our regiment came on shore at Deal, where it remained about a fortnight, and was then removed to Chatham again. The very first night we were in barracks at Chatham, O'Neil, in the most systematic manner, packed up every spare article of clothing and necessities he had, and took them to a well-known spot, called Duck's Paddle, and sold them. It was thought he had deserted, and he was entered so on the books of the regiment. There was nothing heard of him for four days; but on the evening of the fourth day he walked quite deliberately into the guard-house and laid himself down, and in five minutes was fast asleep. He was tried the day following for absenting himself from his quarters without leave, and making away with his clothing and necessities; found guilty, as a matter of course; sentenced, and, for the sixth time, received three hundred lashes.

Whether his constitution was sinking beneath the effects of the severe punishment he had endured, or that he was more than usually weakened and enervated by his recent debauch, it is difficult to say; perhaps both combined to render him an unfit subject for the lash this time; but it was plainly observable that his former strength and firmness had forsaken him under this infliction. He yielded and quivered to the stroke, and

once or twice his head fell forward and hung heavily on his breast; but still not a groan, not a murmur escaped his lips; and he would drag up his head again, and the muscles of his arms would swell out like strained cords, as he braced up his sinking energies, and manned his heart to suffer to the extremity. Water was offered him, but he refused it. It became evident O'Neil was no longer able to brave and despise the lacerations of the military knot. On being untied he was scarcely able to stand—he staggered forward, as if he had lost his sight, and his features were fixed and death-like. He gained strength as he proceeded, and cast off the proffered arm of the guard that conducted him to the hospital. The doctor followed. He was a meagre, sneering, heartless, old wretch, whom the men nick-named "Old Bones." O'Neil caught his leer, and he stopped short, and fixed his dark eye upon him.

"Doctor," said he, in a composed though hollow tone, "why didn't you order me to be taken down before I got all? You saw I was not able to bear it as I used. If I was, I would not have expected it. You didn't, doctor, and you ought;—but if you saw my liver through my bare ribs you wouldn't. I know you, doctor, and I'd advise you to take care of me."

"Move on, men," said the doctor. "Get along, sir; how dare you speak to me?"

"I only advised you to take care of yourself, doctor," said O'Neil, resuming his way; "and you had need."

He was marched to his ward, and the doctor came to dress his back. O'Neil never looked up during the operation; but when the "wrestling jacket" was tied on, he asked was all right?

"All right—lie down," said the doctor.

The words had scarcely passed his lips when O'Neil jumped from the bed, and with one blow felled him senseless to the other side of the room. He then made a rush to leap on him, but was seized by the orderly and hospital-sergeant; and while "Old Bones" was carried off insensible, the ruffian-soldier was tied down on his bed by ropes that strained his legs and arms tightly in opposite directions, and which were fastened securely to the bed-posts.

## Progress of Suicide among the Ancients.

### SECTION I.

EVERY act by which a man voluntarily causes his own death is not criminal. All such acts are, however, suicides. Whether a man produces his own death by swallowing a cup of poison, or by mounting a breach supposing death to be in both cases foreseen, as the inevitable consequence of the act, it is evident that in both cases he equally kills himself. But it is obvious that there are circumstances in which it is a duty to do acts of which a man's own death is the necessary result. This is no uncommon dictate of military obedience. In all operations of war it is a duty to hazard life, and a greater degree of the same obligation may require its sacrifice. If it were constantly criminal to cause the destruction of one's life, there must be a criminality of the same kind, though of an inferior degree, in risking it. It is vain to say, that a volunteer on a forlorn hope has a chance of escape; for it may be said with equal truth that there is also a chance of the failure of the deadliest poison. The agent, in both cases, expects his own death, and in that of the soldier the moral approbation is highest, and the fame is most brilliant, where death is the most certain.

Besides these suicides of duty there are other cases of the hazard or sacrifice of life, which, not being positively prescribed by the rules of conduct, are considered as acts of virtue of the most arduous nature, requiring singular magnanimity, and justly distinguished by the most splendid reputations. Codrus and Decius present themselves to the recollection of every reader. When a Scotch Highland gentleman personated Charles Stuart—when Mde. Elizabeth presented herself to the furious rabble as Marie Antoinette—every human heart acknowledged the generous virtue which made the first sacrifice, and the second expose life, in order to preserve the life of others. But these suicides of patriotism or loyalty are acts done in a conspicuous place, by those who are bred from their infancy to consider honour and disgrace as the first objects of human pursuit and avoidance. Innumerable instances, however, of the same sort, in totally different circumstances, show the power of human nature to do the same acts without the bribe of fame. Backwardness in mounting a breach or boarding a ship is a rare occurrence. Volunteers for service of the most desperate danger are easily found. Mere compassion renders the lowest of the mob, for a moment, capable of the most sublime sacrifices.

There are other suicides which, without being demanded by duty, or performed for the preservation of a community or an individual, are yet generally considered as acts which, whether they be strictly moral or not, can only be performed by minds of the most magnanimous virtue. The suicide of Cato is of this class. It arose from his horror of tyranny, and the feelings of intolerable shame at the prospect of life under an arbitrary master; and it is to be justified by the tendency of the

example to save the world from future tyrannies, and to contribute throughout all ages to diffuse the love of liberty among mankind.

Every case where a man prefers death to guilt is a suicide of duty. Of this nature is all martyrdom, where life is to be saved only by false professions, or by compliances which the conscience of the martyr deems still more criminal. Among the early Christians, as, indeed amongst most persecuted bodies of men, there prevailed a sort of ambition of martyrdom, which the Fathers of the Church condemned as the fruit of misguided zeal, but which was considered by the people with reverence, as an honourable proof of a more sincere attachment to religion than that which was shown by the cautious prudence of lukewarm brethren.

Another sort of suicide was allowed by the most illustrious of the early doctors of Christianity. Led, probably, by that fanatical and ascetic spirit which tainted their moral doctrines respecting the intercourse between the sexes, they allowed a woman to kill herself in order to prevent an involuntary, and, therefore, imaginary, pollution of the body, where the mind was to remain perfectly spotless.

The case of a virtuous man discredited by calumnies, of which refutation does not repair the injurious effect, must be owned to be attended with considerable perplexity; but the more sound casuistry must forbid him to take refuge in voluntary death. The possibility of escaping dishonour is a temptation to undervalue honour. A good man ought not to murmur at that necessity which compels him to refute calumny by his life. But though it be not a justifiable case of suicide, it seems to be one of the most excusable that can be imagined; and though the action must be blamed as a deviation from the most elevated morality, yet the man may be pitied, and even loved, for a purity and even ardour of moral feeling, of which the rigorous censors of his conduct are probably incapable.

According to all principles of morality, it is evident that it is never praiseworthy, or even lawful, to sacrifice life, but in the observance of duty or in the practice of virtue; that suicide, to be moral, must be for others; and that if there be a few beings so eminently useless as well as miserable, that their case approaches to an exception, they are to be viewed with that mercy which is the first virtue of frail creatures, and without which we are unable to contemplate perfection.

When a man is so insulated that his duties become faint and general, all selfish suicide argues at least the vicious purpose of withdrawing from the practice of virtue, and destroying the power of rendering service to mankind. For these purposes life is to be endured where it is miserable, as well as sacrificed when it is most happy; and though the speculator may assign the boundaries of the obligation, they will not be discovered by a generous man when he is called upon to make the effort.

The opinion which represents suicide to be a proof of cowardice is a mere vulgar commonplace. To suffer well is a proof of patience, of fortitude, or of firmness; but boldly to seek the means of deliverance from suffering is the office of courage. Patience endures the gangrened limb—courage encounters the terrors of the amputation. It is a distortion of words from their natural sense to call that man a coward who has completely conquered the fear of death. "He is certainly not destitute of courage," says Voltaire, "who can tranquilly prepare for a voluntary death; some force must be necessary to master the most powerful instinct of nature; and such an action, at all events, rather implies ferocity than weakness. When a patient is in a frenzy, we must not say that he is not strong, but that his strength is that of a madman."

There seems to have existed through all ages, in those extensive regions of the East which have followed the doctrines of Bramah, a strong propensity towards a religious or enthusiastic kind of suicide. No antiquity seems too high to be ascribed to the Gentoo nation, which has invariably preserved its ancient manners and customs. The priests of Bramah have always, at least so far back as human records can carry us, lived in the constant practice of abstinence, and mortification, and contempt of death. They deemed it a mark of weakness, below the dignity of a philosophical mind, to await the approaches of death, and to suffer themselves to be overtaken by it. "They are so disposed," says Porphyry, "towards death, that they would willingly cut short the whole period of life, and thus hasten to the emancipation of the soul from the body. For the most part, they depart out of life, when in good health and free from misfortune. They throw themselves on the fire, that thus the soul may be separated in greater purity from the body, and that they may gain a high commendation. Their friends found it easier to impel them to this voluntary death, than men in other places can be persuaded to take a long journey. They bewail them, as long as they continue in life, but they proclaim them gainers of immortality as soon as they have freed themselves from its incumbrance."

Calanus, an Indian sage, was prevailed on to follow the camp of Alexander the Great in his Indian expedition. He was, however, soon attacked by severe sickness, and obtained leave to ascend the funeral pile in the presence of the whole army. He took a cheerful leave of his friends, whom he entreated to spend the day merrily, and to feast and carouse with Alexander, and endured

the scorching flames to the amazement of surrounding spectators. Greek opinion was much divided as to the propriety of the action. Some applauded the hero, more pitied the madman, but wisdom was for once with the multitude, they deemed the action an ostentatious parade. Alexander afforded an opportunity to Calanus's friends to follow his dying advice; he gave them an entertainment, and offered a prize to him whose potatoes should be the deepest. Unfortunately for the popularity of this ancient contest for the "Whistle,"

"No bard was selected to witness the fray,  
And tell future ages the feats of the day."

Prose has, however, informed us that it was more fatal than that held at the board of Glenriddel, "so noted for drowning of sorrow and care." Between thirty and forty competitors expired in their struggles for victory, which at last declared for Promachus, after he had swallowed twenty-eight pints of wine; but whether that champion of drunkenness, afterwards, took "one bottle more—and had all the sublime!" we are in darkness.

Plutarch in his life of Alexander, adds, "the same thing was done a long time after by another Indian, who came with Cæsar to Athens, where they still show you the Indian's monument." This Braman's name was Zamatrus. He came ambassador from India to Augustus in Greece; and in order to gain glory to his nation and to himself, for firmness and fortitude, he, according to the rights of his country, voluntarily ascended a burning pile in the presence of Augustus, and was consumed to ashes.

The custom of suicide, as practised by the Hindoos, is remarkably opposed to their physical, and, in many points, to their mental structure. This curious feature in the history of humanity has been the source of much controversy, and its solution has greatly perplexed the learned. Montesquieu has, perhaps, reconciled the apparent inconsistency. "Nature," says the President, "having framed the Indians of so weak a texture, as to render them timid, has formed them at the same time of an imagination so lively, that every object makes the strongest impression upon them. The delicacy of organs, which renders them apprehensive of death, contributes likewise to make them dread a thousand things worse than death. The same sensibility makes them fly and dare all danger."

The practice of suicide appears to have been equally ancient among the several other Asiatic nations as among the Hindoos. The Siamese, for as far back as our accounts of them go, not only have thought it lawful to kill themselves, but that it was a sacrifice advantageous to their souls, and productive of great future felicity. An high contempt of life and applause of self-murder has no where been more meritorious than in the Japanese empire. Kamper, in his history of Japan, in treating of the doctrine and way of life of their moralists and wise men, says—"These philosophers do not only admit of self-murder, but look upon it as an heroic and commendable action." The way in which the Japanese have immemorably committed suicide is by ripping open their bellies.

A notion seems to have prevailed in ancient times among all the Scythian tribes, that it was neither expedient nor becoming to wear out the days of existence in prolonging life to the utmost. "They esteem it," says Strabo, in describing the Massagetae, "the most desirable kind of death, if, when worn out with age, they are killed by their friends, cut in pieces and devoured, together with the flesh of other animals slain for the purpose." The Gothic, or Scythian tribes, brought with them into Europe many usages of their Asiatic ancestors; and, among the rest, the high honours that were paid to suicide. Immediately previous to the introduction of Christianity into the kingdoms of Scandinavia, suicide was a religious rite, and entitled its perpetrator to high distinction in the famous hall of the Scandinavian deity, Odia or Wodin.

CATERPILLAR WEAVERS.—A number of years ago, M. Habenstreet, of Munich, an old officer, amused himself by directing the labour of caterpillars, and succeeded in producing an entirely new and curious fabric. These caterpillars are the larvæ of a butterfly known by the name of *finea punctata*, or, according to other naturalists, *finea padilla*. Their instinct leads them to construct above themselves a covering of extreme fineness; but, nevertheless, firm enough to be impenetrable by air, which covering can be easily detached from them. The inventor made these insects work on a suspended paper model, to which he gave exactly the form and size which he required. He thus obtained, at pleasure, among other articles square shawls, of the dimensions of an ell; shawls, two ells in length and one in width; an aerostatic balloon, four feet high by two in horizontal diameter; a lady's entire dress, with sleeves, but without seam. When he wished to give to the fabric any prescribed shape, all that he found necessary was to touch the limits which ought not to be passed with oil, for which the caterpillars have natural repugnance so strong that they will not come in contact with it. The fabric, although perfectly consistent, surpassed the finest cambric in lightness. The balloon which we have mentioned weighed less than five grains. The warmth of the hand was sufficient instantly to inflate it; and the flame of a single match, held under it for a few seconds, was enough to raise it for a considerable height, whence it would not descend for half an hour. When a shawl of the size of a square ell had been well stretched, it was blown into the air by means of a small pair of bellows, and then resembled a light smoke, subject to the slightest agitation of the atmosphere.—*Boston Mercantile Journal*.

\* A square napkin, so called by the soldiers, which is laid over the lacerated back, and tied round the neck and waist. It is kept constantly wet with a solution of sugar of lead, and on this the patient is obliged to lie without turning until all signs of inflammation disappear.

### A Ramble among the Planets.

AMONG the gifted authors of our day to whom the public have failed in doing justice is Mr. Charles Bucke, author of "The Beauties, Harmonies, and Sublimities of Nature," and other excellent works and compilations. His position in the world of literature, though most respectable, is not that to which his talents and great acquirements entitle him; and we trust, in this matter-of-fact age, that the author of so many volumes, combining the beautiful, the useful, and the true, will yet be considered worthy of a higher and nobler niche in the temple of literary fame. The following description of the solar system, equally elaborate, amusing, and instructive, might be taken as a lesson by the most learned of our descriptive astronomers—

Were we in the planet Mercury, the solar spots would appear seven times larger to us than they do here; the sun would rise and set with an unimaginable splendour; while, by night Venus, the Earth, and its "fair attendant" satellite, would exhibit themselves, each many times larger than Mercury does to us. The moon, too, would be often seen to transit the earth; and, every now and then, to glide into and emerge from its shadow.

Were we transplanted to Venus, Mercury would present to our eyes phenomena similar to those which Venus presents here: sometimes full, sometimes gibbous; at other times a crescent; now a morning star, and now an evening one: while the Earth and Moon would shed a light more brilliant than that which is communicated or received by night by any other planet of the solar system.

Towards the extreme south of our horizon some stars are visible only for a short period of the night; others for a longer period; till the eye rests on those which rise exactly east. Then directing our vision to the polar circle, our eye rests on stars which never set; presenting, therefore, no aspect of change, but that arising from an apparent alteration of position.

The Moon! When the sky is clear in the south and west, and the moon rises in "clouded majesty" in the east, exhibiting her "freckled face" at a distance of not more than 240,000 miles, what a magnificent body does she appear! What a splendid appearance, too, does the earth present to her! It seems the largest body of the universe; with a surface thirteen times larger than the moon appears to us; immovably settled in the sky, while the fixed stars are seen to pass slowly, both beside and behind.

We have four seasons: but the moon's axis being nearly perpendicular to the plane of the ecliptic, she has scarcely any change: perhaps no clouds, no snow, no rain, no air; having no atmosphere. Those who live on her surface, therefore, can neither have the face, figure, nor faculties of man. Whether inferior, or superior, who shall determine!

They behold our seas,—smooth, and apparently destitute of storm; but they have no seas themselves; no rivers. They behold our Teneriffe, Olympus, Andes, and Himalayas;—we, in return, see their Ida, Horeb, Athos, and Berosus; some of which rise to the altitude of from three to five miles; with caverns sinking to the depth of more than 18,000 feet; wearing an appearance similar to those which would present themselves were our seas and oceans to lose their waters, and disclose their beds.

There are no phenomena more calculated to excite wonder, in respect to order and precision, than eclipses and returns of comets;—nothing more indicative of design; and nothing more eloquent of an universal predominating intelligence. We gaze upon the zodiac, the starry firmaments on each side, and the galaxy, forming "a broad and ample road," as it were, "ad Regalem domum," and reflect on the "Densa stellarum corona," which they present; till we feel as much lost

As the poor Indian, whose untutored mind  
Sees God in clouds, and hears him in the wind.

When we gaze on the Moon in her second quarter, through a good reflector, the shadows of her mountains are not only to be seen; but they are observed to move; and specks of light on some of her mountain tops. They cannot be mistaken. The surface of her orb resembles burnished gold: but I think she cannot be of the same substance as the earth. So beautiful, so calm—who would not desire to be transported to her surface? And this desire changes the scene to a remembrance of Bishop Wilkins's idea in respect to a voyage to the lunar regions; to Lord Bacon's and John Hunter's opinion in regard to the influence of the moon on the body; and that part of Dante's Paradiso, wherein he describes the lunar sphere, with Beatrice and himself gazing on its inhabitants.

As the moon appears next, in lustre and utility, to the sun, there can be little doubt that she obtained a very early share of veneration. Indeed, we find, from historical record, that, in most countries she had been worshipped as a deity, under various names. Some lines of Orpheus represent the moon as an earth; having cities on its surface. Xenophanes held the same opinion; and also, did Macrobius, and Achilles Tatius. Pythagoras went farther. He believed it to have not only mountains, valleys, woods, rivers, and seas; but animals fifteen times larger than ours; plants of rarer beauty; and men superior not only in size, but in energy and virtue.

Some philosophers—or rather poets—have believed the moon to be the abode of dreams; and some that thither the souls of men are carried after death. Some have even supposed the upper lunarian regions to have been the Elysian fields, inhabited by genii, who descended to earth to the assistance of just men, and the punishment of the wicked. Even Christians—amongst whom we may instance Vitalis—have regarded its surface as the paradise wherein our first parents were created; and whence they were thrust for their unfortunate transgression.

That large stones have fallen from the air has been known from the earliest period of history. They have even fallen in our own times. One, for instance, at Sienna, in Tuscany; a second at Wold Cottage, in the county of York; a third at Villa Franca; a fourth at Smolensko; a fifth in Moravia; a sixth in Catalonia; a seventh in La Vendee; an eighth at Adare; and a ninth at Agen, among the Pyrenees.

Aerolites, on being analysed, are found to consist of silice, lime, sulphur, oxide of iron, magnesia, and oxide of nickel. Whence have these bodies come? Are they formed in the air? are they vomited by volcanoes? or are they projected from the moon, or a comet? Have they fallen upon the earth at all? Is not the whole an imposition? There can exist no doubt. Their being formed in the atmosphere is scarcely to be credited. That they have issued from volcanoes is equally improbable, since no volcanoes have been in the neighbourhood where they have fallen, nor within hundreds of miles. Besides, if I mistake not, there has been found no union of the same materials on the face of the globe, nor even in the interior of it. The moon and a comet must, therefore, for the present, divide the opinions of mankind. That a comet may project such objects is rendered, in some degree, credible, from the circumstance that visiting, as they do, regions of intense heat, and of equal intensity of cold, they may be subject, in their passing, to chemical changes of a very violent nature. It is more probable, however, I think, that aerolites should come from the moon. For on the lunar surface volcanoes have been actually detected. Portions, therefore, may have been projected at times, when that body has been in opposition to the sun. These portions may have passed the moon's sphere of attraction; entered that of the nearest body to it (the earth); and there excite our wonder by displaying a combination totally different from any other known upon its surface.

Fusiniere throws some light upon this mysterious subject. We all know that the earth is surrounded by magnetic currents. He has discovered that lightning carries with it iron, carbon, and sulphur; that it deposits those substances on every thing which it strikes; and not only this, but that it carries from these fresh materials of transport. In rain, too, there are found iron, manganese, and nitrous salts; and sulphuret of iron in hail-stones. Can we not then easily imagine these and other substances to be combined with the force of a metallic current? We may certainly imagine such a thing: during a thunder-storm those substances may be ignited, fused, and amalgamated; but I nevertheless think we must wait a little longer for an entirely convincing hypothesis.

To the inhabitants of Mars, Venus and the earth appear, in most respects, as Mercury and Venus appear to us; exhibiting similar phases, with this exception—they never present themselves in full. Sometimes our moon is seen by them on one side of the earth; sometimes on the other. Sometimes they are observed to pass over the disc of the sun, in the shape of two unequal black spots, at no greater distance from each other than one-third of a degree. The fixed stars are beheld much as we behold them: while the Asteroids, with Jupiter, Saturn, and Uranus, present surfaces somewhat larger than they do to us.

The Asteroids are supposed by some to have been originally formed out of one large planet. I cannot accord with this hypothesis. They have, doubtless, existed from the creation and adjustment of the system, as well as Jupiter and other planets. All these planets enjoy a view of each other: also of the earth (but not of the moon), and Mars, Jupiter, Saturn, and Uranus; all their satellites; and the stupendous rings of Saturn. This is not all. Their diameters are so small, that every star of their firmament, from pole to pole, may be seen by the mere travel of a few hours. Their diameters have been thus estimated:—Juno, 1,425 miles; Vesta, 238; Ceres, 163; Pallas, 80! The diameters of their three external neighbours, however, are—Uranus, 35,112 miles; Saturn, 79,042; and Jupiter, 89,170. What stupendous disproportions!

Now let us suppose ourselves on the surface of Jupiter. The stars rise to our vision; and, in course of three or four hours, set. They move, as it were, not in a gradual course, as with us; but with a precipitation that would dazzle our eyes and bewilder our senses: for the entire heavens appear to the inhabitants in a state of almost mercurial activity. The day, however, is not so splendid as ours; being so much farther from the sun. The eclipses on Jupiter are of three kinds:—solar, lunar, and satellital; and the tints of the satellites have an extremely beautiful effect; for two are white; a third blue; and the fourth orange: and, when all of them are above the horizon, the shadows of objects are cast in four different directions.

Transport ourselves now to the first Satellite of Jupiter. What a scene presents itself! Three moons rise, instead of one, as with us:—with all their diversified phases; one a crescent; one gibbous; one at the full!—and the nearest with twice the diameter of our moon to us; while Jupiter himself hangs like a huge ball, turning rapidly on his axis, now rising, now waxing, now waning; now a crescent, and now a full and ample shield, as it were, covering a vast space of the firmament; and all this in the short space of forty-two hours and a half. Having, it is presumed, no atmosphere, the heavens present a field as black as ebony; and each star shines with a brilliancy more intense than that arising from the concentration of ten thousand diamonds. In 1770 a comet swept through these satellites, without, in the smallest degree, deranging their motions. The Biela and Encke comets, too, ranging through the solar system, between Jupiter and the earth, their aphelion and perihelion are equally harmless.

Saturn, when beheld from our globe with his attendants through a telescope, appears to occupy a space of the heavens not larger than a Spanish dollar. Instead of one moon he has seven, all presenting varied appearances, and casting seven shadows upon his surface. Sometimes they are beheld eclipsing each other, or appearing, disappearing, and reappearing from between and behind two stupendous rings that surround his orb, and which frequently eclipse a great part of it; and those eclipses varying from a minute to the whole length of a day; and coming on with a suddenness that would appal the mind, did not their frequency take from the wonder. The day of Saturn, too, occupying only a little more than ten of our hours, the whole phenomena of the firmament above him pass with a rapidity more than double that presented in our own hemispheres. The rings, too, sometimes cast shadows upon him; and sometimes shine with even greater splendour than the planet itself. Above, below, and between

these vast arches, if we may so call them, the stars are seen; and, possibly, many planets of which we have no knowledge. These rings are not perceptible at the poles of Saturn—nor within several degrees of them; but where they are visible, nothing that we know in nature presents so noble, or so wonderful, and astounding an appearance: illuminating the nights with a splendour more than equal to that of several thousand moons like ours. Indeed, Saturn knows no darkness, except when these rings eclipse the sun.

Pass, now, into the regions of Uranus. The sun appears of a size not larger than Venus. Six satellites, however, rise in his horizon; and what is still more wonderful, they are observed to move in orbits perpendicular to the plane of the ecliptic, and in a direction contrary to that of all other secondaries, as well as primaries; indicating, perhaps, an approach, if not an actual beginning, of another province of the solar empire. Uranus, however, sees only one of the planets that we behold—Saturn. To make up for this, his inhabitants, doubtless, see many other worlds beyond their own orbit, we, from distance, are unable to behold.

The comet of 1811 emerged suddenly, as may be well remembered, from the sphere of the sun's rays, and became visible in one day. It remained several months, and at length disappeared in the Great Bear. We watched it night by night at the bottom of the garden; hailing it as a herald, as it were, sent from the bosom of space, to confirm the truth, that a sublime Power exists beyond the reach and thought of man.

This was the most splendid comet that had yet appeared within the memory of any living person. Its tail, when at its greatest apparent height, reached more than 120 millions of miles. Its envelope was supposed to have been 30,000 miles in thickness; and the centre of its head was separated from its interior surface by a space of 36,000 miles. Its size was calculated to be 527.3 times smaller than that of the sun; but 17 times larger than that of Jupiter; 25,104 times larger than that of the Earth; 1,255,000 times larger than that of the Moon; and of an orbit exceeding those of all the planets of our system added together; while its period of revolution is supposed to be not less than that of 3,380 years! At the end of that period, therefore, it may be expected to return, and become visible again. For Nature is

A solemn institute  
Of laws eternal, whose unaltered page  
No time can change.

When this comet is nearest to the sun's centre, the sun appears to its inhabitants about four times larger than it does to us; when at its greatest distance, it cannot appear larger than a star of the first magnitude.

Now, let us suppose ourselves upon the surface of a comet. If comets are self-luminous, as in numerous instances I am disposed to think they are, we shall see nothing beyond our own globe; our eyes being partly blinded with excess of light. If, however, they are dark spheres, illuminated by other bodies, we for ages behold nebulae, systems of stars, suns, and comets, unseen by mortal eyes. We enter, at length, the solar regions. We behold Uranus and his satellites moving in a course contrary to all other analogies; we pass the empire of Saturn, encircled by his seven moons and double ring: we come within the orbit of Jupiter and his four companions; we pass the Asteroids, and gaze with delight on their diminutive masses, as we had before with amazement on the immensity of others. We invade the orbit of the Earth—we dart through it to those of Venus and Mercury; and then, navigating the more immediate regions of the sun, we pass over on the other side, and commence our return to our secret aphelium in the bosom of space.

DO YOU BELIEVE IT?—A strong instance of resolution has recently come to light at Menilmanger, in the Calvaire. A justice of the peace, whilst proceeding to put the seals on the goods of a deceased lady as protection to the interest of an only daughter, said to be insane, was much surprised by the sudden appearance of the daughter, who declared that she opposed the seals being put on, intending not to be charged with the expense of the operation adding, "I am not mad, as it has been reported; two-and-twenty years ago my mother prevented me from marrying according to my liking, and locked me up in my room. I then made a vow never to speak to any one again, as long as my mother should live; I have kept to it, and here I am to look after my own concerns." The lady appears in no way affected mentally by her long confinement, but her person is much altered, and she is now in her 40th year.

MEASUREMENT OF TIME BY SHADOWS.—The people of the East measure time by the length of their shadow. Hence, if you ask a man what o'clock it is, he immediately goes into the sun, stands erect, then, looking where his shadow terminates, he measures his length with his feet, and tells you nearly the time. Thus the workmen earnestly desire the shadow which indicates the time for leaving their work. A person wishing to leave his toil, says "How long my shadow is in coming!" "Why did you not come sooner?"—"Because I waited for my shadow." In the 7th chapter of Job we find it written, "As a servant earnestly desireth his shadow."—*Robert's Illustrations.*

WHO SENT THE BIRD?—The Chewayan Indians of North America believe, that the globe was originally one great mass of water, with no inhabitants. A bird, however, soon appeared upon the waves, whose wings clapped thunder, and the flame of whose eye made lightning. Upon touching the waters, the earth sprang up like an exhalation. When the earth appeared, the bird called every species of animals out of it. They came at her word; and this they believed to have been the original creation of the world.

NUMBER 8.

SATURDAY, JULY 24, 1841.

PRICE THREE HALFPENCE.

### America—Whence was it Peopled

The popular but improbable tradition of the descendants of Noah and his sons having scattered themselves over the hemisphere on which the ark rested, (viz., Shem in Asia, Ham in Africa, and Japheth in Europe, while the Patriarch himself proceeded to China)—having, as it were, thus accounted for the population of the world, it became a common question, on the discovery of America, Whence was it Peopled? Some philosophers contended that the inhabitants of the Western hemisphere were a separate race from those of the Eastern; that they must have had an Adam of their own, with birds, beasts, and fishes, to keep them company. The Spaniards adopted the opinion that they were not human beings, but, ungifted with immortal souls, that their destruction was as justifiable as that of the prowlers of the forest. The Pope, however, was pleased to admit them within the pale of his authority, and granted license to the robber bands to convert them to the true faith by such arguments as they were best fitted to understand. Fire and sword are weapons which no logic can gainsay, and such as refused to be converted were destroyed as heretics and defyers of the law. With respect to the idea that the aborigines of America were a distinct and differently-created race, it may be stated that their conformation is more allied to that of the Asiatic tribes, the eldest on the earth, than are some of those in Africa, which common consent had allowed to be descended from Ham, on whom the curse of slavery rested.

The sons of Japheth, if they were, as we have been told, the most active of the others, could not have confined themselves to the smallest portion of the globe. The idea of a division of the globe is altogether unreasonable; nor is it likely that the replenishers of the earth would separate further than their necessities required. The building of the Tower of Babel by the descendants of Noah proves their fear of being scattered, their desire to cling to the society of each other, lest evil should befall them. On the confusion of tongues, it is not likely that the close intermixture of the races which must have taken place would be disturbed; because, if those of one blood were gifted with one tongue, the same principle of association, the same desire to remain together, would the more actively exert itself, and the covering of the earth with man and his works be delayed. All idea of their progenitors and kindred must have been lost among the scattered, and the smaller bands, prevented by the larger from locating in the vicinity of their then dwellings, would be driven forth to distant and unknown countries.

All of them, however, must, in a greater or less degree, have been acquainted with ship-building. The very fear which made them cling to each other would impel them to provide means by which to float on the water; and all great marine architects have admitted that the shape of the ark, as explained in the book of Genesis, presents the best and safest model by which a vessel of its dimensions could be constructed. The tribes who seated themselves in the ample plains of Asia might easily be supposed to forget this knowledge, having no occasion to exert it, while the architecture of Babel was mimicked in the towers of Nineveh and the walls of Babylon. Those, however, who were driven to a distance would cherish their acquirements respecting the building of floating craft; and, although the rudeness of their implements might prevent them erecting gigantic vessels, the ingenuity and perseverance of man could easily arrive at the completion of a canoe. Hence the universality of all savage tribes dwelling by the sea being possessed of these conveyances, and hence the comparative proof of islands being peopled by adventurers on the wave. In the South Seas, even now, the natives voyage from island to island, in precisely the same manner as the Arab of the desert pitches and strikes his tent on the equally trackless and profitless land. Thus would seas and lakes be crossed, and from the crowded soil of Asia would emigrants issue forth, seeking land, like Noah's dove, on which to rest the sole of their

foot. The current might come from Asia into Europe and Africa without crossing the Mediterranean; yet even that sea would present no great obstacle to men flying from the exterminating knife of the oppressor, or driven by hunger to seek a more fruitful shore.

This, surely, is a much more plausible supposition than that Shem, Ham, and Japheth, after having driven off their papa to the far East, divided the earth between them, shook hands, and parted, never to meet again. Is it at all likely that the patriarchal trio, who had seen the world in its grandeur of a crowded population—who had witnessed the opening of the windows of heaven, and felt their mighty ark rise upon the rushing flood—who had heard the cries of drowning animals, the screeching of birds—whose ears had been pierced by the wail of children, the frantic scream of women, and the blaspheming howl of men, all crowding on the mountain tops—is it likely that the only survivors of this great disaster would separate? Is it probable that their immediate descendants, bound to each other not more by family ties than by a belief in what their fathers had beheld, would break up their locations, and leave the first spot of earth on which the redeemed set foot? The younger and the weaker branches, those more distant from their great progenitor, those who deemed the deluge a legend, and an antediluvian existence a fable, were the most likely to be sent forth, as beasts of the field and birds of the air drive away their young when sufficiently reared.

But the three great continents of the inhabited globe were girdled by two vast oceans, which led, in the vulgar belief, to the immensity of space; yet even across the broad Atlantic it is not impossible that an oarless boat, or even an armada of emigrating tribes, may have been safely wafted.\* The savages of Africa, as well as America, when pressed by danger, seek refuge in their canoes, and put off to sea.

The aborigines of America are apparently of two distinct races. The Red Indian of the Canadas and the original Mexican present not only different structures, but their manners and habits were altogether dissimilar. The Indians of North America, by their customs, formation, and hardy endurance, proclaim a Tartar origin. Those of the South, by their acquaintance with architecture, their knowledge of metals and their uses, their delight in luxuries and pomp, and their almost effeminate appearance, gave token of a totally different derivation—of having sprung from a comparatively civilised race, who, possessing a considerable knowledge of the arts, built temples instead of huts, and wore embroidered linen instead of furs and skins.

The geographical position of Northern Asia with North America presents no obstacle to the emigration of the rude inhabitants. At one point the two continents are separated by a sea only thirty-nine miles in breadth; and elk, foxes, wolves, and bears, common in both countries, have been known to float across on masses of ice. The Scandinavians, or Northern Tartars, were an adventurous people, and greatly given to fishing as a means of livelihood. It is no great stretch of the credible to suppose that crews of fishermen may have been drifted across the channel, and remained in what they found a better country.†

\* Before Columbus startled Europe with his theories, two dead bodies, indicating a different race of men, unknown trees, and bamboos were picked up on the coast of the Azores. Cocoa nuts are sometimes found on the shores of the North Sea; and on the Orkney and Shetland Isles fruits and seeds belonging to the torrid zones of America have been gathered. Jamaica seeds are not unfrequently washed ashore among the Hebrides; while on the Faro Isles are found plants indigenous to St. Domingo.

† A work lately published—"The Discovery of America by the Northmen in the Tenth Century,"—contains a detailed account of the visits of these hyperborean wanderers to the new continent, which may thus be briefly stated:—In the year 983, a chief, named Erik the Red, having got himself into trouble with his neighbours, set

Although these Scandinavian adventurers can lay no claim to having discovered a continent, they are not to be deprived, in conjunction with the Esquimaux, of having thickly peopled the northern districts of America. The Scandinavians were of much later Asiatic descent than the Esquimaux, who, perhaps, centuries before had been driven north from the expanding families of the south.

These warlike tribes of America—those noble savages to whom danger was an honour, and death a glory; in whom were planted not only all the poetic imagery of speech common to the elder Asiatics, but who preserved among them a knowledge of the Great Spirit—a dim idea of the immortality of the soul, and of a place of glory and of rest—where are they now? A few still linger round their watch-fires, in the woods of Canada, or in the far unexplored Massachusetts. But the great body of them has been destroyed—shot like carrion, and hunted down as wolves. They perished by the graves of their fathers—to them the holiest ground, the securest refuge. Oh! England!—what blood is on thy head? Tribes which existed in the wildness of nature for a thousand years fall before thy "barbarous civilisation."

The Mexicans and Peruvians, however, were a totally different race. These people Pizarro and his brother robbers found in the midst of enjoyments, amassing wealth, obeying laws, and pursuing traffic. It will be recollected that, in an article entitled the "Lost Nation," we alluded to the current of civilisation having proceeded from Siberia, by which, among others, the Egyptians were made acquainted with the geography of the earth, as was instanced by the circumference of the globe being given, as it is, in the latitude supposed to have been the home of the primal teachers of man. In an article on the "Fabled Continent" we also instanced the circumstance of the Greeks having derived their belief of the Atlantis from the Egyptians. A people so well learned as the "Lost Nation" could not be ignorant of the Pacific Ocean, nor of the continent which might be reached by the narrow neck of land lying northward of them. The conviction of the earth being round, added to their travel through Asia westward, and their progress to Egypt on the Mediterranean, must have led them to the conception that the continent they had left on the east would be met on the west. The Egyptians were well acquainted with the Straits of Hercules (Gibraltar), and must have traversed the Atlantic to some extent. Had a colony of the early Egyptians located in Mexico, as the conformation of the people, the architecture, the weaving, and all the pomp and circumstance of government proclaim as most likely, not only is the population of the country accounted for, but the tradition of the lost continent explained. As the Egyptian priesthood died away, or grew less active, (for they never instructed the people in their mysteries), the distance of Atlantis would cease to be known, and ignorant navigators might believe that they had sailed sufficiently far, and found no track of country. The desire for the marvellous among a decaying

sail from the western coast of Iceland, and having discovered Greenland, settled there. The son of one of his companions being absent in Norway at the time, left Iceland in search of them. Driven by tempests out of his reckoning, he discovered land, somewhat elevated, and covered with wood. This being widely different from the accounts he had received of Greenland, he again stood out to sea, and in two days more he came in sight of land. Again he left the wooded country, and ultimately reached the settlement of his friends. Leif, the son of Eric, set out in the year 1,000, to explore the unknown territory; he visited and landed at several places; found fish abundant, and even at one spot grapes growing. On his return, the report he made excited the ambition of the settlement. Leif and his brother again set out. They spent the winter in fishing, and during spring explored the country to the southward. Another expedition followed, which encountered some Esquimaux, the first inhabitants seen, and who were the same as those residing in Greenland. In the lapse of time a rough commerce sprung up between the parties, which, though often interrupted, has never been wholly broken off.

nation, half-learned in science or other improvements, would readily accept the invention of its destruction, and the existence of another continent, in after ages, become doubted, denied, and forgotten.

Should this hypothesis be rejected; should it be denied that a people more deeply versed in the practical sciences than even we are at the present day—(and what a stride has been during the past half century)—fitted out fleets and sailed across the ocean; should it be said that, although they built the Pyramids and raised Pompey's Pillar, that they were ignorant of navigation;—be it recollected that the maritime Phœnicians were the intimate allies of Egypt, that from thence Argos set sail to colonise Greece, and the peopling of Ireland and Scotland is attributed to a prince who left Egypt during the troubles of the Israelites, Carthage acquired its learning from the same country; and it in Africa, and Greece in Europe, were famed for their naval armaments. Inquiry, therefore, must be satisfied that to the exotic teachers and priests of the Pharaohs science owes its dissemination—art its origin, continents their inhabitants; islands their animals;—the sea its ships, and the earth its edifices.

Whether or not the discoveries making among the antiquities of Thebes, and the ruins of Memphis, will yet irrefragably prove these speculations to be correct is a question which even a day or an hour may finally resolve. The wonders of these remarkable cities we may expect shortly to see in process of being rendered intelligible; then the veil of mystery will be lifted up, and that which was hidden for ages added to the living history of man; the broken links of his destiny will be restored, and his progress or retrogression in improvement made apparent to the present race. So soon as the Eastern difficulties shall have been arranged, and the acute and inquiring ruler of Egypt fixed within his boundaries, an opportunity will be afforded to explore more fully the historic treasures of his country, to examine its monuments more closely, and to trace with greater minuteness its painted history on the walls of the Pyramids and other stupendous tombs. Turned from war, to what more noble or lofty design could the Pacha give the influence of his name than to a scientific and properly conducted inquiry into the records of the past, with which his land abounds?

### Napoleon and his Contemporaries.

#### PART III.—THE TRIUMPHAL RETURN.

##### XII.

Year followed year, yet France with wistful eye  
Look'd o'er the main to that bare rocky isle  
Where the lone relics of the Soldier lie;  
Without a speaking stone, or earthen pile  
By which a mourner might an hour beguile,  
And, with uncover'd head and smitten breast,  
Pray that increase of years might reconcile  
His vanquisher to Gallia's fond request,  
To waft his priceless dust from the ungenerous West.

It was a portion of the fatal policy of the Bourbons to keep the martial spirits of France chafing and fretting respecting the untrophied grave of their chief. They conceived that distance would lessen effect upon thought, and that memory would forget the man because his bones were laid far from the Seine. Instead of this having the desired effect, it only added one more item to the discords of France, and enabled the Bonaparte faction to appeal to the sympathies and prejudices of their countrymen, and keep themselves together as a party, after the son of Napoleon died, and his nephew, Louis, had proved himself a mad-cap. The meanness of England, however, in allowing his tomb to be neglected, and yet permitting strangers to visit it, added no honours to her name on the Continent. Even the Germans admired Napoleon Bonaparte, for no other reason than that he humbled their own paltry potentates; and they therefore felt as if the haughty islanders were inclined to gratify the Princes of Germany by a studied neglect of his remains. Asses are ever inclined to kick the dead lion, but it is to be regretted that they should do so through the medium of the "Conquerors of the Conqueror of the World."

##### XIII.

One morning Paris waken'd with the roar  
Of death-discharging cannon in the street;  
The coward Bourbon fled in fear once more,  
And once again did friendly England greet;  
But not for him would launch her gallant fleet;  
Nor her proud army his assistant be.  
Legitimacy fled in mad retreat;  
The Julian heroes made their country free,  
And law now rules the throne by popular decree.

The Three Days of Paris were a speedy and fearful reparation of the battle of Waterloo. Exile could not teach, nor distress bring low, the tyrannic spirit of the Bourbon dynasty. Unapproachable to reason, the same man who fled from Lyons on the approach of Napoleon, after he directed his soldiers to fire upon his people *en masse*, fled like a coward from the scene which his despotism had called forth. He who, deaf to entreaty, refused long and oft, "from the nettle danger to pluck the flower safety"—who would give his subjects no voice in the law, nor admit the responsibility of his advisers, deserted his throne, his friends, his country, when a maddened populace braved his bayonets, and planted the tri-colour on his palace. Whether or not the present King of the French shared in the secret agency by which that revolution was brought about is now a question of little moment; if he had, it ought certainly to teach him wisdom in his councils, liberality in his laws, and mercy in his acts. Of the latter quality, as well as

personal courage, he is certainly not deficient: no monarch has so often escaped the assassin's fire; and it is admitted that he has ever besought his Ministers to spare the lives of the culprits. It is, indeed, a fearful thing to "wade through slaughter to a throne." The refusal of Great Britain to interfere in the domestic broils of France was a triumph of surpassing value to liberty, to reason, and to humanity. Had our Government espoused the cause of the tyrant, blood would again have run through the streets of Paris, and recriminatory executions become as common as in the first French Revolution. By no interference taking place, not one abettor of Charles X. was condemned to die. His advisers were imprisoned for a time, until the enormity of their counsels were forgotten, and then permitted to retire into private life. It will be a great day for the world when the stubborn and incapable of all Governments shall descend from their stools, and become common men.

##### XIV.

Still France,—forgetful not to him who shed  
Undying rays of glory round her name,—  
When Peace her mantle over triumph spread,  
And Revolution's frequent rage grew tame—  
Besought his dust from England's queenly dame;  
To which her liberal mind gave kind reply,  
While all her millions shouted with acclaim,  
"The Soldier shall return!" Sport of destiny,  
This was thy last, thy greatest, surest victory!

The conventional delicacy of diplomacy has not stated how often the request was made to the Government of England, that the remains of Napoleon might be transported to France. There exists, however, an impression that the request was first made to the Duke of Wellington for his friendly aid, soon after the Three Days of Paris—that it was repeated to Earl Grey in 1833, and again to Lord Melbourne previous to the death of William IV. That monarch had a narrow mind, certainly, but he was not ungenerous, much less vindictive; and it would be therefore unjust to charge his memory with this unkindness. Whether these refusals arose from the personal dislike of the monarch, the antipathy of the ministers, or the apathy of those by whom the request was made, will never, in all probability, be explained. More important circumstances, involving deeper interests, have occurred, without the impelling causes being made known. It is perhaps sufficient for us, that the liberal acquiescence was made by a young queen, whose mind could not have been contaminated by the myriads of fallacies instilled during the war into the royal family of England. It was a somewhat remarkable feature, however, in the party politics of this country, that not one newspaper objected to the return of the ashes of Napoleon. Although there is scarcely a conceivable subject, foreign or domestic, on which the press will not disturb the public mind—lashing it into a fury, or blinding it as to the truth—the "Soldier's Return" was allowed to take place without an appeal to prejudice. This unanimity was witnessed and appreciated by the people of France, and had more effect in stemming the warlike movement contemplated by M. Thiers, than all the philosophy of Guizot, or the gallantry of Soult. That the English were a brave nation was admitted by our Gallic neighbours long ago; to prove to them that we were generous took them at an advantage, and they sat down conquered; their animosities cooed away, and pride told them to imitate or surpass us. As there were many in England who thought with France respecting Mehmet Ali, so there were numbers in France who thought with England that the peace of Europe, and the interests of the Sultan and the Egyptian chief, could be better preserved by reasonable arrangement, than by the massacre of millions, the sacking of towns, the burning of harvest fields, or any other of the accompaniments of glorious war.

##### XV.

In his own France at length the Soldier sleeps,  
Himself a monument of human power,  
O'er which decay, though slow, incessant creeps,  
As on some prostrate fane or shattered tower.  
The trophies of his sword have had their hour;  
Yet to this latest triumph Peace shall cling;  
Our sympathy will be a vernal shower;  
Their gratitude a garden, whence shall spring  
The olive and the bay, perpetual blossoming.

The restless wishes of the old soldiers by which France is crowded are now gratified; the exhumation and triumphal return are already forgotten. We shall now only hear of it annually, when a cumbrous ceremony will recall to the recollection of a thoughtless populace something that occurred "a many years ago." That same decay which shall gradually erase the glitter from his tomb will nullify the glory of his conquests, and cause even martial France to believe him something less than a demi-god of fame. When the uses of war are forgotten, the deeds of heroes become inglorious. The stain of blood becomes more visible as the green fades

\* In the eventful life of Napoleon, the number eighteen was associated with so many important events, that you will scarce deny something more than casualty. Such were the engagement from which he assumed the consulate, that of Torina on the river Beresina, the battles of Leipsic and of Waterloo, which were all fought on the 18th of the month. On that day also his corpse was landed on St. Helena, and on the 18th also the Belle Poule sailed with his remains for France.—Dendy's Philosophy of Mystery.

from their laurel, and the arts of peace, and the interchange of good will, progress to the advantage of the world, not alone in keeping down restless and aspiring men, but in educating and elevating the entire mass of the people. Towards the accomplishment of this arduous object England has done more, in promptly yielding up the ashes of a warrior, than she would have done had she trained all her youth to arms, covered the seas with her fleets, and made her name terrible among nations.

##### XVI.

To conquer prejudice, and nations' hate,  
Like gates of brass by giant power to sever,  
More glorious is than lands to desolate,  
Than foeman's force to break, or spears to shiver.  
Twin streams that flow into Truth's mighty river  
(Watering the arid soils of ignorance)  
Be these two countries to the world for ever,  
That knowledge still may spread, and arts advance,  
Through many a festal age, in England and in France.

To the more than patriotic, to the truly religious aspiration of this stanza, we shall make no weakening remark. It is a prayer to which all good men must devoutly add—Amen!

### Scenes and Sketches of Military Life

PATRICK O'NEIL—THE IRISH GRENADEER.

#### CHAPTER VII.—DRUMMED OUT.

O'NEIL was able to walk about the wards of the hospital before the doctor could leave his room. As soon as the latter was pronounced convalescent a garrison committal was put in orders by the commandant, Colonel Christie (a natural son, it is said, of George the Third) and O'Neil was to be tried for that highest of all military offences, striking a superior officer. It was rumoured that his crime would receive the most exemplary punishment, nothing less than the extreme sentence. Many of the officers laid wagers on the subject, and some even stake large odds on the event.

The trial occupied nearly the whole day, and the proceedings and sentence were transmitted to the Horse Guards. On the following day an order came down that O'Neil should be "drummed out" of the regiment in the presence of the garrison.

No one anticipated such a sentence but Colonel Christie who was a humane man, and it is thought sent a sketch of O'Neil's career, recommending the measure, and so it was ordered.

The ceremony of "drumming out" is one that occasions considerable excitement in the army, as it is one of frequent occurrence. In consequence of the disgrace attached to such a proceeding, every means is resorted to before it is recommended—a commanding officer preferring even to have the man transported. It was a terrible sentence to O'Neil—he was now unfit for almost anything—broken down in constitution—without any character except that of being an irreclaimable vagabond—unfitted, by long residence in a barrack-room and the habits forced upon him, and now become almost part of his system during his military career, for civil society; without a friend—even an acquaintance—means or ways, he was cast loose in a strange country sent adrift on the sea of the world like a rotten spar to seek, at the mercy of the winds and waves, a strand from whence he might be picked up, and cast into the fire.

About noon all the men in the garrison, except those on duty, were on the parade ground, and were there formed into a hollow square. O'Neil was marched from the guard room into the centre, and the proceedings of the court martial read—the sentence being that the prisoner should be transported for life to a condemned regiment in one of the African settlements, but which we have intimated, was changed by the commander-in-chief to drumming out. The drum-major and his corps of drums and fifes then surrounded O'Neil, and commenced cutting off the facings and the regimental buttons from his jacket, and the number of the regiment from his cap. A short address was spoken by the Colonel, and the troops were wheeled into line extending the whole length of the barrack square. O'Neil, now trimmed on like a game cock for the pit, was led to the head of the line with a large placard on his back, signifying that he was drummed out, as an "incorrigible character." The drums and fifes struck up the well-known tune called "The Rogue's March;"—the word was given, and the condemned one was led the whole length of the line in front, between a file of men with naked bayonets in their hands, and the drum-major following with his discharge. When he came to the end, the line was brought to the right about, and he was then led up the other side, and without pausing, marched, to the aforesaid consolatory music, right out on the barrack gate. Here a crowd of all degrees and denominations was in waiting to see the degraded soldier turned forth from his fellows, and the people gazed in silent wonder on him as he passed along. Beyond the extreme limits of the ramparts the drum-major called the halt, and presenting O'Neil with his discharge and one shilling, he left him to provide for himself as best he might. Such is the ceremony of drumming out.

The old generous British spirit, oftenest exhibited by the working classes, evinced itself in the case of O'Neil. The mob, pitying the helpless and stigmatised wretch, made up a small collection for his present relief, and on the following morning O'Neil presented himself

at the barrack-gate, clad in a decent suit of second-hand clothes, with a large bludgeon in his hand, deliberately marching backwards and forwards like a soldier on his post; nor did he quit it until a very late hour. A rumour was spread that he was watching to murder the doctor, or any other officer against whom he entertained a grudge; and his desperate mood, now supposed to be raised almost to madness, was warranty sufficient to stamp with credit the most fearful conjectures. An application was made to the magistrates, and on O'Neil's appearance at the gate next morning he was taken by two constables, and brought before the civil authorities.

The serjeant of his former company and the drum-major were instructed to prosecute him, but the law dealt mildly with the criminal; it would not punish him for he supposed meditation of a crime, but to prevent the possibility of its commission, he was ordered to quit the town in twenty-four hours, and if after that time he was found within the precincts, he would be treated as a vagrant and an evil-disposed person.

With this chapter the career of O'Neil, as connected with the military profession, ought properly to have ended, but as the after circumstances of his short and miserable life hang, in some measure, "like fringe upon petticoat," on his military adventures, I will, I am sure, be pardoned if to wind up the existence of Patrick O'Neil, I extend these chapters beyond the mark originally set as their boundary, in order to bring my story to "the last scene of all that ends this strange eventful history."

For about six months nothing was heard at the regiment of the fate of O'Neil. His name and fame were beginning to die away, and he was seldom spoken of in the barrack-room, save when a second-hand retailer of jests and odd sayings applied some of his well-remembered and quaint jokes to a passing event. At the end of that period the colonel received a letter from a magistrate residing at Swaffham, in Norfolk, describing the well-remembered person of O'Neil, and stating that he had been taken up at a fair there for rioting; that he had confessed being a soldier and belonging to the regiment, but denied being a deserter, and that he was detained in prison until it was ascertained whether such was the fact or not. A letter setting forth the truth was despatched in reply.

In the autumn of 182— the — regiment was put under orders for New South Wales; it was to proceed in detachments as guards on board convict ships. I had seen enough of the life of a soldier to render me heartily tired and disgusted with it; and although my lot was cast in comparative ease and freedom, still, there were more of privations, insults, and contumelies than I well could bear. Thinking the service in far off land would in no way improve my situation, I wrote home, requesting my friends to purchase my discharge, and directing them how to apply.

The usual application being made, it was referred from the Horse Guards to our Lieutenant-Colonel for his decision, and he refused to give his sanction to the proceeding; alleging that I was a useful man. He was at the time negotiating an exchange, and not being certain of effecting his object, did not wish to part with one whom he had been so long used to vent his petty spleen, and who, he thought, knew so much of his disposition and temper, as to render him more likely to quarrel with both, and consequently be more useful than a stranger.

He continued to negotiate the exchange for four or five months without effect, and sooner than undergo the long voyage to Australia, and the effects of an Indian climate, after being some time in that country, he prepared to retire. I then applied again for my discharge; again it was referred to him; and now having no motive to detain me, he gave his consent, and to my little satisfaction, I received my discharge from the British army on payment of twenty pounds.

Shortly after my return to my native village, one cold winter morning, I observed a tall and gaunt form walking down the street—his long limbs warping and bending beneath him. As he approached, I recognised at a glance the sadly-altered features of my former fellow-soldier, Patrick O'Neil;—but what a change! The very colour of his skin was turned into a green, dark, and yellow mixture; but there was no mistaking the deep-seated black eye, and the still-lingering gait of the strutting grenadier. A low cap, such as is worn by little boys, was on his head; his body was scantily and most miserably covered by a short dirty smock-frock—an article of dress abhorrent to the Irish—with fustian trousers, and soleless shoes without stockings. His voice was weak and hollow, diminishing at times to a hissing pipe; and his shoulders had taken a premature curve and brought the upper part of his body so forward, that he looked like a very tall man with a hump on his back.

That night he was as happy as good cheer and whisky-unch could make any unfortunate Irishman. His spirits revived for a moment, and he talked and laughed with as much vivacity and humour as if he had never shaken hands with misfortune. He told the story of his adventures, from the time of his being drummed out to that moment with all his former richness and originality. I wish it was in my power to imitate his style successfully; however, I will take an opportunity of giving his adventures as nearly as I can recollect in his own words.

## Progress of Suicide among the Ancients.

### SECTION II.

Pythagoras, who is thought to have gathered much of his knowledge and philosophy from India, seems to have converted what he acquired to a different and more rational purpose than those sages of the East, who approved of self-murder. Pythagoras considered the soul, whilst it was united to the body, to be in a state inferior to that to which, by its proper powers and faculties, it belonged; and consequently to be in a state of probation. "The short remnant of life," says Cicero de Senectute, "that appertains to old men is neither to be greedily coveted or deserted without cause; since Pythagoras forbids any one to depart from his guard or station without the command or authority of his general, that is of God." The opinion of Socrates on suicide may be gathered from Plato. The venerable philosopher affirms that wise men may, on certain occasions, wish for and eagerly desire death rather than life. But to the question—why, then, is he not at liberty to pursue what would conduce to his happiness by killing himself? Socrates demurs. A man, he replied, is situated in this life, as it were, on a post or station, which he must not quit without leave; the gods exert a providential care over us, on which account we are a part of their property and possessions; and we should think it unjust and punishable, in any slave of our own to kill himself without our leave. Thus two of the brightest lights of antiquity are to be found arguing on the same just grounds with respect to the impiety of suicide, that it is an offence against the authority and moral government of the deity.

The opinions of Plato, on this subject, were more lax than those of his venerable master. It is true, that in his Republic he has made laws for the degradation of the remains of suicides; but, from a passage in the 9th book of laws, it appears that, in Plato's estimation, a man should commit suicide when he finds he cannot overcome his evil propensities, rather than run the hazard of being impious and sacrilegious to the gods, or dangerous to the country. Aristotle condemns the distinctions set up by Plato, and ranks under timidity and effeminacy of mind the suicide which proceeds from adverse fortune, or conflicts of labour and pain. The philosophy of Epicurus, which released men from all the hopes and fears of futurity, led in their practical application, although not by the example of their author, to suicide. Various passages in the writings of Cicero prove, that at least in the writer's opinion, the sentiments of Epicurus were favourable to self-murder; and his well-known sophism, quoted by Diogenes Laertius, that, "death, the most dreaded of all evils, was nothing to us, for, while we are present, death is absent, and when death comes we are gone," is strongly confirmatory of Tully's assertions.

Our knowledge of the philosophical system of Epicurus we owe chiefly to the immortal poem of Lucretius. In the seventh century of the Eternal City's existence, this great poet was sent to Athens to study, under the guidance of Phædrus and Zeno, the Epicurean philosophy. The Garden had at this period experienced a sudden and brilliant revival; and it is impossible to reflect on the names of the students, whom we know to have been contemporary, without being astonished at the constellation of real genius and learning they exhibited in the aggregate. Cicero and his brothers Quintus, Titus Pomponius, from his critical knowledge of the Greek tongue, surnamed Atticus; the poet Lucretius Carus, his family and bosom friend Caius Memmius Gemellus, to whom he afterwards dedicated his poem; Lucretius Vespellus, whom Cicero has enumerated among the orators of his day; Marcus Junius Brutus, Caius Cassius, and Caius Velleius, each of whom immortalised himself by preferring the freedom of his country to the friendship of Cæsar; all these were contemporary students, imbibing in the Garden at Athens the doctrines of pleasure. The friendship of these illustrious men only terminated in their death; and that with a success unworthy of their lives. Pomponius Atticus, and Lucretius Vespellus, were the only persons, among the whole of these virtuous and patriotic party, who were, in the common sense of the word, fortunate. Marcus and Quintus Cicero fell victims to the infamous convention between Lepidus, Octavius, and Antony. The warm and sympathetic soul of Lucretius was unable to sustain the misfortunes of his friend Memmius. The shock threw him into a fever, affected his intellects, and, in a paroxysm of delirium, he destroyed himself. Memmius was banished by the intrigues of Pompey into Greece, and died in exile. Brutus and Cassius, in the last convulsions of Roman liberty, unable to survive the death blow the republic had received at Philippi, fell by their own swords. Caius Velleius, upon the final triumph of Octavius at Porsia, fled into Sicily, and in the same manner destroyed himself.

It is remarkable that no sect of philosophers ever so dogmatically prescribed, or so frequently committed suicide, as the stoics, who taught that the pains and sufferings which they strove to end by this act of rebellion against providence were no evils. They professed in suicide to follow the divine will. But even supposing

sufferings to be evils, they are no proof of a signal from God to abandon life; and supposing them not to be evils, they afford not so much as the shadow of a proof. Having once established the principle of self-murder, the Stoics refined on its practice in a manner peculiar to themselves. They determined life or death to be mere externals, and to be matters of perfect indifference, when stripped of concomitant circumstances. Thus it was not only lawful, but frequently a duty incumbent on the Stoic not to wait for death, but to anticipate its natural approach. "A wise man," says Diogenes Laertius in his life of Zeno, "will quit life, when oppressed with very severe pain, or when deprived of any of his senses, or when labouring under desperate diseases." Zeno, the founder of the Stoic philosophy, and his immediate successor Chianthes, contributed to increase not a little the reputation of their school by their deaths. As the former was one day going out of his school, at the age of 98, he fell down, hurt his finger, went home, and hanged himself. The latter having, to aid the cure of an ailment, used abstinence for two days by the advice of his physicians, though the disorder was thereby removed, and leave given him to resume his former diet, refused all sustenance, saying that "he was now so far on his journey towards death, it was not worth retreating;" and accordingly starved himself to death.

The doctrine of the immortality of the soul, says Montesquieu, falsely understood, has almost throughout all nations, and in every age, engaged women, slaves, subjects, friends, to murder themselves, that they might go and serve in the other world the object of their respect and love in this. This custom does not, he adds, so directly proceed from the doctrine of the immortality of the soul, as from that of the resurrection of the body; from whence they have drawn this consequence, that after death the same individual will have the same wants, the same sentiments, the same passions. In this point of view, the doctrine of the immortality of the soul has a prodigious effect on mankind, because the idea of only a simple change of habitation is more within the reach of the human understanding, and more adapted to flatter the heart, than the idea of a new modification.

Plutarch describes the rage for suicide, or to write more accurately, the epidemic rage for suicide, at Miletus, a city of Ionia, and the mode by which it was cured. "The Miletian virgins," says he, "were at one time possessed with an uncommon rage for suicide. All desire of life seemed suddenly to leave them, and they rushed on death, by the help of the halter, with an impetuous fury. The tears and entreaties of parents and friends, for they were unmarried women, were of no avail: and if they were prevented by force for a while, they evaded all the attention and vigilance of their observers, and found means to perpetrate the horrid deed. Some ascribed this extraordinary species of desperation and phrenzy to certain occult and maddening qualities of the air at that season, somehow or other peculiarly injurious to the female frame and texture, both of body and mind, (since the men were not visibly affected by it,) while the superstitious considered it as a calamity sent from the gods, and, therefore, beyond the power of human remedy." This dreadful practice, Plutarch adds, was put an end to by the fear of shame and ignominy; for the government issued a decree, that the body of every young woman who killed herself, should be dragged naked through the streets by the same rope with which she had committed the deed. The author of the "Historical Essay on Old Maids" humorously suggests, that "they must have been a set of 'antiquated virgins' only who were driven to final despair."

A most bloody scene of mixed murder and suicide took place in the palace of Nicles, King of Paphos, in Cyprus, on the approach of King Ptolemy's officers, who came to dispossess him of his throne and life. The unhappy prince, finding himself destitute of defence, became his own executioner. But neither the entreaties nor the kind treatment of Ptolemy's agents could prevail on his Queen Axitha to survive her deceased lord. She first slew her daughters with her own hand, and, after having prevailed on the princesses, sisters of Nicles, to despatch themselves, Axitha plunged the dagger into her own bosom. Moved at the sight of so much horror and bloodshed, the husbands of the deceased princesses soon agreed to follow their example, and, having first set fire to the four corners of the palace, fell on their own swords. A horrid scene to be acted in the favourite abode of the Cyprian goddess, where the loves and the graces alone should have sported and played.

Ancient Cyprus furnishes another extraordinary instance of suicide, in the person of that King Ptolemy to whom Cato was sent by the Romans to demand his kingdom and his treasures. He knew resistance would be vain; and ill brooking either to descend from the sovereign dignity into a private station, or to deliver up those treasures which were dearer to him than his life, he took the resolution of sinking, together with his riches!!! to the bottom of the sea; and for this purpose had them conveyed on ship-board, meaning to have hales bored through the bottom of the ship, that all might sink together. But, though he continued firm in his resolution of dying, he could not find in his heart to murder, as it were, his beloved treasures; and therefore he returned on shore again, and immediately after swallowed poison.

### Marriages in Russia.

We had a wedding here a few days ago, and we went into the gallery of the church to witness the ceremony, which began at half-past seven in the evening, and lasted nearly three quarters of an hour. The bridegroom was a peasant of rather a superior class, and in good circumstances, but still a serf; and the bride was the daughter of a Tamboff tradesman. In a case like this the wife becomes a slave, but she regains her liberty at her husband's death, if she survives him. The church was of course lighted up, and a small altar was placed in the middle; in front of the altar a carpet is always stretched, on which the couple stand, each holding a lighted taper during the ceremony: they walk up to it side by side, and it is supposed that whichever first sets foot on it, will hereafter have the upper hand in the household. Towards the latter part of the ceremony, after a number of prayers and hymns, two crowns of gilt metal were brought to the priest, and he placed them, after making the sign of the cross and pronouncing a short blessing, on the heads of the pair whom he was marrying; he then joined their hands and led them three times round the altar. A cup filled with wine and water was then brought, of which the bride and bridegroom tasted each three times. After this a homily was read on the mutual duties of husband and wife, but this was no necessary part of the ceremony. At the conclusion, the priest desired the newly-married couple to kiss one another, and when they had done so, their friends all crowded round them with kisses and congratulations. The crowns, which had been taken off their heads, were now put on again, and they walked out of church preceded by the priest and deacon bearing the cross, and by a boy carrying a consecrated image to be placed in their bed-room. The bride, who was rather a pretty girl, and only seventeen, looked sadly worn out, which was not surprising, as she had come from Tamboff that morning, a journey of six or seven hours, over a bad road; and had, according to the custom of her class on the occasion of their marriage, tasted no food all that day.

The priest was to join the bridal supper, and I was told that there would be further prayers and ceremonies in the house, and that the happy couple would sit all the evening with the crowns on their heads. The poorer peasants do not take the crowns out of the church, as they have to pay an extra fee to the priest for the permission. At weddings in a higher sphere, the crowns are never actually worn, but are held over the heads of the bride and bridegroom during the ceremony by their friends. No marriage can take place in the Greek church during any of the fasts, nor at other times on a Tuesday, Thursday, or Saturday. The lawful periods are therefore limited to four days in the week, during less than half the year. Among the upper classes the ceremony generally takes place at night, and the married couple, instead of setting off immediately together into retirement for a while, according to the sensible English fashion, are expected to remain for some time with the parents of the lady. Both are required by rigorous etiquette to write beforehand to announce their approaching union to every relation they possess, and to take the earliest opportunity after their marriage of paying them a visit uninvited. This last is, indeed, an attention which is expected not only by relations, but also by friends, and often even by mere acquaintances. A lady at Moscow told me that she was taken in this manner, as a bride, into about seventy houses, the greater part of which she had never entered since. All general rules have exceptions; but it appears to me, from all that I have heard and can ascertain, that a very great proportion of Russian marriages are mere matters of business and calculation, in which family interests are alone considered, and the feelings and inclinations of the parties most concerned are utterly disregarded. A union between two persons is arranged by their respective parents, and they are expected submissively to acquiesce. In the upper classes this is one necessary and natural consequence of the restraint which is placed upon the social intercourse of the two sexes, so that the young men and young ladies have rarely the opportunity of becoming well acquainted with one another. Another important reason for the frequency of marriages of convenience, and one which pervades all classes, may be found in the exaggerated notions of parental authority which prevail in this country, where a person at the age of thirty is often considered as incapable of judging and acting for himself as he was at the age of ten. The results of this system are of course anything but favourable to the natural attachment of children to their fathers and mothers, since sincere affection, and a voluntary desire to please, soon vanish where unreasonable sacrifices are exacted.

Parental tyranny is carried to its highest pitch among the tradesmen and the peasants, and therefore interested marriages, where the affections are no way concerned, or rather where they are often outraged, are as common among these classes as among the higher orders. Peasants, however, cannot marry without the consent of their master, and he, therefore, has it in his power to a considerable extent to check the evil. If he wishes to do so, whenever his consent is asked, he sends for the young couple, and speaks to each in private, encouraging them to tell him the truth, and endeavouring to ascertain whether they really wish to be married, or whether the matter has been arranged between their families without their desire. If in this manner the master discovers that they are repugnant to the union, or that their affections are fixed elsewhere, he can easily find a plausible excuse for refusing his consent to the marriage, without betraying to the parents the confidence reposed in him.

I am assured that the following anecdote is true; and it seems characteristic of the Russian tradesman, whose propensities to cheat and over-reach are sometimes rather too strongly developed:—

A marriage had been arranged between two families in the trading class at Moscow. The father of the young lady was rich, and it was agreed that he should provide her with a handsome trousseau, and that he should pay his son-in-law her fortune of two hundred thousand roubles, about eight thousand pounds, on the morning of the wedding. The happy day at length arrived, the trousseau or

bridal gift, according to custom, packed in handsome chests, placed on cars, and paraded through the street to the bridegroom's house, to display the wealth of the family; it having been already, with the same laudable object, exhibited as usual in the bride's apartments to all who chose to come, either to criticise or admire.

Before the wedding, the father of the lady presented her intended husband with the promised dowry of his daughter; as, however, it was now time to proceed to church, he remarked to the young man, "You can't carry such a sum of money as this about you, so you had better leave it with me, and you can take it home with you at night." To this proposal the other readily assented; the wedding was duly solemnized, and was as usual celebrated afterwards by a vast deal of eating and drinking; and when the happy couple went home at night, the bridegroom, unsuspecting from wine and love, was easily persuaded to leave his money in his father-in-law's care till the following morning.

The next day, he was hardly dressed when he was told there were some men enquiring for him; he at first refused to see them, saying, "it was not a moment for business, and he would attend to none that day;" the people, however, persisted in their demand for admission, and were at length let in. On seeing the bridegroom, the immediately told him they were come for the chests. What chests? was the reply. Why the *bridal gift*, to be sure. "Pooh!" said the young man, who supposed that the ornamented chests had been hired for the occasion. "You shall have your boxes, but you are in a great hurry, my wife has not had time yet to unpack the things, and put them in their proper places." The lady, who was standing by, looked extremely foolish at this, while the men replied, that they must have not only the chests, but also their contents. Upon this, the bridegroom got in a rage, and asked if they meant to carry off his wife's wardrobe. "Don't talk nonsense about your wife's wardrobe," said the intruders with a provoking laugh; "you don't really suppose all those things belong to her; the old gentleman only hired them for the occasion, to make a show, and we are sent now to fetch them back." The bride, on being appealed to, was obliged to admit that all the men had said was true; and accordingly, they carried off the handsome furs, silks, jewels, and other valuable articles of a Russian trousseau in that class of life; while the husband betook himself in no good humour to his father-in-law to complain of his deceit, and to get the money which he had left in his charge. "What money?" said the old man, in pretended surprise. "Why," said the other, "the two hundred thousand roubles which you paid me yesterday as your dowry, and which I left in your care last night." "Ah!" said the father-in-law, laughing, "you can't be serious. I gave you the money yesterday to make a show before the company, and you gave it me back afterwards, as it was always understood between us that you should."

In vain the young man denied the assertion, and claimed the payment of the money, and the fulfilment of the contract; argument and entreaty proved alike useless, and he was obliged to go home with the satisfaction of having been cheated out of his wife's fortune, as well as her wardrobe, by her own father.—*Venables' Domestic Scenes.*

### The Original Blue Beard.

In a work by Mr. Trollope, edited by his mother, the celebrated authoress, and entitled "A Summer in Western France," the following account is given of the origin of one of our old nursery tales, which has frightened girls and charmed boys for centuries. Speaking of the ruins of the Chateau Chantoe, Mr. Trollope describes it as being "famous, or infamous rather, as the residence of one of the most execrable monsters who ever disgraced humanity, and as the scene of his atrocities. This was no other than Gilles de Laval, Marquis de Retz, whose revolting abominations, having been mixed up by the shuddering peasants with supernatural horrors, have obtained for him, under the nick-name of Blue Beard, an universal notoriety of a lighter kind than the reality of his crimes deserved. This Gilles de Laval, lord of Retz, of Briolay, of Chantoe, of Ingrandes, of Loroux-Bottereau, of Blaison, of Chemellier, of Gratecuisse, of Fontaine Milon, in Anjou, and of many other baronies and lordships in Brittany and other parts of the kingdom, was one of the richest men of his day in the time of Charles VII. He became master of all this enormous property at the age of twenty, and, by the most prodigal and absurd extravagance, dissipated nearly the whole of it. Among other traits of his profuse expenditure, the establishment of his chapel has been recorded. It was composed of a 'bishop,' as he insisted upon calling his principal chaplain, a dean, a chanter, two archdeacons, four vicars, a schoolmaster, twelve chaplains, and eight chorists. All these followed in his suite wherever he travelled. Each one of them had his horse and his servant; they were all dressed in robes of scarlet and furs, and had rich appointments. Chandeliers, censers, crosses, sacred vessels in great quantity, and all of gold and silver, were transported with them, together, says the historian, with many organs, each carried by six men. He was exceedingly anxious that all the priests of his chapel should be entitled to wear the mitre, and he sent many embassies to Rome to obtain this privilege, but without success. These were the follies of his youth; and it would have been well if he had left behind him only the remembrance of similar absurdities. But these and many other equally ridiculous extravagances soon began to make serious inroads into his property, enormous as it was. He then took into his pay a certain physician of Poitou, and a Florentine, named Prelati, who pretended to be in communication with the devil, and to be able to recruit his exhausted treasures by supernatural means. These scoundrels found means to make him believe that the devil appeared to him, and persuaded him to sign an agreement with his Satanic majesty in due form. Raising the devil may, in the nineteenth century, be laughed at as a harmless absurdity, involving no very heinous degree of criminality. But that is very far from harmless which renders a man criminal in his own eyes. Gilles de Laval conceived himself to have committed the blackest sin of which

man could possibly be guilty, and the real moral degradation which ensued from it was proportioned to his estimate of his offence. No crime was henceforward monstrous enough to make him hesitate in his course, as the recorded series of his atrocities is probably unequalled in the annals of human depravity. With a revolting vampire-like selfishness, more detestable than any ordinary object of murder, he caused the handsomest and finest children of either sex throughout his domains to be seized and put to death within these walls of Chantoe, in order to form a bath of their blood, in the belief that it would preserve his own loathsome life and vigour. In vain through the wide extent of his lands and villages rose a universal voice of lament and execration from the wretched peasantry obliged to furnish this fearful tribute, who realised the most horrible fictions of pagan antiquity. Already more than a hundred victims had perished, and the feeble, ill-organised justice of the period was paralysed by the rank, the power, and vast possessions of the monster. At last, however, the universal voice of the country became too loud to be disregarded; and, little the men of that day were accustomed to be shocked at ordinary crimes of violence and blood, the wretch's life became too revolting to be tolerated by them; and he not the constituted authorities at length interfered, he would have been exterminated as a noxious reptile by the tardily-excited violence of popular indignation. He was eventually seized by the orders of the Bishop of Nantes and the Seneschal of Rennes; and, after a trial during which revelations of wickedness and barbarism almost incredible, continued through many years, were substantiated against him, he was condemned to be burned alive in the meadows before Nantes. And this sentence was executed there on the 23rd of December, the year 1440. The culprit is recorded to have presented himself before the tribunal with the utmost haughtiness and disdain, and replied to their interrogatories that he had committed crimes enough to condemn to death ten thousand men. So lived and died Gilles de Laval, the veritable original of the redoubtable bloody Blue Beard, and the ugly ruins of his blood-defiled castle of Chantoe seem to remain yet standing solely to perpetuate the memory of his infamy and ignominious name."

### Wade's New History of England.

THIS able work gives the old history of course, but in a new style. The narrative is not confined to a mere record of the actions of the court, or the movements of the army, or of the numbers slain in battle. All events, great or little, which, either directly or through concurrent circumstances, had any effect on the public mind, are faithfully narrated; and a concise enumeration of the leading improvements in the law, in the morals and domestic comforts of the people, are also given of each reign. In addition to these collocation of facts, each chapter is closed by a dissertation on the public characters of the time, on the merits as statesmen, on their conduct as men. An excellent and truth-speaking specimen of this new system of history is given in the latest part published (for the work is diligently revised, is publishing in monthly parts), of the Court and Times of Charles the Second. Our author's remarks—

A striking result of the Restoration was, almost instantaneous revolution in the moral habits of the people. Under the Commonwealth all men were virtuous, or compelled to wear its exterior garb; but no sooner were the restraints, imposed by the strictness of puritanism, removed, than vice stalked through the land without disguise. The court set the fashion. Buckingham, Rochester, Sir Charles Sedley, and the Killigrews, were most distinguished by their wit and libertinism. Charles laughed at their follies, and by his example, and that of his cavaliers, licentiousness and debauchery became prevalent in the nation. Ebrriety and the pleasures of the table were freely indulged in. Love was treated more as an appetite than a passion, and delicacy and sentiment entered little into the attachments formed between the sexes. Conversation was corrupted as well as conduct. The coarsest jests and most indecent words were admitted among the highest classes, and even disgraced the literature of the day. The stage copying the living manners of the time, united the profligacy of the French with the rudeness of English manners. Nearly all the actresses were in the keeping, many of them the wives, of the nobility. The king, as before observed, took two of his favourite mistresses from the theatres—Davies and Nell Gwynne. Each bore him a child, which was ennobled, and Davies received a costly establishment in Suffolk-street. Gwynne might have received a coronet, like the Duchesses of Cleveland and Portsmouth, but she always refused a title.

It was in the company of his mistresses that Charles spent much of the time which was due to the service of the nation. 'He delighted,' says Sheffield, 'in a bewitching kind of pleasure called sauntering.' Even when the council had assembled to deliberate in his presence, the truant monarch would prefer willing away his time in their fascinating society.

Speaking of this licentious era, Dr. Burnet says (Hist. of his Own Time, i. 368), 'At this time the court fell into much extravagance in masquerading; both King and Queen went about masked, and came into houses unknown, and danced there with a great deal of frolic. In all this they were so disguised that none could distinguish them.' It would have been well had the gaieties of the court been always so innocent as masquerading, or, as Pepys mentions, gipsy-parties and fortune-telling; but some of the gallants of the time perpetrated with impunity offences of a darker character. Sir John Denham and Lord Chesterfield have both been accused of murdering their wives by poison; and the latter to have aggravated the horrors of his offence by administering the fatal dose in the holy wine of the communion (Life of Lord William Russell, 2d edit., 44). An incestuous connection with his sister Henrietta, Duchess of Orleans, has been imputed to the King. The abandoned Duke of Buckingham, after the fatal duel with the Earl of Shrewsbury, introduced the countess to his wife in his own house, and is said to have slept with his

adulterous paramour the same night in the bloody shirt in which he had slain her husband.

The extravagant pretensions to piety of the former age had much propagated the spirit of irreligion; and most men of learning and genius lay under the imputation of deism. Among the number may be reckoned Shaftesbury, Halifax, Buckingham, Mulgrave, Essex, Rochester, Sir William Temple, and Algernon Sydney. Charles himself was considered an infidel. But it is probable he had no settled opinions of religion; though he died, after a very singular death-bed scene—if what Burnet relates be true—in the communion of the Church of Rome.

The costume changed with manners after the Restoration. 'Charles II.'s beauties were the very reverse of their mothers in dress as in demeanour. The starched ruff, the steeple-crowned hat, the rigid stomacher, and the stately fardangle, were banished with the gravity and morality of their wearers. A studied negligence, an elegant deshabille, is the prevailing character of the costume in which they are nearly all represented; their glossy ringlets escaping from a single bandeau of pearls, or adorned by a single rose, fall in graceful profusion upon snowy necks, unveiled by even the transparent lawn of the band or the portecollet; and the fair round arm, bare to the elbow, reclines upon the voluptuous satin petticoat, while the gown, of the same rich material, piles up its voluminous train in the background.' (Hist. Brit. Costume, 301.) The numerous engravings from the celebrated painters of this period, have rendered generally familiar the style of dress worn by court ladies.

The fashion of male costume did not improve during this reign. The most elegant and picturesque style of dress ever worn in England appears to have been in Charles I.'s time, from 1625 to 1648. It has acquired the appellation of the Vandyke dress, being the habit in which that artist painted, and it is frequently seen on the stage. It degenerated into extravagance in the reign of his successor, Charles II., when the periwig and petticoat-reeches were introduced; and the doublet, which, at the beginning of his reign was very short, became elongated to the middle of the thigh, and assumed the form of the modern coat. So extraordinary a head-dress as the periwig demanded a different covering to the high-crowned hat or broad-leaved Flemish beaver. The crown was lowered and the brim raised. In lieu of the chivalric plume worn on one side of the head, a row of feathers was placed round it, and the first approach made to the cocked hats of the eighteenth century.

Neckcloths or cravats of Brussels and Flanders lace were worn towards the close of this reign, tied in a knot under the chin, the ends hanging down square.

#### A Cockney and an Aberdonian.

THE proverbial sagacity of the good citizens of Aberdeen is amusingly illustrated in an article in the *Metropolitan* this month. A small shopkeeper in that learned city had intended to write to London for 45lbs of indigo, but by some mistake had ordered forty-five tons. Scarcely is the order supplied than accounts are received from India of the failure of the crop, and the London firm instantly despatch a subordinate to procure the return of the cargo. This, however, is found to be a somewhat difficult matter. Having introduced himself, the clerk is thus addressed by the wily Scot:—

"Ye are come to Aberdeen about [the indigo, doubtless]" said Donald, after a pause, and very deliberately. "Yes. My principals feel sure that you have made a trifling mistake in the amount of your order; so, to relieve your anxiety, they have sent me down to you, to say that they are willing to take the indigo back, and release you from your bargain, provided that you will pay the expense of the freight—and a very generous offer it is, I can tell you."

"I am sure that I am over obliged to the gude gentlemen. But pray, sir, who may ye be yer ainsel?" A modest young man, nae doubt, but humble—yer preferment's all to come. One would just like to know whom one is treating wi'—some junior clerk, or, perhaps, one of the warehousemen?—surely ye no be one of the porters?"

Very indignant indeed was the fop at these degrading conjectures. With much hauteur he exclaimed, "I must acquaint you that I am the confidential principal and managing director of the firm's vast mercantile operations; that I am a near relation of Mr. Hubbens, the head of the firm; and that I have full power and authority to do just what I please in this, as in every other transaction. My name, sir, is Daniel Hubbens, at your service. What do you say to my offer?"

"I should like to glance at your authority—no offence."

Mr. Daniel Hubbens was offended, however; but, finding the Scotchman firm, he was obliged to give him the necessary vouchers that he was empowered to treat with him for a re-sale of the merchandise. The examination of this document still further opened the mental eyes of M'Grie to the value of his late purchase, and he consequently became more dogged and consequential.

Mr. Hubbens, perceiving the turn that affairs were likely to take, and that he had a difficult task to perform, at once altered the loftiness of his manner, and said—"Well, well, my dear sir, the fact is you have long bought from us. I wish now to see if we, our very respectable firm, cannot purchase from you. So come down to my inn, and we'll talk the matter over the bottle of the best you can call for."

"Oo, there's nae acasion; just say a' here."

"No, no, my dear sir; come with me you must. I am very tired, and the best supper that Aberdeen can produce is providing for us two."

"Sae ye are prepared for me. I understand. Ye would nae hae ta'en all this troublous wark for little. I'll awa with you, my man."

And away they both went; in the short journey to the inn Donald cogitating on the utmost that he should ask for the re-sale of the indigo, and the managing clerk en-

deavouring to divert his thoughts from the value of the goods in his possession.

The supper and its accessories were the best that ever fell to the lot of Donald to share; but he was prudent, and the clerk gained no advantage through the means of his lavish expenditure of choice wines, so after many flourishes and much circumlocution, he was forced to put the plain question to his guest, "What will you take to pass your cargo of indigo back to our firm?"

"Troth, Mr. Hubbens, I'm at a loss a bit. Phat will ye gie, truly?"

"Why, Mr. M'Grie, the fact is, we have received a very unexpected order for the article, and our people have empowered me to come to Aberdeen and offer you a thousand pounds to return the cargo just as you got it. There is a glorious chance for you! A thousand pounds! Don't you feel yourself in heaven?"

"No, no; I'm better advised than that comes to. I didna buy the mickle lot but upon sound calculations. I have friends, sir, friends who have the first intelligence."

It is as I suspected, thought the clerk; he has had the first news of the general failure of the crops.

"I'll tell you what it is Mr. M'Grie—it is a bold step, but I'll take it upon myself to double the offer. Two thousand and sir, two thousand! Hey?"

"Indeed no, my man. I can make mair o't than that."

"Well, I must let you keep it," said the youngster, with an air of well-affected indifference.

"Weel, weel, young sir, here's to your verra gude health, and a pleasant journey back again."

"Thank you, sir. May the indigo prosper with you!"

They drank two glasses of wine each in silence. The mortification of Hubbens could not be concealed, whilst M'Grie's visage represented content carved out in stone.

After a considerable pause, the clerk lost his temper entirely—his patience had long gone before it—and he resumed the attack upon the imperturbable Donald. At length the would-be purchaser, not at all liking the prospect and the shame of an unsuccessful journey back to his principals, in a fit of desperation pulled out his private instructions, and said, "Here, read that, obstinate man of iron that you are. Just so far am I permitted to go, and no farther."

M'Grie read very deliberately that his host was empowered to offer him the freight both ways, and four thousand pounds.

"It is driving me hard," said Donald; "but as you are an unco amiable young man, and no to fash you with your employers, I'll just consent. And to show ye that I can be liberal too, why, when ye hae settled the reckoning, I'll stand a pint o' Glenlivet aween the twa of us."

After this, the transaction was immediately wound up, and the money paid down.

#### Discovery of Greek Fire in England.

THE *Fanal* newspaper, in making an allusion to the recent notices in the House of Commons, of Mr. Warner's invention of a destructive missile, places it under the above title, and attempts to connect the invention with the destructive engine of war, descriptions of which were given in that paper some months ago, and were represented to be constructing secretly in the dockyards at Woolwich. The same writer professes to be in possession of the secret, of which he thus gives all nations the benefit:—The English Parliament has lately paid a great deal of attention to the discovery of Captain Warner, which, according to an official report, must for ever confer the mastery of the seas on that nation which is the first to adopt it. A powerful state has already offered the inventor a reward of seven millions and a half of francs to disclose his secret, but it is believed that he is too much of a patriot to allow other nations to derive the benefit of his discovery. It was not, therefore, by him that we were informed of this discovery when we mentioned it more than a year ago, along with many others, which were then considered visionary, but of the reality of which every day affords proofs. It is stated that the destructive effects of this missile may be extended to a great distance, equal to the range of a Congreve rocket, charged with Greek fire, and fired from a cannon in the manner we have described. But the most terrible engine of Mr. Warner is a boiler filled with the materials that compose the Greek fire and with water, which can be heated to twenty-five atmospheres when required. The steam exerting an enormous pressure on the oily and resinous substance in a state of incandescence, it is only necessary to open the stop cock of a pipe in order to produce a stream of fire many hundreds of metres in length, and to cover the sails and rigging of a ship with a thousand inextinguishable fires. The member of the House of Commons who states that a fleet of a hundred vessels would not be able to resist such a meteor for an hour is perfectly right. If it were a question in what manner it would be possible to approach these hundred vessels, armed with cannons—this can now be easily accomplished, by means of steam, and with the Archimedian screw substituted for the paddle-wheels, which are the vulnerable part of ordinary steam-boats. Cuirasses have been made to resist bullets, they will now be made to resist cannon balls; for it is known that nothing can be easier than to construct a vessel impervious to the heaviest projectiles, by providing it with planks of sufficient thickness covered with sheets of lead, iron, and of timber, as the Americans have already done. This vessel, having neither cannon, nor lading, nor a numerous crew on board, and not being intended for taking a voyage, would be able to appropriate its whole tonnage to making itself proof against cannon balls. Thus prepared, and taking a becalmed fleet by surprise, if the *Infernal* does not sail well, two hours instead of one would accomplish the destruction. If necessary, such a ship would be able to enter all the enemies' ports, destroy every thing that came within its range, and escape uninjured. The secret is now divulged. Every one may make the attempt; the most alert will succeed. Let it not be said that the thing is impossible, impracticable. We have applied to all intelligent engineers, mechanics, and chemists; there is not one who will not undertake to construct one of these infernal machines for a million of florins; but representative governments will not pay attention to it till it is too late.

#### Two Truths in Two Guises.

WE take the two following extracts from *Fraser's Magazine*:—The subjects on which they treat are as different as the manner in which they are handled, yet the moral is the same—the evil and folly of certain laws and prejudices, which, although gradually disappearing, still require to be exposed and censured, that their erasure may be completed.

WHAT WAS HE?—An hour being appointed for the interview, pale and trembling, the wife with three children entered the tomb of a living being, who had been their only love and hope in this world—he whose solicitude to insure their happiness was the cause of their misery. After an absence, it is natural to rush into the arms of those we love; but disgrace and consequent shame make strange havoc with the impulses of the heart. "Do you forgive me, Maria?" said the husband, keeping aloof from his wife, as if his touch would be pollution. "Would that others could as readily forgive!" replied the agonized wife, sinking on a seat near to her. "Ah, you mean God! Ah, have you prayed for me, Maria? Do you think there is hope for me? Speak! I have been a great sinner—a wicked sinner, Maria. Yet do not tell these, your children, what a bad man their father was. But wherefore are they here? Is not my punishment sufficiently heavy without bringing my children to reproach me?" The gaoler reminded the bewildered man that he had expressed a wish to see them. "Yes—true!" he ejaculated; "but I have been mad, and have not recovered my senses. Maria, your husband is mad!" Maria heard him not; she was lying senseless on the floor. The children, aged six, eight, and ten, were crying over her, thinking that their unhappy and evidently distracted father had been the cause of her death. Both husband and wife had thousands of questions to ask, and more matter to communicate, but the interview was ended. Several hours elapsed ere the wife was restored to perfect consciousness; and it was late in the evening before her doctored husband could be brought to resume his preparations for the fate that awaited him the following morning. "Shall I not see him once more?" inquired the wife, as she slowly recovered her recollection; "only once more—only one look! I am now prepared, and can command my feelings." This privilege was denied her, as such interviews rarely answer any purpose but to distract the mind of the one whose business it is to forget the world and all its attractions, and to agonize the feelings of the other, who stands in need of all the resolution they possess to restrain the calamities attendant on a catastrophe so fatal to their worldly prospects. It was evening before the wife and her children could be conveyed home; the latter, while at the prison and on their road, asking their agonized mother a number of questions regarding their father, every one of which penetrated the soul, and caused her further anguish. It was the first time the subject of death had been forced on their attention, and they were too young to have anything but a confused notion of it, now they had learned that their father was doomed in a few hours to meet it before the public gaze. In all these cases, the truth is that the wife and children of the offenders are the only parties really punished. Even the hanging itself falls with a heavier weight of suffering on the sensibilities of an attached wife than it does on the actual culprit, whose sense of pain has a termination. The wife, tortured with the picture of the scene of strangulation on her imagination, in vain, when worn out with distress of mind, seeks repose; the excited and deranged nerves keep the fancy at work; she dreams that they have laid her dead husband, cold and clammy, by her side, and awakes in terror at being so near one whose absence a short time since was her only trouble. The hours, as the morning approaches, are counted; then minutes are watched. The fatal period arrives—the clock strikes eight—she sees the signal—hears the drop fall—feels the jerk—the sensation of choking—and swoons, again to revive to the consciousness that all is desolation and misery around her!

WHO ARE WE?—Accursed, I say, be all uniform coats of blue or of red; all ye epaulets and sabretashes; all ye guns, shrapnels, and musketoons; all ye silken banners embroidered with bloody reminiscences of successful fights: down—down to the bottomless pit with you all, and let honest men live and love each other without you! What business have I, forsooth, to plume myself because the Duke of Wellington beat the French in Spain and elsewhere; and kindle as I read the tale, and fancy myself of a heroic stock, because my uncle Tom was at the battle of Waterloo, and because we beat Napoleon there? Who are we, in the name of Beelzebub? Did we ever fight in our lives? Have we the slightest inclination for fighting and murdering one another? Why are we to go on hating one another, from generation to generation, swelling up our little bosoms with absurd national conceit, strutting and crowing over our neighbours, and longing to be at fisty-cuffs with them again? As Aristotle remarks, in war there are always two parties; and though it often happens that both declare themselves to be victorious, it still is generally the case that one party beats and the other is beaten. The conqueror is thus filled with national pride, and the conquered with national hatred, and a desire to do better next time. If he has his revenge and beats his opponent as desired, these agreeable feelings are reversed, and so pride and hatred continue in *secula seculorum*, and ribands and orders are given away, and great men rise and flourish. "Remember you are Britons!" cried our general; "there is the enemy and de—'em, give 'em the bayonet!" Hurrah! helter skelter, load and fire, cut and thrust, down they go! "Soldats! dans ce moment terrible la France vous regarde; Vive l'Empereur!" shouts Jacques Bonhomme, and his sword is through your ribs in a twinkling. "Children!" roars Feld-marchal Sauerkraut, "men of Hohenzollernsigringen! remember the eyes of Vaterland are upon you!" and murder again is the consequence. Tomahoe-teeboo leads on the Ashantees with the very same war-cry, and they eat all their prisoners with true patriotic cannibalism. Thus do nations consider themselves superior to all the rest of the world!

## A Fashionable Marriage.

## CHAPTER III.—THE SETTLEMENT—THE CEREMONY—THE CATASTROPHE.

EARLIER in the morning than fashion would think polite, Mr. Winyett was ushered into the presence of the Countess of Foulborough, and a few minutes sufficed to introduce him to all the members of the family. The Earl contrived to leave his room, and received the City merchant as blandly as the gout would permit him. The Countess was remarkably active, smiling over and upon all, until even her daughters began to suspect that their talented mama had some other purpose to serve than the happiness of her son. His Lordship was affable in the extreme, and on that morning made more way in the good opinion of Mr. Winyett than all his previous interviews had effected for him. The young lady herself began to feel her spirits expand, and a joyous and delightful thrill crept through her nerves, giving an illuminated expression to her features, which made her father more than once inquire of himself what could have been the nature and cause of her sudden illness. The heat and excitement of the opera, however, bore on its ample shoulders all blame respecting Miss Winyett's indisposition; and the ardent attachment of the young lord was deemed a fitting apology for his so far trespassing the rules of prudence in bringing her to his father's mansion. At breakfast every winning grace which a polished woman can throw around her conduct was displayed by the Countess; and her daughters, taking so excellent an example, proved themselves polite without pride, and affable without condescension. Mr. Winyett felt himself elevated even in his own estimation, and it was therefore with a firm step and a glowing cheek that the old man rose at the request of the Earl, when informed that he and his Countess would converse with him for a short time in the library.

Seated amongst books never read, the Earl partly admitted to Mr. Winyett his inability to open the subject on which they had solicited his attendance, or to conduct it in a manner becoming its importance; but his Countess, to whom all matters were delegated while he suffered under the attacks of gout, would not only act for herself and him, but be better qualified to talk of certain delicate matters which generally intrude themselves in matters of the present description. Thus introduced, the Countess opened upon the merchant all the charms of her conversation, and commenced the topic of her son's affection for his amiable and accomplished daughter in so delicate a manner, and proceeded so tenderly, yet effectually, towards her approval of his choice, and the hope that her son had not accepted the reciprocal attachment of Miss Winyett without her parent's concurrence. Mr. Winyett, led away by the brilliant display of words, and not a little seduced by the enticing style in which they were delivered, could only half mutter a few broken sentences respecting his satisfaction—his pride at the prospect of his daughter's union—his power of giving her an affluent settlement, and his hope of seeing her happy with the man of her choice, and so on. Had a superficial observer seen and heard the parties, he would not have been able to fix the proper characteristics of either of them. The Earl's small grey eyes twinkled with intense emotion, but his other features presented their usual appearance of frozen snow. The Countess, radiant with satisfied good nature, would have been taken for a beautiful and perfect picture of disinterested kindness, to whom the happiness of others was a principle of life, into which no germ of selfishness could ever have an entrance. Mr. Winyett alone was embarrassed; but the kind and soothing manner in which the Countess assisted him to finish a sentence; the delicate promptings she gave him to make his own meaning plain, proved that she read his thoughts more plainly than he could himself explain them; and finding that they needed no direction towards the current in which she wished them to flow, Mr. Winyett was ultimately made as confident in his speech as he would have been in the summation of his ledger. The morning waxed away; the parents joined "the family," and, after an elegant refection, the Countess, her daughters, and Miss Winyett, proceeded to the Park, while Mr. Winyett went in search of Josias Vincent, Esq.

A very few days sufficed for the transaction of the legal portion of the business. Lawyers can be as speedy in their operations as they are dilatory, when it is their interest to do so. This was such an instance; and Mr. Vincent called early one morning at — Square, saw Lord Swindleton in his bedroom, and informed him that Mr. Winyett, on the morning of his daughter's marriage, would pay to the solicitor of the Earl of Foulborough the sum of fifty thousand pounds, for the use of herself and husband; that he had purchased a large assortment of jewellery, from which the Countess and the ladies might expect a few articles of ornamental wear; that the merchant had also made his will, in which the residue of his fortune was made to devolve on the second son of his daughter; whom failing, to be equally divided among her daughters; whom failing, to devolve upon her eldest surviving son; whom failing, to become the property of herself; and in the event of her dying before the testator, without issue, then the entire residue of his fortune should descend to her husband, the Right Hon. Lord Swindleton. Mr. Vincent shortly afterwards departed, with a bill for one thousand pounds, at ten days' notice, in his possession.

No sooner was it bruited abroad that the noble heir of the honours of Foulborough was about to be married to the daughter of a rich merchant in the City than all the tradesmen, who had been unable to supply goods for the use of the family, suddenly became possessed of large and elegant stocks of laces, silks, &c., and would be most happy to wait at the mansion with whatever patterns might be required.

At length the long-awaited on morning arrived, and the confiding and guileless maiden became Lady Swindleton. It would be an idle task to dwell on the ceremonies of a marriage, and still more useless to describe the garniture of the breakfast table, or the stately deportment of those who scarcely tasted any of the delicacies with which it was encumbered. The country seat of the Earl had been furnished up for the occasion, and thither the "happy couple" repaired to enjoy the honeymoon. That period of wedded love is generally unaccounted for in fashionable life. It is supposed to be so entirely filled up with a quiet round of domestic enjoyments, with agreeable conversations, and tender attempts to make each other happy without the foreign aid of society, that little description is necessary. Some of the uninitiated think it must be a dull affair at best; but no young lady has been known to express a disinclination to undergo the novitiate. Whatever enjoyments may usually accrue to the secluded wedded lovers in ordinary cases, few fell to the lot of Lady Swindleton. Her heartless lord, almost as soon as he alighted from the carriage (which, by-the-bye, was sent back immediately to town), cooled down into the careless husband, and left a woman, whose whole heart was bound up in him, for the society of a few blacklegs and their dogs. In a few weeks he returned to town, discharged his debts of honour to his mother and sisters, redeemed his character at Tattersall's, and enjoyed the reputation of being one of the best men about town. In the gay circles to which he again became a welcome guest, no inquiry whatever was made respecting his lady; it was sufficient for them that her father's gold glittered on the card table.

Lady Swindleton resided for nearly three months in the country, ashamed to write to her father, but urgent in her letters to her husband, who only twice deigned to reply to her communications; and when she compared his unmeaning or excusing letters with the tone and warmth of his conversation a few months before, an almost undistinguishable pang would settle in her breast, and, almost ere she was aware, tears of anguishing import would roll down her pale cheeks, like hail drops in summer—round drops of water congealed in falling.

It was not until compelled to inform his Lordship of her being likely too add a new claimant to the honours of Foulborough, that her husband waited on the Countess, and inquired what was to be done respecting her. No sooner was the Countess aware of the situation of her daughter-in-law, than she resolved to convert the circumstance to her benefit. She assumed great concern at the loneliness of the dear child, and counselled the immediate departure of her son to console her, and bring her up to town that her spirits might be rendered cheerful and happy. Unfortunately, Lord Swindleton was engaged at a most important race on the following day, where a horse he had recently purchased was to run; consequently it was impossible for him to leave town on any other errand. With some difficulty, therefore, the Countess allowed herself to be induced to go down, receiving in consideration of her services a small roll of bank-notes, a mere trifle of which she stood somewhat in need. A few hours' soothing by the Countess lulled the complaints but not the suspicions of Lady Swindleton, who resolved, so soon as she got to town, to take up her residence with her father. The Countess, however, was determined to ingratiate herself with her daughter-in-law, even at the expense of her son, and continued to render the disconsolate wife every attention of which flattery and art were capable. In a few days they returned to town; and the first intelligence they heard of his Lordship was, that he had been "cleaned out" at Newmarket, and was now as poor, though not quite so much in debt, as previous to his marriage. Ere Lord Swindleton could apply his seductive persuasion to his wife, with the view of inducing her to apply to her father for assistance, the enraged Countess forgot her whole week's policy, and, bursting into the most unladylike passion, exposed the delinquencies and poverty of her son, and called on the affrighted lady to encourage his misconduct no longer!

"Had it not been for you, madam, this would not have occurred," exclaimed the Countess. "The vulgar company into which he has thrown himself has been his ruin."

"I hope you are not in difficulty, my very foolish mother;" hisped the youth, "for I do assure you that I cannot give you another slice of my lady's jointure."

"Leave this house instantly," replied the Countess.

"Adieu," half sung half said the noble lord, as he gracefully bowed himself out of the room.

Lady Swindleton had seated herself on a chair. Confounded at the display of passion and villany she had witnessed, she felt a dizziness coming over her which would have rendered her insensible. With an energy of which she scarcely deemed herself capable, she shook it off, and paced the room firmly, while her graceless lord made his exit. The Countess turned upon her, but instead of meeting a pale and shrinking creature she

beheld the victim not only unalarmed, but almost appearing as if unconcerned. Struck with astonishment, the Countess remained silent, when Lady Swindleton thus addressed her.

"Madam, please be seated. The loss of my fortune is to me of little moment—much less than the exposure which must ensue will be to you and your family. The many dreary hours which I have passed in the country, while my husband and you were rioting in excess, will carry less of regret with them than your conduct may cause yourself—their memory will be unimpaired by a pang of remorse or a sense of shame; perhaps also so will the recollection of your conduct. I am sorry only for my father; the fruit of many years frugality and careful management has been dissipated in almost as many days yet that he will forgive for his daughter's sake. I am yet too young a wife, and likely too soon to be a mother, to struggle on through such a life as this day gives promise of. I cannot give up the name of your family for the sake of that which breathes within me, but, however much the disappointment of my life may be, it must be passed in seclusion—with my father, not with my husband or his family."

The decision with which this resolution was uttered had considerable effect upon the Countess. Several times she made an attempt to interrupt her daughter-in-law, but the cool manner of her address would brook no interruption, and for the first time the haughty dame felt herself awed into silence. Ere Lady Swindleton passed, the Countess had changed her resolve, and for the family honour and her own profit, determined to endure the city girl. She, therefore, cast a mild yet reproving look upon her daughter-in-law; first one tear appeared, then another, till her eyes seemed as if studded with illuminated pearls;—a sigh was then seen to be struggling and heaving in her bosom; it escaped from her lips; and the tears, by the shock, fell like a shower on a marble vase, only rendering the unstreaked portion of her neck more glossy and transparent by the comparison.

There are some women who, while commanding tears, really feel impressed by the weakness they feign; and who, by their tenderness of look, lead captive the most resolute determination to withstand their art or entreaty. Such a profound artist was the Countess; she could throw for a moment her whole heart, selfish and callous as it was, into a sentiment, and look Virtue and Meekness personified. Thus was Lady Swindleton beguiled; thus were her emotions led from herself to those with whom she had become allied, and thus was the incessant trembler in her bosom made to cling still more closely and fondly to him who had outraged her feelings, destroyed her quiet, and prostrated her hopes of happiness, alike as a wife or mother. There is no agony more bitter to the soul than that which arises from a consciousness of injury; and yet, that all the affections of the mind and senses still adhere to those by whom that injury has been inflicted. The Countess observed this weakness, fixed it, and by it obtained the extent of her wishes,—that is, so far as it was possible for these wishes to be satisfied.

The Countess well knew that her reprobate son would only laugh at her anger, while he would readily yield to her persuasion, provided that he could be made a gainer by her counsel. She, therefore, most tenderly adjoined her daughter-in-law by the endearing terms of a wife and expectant mother to assist her in redeeming his Lordship from ruin—to entice him from vulgar company, and to reclaim him to that honour and dignity befitting his birth, and to that happiness with which a family could alone surround him. The victory was complete; the unhappy wife relented in her purpose of explaining all to her father; gradually she was induced to represent a falsehood to him, and to seek money for her own purposes. The unsuspecting merchant readily complied, once and again. There was not a more cheerful and pleasure-bringing husband than Lord Swindleton when money was to be had; there was not a kinder or more attentive mother-in-law than the Countess on like occasions. Still, for days, sometimes weeks, the young lord would absent himself from home. Lady Swindleton was now approaching a critical time in her existence; and, like every mother with her first-born, awaited the result in fear. One morning, while calculating her period with some anxiety, she received a letter from her husband, stating that he was forcibly detained in a "hotel" for a debt of five thousand pounds, which he had incurred at the gaming-table; and that unless she could immediately furnish him with that sum, he could not possibly see her again. The lady trembled in every nerve; but she resolved on the instant to despatch the note to her father, and leave the matter altogether in his hands. In a few hours Mr. Winyett was with his daughter, gently chiding her for not informing him of such circumstances sooner. The Countess, knowing what had occurred, refused to see him. He proceeded, therefore, to the fashionable prison of his son-in-law, and inquired the amount for which he was detained.

"Only a paltry thousand," replied the master of the table.

"If that is all," said Mr. Winyett, "could you not have trusted to his honour for the paltry amount?"

"We know him too well for that," rejoined the official. "We know the bottom of his purse pretty well by this time."

"Do not be despirited, my Lord," said the merchant; "your confidence in me and my daughter, I am certain,

has been great. I have seen the note you sent her, and am aware of the amount you so delicately demanded. I restore you to liberty, but not another shilling of mine do you receive."

While Mr. Winyett paid the money, Lord Swindleton took his hat, and was permitted to walk down stairs. On the merchant's reaching his daughter's, he found her husband and mother-in-law accusing her of perfidy and ingratitude in having exposed them. Turning round on Mr. Winyett, the hopeful lordling demanded the remainder of the poor sum he had been led to expect.

Mr. Winyett quietly advised his daughter to depart with him, but his Lordship immediately interfered, and declared that his wife should remain where she was, and be subject to his control, unless his wishes were complied with. The old merchant possessed all the feelings of a father, but at the same time he was a man of business, and knew how to meet a difficulty. While his daughter reclined on the sofa, her face colourless and cold, her eyes red, and her lips blue, the merchant coolly took a pair, drew out a few lines on a slip of paper, threw it over to his son-in-law, who, having read it with equal coolness, readily placed his name to it, and received the money. A street coach was ordered, the lady conveyed to it, and Mr. Winyett drove off, while the drawing-room curtains were violently closed as they passed. Neither spoke for a time—one never more. While proceeding down the noisy and crowded Strand, or through Fleet-street, Lady Swindleton fell down on her father's knees; a looking-glass escaped her lips, her eyes turned round, and her limbs stiffened in his grasp. At first, he intended to have stopped the vehicle and called a surgeon; but, rage, disappointment, and mental anguish deterred him; he flattered himself that she was already dead, and drove on through the city; passed the well-known crowded thoroughfares where he had so often plodded cutlery in the accumulation of his wealth; and after weary hour's drive reached his little house in the country. The lady was quietly carried to her old apartment. A surgeon speedily arrived, who declared life had fled. The old man uttered no complaint. He transmitted a messenger to the Earl of Foulborough, who in reply stated his deep regret at the circumstance, and his hope that the funeral would be conducted in a manner becoming the family. Mr. Winyett, after the remains of his daughter had been properly attended to, gently opened his bureau, took out a well-folded document, tore it methodically in pieces, and placed them in a grate, applying thereto a lighted candle. On the morning after the funeral, there appeared in the same paper which announced the approaching marriage, "We regret to announce that the accomplished Lady Swindleton died in premature childhood, on Wednesday last. It is needless to add that the family are plunged in the deepest affliction."

The Earl and his son are prepared to take office; and the Countess more than ever urgently desires that it may be an ambassadorial appointment.

#### Cruelties of Science.

The newspapers the other day gave the following American extract, respecting the effects of a galvanic shock on the body of an unfortunate man, who, having been executed by murder, was cut down at the earliest moment allowed by law, and experimented upon while his corpse was warm, the motion of his blood not quite suspended, and the action of his brain not yet at rest. This cruel torture on an individual whose soul still lingered in agony intense, in a senseless frame, was reported merely as the "wonders of galvanism;" no pen was found to indite an indignant sentence against the barbarity of the transaction: nor were the experimentalists called on to express regret at the terrible torture they had inflicted on a human being who had already endured the shame of death, and satisfied the law.

John White, convicted of the murder of Messrs. Gwatkin and Glenn, on board a flat boat on the Ohio river, was executed at Louisville, on the 8th ult., a little after six o'clock in the morning. The rope not "playing" well, cased the knot to slip up over the chin instead of hanging under his ear, so that his neck was not broken by a fall. Previously to his execution he wrote a letter to his father, in which he stated that he was present when the unfortunate men were murdered: that he did not participate in the act, but was compelled to beg his own life from two men who murdered them. He was cut down after hanging about twenty-five minutes, and his body was given to the doctors for the purposes of experiment. The *Louisville City Gazette* gives the annexed extraordinary circumstances attending an experiment with the galvanic battery:—"The poles of a powerful galvanic pile, which had been prepared for the occasion, were immediately applied to him, and to the unutterable joy of all present, with the most perfect success. On the first application of the fluid to his body, which was yet warm and trembling, universal tremour was seen to pass over his frame; on a sudden he arose from his bench to a sitting posture, and with great eagerness and impatience raised his hand to his neck, trying to grasp the scarf in his fingers and tear it from his throat! He first snatched at it with great rashness, as though the rope was yet around his neck, and then continued some moments picking at the seam with his fingers, as though it was something that adhered to his throat giving him great uneasiness. But this symptom was soon forgotten, for almost the next moment he rose upon his feet, raised his arms level with his breast, and, opening his bloodshot eyes, gave forth from his mouth a most terrific screech, after which his chest worked as if in respiration in a very violent manner. Very one at this moment was as mute as death, when one of the surgeons exclaimed that he was alive. The excitement was too great to allow time for a reply to the remark;

every eye was riveted upon the agitated and shaking corpse. The operator continued to let upon it a full quantum of the galvanic fluid, till the action upon its nerves became so powerful that it made a tremendous bound, leaping by a sort of imperfect plunge into a corner of the room, disengaging itself entirely from the wires which communicated the galvanism. All immediately drew around the body. For the moment after its fall it seemed perfectly motionless and dead; a surgeon approached, and taking hold of his arm, announced that he thought he felt a slight though a single beat of the pulse. The galvanic operator was just going to arrange his machine to give him another charge, when the surgeon exclaimed that he breathed. At this moment he gave a long gasp, rising and gently waving his right hand; his sighs continued for two minutes, when they ceased entirely. His whole frame seemed to be agitated, his chest heaved, and his legs trembled. These effects were supposed to be caused by the powerful influence of the galvanic fluid upon the nerves; none of these movements were yet supposed attributable to the action of life. It was considered that the animating principle of nature had left his frame and could never be again restored. In the very height of anxiety, the surgeon announced that he could feel feeble pulsations. A piece of broken looking-glass was immediately held before his nostrils, which was instantly covered with a cloud. The most intense anxiety was felt for some seconds, when the motion of his chest, as in the act of respiration, became visible. He rolled his eyes wildly in their sockets, occasionally closing them, and giving most terrific scowls. In about five minutes his breathing became tolerably frequent—probably he would give one breath where an healthy man would give four. His breathing, however, rapidly increased. The doctors began to speak to him, but he gave no indication that he heard a word. He looked upon the scene around him with the most death-like indifference. A young medical student approached him, and, taking hold of his arm and shoulder, White rose upon his feet, took two steps thus supported, and seated himself in an arm chair. His muscles seemed to relax, and he appeared somewhat overcome with the exertion he had made. A bottle of hartshorn was immediately applied to his nose, which revived him, but his life seemed to be that of a man much intoxicated. He seemed upon one occasion to try to give utterance to some feeling, but, from an unknown cause, an impediment probably occasioned by the execution, he was unable to give utterance to a word. His system was critically examined, and though he was pronounced by the doctors to be perfectly alive, yet he could live but a very few minutes, for congestion of the brain was rapidly taking place. Every method was adopted to equalize the circulation, and save the patient from the terrible consequence of so sad a catastrophe, but in vain. The blood-vessels of the head were enormously distended, and his eyes appeared to be balls of clotted blood. His system was immediately thrown into direful spasms, and he died in a few minutes in the most excruciating agonies."

#### Power and Properties of the Blood.

In an excellent little work, comprising several lectures delivered by Mr. White, at the Highgate Literary and Scientific Institution, there is a vast number of well-pointed anecdotes, given in elucidation of the views of the lecturer. Among these the following, respecting the power and properties of the blood, appear to us more than ordinarily interesting:—

Some men have possessed the power of diminishing the action of the heart in themselves to such an extraordinary degree that they have simulated death. In these cases no pulsation has been felt in the heart or arteries, and respiration could not be perceived. A case is related in 'Harriott's Struggles.' The author, a resident in India, states that his Hindoo servants, when offended, fell down, and simulated death so perfectly, that he knew not whether he were looking on a living or dead body. Experience convinced him that he had been tricked; and having been called one day, while sealing a letter, to a man who had fallen down, apparently dead, he dropped on his unclad body a little burning wax, and the man immediately sprang up, resolved to sham no more.

The heart, though exquisitely sensible to mental impressions, is not sensible to touch, as is shown by the observation of Harvey, discoverer of the circulation of the blood, which is to this effect:—"A noble youth of the family of Montgomery, from a fall and abscess on the side of his chest, had the interior marvellously exposed, so that after his cure, on his return from his travels, the heart and lungs were still visible, and could be handled: which, when it was communicated to Charles I., he expressed a desire that Harvey should be permitted to see the youth, and examine his heart. When (says Harvey) I had paid my respects to this young nobleman, and conveyed to him the King's request, he made no concealment, but exposed the left side of his breast, when I saw a cavity into which I could introduce my fingers and thumb. Astonished with the novelty, again and again I explored the wound; and, first marvelling at the extraordinary nature of the cure, I set about the examination of the heart. Taking it in one hand, and placing the finger of the other on the pulse of the wrist, I satisfied myself that it was indeed the heart which I grasped. I then brought him to the King, that he might behold and touch so extraordinary a thing, and that he might perceive, as I did, that unless when we touched the outer skin, or saw our fingers in the cavity, this young nobleman knew not that we touched the heart!"

When blood is removed from the body, it coagulates; that is, a considerable part, including the colouring matter, becomes solid. The blood coagulates also, in the dead body, although it is sometimes found fluid, rarely in those who have died a natural death; frequently in those who have died suddenly from violence, from narcotic poisons, or lightning; and often also in those who have died of apoplexy. A common superstitious belief has existed, that if a murderer come near the body he has murdered, the corpse will bleed at his presence. As, when death has suddenly occurred, the blood is often fluid, and the body may have been moved when the suspected person has been

put to this trial, we can conceive that the bleeding would often occur; but we cannot suppose it would afford any proof of the guilt of the looker-on. In Hargrave's State Trials, quoted in Beck's Medical Jurisprudence, Sir John Maynard, an eminent lawyer, states that the following evidence was given in a trial for homicide, which occurred in Hertfordshire, in the fourth year of Charles I.:—"An ancient and grave person, minister to the parish where the fact was committed, deposed, that the body being taken up out of the grave, thirty days after the party's death, and lying on the grass; and the four defendants being present, were required each of them to touch the dead body. Okeman's wife fell upon her knees, and prayed God to show tokens of her innocence. The appellant did not touch the dead body, whereupon the brow of the dead, which before was of a livid and carrion colour (in terminis, the verbal expression of the witness), began to have a dew or gentle sweat arise on it, which increased by degrees, till the sweat ran down in drops on the face: the brow turned to a lively and fresh colour, and the deceased opened one of her eyes, and shut it again; and this opening the eye was done three several times. She likewise thrust out the ring or marriage finger three times, and pulled it in again, and the finger dropped blood on the grass."

When we read such tales of the superstitious belief of our ancestors, our hearts swell with gratitude to the promoters of general education, cheap literature, and literary and scientific institutions; for knowledge is the power which bursts the thralldom of superstition.

Some doubt has been expressed by Lord Clarendon, in the "History of the Rebellion and Civil Wars in England," as to the spot in which the remains of the unhappy King Charles I. had been interred. In a paper, written by Mr. Herbert, and published in the 'Athenæ Oxonienses,' it is stated, that the body was interred in King Henry VIII.'s vault, in St. George's Chapel, Windsor. In the year 1813 an aperture was accidentally made in King Henry VIII.'s vault. By direction of the Prince Regent, an examination of the vault was made: Sir Henry Hallford was present at the examination. In an account of the examination drawn up by him—authenticated by the Prince Regent,\* deposited in the British Museum, and also published in Sir Henry Hallford's 'Essays and Orations'—it is stated, that a coffin was discovered, bearing an inscription, 'King Charles, 1648,' which contained a body covered with an unctuous substance, and embalmed in cere-cloth. Sir Henry says, 'When the head had been entirely disengaged from the attachments which confined it, it was found to be loose, and, without any difficulty, was taken up and held to view. It was quite wet, and gave a greenish red tinge to paper and to linen, which touched it.' Sir Henry adds in a note, 'I have not asserted this liquid to be blood, because I had not an opportunity of being sure that it was so. Nobody present had a doubt of its being blood.' This statement shows how long a time the blood may remain fluid.

#### An Old Song Worth Singing.

HAPPY and free are a Married Man's reveries;  
Cheerily, merrily, passes his life;  
He knows not the Bachelor's reveries, devilleries,  
Cared by and blessed by his children and a wife.  
From lassitude free too, sweet home still to flee to,  
A pet on his knee too, his kindness to share.  
A fire-side so cheery, the smiles of his deary,—  
O this boys, this is the Married Man's Fare.

Wife, kind as an angel, sees things never range ill,  
Busy promoting his comfort around,  
Dispelling dejection with smiles of affection,  
Sympathizing, advising, when fortune has frowned.  
Old ones relating droll tales never sating,  
Little ones prating, all strangers to care; [munching,  
Some romping, some jumping, some punching, some  
Economy dealing the Married Man's Fare.

Thus is each jolly day one live holiday;  
Not so the Bachelor, lonely, depressed—  
No gentle one near him, to home to endear him,  
In sorrow to cheer him, no friend if no guest;  
No children to climp up—'twould fill all my rhyme up,  
And take too much time up, to tell his despair;  
Cross housekeeper meeting him, cheating him, beating him;  
Bills pouring, maids scouring, devouring his fare.

He has no one to put on a sleeve or neck button—  
Shirts mangled to rags—drawers stringless at knee;  
The cook, to his grief too, spoils pudding and beef too,  
With overdone, underdone, undone is he;  
No son, still a treasure, in business or leisure;  
No daughter, with pleasure, new joys to prepare;  
But old maids and cousins, kind souls! rush in dozens  
Relieving him soon of his bachelor's fare.

He calls children apes, Sir, (the fox and the grapes, Sir,)  
And fain would be wed when his locks are like snow;  
But widows throw scorn out, and tell him he's worn out;  
And maidens, deriding, cry "No! my love no!"  
Old age comes with sorrow, with wrinkle, with furrow,  
No hope in to-morrow—none sympathy spares;  
And when unfit to rise up, he looks to the skies up—  
None close his old eyes up—he dies—and who cares?

\* On this circumstance Lord Byron wrote some of the most bitter and severe lines that ever proceeded from his pen. The noble poet was well known to entertain an excited antipathy against George the Fourth, but that ill-will was not deemed so active and determined as to be capable of venting the strong and passionate hate conveyed in the following lines. Their publication induced more unpopularity to the poet than to the Regent:—

Famed for contemptuous breach of sacred ties,  
By headless Charles see heartless Henry lies;  
Between them stands another sceptred thing—  
It moves, it reigns—in all but name, a king:  
Charles to his people, Henry to his wife,  
—In him the double tyrant starts to life:  
Justice and death have mix'd their dust in vain,  
Each royal vampire wakes to life again.  
Ah what can tombs avail!—since these disgorge  
The blood and dust of both—to mould a George.

### Troubles of Mahomedan Ladies.

Two firms have lately been promulgated by the Sheikh ul Islam, which it is said have created great discontent among the fair inhabitants of the Turkish harems. The first is somewhat to the following effect:—"Whereas it has come to the knowledge of those whose duty it is to watch over the morals of the faithful, and to see that none shall presume to transgress prescribed rules, that certain women, of unblushing boldness and frivolous demeanour, have, in imitation of those daughters of burnt mothers, the she Kiaffirs of Pera, permitted their noses, and even their lips, to be exposed to the wanton gaze of passengers, it is enjoined, in the name of the Most Merciful, the recompenser of all virtue, that the wives and daughters of the faithful shall cautiously abstain from all such indecencies, and that they shall carefully wrap their yachmecks (veils) round their faces, in such a manner as to conceal their lips and noses, and only leave a sufficient aperture for the purpose of seeing that they do not defile themselves by coming in contact with any male infidels. Let them attend to this, or it will be the worse for them." The second is still more stringent, and not altogether exempt from a piece of scandal. It is couched more or less in these terms:—"Allah is great and omnipotent, and has placed limits to all things. It being a matter of public notoriety that the infidel traders of Pera, have increased in number, and stored their shops with divers tempting articles, the offspring of Satan's inventions, whereby the wives and handmaids of the faithful are excited to acts of most objectionable extravagance, thereby injuring their domestic felicity, and entailing great pecuniary inflictions upon their husbands and lords; it also being observed that, not content with filling their shops with these luring creations of Eblis, the aforesaid breeders of mischief place behind their counters youths of comely appearance, hoping strongly to further captivate and intoxicate the senses of true believing women, and thence endangering their souls as well as their purses. It is consequently ordained, in the name of the Avenger of all Incongruities, that caution and discretion be inculcated by husbands and male relatives, and that the pernicious practice of frequenting these infidel traps of destruction be put an end to. Let this serve as a warning, or all parties will eat considerable dirt in this world and in the next."

The great extent to which this absurd conduct is carried by the rigidly righteous, will be seen by the following paragraph from the *Bengal Hurkaru*:—"A restive camel threw his load, consisting of one of the wives of Shah Soojah, concealed of course with such privacy as a kujawub may afford. Entangled in his fallen burthen the beast fell heavily upon it; in an instant one of the European officers hastened to the spot, and would fain have released the poor captive, over whom the camel, entangled, as we have said, in some of the ropes of the kujawub, was still struggling. But even amid all the pain and peril of the moment, the unfortunate lady forbade him to approach her, and enjoined him, as he hoped his soul might be happy, not to save her life at the cost of what she must regard as 'outrage worse than death.' It by no means follows that this luckless lady was in effect more spotless than her fair competers, but she must have been aware that a terrible penalty would attach to her acceptance of that sort of assistance, which would alone have been effectual from any man, and more especially perhaps (though I know not this) from any one not among the 'Faithful.' Be this as it may, the gentleman, thus 'warned off,' reluctantly drew back, and it was not till the approach of some eunuchs, who (I have it on authority) are always in the way when they are not wanted and out of it when they are—that with an infinite deal of bungling the fair sufferer was at length extricated. She was by this time almost lifeless, as might be gathered from the increased faintness of her cries; and during the night it was reported this victim of Asiatic absurdity and jealousy had breathed her last."

### Fragments.

**THE WOMEN OF THE AZORES.**—In our rides we passed many women enveloped in heavy cloth cloaks of dark indigo; which, with high hoods stiffened over their heads with whalebone and buckram, almost conceal their faces, except when one white hand is put up to open the mouth of the hood and gratify their curiosity. When they wear shoes, which is generally the case near the city, they are neat about the feet, which although not small, are generally well formed. Their shoes are of various colours, from the neat black and glazed slipper that Englishwomen wear, to scarlet, blue, red, and orange in every shade. Indeed this is almost the only piece of finery, which, under such a covering, it is possible to display. A lady told me that women recognised one another by their feet as they walked the streets, and would draw up or pass on, according as the passer-by was shod in black or prinrose.—*A Winter in the Azores.*

**COFFEE-DRINKING.**—**SWEET TOOTH IN PARIS.**—The superiority of French coffee over that which is made in England, consists, first, in the berry being roasted more than it is in England; and, 2dly, in making the coffee of great strength, to which is added a large quantity of hot milk. The usual mode of taking coffee in Paris for breakfast is one fourth coffee and three fourths milk. The English frequently take a much larger proportion of coffee, and, therefore, experience bad effects; for if taken too strong it is calculated to produce heat of blood, dryness of skin, and indigestion. The practice of taking a small cup of coffee after dinner, without milk, is said to facilitate the digestion; but long experience has shown that at the same time there should be a small quantity of brandy or other liqueur. The enormous quantity of sugar which is served with one's coffee surprises a stranger. The French are great sugar eaters, and generally put five or six large lumps in a cup of coffee. Those who do not consume what is served, frequently put the remaining lumps into their pocket, which they eat during the day, or employ at home for the manufacture of *cau sucree*. It is not exactly fashionable to carry away one's sugar, but the practice excites no comment.

**A PATRIOTIC PRIEST AND GOOD FAIRY.**—The Castle of Carrig-a-Droid, in Cork, Mrs. Hall tells us, is built on a rock in the Lee. Although this pass of the river must have been one of importance, the building is comparatively modern. In 1641, however, it was a strong fortress, and had the credit of baffling the arms of Oliver Cromwell. The Roman Catholic Bishop of Ross had garrisoned it with an army for Charles I.; Cromwell despatched Lord Broghill with orders to attack and scatter the Irish in this quarter; and in the rout that followed—upon which the muse of Davenant had complimented his lordship—the bishop was taken prisoner. A free pardon was offered to him if he would procure the surrender of the castle, which he appeared willing to do; he was conducted to the walls, where, instead of calling upon the Irish to admit their enemies, he boldly adjured them to hold out while one stone remained upon another; then, turning to his astonished guard, he yielded to his fate, "whereupon he was immediately hanged." Yet the castle was soon afterwards taken by a weak stratagem. The English drew towards it the trunks of trees, by yoking oxen to them, which the garrison perceiving, mistook for cannon, and "presently began to parley, and surrendered upon articles." Tradition states the castle to have been erected by a MacCarthy, "to please the lady O'Carroll," who desired a residence on this singularly wild and beautiful spot. A legend, however, attributes its origin to a circumstance still more romantic. A poor peasant, lame and hump-backed, fell in love with the fair daughter of his chieftain, and pined in despair at the hopeless nature of his attachment. Wandering by the river-side, he suddenly heard the click click of the Leprehawn's hammer, seized the tiny brogue-maker, and compelled him to reveal the secret of the whereabouts of his treasure store. The little being not only endowed him with riches, but changed his awkward and ungainly form to one of manly grace; and the lovely Maiga was readily wooed, and easily won, by a stranger rich enough to build for her a noble mansion and to place the wealth of earth at her feet.

**COLOUR OF THE AIR.**—When we look at the sky on a clear day, it appears like a large light blue arch set over our head, and seen through the (supposed) invisible substance called air. But this is not the case: there is no blue dome above us, and when the sky is viewed from any elevated region of the earth, as the top of a high mountain or in a balloon, and where we would expect that this supposed blue vault would be more distinct, and manifest its blue tint more decidedly, it appears not more blue, but dark or black. In proportion as the spectator rises above the surface of the earth, and has less air above him, and that very rare, the blue tint gradually disappears; and if he could attain a height at which there is no air, the sky would be perfectly black, there would be total darkness all around, except in the direction in which the sun's rays fall upon him. This leads to the inference, that the air itself is of a blue colour. But how does it happen that we see this blue colour of the air only when we look at the sky, or at a distant mountain or forest? Why is not the blue colour seen in the air surrounding us when we look towards a house or wall not so far removed, or even in the air in a room, or in the air contained in what we call an empty glass vessel? A very simple experiment will explain the reason of this apparent anomaly. If we take any large glass vessel which contains a coloured liquid of a deep colour, and have several glass tubes of different diameters, from an inch to a 10th or 20th of an inch, and fill these tubes with liquid out of the large vessel; though we have the same liquid in all, and hence, in all the matter which causes the colour, it will be seen that the tint will gradually become more faint in proportion as the diameter of the tube is less, until, in the smallest, the liquid is clear and colourless like water. The intensity of the colour is just in proportion to the mass at which the spectator looks, and a very small quantity of that which, in large quantities, has a strong colour, does not present any colour at all, and thus, though the great body of air which is opposed to us, when we look at a clear sky or any distant object, transmits a sufficient quantity of blue rays to produce an impression of that colour on the eye, the small quantity in a glass, in a room, or even within the compass of a few miles, cannot convey enough of blue rays to the eye to produce the colour which the air manifests in a large body.

**FRENCH REWARDS FOR TALENT AND VIRTUE.**—One of the most interesting exhibitions of Paris lately took place, viz., the distribution of prizes accorded by the Academie Francaise for the most useful literary works, and the best instances of moral actions during the past year. An interesting detail was first read by the secretary, relative to the nature of the literary productions which were to be rewarded, and he ended by announcing that the prize for poetry (fifteen hundred francs) on the given theme, "The influence of Christian civilisation in the East," had been gained by M. Alfred des Essarts, who would read his poem to the audience. The young author was then led up to the president, from whom he received a rich gold medal; and, amidst warm plaudits from the members, he read aloud his manuscript. Of the eight prizes for works most useful to morality, six were to female writers, who, as the secretary gallantly said, had united elegance with power, and purity with industry. When the literary rewards were terminated, the prizes for virtuous actions were detailed by the director, M. de Jouy, who is so well known in England by his "Hermit of the Chaussee D'Autin," published many years ago. A sum of 10,000f., (£400) was given among four persons for praiseworthy acts: the first prize, of 3,000f., to a poor washerwoman, who, although she had seven children of her own, had adopted eight orphans fifteen years ago, and had maintained them through many struggles and difficulties ever since. Another prize was to an officer who had saved the life of a child from a burning house, which no one else would enter; and, after his first escape, hearing a female voice from the second floor, exclaiming, "Oh save my daughter!" regardless of the fearful danger, the young man rushed up the ladder, and found his difficulties increased by the mother and daughter having fainted; however, by almost superhuman exertion, he saved both, at the expense of severe personal injury to himself. A further

sum of 10,000f. was given in smaller portions, for instance, of virtue and domestic good conduct in humble life, parties residing in the provinces.

**FRENCH SENTIMENT AND HUMAN PHILOSOPHY.**—The following painful truths are from a new work by Buret, a French author of some promise:—"Man," Jesus Christ, "liveth not by bread alone; "but unfortunates who employ all the thoughts and almost all the hours of their lives to procure food for their body, are deprived of the spiritual sustenance necessary to man's mind. I merely, Religion undertook to satisfy the noble want of human nature, and by its festivals relieved the painful fatigue of toil. The day of rest was consecrated, if no elevated thought, at least to sweet and noble sentiment. The church convened to its solemnities, under its spires and almost celestial roofs, amid the finest monumental art that human hands have raised, the whole Christian population—that is to say, all men, without distinction for there, in the presence of God, all were brethren. shared equally amongst all its prayer and its incense, sacred instructions, and the highest enjoyments that arts could afford. The Catholic Church was at once Temple, the Museum, and—if I may use so profane a term—the Opera of the people. Religion now has lost the direction of the people; for its priesthood became the instrument of the powers of oppression, the defender of interests of the few against the legitimate interests of the many, and has shared the fate of those whom it supported. The people, having lost confidence, abandoned the Catholic Church with regret; and has since remained without temple, without altar, without the poetic consolation of the festivals, and without any enjoyments of the arts. Unfortunately, we comprehend too well the fall of Catholicism such as the priest made it; but who amongst us does not regret that nothing has replaced for the people that which is lost? There is profound meaning in the common expression,—"we want a religion for the people." Religion the explanation of human destiny, the poetry of our earth existence, the consoling promise of a better futurity. A who have more interest in hope and belief than the poor."

**A PICTORIAL FRAGMENT.**—In the present days, publishing, almost every book of consequence is illustrated with pictures, whether they be absolutely necessary or not. We have "Pictorial Bibles," "Pictorial Prayer-books," "Pictorial Testaments," "Pictorial Shakspeares," "Pictorial Molières," and "Pictorial Devils upon T Sticks," but why not illustrate more useful, the most practical books. Would not a Pictorial Blue Book Court Guide be a good spec? It might be rendered extremely pretty, and highly useful, by containing portraits of all persons named in the book, a sketch of their houses with explanatory references to the windows, so as to show at a glance which room is the bed-room of the married branch of the family, and which of the unmarried, and other information that might be serviceable. Portraits of the unmarried daughters ought on no account to be omitted. Directories in the same manner might be illustrated with portraits of the bankers, fac similes of their hand-writings, plans of their premises, explanations of the construction of their cash-boxes, and the keys, &c., which would be highly curious. Law Reports ought certainly to be Pictorial. How greatly increased would the stirring and exciting interest which youth, more especially, find in the perusal of causes of elopement, criminal conversation, &c., if portraits were given of the naughty delinquents, the accessories in the shape of post-boy blacksmiths, and others, and of the spoilt-sport pursuers and spies, and of the envious chambermaids, &c. In cases of domestic quarrels between man and wife, of assault and battery, what a fine scope there is for the Pictorial! I fancy one of the pictures now. I see it, there it is; beautiful, spirited! Look, there stands the husband holding up the poker to ward off the blow his affectionate wife is dealing him with a frying-pan, while she holds his hair by her grasp; there's the cradle upset, and the child thrown out; the terrified cat jumps up to the ceiling; the me stands still and burns before the fire; the kettle is boiling over into the Yorkshire pudding; and all the dinner things lie smashed upon the floor. Surely this is worthy of the Pictorial! And now for the second illustration. There are the judge, jury, counsellors, plenty of silk, plenty of wig, plenty of profound listeners, there stand the unfortunate claimant of protection from the court. See the black patches on his face, there stands the virago with her arm a kimbo, and there are the identical weapons of offence. This kind of picture would also serve to illustrate such valuable and highly instructive books, and when thus illustrated in the Pictorial fashion no one should be without it. Not only should faithful portraits be given, but an account of the phrenology of each person. Trusting that some spirited publisher, if any such there be, will adopt the Pictorial hints I have thrown out, I am the public's most obedient servant.—*A Bookworm.*

**TOO TRUE.**—Labour, where the workman possesses no other kind of capital, as is the case with several classes of operatives, has not the economic characters of an article of traffic; wages do not belong to a market; for the operative does not stand before his employer in the character of a free seller. It may be said that the capitalist is always free to purchase labour, and the workman always forced to sell it. The value of labour is completely destroyed; it is not sold every moment. Labour differs from all articles of traffic, because it can neither be stored nor saved. To the operative, labour is life, and if that life be not daily exchanged for food and raiment, it dwindles away and becomes extinct. The capitalist or purchaser of labour is placed in a very different position: if his wealth is unemployed it is unproductive, but it is not destroyed. He can afford to defer the bargain until more favourable conditions are offered. In a word, labour is not always demanded, and is always obliged to offer itself.

SATURDAY, JULY 31, 1841.

PRICE THREE HALFPENCE.

## A Trip by the Great Western Railway.

DEAR CHAMBERS,—Never did school-boy run home more joyously on the unexpected gift of a holiday than did we to the Railway station at Paddington, when you informed us that for two whole days our attendance could be dispensed with. The noisy omnibii had, many a time and oft, earned for themselves our hearty maledictions in the Strand, as they disturbed or disarranged the self-willed ideas that came not at our call. At the Railway-office, however, the jerking trundle of the wheels was music to our tender ears, and the voice and signal of the "cad" were as promises of liberty to the captive. We endured with exemplary patience the many stoppages on the road, and displayed a Roman fortitude when the omnibus actually halted at the Angel at Islington. As we neared the station, however, a degree of anxiety crept upon us, nor did the feverishness altogether subside until we were fairly seated, and locked in within one of the elegant and commodious carriages which traverse the majestic line of railway between London and Bridgewater.

Securely seated, we ventured to look on the busy mass around us. We had expected to witness much bustle and greater confusion; to be dinned with the clamour of porters, and the shrill call of old ladies for attendance. The large and splendid building, however, crowded as it was, echoed not with a discordant sound; piles of luggage gradually and silently disappeared; doors were opened and shut without a clang; every attending officer appeared to know his duty; he interfered with none; no one interfered with him. The intricacies of the rails, which would puzzle even some of our geometrical students, were traversed by carriages, and turned about without difficulty or delay. Suddenly, the shrill sharp sound of the steam-whistle was heard, and off we set at an easy rate through the sinuosities of the station. Our speed increased as we merged into the open air; the tops of the green clad trees peeped curiously over the high embankments of the line, the slender stems of their upper branches waving us an adieu as gracefully as did many a fair and beaming eye to our companions on the way. A splendid open country burst upon us as we escaped from the embanking walls; sweet green grass welcomed us to the country, while a distant view of Kensall-green Cemetery told us how pleasant must a grave-yard be among trees and flowers, when compared with the dismal strips that surround the churches in the City. Passing a cutting through a red clayey heath, girdled in its elevated portions by a massy brick wall, we came upon a gorgeous panorama of fields and trees. In the far distance, oaks and elms glided on or from us—as the line approached or diverged; the parks spotted with cattle appeared to come with us on our way, while those more at hand flew from us as if afraid of the purpose of our intrusion. On the whole line, we observed that the horses grazing lifted their heads at our approach, threw up their heels in hasty fear, and set off to the further verge of their encampment, as if they were aware that a formidable rival to their value and usefulness was in the neighbourhood. Near the Ealing station, however, one black philosopher looked quietly on as we passed him; he seemed to have made up his mind, and to content himself with his past exertions; whether he contemplated retiring on his "small savings," or of taking the benefit of the Insolvent Act, we are unable to determine; but "Othello's occupation's gone," was legibly written on his forehead, and he seemed to care not although all the world should know it.

"What a splendid field for partridges!" exclaimed a gentleman sitting with us. "Do you know, Sir, that were I in that field on the 1st of September I would undertake to bag four brace of partridges?"

"What building is that on the left?" inquired we, with an affirmative nod respecting his sporting abilities.

"That? why, that is Hanwell Lunatic Asylum. My dear Sir, I hope you don't mean to insinuate that any relation exists between it and the 1st of September?"

The valve of conversation was thus opened, and we were

strangers no longer. We now passed over a high-arched viaduct, enabling us to look down upon the steep below, and gaze upon the far-spreading country, dotted with clumps of trees, and embowered by fields of heavily-laden grain. On the roadway, the unblushing poppy kept the chief place, while an immense field of beans occupied the eye in one direction for a considerable space. The soft green hue, beginning to be silvered with the ripening pod, was instantly changed by the intrusion of a brick field; piles of unburnt clay were stretching far and near, while a burning mass now and then gave token that the process of labour was completing. There appeared as many bricks as would have built a respectable-sized town, yet over the whole expanse there could not be discovered more than ten or a dozen men at work.

As we neared the river Colne we caught a glimpse of the stately towers of Windsor, with the proud standard of England floating high in the air, the rays of the sun shining gladly on its folds, while ever and anon the breeze would open the ample silk and stretch it towards us, as if graciously saying—"Her Majesty is now at home." A steep excavation hid the bold view from us on the instant, and all that met our vision was a stalwart thistle, which reared itself as if it were on its own wild hills of heath. Our mind instantly reverted to Scotland, and its hapless Mary—to her castles of Edinburgh, where her fair son was born—to Craigmillar, where her few peaceful summer hours were passed—to Lochleven, where her sad imprisonment brought the gray and the grief to her forehead—to Fotheringay, where the block and her long white neck became acquainted. It was an easy transition of memory to think upon Elizabeth, of Kenilworth, of Tilbury, of Greenwich Park, and Whitehall.

These thoughts brought us to the station at Slough, where the same elegance and roomy accommodation presented themselves. Indeed, it appeared to us as if the several intermediate stations had brought their buildings along with us, they were so exactly twin to each other. That must either have been the case, or the same draughtsman, carpenter, painter, and charwoman had been, and is employed on them all. No sooner had we quitted the station than we were met by a flower-enamelled embankment, on which the summer daisies blushed like a crowd of children, while the graceful dahlias looked like modest yet unashful matrons, keeping watch and ward over their progeny. Into this polite society, however, the poppies had again intruded, and blazoned themselves like general officers on a field day.

Again the broad and ample fields spread themselves out in their luxuriant vegetation; although there was neither a tree nor a crop in a situation like to what we had seen before, (while light and shade were playing in their wildest loveliness on yellowing wheat and greenish oats,) the essentials of the scene were so much the same, that we began to wish for a sloping hill or jutting rock, for the meandering of a river, or the broad swell of the restless and resistless sea. Our discontented mood received a sudden yet welcome check; high in air a lark sprang up, its quivering wing mounting gaily to its own glad note. We looked on the glowing sky, and the scene we wished was there. Clouds of all hues—blue as ocean, and dark as its wildest cliffs—hung in their glorious drapery from the illimitable orb of heaven, while the streaming light shone like rivers of gladness upon the smiling land.

"This, my dear Sir," said our friend of the partridges, "is the Maidenhead station."

Here we parted company with a lady, her parrot, and its cage. We assisted the lady to leave the carriage, our sporting friend handing out the parrot; and the smile of thanks which he received was more bland, more sweet, than that awarded to us. Our friend witnessed his triumph, and, like a good soldier, took advantage of it.

"Depend on it, Sir, a lady who keeps a bird is not selfish, and she will think more of the little attention bestowed on her favourite than those awarded to herself."

After passing over a high embankment, which raised us

considerably above the level of the country, we all at once dipped into a deep excavation, the chalky sides of which, by shutting our eyes, we converted into Dover cliffs. This reverie was somewhat awkwardly disturbed by the rapid passing of a train proceeding on to London, flying like a wild bird from the fowler's snare. This observation raised us considerably in the estimation of our sporting friend, and he accordingly favoured us with all the delights of partridge shooting. We retaliated upon him our knowledge of the Highlands, of its grouse and black-cock; but were speedily silenced by his informing us that he had a splendid dog, whose "papa" had been in the Highlands, and he should take his own there next season.

Immense fields of beans spread themselves out upon the green waste, with here and there a yellow strip of grain, forming an exact reverse to the desert and the much-longed-for oasis. Ere we could fancy to ourselves the appearance of a mirage on the sandy plain, which deludes travellers into an idea of blessed water in a burning land, the winding Thames spread itself out before us, glittering and glowing like a huge serpent on the sward. We were now at Reading, where, among its clustering houses, we discovered the wreck of a time-worn tower, or fortalice, the ivy creeping and shining on its dim-grey walls. The vulgar brick of the modern residences seemed to shun its company as an antiquated fashionable; while the ruin, true to its ancient pride, gloried in its loneliness, looked more majestic through its sadness, and by its solitariness seemed to say, "I am among but not of them."

"Scream—scream—scream" again whistled the signal-valve, and we strode through lengthening fields of heavily laden grain, a prospect which seemed to proclaim that there shall be in the land plenty for man and for beast. Among the ample foliage of the trees we saw the little birds hopping in an independent strut from bough to bough, but their small voices coped not with the untiring sound of the massy wheels of the long train upon the rails. Still to our ear their little notes sounded gladly, and the busy hum of the wild bee awoke upon our fancy as he crossed the way with rapid and undulating wing. Now a thick wood burst upon our view, edging a high sloping country with its waving fringe, while in the nearer fields the lordly crow hopped and plodded through the heavy soil, as if in close investigation whether the fallow land was inhabited by creeping things congenial to his stomach. The plantation closed around us, and we ran through its mossy way, only to come to a deep chalky cutting, frequently spanned by high and noble arches, upon which would loiter the astonished hind until we passed; then, scratching his head, he would lend his horse the whip and proceed upon his way. With a magic suddenness the piled embankments fell away, and the whole country was again opened to us as if a curtain had been lifted from our vision. The ground rose majestically before and behind us, topped with trees of giant growth, and enamelled with fields of corn which longed for the sickle and the merry reaper's song. A farm standing next claimed our notice; the principal building was slated, and looked comfortable as well as elegant; the major part of the buildings, however, were of thatch, while some of the outer houses were broken in the roof, and the straw peeped through as the wiry hair of a houseless wanderer (for we must not say vagrant) insinuates itself through the ventilated roof of his apologetical hat. Again we posted through a chalky cutting, and again welcomed a diversified scene of wood and water, softened by green fields, and crowned by a woody promontory, which met the horizon like a dark rock in the far distance—all beauty, sublimity, and repose. Embowered in the trees, on the gently sloping hills, we could descry some of the stately halls of England, where the old landed gentry hold their state, and fine country gentlemen dispense good deeds and better will—"to those that receive them." We saw no mansion surrounded by cottages; they were all retired, and held no communion with the ephemeral visitants of the world, who, never having had a grandfather, were unknown in

Herald's College, and had not the least stake in the country.

In the vicinity of the Goring station there is a neat farm house, supported by a confusion of cottages; in the front stands a pretty little church, the graveyard of which the clergyman had turned into a sheep-fold—an emblem, we suppose, of the good conduct and prospects of his spiritual flock. A haze now began to spread upon a distant hill; a dark spot, like that of the man's hand on the sea of Samaria, was seen to expand upon the firmament, and a hasty blast of rain entered unannounced by the carriage-window. This was taken as a signal by all the labourers on the line and in the fields to shelter themselves, and enabled us to discover a gipsy encampment, whither some men led their steps with a familiarity which betokened acquaintance-ship at least. "Where," thought we to ourselves, "frowned the justice, and where scowled his clerk." The cloud passed by, the sun broke forth, and a ruddy ragged girl came out from the awning, grinned with her white teeth in approbation of the train, but certainly in derision of our reflections. The girl and her laugh were driven from our remembrance by the appearance of a sheep-fold, the lambs gambolling around and tormenting their dams, who submitted to each attack with true motherly enjoyment. At the open door of the pen sat a black dog, the "faithful shepherd" personified; he looked neither to the right nor to the left, nor intruded on the amusements of his prisoners, a lesson which greater goalers might do well to imitate.

Another plantation received us with open arms, the tall slender trees appearing like Norway scaffold poles decorated for a holiday, after the manner of Jack o' the Green on a May-day. This picture was followed by a plentiful display of leeks and lettuces along the banks of the Stevenston station, proving that the attendant had some agricultural taste as well as mechanical skill. A group of children welcomed the train, not as a wonder, but with a familiar recognition, which bespoke a latent idea that the day would come when they should be conductors or engineers themselves. One urchin stood perched upon a stile with a face so grave, and an eye so steady, that a parish beadle might have taken a lesson from him.

"There—there now, that copse is the place for pheasants. I would give up my seat immediately to get into that inclosure with a gun, and a few charges of shot."

This, of course, could be said by no other than our sporting friend. In his eagerness to look out he rose from his seat, but at that instant a returning train flew past, the steam-whistle screamed out "Take care," and he fell back in a somewhat undignified position. We were now in the midst of a vast amphitheatre of hills, which girded a level country crowded with the spoils of an early autumn, while on the distant hill tops the dwarf trees appeared like the beautiful feet of those who bring glad tidings.

"Whew—whew—whew," again sounded the whistle. We were at Faringdon station. In addition to the ample and elegant accommodation of the other halting places, an inviting sign-board announced "refreshments;" but no rest was allowed the engines; no sandwiches reached the passengers. We had to content ourselves with a leak upon an old wooden shed with a tarpaulin roof, formerly used as a dépôt for the workman's tools, and on which some villanous wit had written "This house to let." A flock of geese relieved our aching eyes, and we appealed with confidence to our sporting friend that one of them would prove a sumptuous dinner for two.

"I don't know," said he, "Partridges are much better eating. You know," added he, "that I am a philosopher, and I consider that the sportsman eats his game with as much zest as the labouring man enjoys his meal. He knows he has earned it, and every mouthful sweetens the remembrance of his toil."

There was too much truth in the latter observation to induce us to question the philosophy of the application.

We were now upon the more recently opened part of the line. The embankments were new; neither flowers nor weeds had yet had time to pave the summits or slopes of the way. The vegetation of the surrounding country, however, was still the same, and we entered with all the pride of a Norman invader; we partitioned it in our mind's eye with feudal pomp, keeping to ourselves sufficient to enable us to retain our dignity among the retainers. While thus engaged, a sapient crow stood upon the bank as boldly as an old Saxon baron repelling an invasion on his territory. These warlike reminiscences were parted from existence by a stupendous cutting through which we proceeded, and we became ourselves again. Still our active and awakened thoughts refused repose. Shielded by high walls of earth, which sloped to the edge of the rails, we considered the vast amount of labour which must have been expended on one little spot; but ere calculation could come to our assistance, we were in the midst of a wide ranging pasture land, spotted and diversified with herds and flocks—the sun glistening on blade and leaf—on tawny hide and feathered wing—on pool and stream, on furze and toppling trees.

As we entered Wiltshire, our way ran in a lateral direction with the common road and a canal; on the one a horse was dragging a heavy boat, while on the other a cart stood still till its driver satisfied his curiosity at the rapid train above him. At the station on the Wootton-Bassett road, we slackened pace, and found

that another engine was being attached to the train. We had hitherto been dragged in our triumphal march by the "Lion," and the "Tiger," being placed before it, tandem fashion, we speedily found that if the battle was not always to the strong, the race was in this instance to the swift. With increased speed we passed a dilapidated white-washed house, through a broken window of which looked two unwashed damsels, and at another stood an almost unwashable old man. But, haste! We must not loiter on our way—

"For we have many a mountain path to tread."

Stop! The poetry in our composition must not induce us to deviate from the truth. True, a steep hill lay before us, over which for perhaps a thousand years wain and waggon trudged slowly and heavily; we however ran through a deep excavation, the banks displaying a soil of heavy and tenacious clay. In another instant we were in the open country; the trees and fields flying from us in affrighted haste; the clouds keeping pace with us in vain. The country undulated considerably; now we were in a ravine; now on a high embankment, the plain far below. Then we rushed at exhilarating speed between a cleft rock—high, massy, and frowning; the rugged ledge appeared to complain of the ruthless axe and hammer, and to bewail the absence of the ivy and the lichen to cover its nakedness from the gaze of man. We were now at Boxhill, through whose solid heart a passage had been cut, the hill growing upon us as we rushed into its centre. Suddenly we penetrated the long dark tunnel, which, a mile and three-quarters in length, evidences a degree of engineering skill, of mechanical industry, and patient labour, never seen in the ample plains of England. The whistle sounded shrill and sharp as we entered this Cimmerian region, the gloom rendered more visible by the lamps which burn night and day in niches in the solid wall. Now and then a gleam of the forsaken day would cast a blessed halo on our path, the light streaming down the shafts which have been cut through the rock and soil to the surface. The principal of these shafts (seven in number) exceeds 200 feet in depth—that is, from the roof of the arch to the surface of the hill on the outside.

As we proceeded towards the end of the tunnel, the light gradually strengthened, and we burst alike upon the glare of day and the outskirts of Bath. The vaulted town rose majestically before us. We recollected Edinburgh at once; and, although the "glass of fashion and the mould of form" to provincial England claimed no rugged steep nor giant pile, its appearance was not less romantic or fascinating to the travelled eye. We longed to ascend one or other of the green hills which protected Bath from the stormy blast, that we might there enjoy a Pisgah view of the city of old fortunes and young fashions; but we contented ourselves until our return with a half-hour's investigation of the railway-station. The sweet Avon intersects the railway, and accompanies it on its way some distance towards Bristol. A bridge over the river leads to the town, and on another bridge above that the railway extends its fearless length. The station-house, when completed, will be a splendid stone building, of a modern Gothic style, and fitted up with a most elaborate attention to the comfort of passengers. Arches upon arches are built to form a broad and firm foundation; presenting an appearance of a vaulted castle of old, where, in dungeon deep and noisome cell, the prisoner pined to death. Here, however, all is light and activity, rendered still more conspicuous by the absence of confusion.

We set off for Bristol rather cavalierly. In defiance of all provincial pride, the railway, by a series of arches, is carried on a level with the house-tops, cutting off corners of bed-rooms, and blocking up windows with the ruthless hand of a tax-evader. This high state of travel, however, is amply compensated by the line gliding in a deep cutting, flanked by high walls of polished stone; then comes a tunnel, then a short view of light and liveliness; another excavation succeeds, then a tunnel; and thus alternate night and day govern the road to Bristol. Some of the cuttings are nearly as splendid and romantic as that which introduces us to Boxhill, with this difference, that there the rock is a greyish white, while between Bath and Bristol it is of a deep dark red, intermixed now and then with layers of earth. Huge artificial precipices now frown upon us; yet, undeterred, we pursued our venturesome way until we came to undulating fields, and Bristol lay beneath our feet.

The smoky town presented few objects for immediate remark. Next day, we discovered something worth relating. Of that, however, more anon. We had still upwards of thirty miles to proceed ere we reached Bridgewater, where our sporting friend assured us they could roast a fowl and brew ale with any district in the kingdom. The shadows of the trees now began to tell us that the day was on the wane. Long and immense excavations met us on our way, and gave token of the power of man, when directed by proper principles and active skill. Now we were looking on the open plain, now in the hollow of a cleft rock; now on a ridgy embankment, now in the bosom of stony hills. The fair and free open country at length fully gained, the crops appeared greener than in Wiltshire; the sun of Somerset apparently had not been in the ascendant for the season. Nor were the fields so strictly kept from weeds; the line of way was in many places guarded by strong detachments of thistles, relieved at intervals by

faded docks, whose stems had completely run to seed. Meadow flats now extended their freshened faces along the line, while here and there a field of wheat or oats waved proudly among the lowly hay or grass by which it was surrounded. Some fields appeared as if they had at one time resolved to become heathy and betake themselves to Scotland; then had repented of their crime, but were unable to go back to fruitfulness and national virtue.

"Scream—scream—screech," yelled the whistle, and our pace visibly slackened. We entered a commodious building; we thought we had seen it before, but began to doubt when we were told that Bridgewater had now the honour of our presence. Six hours before we were in the streets of London; a space of a hundred and sixty miles now lay between us and the scene of our profitable labours. To whom, then, asked we of ourselves, are we indebted for this speedy transit to the western coast of England? By whose skill and appliant labour has space been set aside, and a long level line been laid down on which speed vies with elegance, and security reclines on the same cushion with comfort? He by whom the valley has been exalted and the hill brought low—whose rod of power has cleft the rock in twain, and bid the stream flow freely far beneath his feet—he is the conqueror alike of man and matter; and of him shall after ages say, his mind was like his work, practical in its vastness, and useful in all its results.

To the vast conception and untiring energy of I. K. Brunel, Esq., are the public indebted for this mighty work. The immense sum of money expended on the line is amply evidenced by the stupendous works which continually meet the eye—bridges, viaducts, excavations, embankments, and tunnels,—all are monuments of engineering skill, and triumphs of scientific knowledge. By the timing of the trains, Bridgewater may be reached at mid-day, and the evening again set the traveller down in the metropolis. The Londoner may reach Bath in four hours—remain there till night-fall, and yet return home ere the chimes of midnight. These are triumphs which posterity shall celebrate; which shall take away the reproach of the provinces, and make England one mighty city; which shall destroy local prejudices, and eradicate rival interests; which shall make man better acquainted with his kindred, and teach him of what the human mind is capable, when genius sits down to calculate, and ability goes forth to execute.

Dear Chambers, we are now engaged on the wing of a fowl; our imagination has gone to roost. Our sporting friend carves elegantly. A Somersetshire lass, with an eye like a ravening hawk, has just introduced the wine. "Success to the Great Western Railway, and prosperity to your London Journal."

#### Mesmerism, or Animal Magnetism.

THIS science has again begun to excite attention. Without adopting the dogma of its professors, or approving of the condemnation given to it by its opponents, we give an impartial account of recent experiments in several of the most important cities of the world. The following account of Mesmer, and of his powers, is by a correspondent of an influential London paper, and is worthy of attention, at least for its historical and scientific research:—Mesmer, a native of Switzerland, from whose cognomen the science has been named, was the first person in Europe who attracted attention by the practice of the art. His exhibitions, however, were attended with a great deal of mummery, with the playing of musical instruments, and the manipulation of iron spindles, issuing from a wooden circular box. This box, or tub, admitted round it about 50 patients, and each patient was connected to his neighbour by a cord, while to render the chain of communication more complete, the one pinched the other's thumb. This new science produced so much sensation in Paris, that the government appointed a commission to inquire into its merits, at the head of which was the celebrated Benjamin Franklin. The report was unfavourable to the pretensions of the new science, but it is worthy of remark, that Mesmer himself never came in contact with the commissioners; he refused to explain the principles by which he operated, but one of his pupils, Delson, undertook to explain everything, but not to the satisfaction of the commission. Nevertheless, they admit that five out of fourteen sick persons experienced some effects from the operation, but attributed their effects to the influence of imagination. But, as we can only judge from effects, and allowing that Mesmerism works only through the medium of the imagination, still are not the principles which govern so tremendous an agency worthy of being inquired into? Any objections urged either from analogy, from reason, or from experience, can scarcely be entertained. At first sight, who would suppose that the combination of certain plates of metal immersed in diffused acid would produce the extraordinary effects which we can see daily demonstrated, either by the electro-galvanic battery or the voltaic pile? Or that the union and combustion of two gases should produce so great a heat as to consume iron, and reduce the diamond to its primitive elements? Or that Hull's hydraulic machine should overcome the laws of gravitation, and raise water in spite of its physical properties, simply by rapidity of motion? Or that the violet ray of the prism should magnetize iron? Yet these are facts which no one ventures to question, because they are daily demonstrated. Or shall we make any allusion to the daguerrotype, the

electrotype, or the wonderful powers of steam, with the strange faculty of electricity? Why, therefore, without inquiry, should we refuse to an individual the credit of possessing latent powers, which are not common to all our race? All fish have not the property of the gymnotus—yet who doubts the power of the eel in the Adelaide Gallery to produce electrical phenomena? We could multiply cases of extraordinary qualities possessed not only by animals but by men. Does any one doubt the venom of the rattle-snake, of the cobra de capella, or of that horrid reptile common near the mines of Choco, in South America, whose bite is instantaneous and the frightful dissolution, when the body swells, and the whole frame in a few seconds is decomposed, and becomes a fluid mass of loathsome corruption? Or does any one question the extraordinary faculty which that individual, pensioned at the Mauritius by the British Government, possesses of seeing vessels some hundred miles at sea? Or the fact of the Brahmin who could sit on air; or of another Indian who could bury himself for a month, as witnessed by Lieutenant Boileau, and then resuscitate himself; or of the case of Colonel Townshend, noticed by Cheyne, who could voluntarily expire and again return to life? The power of the hazel twig in the hands of certain persons to point out the source of springs was long treated as fictitious; but in the 22d volume of the *Quarterly Review* there is a well-authenticated case of Lady N.'s exhibiting this power in the presence of Dr. Hutton and others, in a field near the new college at Woolwich, and subsequently at other places. It would be an endless task to enumerate the frequent divergence from the ordinary laws of the human economy, in persons of peculiar idiosyncrasies, but we shall merely notice, in passing, the fact of Chabert swallowing eleven grains of phosphorus, and we forget how many of arsenic, with impunity—a circumstance which, in a great measure, corroborates the statement of the Roman historian, that Mithridates was insensible to poison, while it brings to mind the anecdote of the ancient dame who had lived so long on poison that none could approach her bed without destruction.

We now give a detail of some experiments which recently took place in the Hanover-square Rooms. M. Delafontaine having made his arrangements, a youth made his appearance, of a sallow olive complexion, but seemingly healthy, and rather good looking. He was seated in an arm-chair and the mesmeristic operations commenced. The operator took off his left-hand glove, drew a chair to the right of the youth, then placed his left thumb upon the apex of his (the youth's) right thumb, and two fingers on the fleshy part of the ball, and looked him steadily and fixedly in the face. It was about two or three minutes before any visible effects were produced, though immediately as he commenced, a sort of spasmodic motion took place in the youth's throat, the symptoms indicating the presence of what medical writers have designated *globus hystericus*. Shortly after the patient seemed lost to all consciousness, as, indeed, it was soon proved he was. But in the sleep into which he had been thrown, the ordinary phenomena of sleep were not indicated. For example, his neck remained rigid, while his arms rested apparently flaccid at his sides, and no change could be detected in the features, except perhaps that his cheeks were a little more pallid—if this expression may be allowed, for it is not the word that expresses what we mean—than when he took his seat. The somnambulist being now complete, the operator, to our horror, drove several pins forcibly into his head and cheeks; but the somnambulist gave no indications of sensation. In fact, he seemed dead, and the interest excited in the room was expressed in suppressed sighs. At this period we confess that we felt a little indignant at the supposed legerdemain which was being practised, but a few moments convinced us of the injustice of our suspicions, and, we believe, of every other person in the room. A vial of concentrated ammonia, commonly called hartshorn, was then opened by M. Delafontaine, and handed to the company to test its strength; and so powerful was it, that no one could bear it within six or eight inches of his nose, yet this was applied closely; in fact, affixed to the nostrils of the somnambulist; yet he gave no sign whatever of his suffering from it, and was decidedly unconscious of its presence. Next, some lucifer matches were lighted, and placed under his nose, the operator closing his mouth with his hand; but neither did these produce any effect. On being partially unsomnambulized, he drew back his head when the phial was held to his nose. Being again subjected to the magnetic influence, several percussion caps were fired from a pistol close to his ear, on both sides, and over the crown of his head, and at the occiput, and before his face, but he gave no start, or even moved a fibre. He was then partially awakened again, and started at the discharge of another percussion-cap. Being again manipulated, a perfect state of catalepsy was produced. His arms were extended horizontally from the shoulders, and his legs from the chair, and in this position the electro-magnetic current, from a powerful machine, was made to pass through him, which shook him dreadfully, but he gave no signs of feeling. We forgot, in the hurry of description, to say that previous to this experiment, having doubts of the catalepsy, we asked and obtained leave to feel the patient's pulse, but after a very careful examination, being determined to judge for ourselves, we could not

detect any pulsation whatever. The arm was rigid, and could not be bent. It resisted like the bough of a tree, and, whether from fancy, agitation, or the magnetic fluid, we will not undertake to say which, we experienced a disagreeable sensation, which no words can express, and gladly, therefore, left the somnambulist for our seat. The somnambulist still in the chair, the company were invited to test the power of the electro-magnetic machine, but none seemed willing at first to subject themselves to its influence, till a gentleman, evidently from the country, if we might judge from his fine healthy looks, stepped forward and took the wires; but he had scarcely laid hold of them when he gave a shout that we shall never forget as long as we live. He declared that he was so overwhelmed with the shock that he could not let go the wires, and therefore shouted. The patient was next subjected to the voltaic battery. From this he seemed to suffer at first, but the operator declaring he had not been sufficiently magnetized, renewed the fluid, when, though the battery shook his arms like rattles, still he seemed quite unconscious of suffering. He was then blindfolded and covered with a cloth, that he might not by any possibility see who approached him, and several of the company thrust pins into his hands and thighs, but he remained insensible. He was then made to walk leaning on the arm of a gentleman who volunteered to support him, when the operator, standing at several yards distant, suddenly caused him to fall by a mere motion of the hand. This experiment seemed to alarm the gentleman on whose arm the somnambulist was leaning at the time he fell, and indeed it required all his exertions to keep his head from coming violently in contact with the floor, as it was, he saved him by the merest chance. When he was raised, which was done by the operator seizing him by the collar, the right arm, which had been resting for support on the gentleman's arm, was elevated and rigid, as if still in the position it occupied while walking, while the left foot was raised in the act of stepping out. Being at length unmagnetized, the youth seemed perfectly in health, and declared that he did not recollect anything that had happened to him. We have forgotten to mention that he was directed to sing during the period he was under magnetic influence, when he made a low moaning noise, coming as it were from the stomach, but which was arrested at will, by a single motion of the operator's hand.

Speaking of this exhibition, the correspondent before alluded to says:—"We set aside entirely several of the experiments made by M. Delafontaine, such as the application of the ammonia to the nostrils, the firing of the pistols, and the pins plunged into the flesh of the somnambulist, because Phineas Adams, a soldier in the Somerset Militia, in the year 1811, in a fit of malingering, actually submitted to as severe tests without a murmur—nay, to severer tests, for his scalp was removed, and the skull scraped without his giving sign of sensibility; yet, on procuring his discharge, in two days after he was seen at work; but we cannot set aside that the somnambulist submitted, without a murmur, to the action of the voltaic pile and the electro-magnetic current without evincing any signs of pain or suffering. It is upon this point that we say inquiry is called for. If it be a cheat, it is a magnificent one, and in proportion to the magnitude of the deception should the punishment be meted. Let the inquiry be undertaken by proper persons—by men who are acquainted with the wonders of physical science, and not by pseudo-medical reformers and political practitioners, and let their decision be final. The time has arrived when no pretensions to science, however apparently wild or visionary, can be treated with contempt."

We learn from a New York paper, that Dr. Collyer gave a private exhibition at the Temple, to a select company of professional gentlemen, pursuant to a previous arrangement. At the close of a previous exhibition, it was suggested that such a company should be selected, and a committee was appointed to select an equal number from the learned professions, and they accordingly invited fourteen clergymen of good standing, as many physicians, and also lawyers.

About eight ministers of different sects, the same number of physicians, and five lawyers responded to the call, and were formed into a general committee.

The young man Frederick, but 20 years of age, was placed in the chair, as the first subject on which Dr. Collyer was to operate, and a sub-committee was appointed to watch and note the phenomena. Before Dr. Collyer commenced, the lad's pulse was felt and pronounced to be "80 per minute, not very full, but pretty regular." Dr. Collyer now placed himself in a chair opposite the subject, and fixed his eyes intently upon him, and in six minutes, without using any manipulation, declared him to be in the magnetic state, and left him to be experimented on by any one present who thought proper to do so. At the moment that he passed into the magnetic state, Dr. Ingalls announced that a slight spasm in the muscle of the right arm was exhibited. The pulsations were then counted, and reported to be "nineteen beats in a quarter of a minute, a little fuller than before, yet not very hard." One of the sub-committee slapped his hands together very loud under the lad's ear, but he seemed utterly insensible to the sound. He rather laid in the chair apparently in a rigid state, but the muscle yielded to pressure. The right hand could be forced down

from the breast, against which it pressed when not held down. He was raised upon his feet and left to fall without exhibiting any consciousness, and his body inclined on every side according to the laws of gravitation. No effort was perceptible of voluntary resistance to this tendency. When Dr. Collyer willed, there was considerable action in the right hand, and attempts to raise it—also some in the left. There was also some redness on the left cheek, but not on the right. He was then laid out on the stage, as motionless as a corpse, the legs being slightly bent and the neck rigidly awry. His nose was tickled, and a pen was jabbed under his left ear, in his neck, and on the back of his hand, without producing any motion. It was stated that pins had been stuck into him without causing the subject to manifest any sense of feeling. To this it was objected that he might possess sufficient control over the sensation of pain produced by so small a laceration of the skin as would be made by a pin, as to conceal any indication of its existence. Therefore, a firm and well-defined cut with a common penknife was made on the back of the little finger, and the blood flowed freely, but not a nerve quivered, or a spark of sensibility was discoverable in the hand, face, or elsewhere—not the slightest twitch. For a considerable time an eminent physician, strongly prejudiced against the supposed science, endeavoured to disturb the inanity of the subject by passing his fingers in various directions over his eyelids.

A respectable lad, of 17 years of age, afflicted with the St. Vitus Dance, was now placed in the chair to be magnetised. A distinguished clergyman, of whose church the patient had been a member for three years, vouched for his good character, and assured the committee that his word might be relied on. Owing to his peculiar affection, his pulse at the wrist was very irregular; but, after examination, Dr. Storer pronounced the pulsation of the heart to be very regular. Dr. Collyer operated on him by active manipulation, as well as by gazing upon him, and he was soon in a drowsy state, and the "dance," as it is called, gradually declined in frequency and extent; but as it left him, the other subject, lying prostrate on the platform, some ten feet off, seemed to be affected with it—as if it were in the process of transfer from the body of the patient to him. He exhibited titanic action of the muscles, which the most experienced medical gentlemen present said could not be feigned.

This phenomenon, which Dr. C. said was wholly new to him, excited the greatest curiosity. His respiration became violently spasmodic. On the other hand, the St. Vitus' spasms completely disappeared from the head, arms, and trunk of the actual patient, and were only observable about his feet. Dr. Lewis, who, at the commencement of the experiments, said he was not afraid of compromising his dignity, by avowing himself a believer in animal magnetism, discharged a large pistol within five feet of Frederick's head, but he gave no signs of life. In about five minutes after he fired again, but with no other result.

Dr. Collyer did not succeed in reducing his new patient to the state of somnambulism, and he said that it was very rarely that he entirely succeeded in the first attempt on a subject. A magnetic habit, he said, had to be acquired by the subject. He also attributed his partial failure in some degree to the fact that he had exhausted a portion of his magnetic power on Frederick. The lad, however, stated that he was conscious that he was under some strange influence, and that he felt himself falling into a state of insensibility while the doctor was operating on him. After he had perfectly come to himself, he said that he felt a darting or pricking sensation running through his arms.

Frederick was kept in the magnetic state an hour and a half, and when Dr. Collyer took him out of it he became exceedingly angry, because his neck handkerchief and collar had been removed, and his well-starched shirt bosom tumbled by the unscrupulous hands of the sceptical examiners. For some ten minutes after he was restored to his senses, he exhibited decided symptoms of St. Vitus' spasms.

These experiments, attested as they are by the first physicians of the active school, forcibly attest the existence of a powerful agency, the origin and extent of which is as yet unknown. The medical world has a splendid field of speculation before it, and we doubt not will use it to advantage.

TO ALL WHOM IT MAY CONCERN.—In the most of instances man has his health greatly in his own power; for even a moderate regard for the decencies of life is usually followed or rewarded by a fair share of health and comfort; but when men and women neglect themselves and their children, one and all of them are rendered doubly liable to disease and death. It may be said that typhus fever, and many other infectious diseases, generally originate in depots of poverty, profligacy, and filth; and every medical man can testify that under such circumstances the great majority of severe cases prove fatal. If people were as much alive to the performance of their domestic duties, and to a becoming conduct in life, as they often are to those gratifications which pander only to their animal appetites and propensities, they would to a certainty be much more comfortable, healthy, and happy, and would very seldom be subjected either to the sweeping scourge of pestilence, or to the direful effects of famine. Famine and pestilence usually accompany each other, and are very generally the consequence of all those moral outrages which degrade and disgrace human nature.—*Philosophy of Death.*

**British Song Birds in Cages.****THE BABILLARD.—(*Ficedula garrula*.)**

The babillard, nettle-creep, or lesser whitethroat will mostly, a day or two after its capture, take flies from the hand. It should be fed upon them and other insects, and also on bread and milk. The cock sings almost incessantly, and while singing he erects the feathers of his head and throat, and throws himself into a variety of strange attitudes. When he sings in a room, during the earlier part of the year, he is heard to great advantage. His song consists of sweet and musical notes, and though occasionally pretty loud, especially when another bird tries to excel him, yet they are generally so low as not to be audible a little way off. It is usually a domineering bird in confinement, and we have heard of one which was so pugnacious that it attacked every bird that came near it, and even pulled the feathers out of an ox-eye (*Parus major*), which was twice its own size.

**THE BLACKBIRD.—(*Merula vulgaris*.)**

The blackbird, or ouzel, is the largest of our singing birds, attaining the length of eleven inches from the tip of the bill to the tip of the tail. The bill of the cock is deep yellow, but the tip and upper part of the hens are black. The cock begins to sing in February or in March, and continues his song till the end of July; but he resumes his song in autumn. His song is very fine, but too loud and shrill for an ordinary sized room. He may be taught to whistle a tune, and to speak. If well taught, he will whistle very delightfully, and for about four or five months in the year. He is fond of pruning and washing his feathers, and, therefore, a large saucer or other vessel full of clean water should be placed in his cage during warm weather. You must supply his table with meat, insects, berries, &c. He is usually a strong hardy bird; and when he does happen to get disordered you may easily restore him to perfect health and convalescence, by administering one or two large spiders, and five or six wood-lice; putting at the same time a little cochineal into his glass. You must not stuff him with too many spiders and wood-lice in one day, for, if you do so, he will disregard all other food for the sake of these delicacies.

The nest is built very early in the year. Its exterior much resembles that of the song thrush, but it is more massive. The interior is lined with clay, into which is worked a thick bedding of dry hay and hair. The eggs, four or five in number, are bluish green, sprinkled with dusky spots, and are hatched in March. If the young are ten or twelve days old when taken from the nest, they may be easily reared by feeding them with bullock's heart, sheep's heart, or any other sort of lean and fresh meat, chopped fine, and mixed with moistened bread. Country people generally feed them with cheese-curd or white bread and milk. You must give them food once in every two hours, and after each meal mind that you remove their ordure, as, like all other song-birds, they thrive best when care is taken to keep them in a clean state. It is also advisable to give them a clean bed of straw whenever their nest becomes dirty. Separate your nestlings as soon as you can. When they are nearly full-grown you may begin and continue to feed them with any sort of fresh meat, no matter whether raw, boiled, roasted, or paid for. Authors and bird-fanciers differ much as to the best mode of telling a cock-bird among a nest of young; but we will bet them a bottle of canary that the young cock blackbird is almost certain to be the blackest of the family. When he has changed his chicken feathers he becomes coal black, while the plumage of his sisters remains of a rusty black.

**THE BLACKCAP.—(*Curruca atricapilla*, *Sylvia atricapilla*.)**

The blackcap, or mock nightingale, arrives in England in April and leaves it in September. The head of the cock is black, that of the hen is of a dull rust colour. The song of the blackcap is wild, sprightly, and plaintive. "Its charming and delicate warblings are heard to very great advantage in a room, but the cheering animated notes with which he usually finishes his song are," says Mr. Blyth, "almost too loud and stunning when heard in doors, though so exquisitely beautiful in the open air. The notes of two of these birds which I have kept in confinement are extremely different, so that I can easily tell which of them is singing; yet no person who knows the song of the blackcap could ever possibly mistake the voice of either of them for that of another species, though so different from each other. One of them sings part of the garden warbler's song, and the other intermixes many of the nightingale's notes, though both of them were old birds when caught. A few weeks since, when a nightingale that I have was singing, in his finest style, I observed one of the blackcaps listen with great attention, and when the nightingale had ceased, the blackcap repeated several of his notes very correctly, but I have never observed him attempt them since. I once heard a wild blackcap repeat the notes of the song thrush so correctly as to deceive me, until he broke out with his usual loud clear notes." In a wild state blackcaps feed principally upon the berries of the ivy, privet, elder, and honeysuckle. In the fruit season they help themselves to peas and currants pretty freely. Caged specimens should be fed on canary-seed mixed with a little rapeseed, and should be occasionally treated to a roasted apple or other soft fruit. If they fall sick give them a small quantity of hemp-seed, and put a little saffron into their water. They form their nest of dry goose-grass, wool, and moss, and line it with feathers, a few horse hairs and the fibres of roots. The hen lays from four to five eggs of a pale reddish brown, sprinkled with darker spots. The cock and hen sit upon them by turns, and when she sits upon them the cock, who loves her 'too sincerely,' brings her flies, worms, and other inexpensive dainties. Our fair readers will say that this is just as it should be, and will hold up the cock blackcap as an example for husbands to follow, when their wives are 'in the straw.'

**THE BULFINCH OR ALP.—(*Pyrrhula vulgaris*.)**

When full grown the cock is distinguished from the hen by having the crown of his head much blacker and a very crimson red breast. Though it has naturally but three unmusical notes, it may be taught to pipe and speak, but

the cock is preferable, as he is not only more easily instructed but is handsomer. When once he has learnt a lesson he seldom forgets it. If well taught he becomes an amusing and valuable bird. Nine or ten guineas have not unfrequently been given for a well-educated bulfinch. Pennant tells us that a gentleman in Lancashire had one that could whistle several tunes, and which was so well disciplined that it would come at its master's call, perch on his shoulders, and at his command go through a difficult musical lesson.

The nest of the bulfinch is formed of the twigs of birch, moss, and fibrous roots, and lined with fine roots. The hen lays four or five eggs of a bluish white colour, spotted with brown and red. She has two or three broods in the year, the first being hatched about the close of May, or at the beginning of June. If you wish to bring them up from the nest let them be a fortnight old before you take them under your care. When you have kept them about a week indoors, you may continue piping, whistling, or talking to them whatever you wish to teach them. While they are young feed them on a stiff paste made of white bread, which, after having been soaked in water and then well squeezed, has been boiled in milk. Feed them every two hours from morning until evening. As soon as they are capable of feeding themselves give them canary-seed with a little rape-seed. Should they become disordered, let them have a small quantity of hempseed, and put a little saffron in their water. If fed entirely on hemp-seed the colour of the feathers will change to black; and, if that be its only food for a month or six weeks before it moults its old feathers in the autumn, those which will succeed them will be black. It is rather difficult to tell a cock nestling from a hen, but some persons decide this question by pulling three or four feathers off the breast, when about three weeks' old. Those whose feathers are replaced, in ten or twelve days, by very red feathers, are cocks; while those whose new feathers are of a pale brown colour are hens.

**THE CHAFFINCH.—(*Fringilla coelebs*.)**

This is a strong healthy bird, and a very agreeable songster. Specimens brought from Essex are considered as the best. Some from that county have been sold for a guinea and a half a piece, and others for even as much as two guineas each. In their free state they sing only from February to the beginning of June, but when brought up from the nest, they will sing in confinement during six or seven months. They feed on various kinds of small seeds, caterpillars, &c. They construct a very neat nest of moss, lichen, and wool, and line it with feathers and hair. The hen lays five or six eggs of a pale reddish colour, sprinkled with dark purple spots. During the period of incubation the cock is very attentive. There are two or three broods in the year, the first being hatched at the beginning of May. You may begin to bring them up when they are ten or twelve days old, and feed them on a thickish paste made of white bread, which, after having been soaked in water and well squeezed, has been boiled in milk. Among a nest of young ones the cock may be distinguished by its back being browner, the white on his wing being brighter, and all his other colours being of a deeper tint than those of his fellow nestlings. If you pull two or three feathers off the breast of a nestling, and they are replaced, in a few days, by new ones of a red colour, you may conclude that it is a cock; but if they are of the same colour as the first, that it is a hen. When full grown the cock may be readily told by his breast being of a fine red, while that of the hen is grey.

**THE FURZE WARBLER.—(*Ficedula ulicicola*.)**

The furze warbler, furze wren, or Dartford warbler is a pretty, lively, restless bird, of an amiable disposition, living in complete tranquillity not only with birds of its own, but of other species. His song, which strongly resembles the whitethroat, is very brisk, and contains some notes like those of the linnet, but it has many entirely original. While singing, he erects his crest and tail, and whisks about with great agility. He feeds on insects chiefly, but is also fond of a ripe and mealy pear.

**THE GARDEN WARBLER.—(*Ficedula hortensis*.)**

This elegant bird arrives about the middle of April, but does not become common until about the middle of May. It announces its arrival by pouring forth its melody from the top of some high pear-tree or from among the branches of an elm. Our friend, Mr. Blyth, says the garden warbler "commences usually with some low twittering notes not unlike those of the swallow, and raising his voice by degrees through a series of charming and most delightful modulations, many of which closely resemble portions of the nightingale's song, he ends with the full rich whistle of the blackbird, but delivered in a more hurried cadence. It certainly possesses several of the nightingale's notes, but those of the blackbird predominate; the song is, nevertheless, perfectly original, and is uttered in a more lively and animated manner than the songs of either of those birds. He continues singing usually about three or four minutes, when he stops as if to take breath, and almost immediately commences again; his deep rich mellow warble is heard throughout the day, and occasionally at sunset, singing nearly throughout the summer, and often both beginning and ending with the same loud blackbird notes."

During the spring, garden warblers feed chiefly on the berries of the ivy, privet, and elder, but when summer comes they "play old gooseberry" among the fruits of our orchards, more especially attacking the Kentish cherries. They also eat insects, though they show a decided preference for fruit.

**THE GOLDFINCH.—(*Fringilla carduelis*.)**

The cock goldfinch is easily distinguished from the hen by all his colours being brighter, by the edges of his wings being of a glossy black up to the shoulders, and by the upper mandible of his bill being black and the under one red. When a cock is caught and caged it soon becomes tame, and sings in about a fortnight. It is very active and lively in confinement, hopping about the cage, and frequently hanging from the bars with its back downwards; which habit, together with the manner in which it rests its feet on its food and pecks at it, reminds one of the habits of the tit. After its capture it should be indulged with

hemp-seed, which it is very fond of, and which makes it sing very boldly; but this kind of food being very hot, it is well to discontinue it gradually, and if always fed on it, the bird rarely moults well or lives long, and when abundantly dieted upon it, the whole of its plumage, excepting the yellow portion of the wings, have been known to turn black. Canary-seed is a better food for it. The seeds of dock are also proper for it, and if you wish to please it, give it now and then the head of a teasel or of a thistle, that it may pick out the seeds.

The nest of the goldfinch is very neatly constructed of moss, dry grass, and roots; and is lined with a few hairs or feathers, small tufts of fine wool, and the down of the willow, of the coltsfoot, or of the broad-leaved cotton-grass (*Eriophorum polystachion*). Sometimes the lining consists solely of cotton-wool. The hen lays five or six eggs of a bluish white, with a few bright spots which are dark in the centre, and shade off in a thick spread purple. She has two broods in the year; the first brood is sometimes hatched as early as the end of May, and the second is hatched about September. The first brood acquire the black on the head about the middle of September, and the red colour at the end of that month; yet it is some time before the head is in perfect plumage.

**THE GRASSHOPPER WARBLER.—(*Sylvia locustella*.)**

Grasshopper warblers have been erroneously stated to be rare birds, but they are to be either seen or heard almost every where that furze-bushes grow. We have met with them on almost all of our suburban heaths and commons. Lately we heard one in a field at Camden Town, and last year, (1840), we were within a step of treading upon one on Wimbledon Common. They arrive about the first or second week in April, the cock coming about a week or ten days before the hen. The song, if it may be called a song, consists of a singular continuous rattling or rather thrilling sound, beginning generally very low, and becoming in about a minute loud enough to be heard at a considerable distance: this continues for several minutes, and is uttered with a kind of ventriloquism, the bird remaining in one place, though its voice, meanwhile, would give the hearer to suppose that it was now here, now there. From the close resemblance of its note to that of mole-crickets (*Gryllotalpa vulgaris*), Montagu suggests that, as it is chiefly uttered at the time those singular insects are about, it may possibly serve also as a decoy to inveigle them to their destruction; had this, however, been intended, it is probable that both sexes would have been endowed with the same deceptive cry; but the hen is said to be quite mute.

In the neighbourhood of London this interesting bird breeds on Penge Common, Streatham Common, Wimbledon Common, and in Coombe Wood, which places, during the summer evenings, resound with their noise.

**THE GREENFINCH.—(*Fringilla chloris*.)**

The greenfinch, green linnet, or greenbird, is so easily tamed, that, as Pennant observes, "it frequently eats out of one's hand five minutes after it is taken, if you have an opportunity of carrying it into the dark; the bird should then be put upon your finger, which it does not attempt to move from, for being in darkness it does not know where to fly. You may then introduce the finger of your other hand under the breast, which making it inconvenient to stay upon the first finger, on which it was before placed, it climbs upon the second, where it likewise continues, and for the same reason. When this has been nine or ten times repeated, and the bird stroked and caressed, it finds that you intend it no harm; and if the light is gradually let in, it will very frequently eat any bruised seed out of your hand, and afterwards continue tame."

Though its natural song is not the most melodious, yet the bird may be taught to pipe or whistle the songs of other birds. One brought up from the nest may be taught to imitate not only the songs of other birds, but to whistle a tune. The nestling may be fed upon a stiff paste made of white bread, which after having been soaked in water, has been well squeezed, and then boiled in a little milk. If, when older, it should seem ailing, let it have a little lettuce-seed, and put a bit of liquorice or of saffron into its drink. If its bowels appear to be relaxed, you need not call in our friend, Dr. Golding Bird, but give it a little chalk and bruised hemp-seed.

**THE LINNET.—(*Linaria linota*.)**

The linnet, or linnie, is a fine songster, and a very good one has often been sold for as much as three or four guineas. It will learn to whistle the song of the wood-lark, canary, or any other bird; and it is said that it can be taught to speak. During the pairing season, the breast and forehead of wild cock linnets, with some few exceptions, assume a fine bright scarlet, which change never occurs on those parts of a tame cock that has been caged during the winter. The breast alone, however, of a caged cock, which is often hung out in the open air, will be of a brighter red than that of one constantly kept in doors.

Linnets have three or four broods in the year. The first batch of eggs, four or five, are generally hatched in April. If you wish to rear the nestlings for the cage or aviary, let them be at least ten days old before you wean them. At first you may feed your little chirpers on a stiff paste made of white bread, which, after having been soaked in water and then well strained, has been boiled in a small quantity of milk. You may, also, mix with the paste a little rape-seed, which must be previously soaked in water for ten or eleven hours, then boiled, and afterwards strained free from water by great pressure. Feed them every two hours from six in the morning until eight at night. When they are about six or seven weeks old, and capable of feeding themselves, you may restrict them, for one week, to rape-seed which has been scalded with hot water. Afterwards, feed them on bread, chopped egg, rape-seed, or canary. When they seem ailing, we would prescribe a little lettuce-seed, with, occasionally, some chickweed which is in seed. If they have diarrhoea give them some chalk, bruised hemp-seed, and a stalk of plantain-seed. Put, also, some saffron, or a bit of liquorice into their water. Cock nestlings may easily be distinguished by their being browner upon the back, and by the second, third, and fourth feathers of the wing being white up to the quill.

# Traits and Sketches of Irish Character.

THE YOUNG PRIEST.

The influence of the priesthood among the peasantry need be no longer a mystery, when this portrait of sympathy, charity, and humane devotion, by Mrs. S. C. Hall is perused. No wonder than the pastors and their flocks are wedded to each other by more than ordinary ties, when poverty only endears misfortune, and the name of a stranger becomes a passport to affectionate assistance. The Hedge Schools, says our able authoress, are almost gone from the country. During our recent visit, we saw but two or three of them; some twenty years ago we should have encountered one, at least, in every parish. They receive their peculiar designation from the fact, that in fine weather the school-room was always removed out of doors; the Domine sat usually beside his threshold; and the young urchins, his pupils, were scattered in all directions about the landscape, poring over the "Gough," or "Voster," (the standard arithmeticians of Ireland, long ago,) scrawling figures on the fragments of a slate, courting acquaintance with the favoured historian, Cornelius Nepos, or occupied upon the more abstruse mysteries of the mathematics; the more laborious and persevering of the learners generally taking their places, "book in hand," upon, or at the base of, the turf-rick, that was always within the master's ken. In addition to the pupils who paid to the teacher as much as they could, and in the coin most at their command, there were generally in such establishments some who paid nothing, and were not expected to pay anything—"poor scholars," as they were termed, who received education "gratis;" and who were not unfrequently intended, or rather intended themselves, for the priesthood. They were, in most instances, orphans; but they had no occasion to beg, for the farm-house as well as the cottage was open for their reception, and the "poor scholar" was sure of a "God save you kindly," and "Kindly welcome," wherever he appeared. In this way, with scant clothing, a strap of books over his shoulder, his ink-horn suspended from his button-hole, and two or three ill-cut inky pens stuck in the twist or twine that encircled his hat, the aspirant for knowledge set forth on his mission, sometimes aided by a subscription commenced and forwarded by his parish-priest, who found many of his congregation willing to bestow their halfpence and pence, together with their cordial blessings, on "the boy that had his mind turned for good." Now and then a "good-for-nothing" would take upon himself the habit and name of a "poor scholar," and impose upon the good-natured inhabitants of a district; but in a little time he was sure to be discovered, and was never again trusted. Such fellows used to be seen lounging about the corners of the streets in country-towns, pretending they "war goin to Kerry for larnin, God help 'em, when they got a thrifle to pay their expences." They were invariably great thieves, and fetchers and carriers of strife and sedition, and generally terminated their career as professed beggars. Very different from such was a lad we knew in our youth, and whose simple history we delay our readers to hear; it will illustrate the "scholastic system" we are describing, and at the same time exhibit the self-sacrificing generosity of the Irish peasant.

It was towards the middle of September, or, as they, in Ireland, usually style the period, "the latter end of harvest," several years ago, that we were sedulously gathering a nosegay of blue corn-flowers and scarlet poppies, in the field of a dear relative, whose labourers were busily employed in reaping. A group of Irish harvesters are generally noisy, full of jest, and song and laughter; but we observed that although not more diligent than usual, these were usually silent—yet the day was fine, the food abundant, and no "sickness" afflicted the neighbourhood. Our ramble was accompanied by a fine Newfoundland dog—Neptune, a fellow worthy of his name. After walking along at our accustomed pace, (for he disdained idle gambols,) Nep came to a dead stand. There was a remarkable old tree in the hedge, so old that it was hollow almost to the top, where a few green bows and leaves sprouted forth, as remembrancers of past days; the open part of the trunk was on the other side, so that a stranger standing where we stood could have no idea how much it was decayed;—at this old tree Nep made a point, as if setting a bird; he would neither advance nor retreat, but stood with fixed eyes and erect ears in a watchful position. It occurred to us that the reapers had whiskey or some smuggled goods concealed there, and we resolved to fathom the mystery. In accordance with this resolution, we commenced first a descent into what is called the "gripe" of the ditch, and then seizing upon the bough of a sturdy little hawthorn, were about ascending, when two rosy-cheeked harvest-girls interposed—

"Ah, thin, don't, iv you plase—(bad luck to you, Nep, for a tale-telling ould baste of a dog!—couldn't ye let the young lady have her walk?)—don't, iv you plase, Miss machree, go up there. Faix, it's the truth we're tellin' ye, 'tisn't safe. O, ye may laugh, but by all the blessed books that ever was opened, it's true; 'tis not safe, and maybe its yer death ye'd get if ye go."

This, of course, only whetted our curiosity. "The men have concealed whisky here."

"Oh! bad cess to the dhrop—sure they don't want it, when they got their glass at the heel of the evenin' without so much as axing for it; we'll tell, if ye won't tell ov us to the masher and mistress—though we couldn't help it, for it's God's will. Sure the boys

there never raised their voice in a song, nor even the kink of a laugh ever passed their lips, just out of regard to the quietness—the crathur! and sure the dhrop of new milk, and it just to look at a grain of tea, is all we give on a two-pronged fork or the ould shovel. And the weather's mighty fine, as it always does be when the likes of them's in trouble; sure, the dew falls light on the spring chicken!" We pressed still more strongly for an explanation. "Well, it was the loneliest place in the parish," answered Anty, a blue-eyed girl of sixteen, the very picture of good-nature and mischief, though her features were tutored into an expression of sobriety and even sympathy. "And what else could I do, barrin I was a baste?" she continued. "And see even that poor dumb dog looks like a Christian at the tree—Nep, say now, and don't frighten—"

"What, Anty?"

"Whisht! an I'll tell, but you musn't let on, [pretend to know] for maybe I'd lose the work.—It's—only a little boy we hid in the tree!"

"A boy!"

"Ay, faix! he was a boy, the craythur; but he's an atomy now, with whatever he is—maasles, or small pox or feaver, myself doesn't know—but it's bad enough. He's a poor scholar! the jewel, travelin to make a man of himself, which, if the Lord doesn't raise him out of the sickness, he'll never be; and travelin the world and ould Ireland for larnin, and was struck [taken ill] as he came here; and he thinking he'd have six months, or maybe a year, with Mr. Devereux, who has grate Haythen as well as Christian knowledge; and sure no one would let him into their place for dread of the sickness that brought lamentations into all our houses last year; and I found him," continued the girl, bursting into tears, "I found him shivering under an elder bush, that's unlucky 'in itself, and pantin' the little breath in his body out; and I'd ha' thought there would ha' been little use in all I could do: only what should I see, when I took my eyes off him, but a cow licking herself the wrong way, and that gave me heart, and I spoke to him, and all he axed for was a drink of wather, and that I'd take him to his mother, the poor lamb! and she hundreds of miles away, at the back of God-speed, maybe; and sure that kilt me intirely, for I thought of my own mother that the Lord took from me before I had sense to ax her blessin. And ye'd think the life would lave the craythur every minute—so, first of all, myself and this little girl made a fine ayse bed for him inside the ould tree, dry and comfortable, with the new straw, and then we stole granny's *plaikeen* [a square of flannel, or shawl] out of the bit of a box, and a blanket, and laid him a top of it; and when we settled him snug, we asked my uncle if we might do it, and he said *he'd murder us* [A figure of speech] if we had any call to him; and we said we wouldn't, because we had done it already; but, in the end, my uncle himself was as willing to do a hand's turn to the poor scholar as if he was a *soggarth* [young priest], which he will be, plase God; only the sickness is heavy on him still, and the people so mortal afraid of it."

"The poor boy," added the other girl, "had bitter usage where he was before, from a cowl-headed nagur of a schoolmaster, who loved money better than larnin—which proved he had no call to it, at all, at all. We heard the rights of it, from one that knew—may the Lord break hard fortune before every poor honest woman's child!—and took his bit of gold from him, and gave him nothing but dirty English for it, and he wanting Latin and the Humanities—what he hadn't himself, only coming over the people with blarney and big words—the Omadawn! to think of his taking in a poor soft boy like that, who was away from his mother, trusting only to the Lord, and the charity of the poor Christians that often had nothing but their prayers to send along the road with him! Sure it must be a black bitter heart entirely that would not warm to a boy that quit the home where his heart grew in the love of his mother's eyes, to wander for larning."

In a little time we discovered that the poor scholar, who rejoiced in the thoroughly Irish name of Patrick O'Brien, had been most tenderly cared for, not only by those kind-hearted girls, but by each of the harvesters: two young men in particular took it turn about to sit up with the lone child the greater part of the night, listening to the feeble ravings he uttered about his mother and his home, and moistening his lips with milk and water—the fatigue of the day's labour under a scorching sun, with no more strengthening food than potatoes and milk, did not prevent their performing this deed of love and charity. When we discovered him, the fever—to use Anty's words—had turned on him for good, and he was perfectly rational, though feeble almost beyond belief, and only opening his lips to invoke blessings upon his preservers. We found that he had suffered from measles, rendered much worse than they generally are by fatigue, want, and ill usage. A few evenings after, when the golden grain was gathered into shocks, and the field clear of its labourers, we set forth, accompanied by Patrick's first benefactress, to pay him a visit. The weather was clear and balmy, and so still that we could hear the grasshopper rustle in the tufts of grass that grew by the path. The corn-creak ran poking and creaking across the stubble, and, one by one, before the sun had set,

"The wee stars were dreaming their path through the skies."

It was a silent but not a solitary evening, for every blade

of grass was instinct with life, peopled by insect wonders, teeming with existence—creating and fostering thought. Even Anty felt the subduing influence of the scene, and walked without uttering a word. As we drew near the old tree, we heard a faint, low, feeble voice—the voice of a young boy singing, or rather murmuring, snatches of one of those beautiful Latin hymns which form a part of the Roman Catholic service. We knew that it proceeded from poor Patrick; and Anty crossed herself devoutly more than once while she listened. He ceased; and then, by a circuitous path, we got to the hollow side of the tree.

The poor lad was worn down by sickness, and his eyes, naturally large, seemed of enormous size, looking out as they did from amid his long tangled hair. His head was pillowed on his book; and it would seem as though the "plaikeens" of half the old women in the parish had been gathered together to do him service. His quivering lips only opened to express gratitude, and his thin hands were clasped in silent prayer when we left him. His tale had nothing remarkable in it—it was but one among many. He was the only son of a widow, who having wed too early, was reduced from comfort to the depth of privation; her young husband closed his sorrows in an early grave, and she devoted her energies to the task of providing for her two children; the girl was blind from her birth, and the boy, whose feeling and manners would have led to the belief so prevalent in Ireland of the invariable refinement of "dacent blood," resolved to seek by the way-sides and hedges the information he had no means of obtaining in stater seminary. Those who know how strongly the ties of kindred are intertwined round an Irish heart—only those can understand how more than hard it is for the parent to part with the child. Notwithstanding, Patrick was blessed and sent forth by his mother—an Ishmael, without the protecting care of a Hagar—amid the wilderness of the world. More than once he returned to weep upon her bosom, and to repeat the assurance, that when they met again he would be a credit to his name. He had, as Anty said, suffered wrong from an ignorant schoolmaster, who plundered him of the small collection the priest had made for his benefit, and then ill-used him.

His illness we have told of; his recovery was hailed with hearty joy by "the neighbours," who began to consider him as a property of their own—a creature they had all some interest in. He was duly received at the school, the master of which deserved the reputation he had achieved—for, despite his oddity, and a strong brogue of the true Munster character, he was a good classic of the old régime, and a most kind-hearted man. Although no Domine ever entertained a more exalted opinion of his own learning, or held ignorant amuses (as he pronounced the word) in greater contempt than Mr. Devereux, still, when he found a pupil to his mind, who would work hard and constantly, he treated him with such consideration, that the youth was seldom permitted to speak except in the dead languages. He wore a rough scratch wig, originally of a light drab colour; and not only did he, like Miss Edgeworth's old steward in "Castle Rackrent," dust his own or a favoured visitor's seat therewith, but he used no other pen-wiper, and the hair bore testimony of having made acquaintance with both red and black ink. He prided himself not only on his Latin and mathematical attainments, but on his "manners;" and even deigned to instruct his pupils in the mysteries of a bow, and the necessity for holding the head in a perfectly erect position. Sometimes he would condescend to bestow a word of advice to one of the gentler sex, such as "Jinny, that's a good girl; I knew yer mother before you were born, and a fine, straight, upright *Girtha* she was—straight in mind an' body; be a good girl, Jinny, and hold up yer head, and never sit back on your chair—only so—like a poplar, and keep yer heels together and yer toes out—that's rale manners, Jinny." Often did he exclaim to Patrick, "Lave off discoursing in the vulgar tongue, I tell you, and will you take up your Cornelius Nepos, to say no-thing of Virgil, if you plase, Master Patrick, and never heed helping Mickey-the-goose, with his 'numbers. Hasn't he Gough and Voster, or part of them any way? for the pig ate simple addition and compound fractions out of both the one and the other. And, Ned Lacey, I saw you copying I know what, upon your thumb-nail off Patrick's slate. I'll thumb-nail ye, you mane puppy! to be picking the poor boy's brains that way; but the time will be yet, when you'll be glad to come to his knee, for it is he that will have the vestments, and not the first nor the last, plase God, that got them through my instructions. Patrick, sir, next Sunday, when you go up to the big house as you always do, mind me, sir, never open yer lips to the mistress or the young ladies but in Latin—Greek's too much for them you understand me, unless they should ask you to give them a touch of it out of feminine curiosity, knowing you to have the advantage of being my pupil; but no vulgar tongue out of your head, mind that; and when you go into the drawing-room, make yer bow with yer hand on yer heart in the first position, like an Irish-man."

Under all his pomposity of manner there was much sterling good—the old schoolmaster never would accept of any remuneration from a "fatherless child," and consequently had an abundant supply of widows' children in his seminary. "What does it cost me," he would say, "but my breath? and that's small loss—death will

have the less to take when my time comes—and sure it will penetrate to many a heart, and give them the knowledge that I can't take out of the world with me, no more than my other garments." In less than a year, Patrick had become his teacher's right hand; he was not only his "first Latin," but in a fair way to become his first Grecian; and the only thing that tormented the worthy schoolmaster was, that Patrick was "no hand" at "mathematics." He wrote frequently to his mother, and sometimes heard from her; but at last came the mournful intelligence that he could see her no more. She had perished of fever—one of those dreadful fevers that finish the work commenced by starvation, had taken her away from present care, and denied her all participation in the honours she anticipated for her son. The news crushed the heart of the poor scholar; and with it was mingled not only sorrow for the departed, but a deep anxiety on account of his little blind sister. "The neighbours," he said "will, I know, keep her among them—a bit here, a sup there—and give her clothes enough for summer; but my dread is that she'll turn to begging, and that would be cruel to think of—my poor little blind Nelly!"

"Where are you going this evening, Patrick?" inquired the old schoolmaster, as his favourite pupil was leaving, having bade him his usual respectful good-day.

"I promised Mrs. Nowlan, Sir, I'd go up there and read a bit with the boys to help them with you."

"Well, never mind that now; I want to discourse with you this evening."

"Thank you, sir," he replied with a heavy sigh, hanging his hat on the same peg that supported the Domine's great-coat—"but the throb has moidered my head—I'm afraid I'm not equal to much to-night."

"Ah!" said the old man, "learning's a fine thing, but there are things that ruin it intirely—in vulgar phrase, that bother it. Sit down, Patrick, and we'll see if for once the master and his pupil—the old man and the young one's thoughts, go the same way."

Patrick did as "the master" desired. "Tell me," inquired the Domine, resting his elbows on his knees—"tell me, did the news you got, poor fellow, determine you on doing anything particular?"

"It did, master, it did, God help me, and look down upon and bless you, and every one that has been kind and good to me!"

"What have you determined? or have you brought your resolution to a point?"

"I have, sir. It's hard parting—but the little girl, sir—my poor blind sister—the lone darling that never wasted sight while she had her mother's eyes—the tender child, sir; the neighbours are all kind, all good, but they can't be expected to take for a continuance the bit out of their own mouths to put it into hers—that can't be expected—nor it shan't be; I mean to set out for home on Monday, sir, please God, and be to that poor blind child, mother and father, and brother. She is all of my own blood in the world now, and I can't make her heart as dark as her eyes. Thanks be to the Almighty, I have health and strength now, which I had not when I left home—health, strength, and knowledge; though," he added, in a tone of intense sorrow, "that knowledge will never lead me to what I once hoped it would."

"What do you mean?" inquired the old schoolmaster—"expound."

"My heart, sir, was set, as you know, on making my way to the altar; but His will be done! I was too ambitious; I must work to keep Nelly—she must not starve or beg while I live upon good men's hearts: we are alone in the wide world: instead of learning, I must labour, that's all; and I'm sure, sir, I hope you won't consider the pains you have taken with me thrown away; you have sown the good seed; if the rock is barren, it is no fault of yours; but it is not barren—why should I deny the feelings that stir within me?" He could not proceed for tears; and the old man pushed his spectacles so violently up his forehead as to disturb his eyes.

"What's to all the little girl," said Mr. Devereux at last, "to live, as many have done before her—in *forma pauperis*? Sure—that is, of a certainty, I mean you found nothing painful in stopping a week at Mrs. Rooney's, and a month with the Driscolls, and so on, and every one glad to have you."

"God reward them! Yes, sir, that's true; and of late, I've given the children, wherever I was stopping, a lift of the learning; but poor Nelly has no right to burden any one while my bones are strong enough to work for her—and she SHALL NOT!"

"And how dare you say that to my face, Patrick O'Brien?" screamed the schoolmaster, flinging his wig right on the nose of a respectable pig, who was poking it over the half-door intended to keep in the little children, and to keep out the pigs. "How dare you—in your pupilage—say 'she shall not'? I say she shall! She shall burden me.—I say you shall go for her, and bring her here, and my old woman will be to her as she is to her own grandchildren, not a hair in the differ. All belonging to me, glory be to God! are well to do in the world; and a blind child may be a bright blessing. Go, boy, go, and lead the blind girl here. I won't give up the honour and glory of my

seminary because of an afflicted colleen. When you go to Maynooth, we'll take care of her; my grandchildren are grown too wise, and I'll be glad to have a blind child to take poems and things that way to, of the long winter evenings, when I'm lonely for want of the lessons; so now no more about it. She'll be all as one as the baby of my old age, and you'll be Father Pat, and maybe I'd have the last blessed sacrament from yer hands yet." And so he had; for this is no romance. The blind child was led by her brother to the old schoolmaster's dwelling. Many of the neighbouring poor said, "God reward you, Mither Devereux, ye'r a fine man;" but the generous act excited no astonishment; generosity of character is so common amongst the peasantry, that it does not produce comment; they are in the constant habit of doing things and making sacrifices, which, if done long ago, would have been recorded as deeds of heroic virtue; but there are no village annals for village virtues; and at the time the schoolmaster's generosity made little impression on ourselves, simply because it was not rare, for near him lived a poor widow, who, in addition to her own three children, fostered one whom the wild waves threw up upon the shore from a wreck; and another, who took three of her brother's orphans to her one-roomed house; and another, who nourished the infant of a beggar who died in her husband's barn, at the breast with her own baby.

The old schoolmaster is dead; but before he died, he had, as we have said, the desire of his heart. A blind sister lives with "the soggarth" to this day, and he is respected, as all deserve to be who build their own fortunes bravely and boldly, and having laid a good foundation, are not ashamed of the labour that wins the highest distinction a free-born man can achieve.

### The London Water Companies.

In order fully to appreciate the vast importance of the Companies that supply London with water, it will only be necessary to imagine the cisterns of the inhabitants to be empty for a week. Were such an event as this to happen accidentally, no further evidence would be required to prove that water delivered into each separate house of the metropolis is the cheapest necessary of life.

The whole of London is supplied with water by eight companies. These are known as the New River, East London, West Middlesex, Chelsea, Grand Junction, Lambeth, Vauxhall, and Southwark. Five of these companies have their establishments on the north side of the Thames; and the other three are located on the south side. In 1834 their pipes were laid on to more than one hundred and ninety-four thousand houses; and the enormous quantity of two hundred and thirty-six million hogsheads of water was annually delivered therein. Since that period the consumption has increased considerably. The following is a statement of the quantity supplied by each company, according to the returns made to Parliament, in 1834:—

	Houses and Buildings Supplied.	Hogsheads of water Annually Supplied.
New River .....	73,212	114,650,000
East London .....	46,421	37,810,594
West Middlesex .....	16,000	20,000,000
Chelsea .....	13,892	15,753,000
Grand Junction .....	8,780	21,702,567
Lambeth .....	16,682	11,998,600
Vauxhall .....	12,046	7,000,000
Southwark .....	7,100	7,000,000

The New River Company derives about two-thirds of its supply from a spring near Ware, twenty-one miles north of London, and the other third from an arm of the River Lea, situate near the source of the spring. Their united waters are conducted to the metropolis by an artificial channel, forty miles long, generally known as the New River. The company has two capacious "settling reservoirs" at Stoke Newington, in which the water is allowed to remain at rest and become clear before it is permitted to flow to the New River head at Clerkenwell, whence it is distributed to the houses, partly by its own gravity, in consequence of the favourable height of the reservoirs, and partly by engine power. The total annual income of this company is about £105,000, and its outgoings from £40,000 to £42,000 yearly. The amount of capital employed exceeds £1,000,000 sterling, and the average value of each original £100 share is now about £15,000. The works of this company are under the superintendence of Mr. William Chadwell Mylne, a civil engineer of great reputation: The district supplied by the New River Company extends from Charing Cross and Oxford-street to St. Katharine's Docks and Whitechapel; and it ranges northward as far as Edmonton.

The East London Water Company draws the whole of its supply from the Lea, at a part of the river which is removed beyond the influence of the tide of the Thames. Their principal works are at Old Ford; they have also machinery for raising water at Lea-bridge and Stratford. The engineer of this company, Mr. Wicksteed, was the first to introduce a Cornish engine into London, as a powerful and economical means of lifting water. At the present date it is performing a duty of seventy-four millions of pounds, which is about double the work done by the other engines of the Company; the result of which is a saving of nearly half the expense of coals. The estimated current expenditure of this company is between £16,000 and £17,000 per annum, and

its yearly rental not less than £46,000. The district supplied by its works is large. It extends from the London Docks to Stratford and Bow, including in its course a large portion of the buildings between Whitechapel, and Mile-end, and the Thames; from the former of which places it stretches to a part of Bishops gate-street and its neighbourhood, and thence to the Kingsland and Hackney-roads, Clapton, Homerton, Bethnal-green, Bromley, Poplar, and Blackwall, the Thames forming its southern boundary. This company was established in 1807.

The West Middlesex Company, established in 1806, has its engines located on the north bank of the Thames at the upper end of Hammersmith, the power of which is sufficient for the delivery of thirteen million gallons daily. This company has also capacious reservoirs at Barnes, Kensington, and Little Primrose Hill; the last mentioned, which is on the summit of the elevation, is estimated to contain 88,000 hogsheads of water, at a height of 188 feet above the level of the Thames; that of Kensington being 122 feet above the same level. The capital expended amounts to about half a million of pounds sterling, and the gross rental to about £46,000. The estimated annual expenses approach £19,000. The works of this company are under the control of Mr. W. Tierney Clarke; its district includes Turnham-green, Chiswick, Hammersmith, part of Fulham, Kensington, Earl's Court, part of Brompton, Kensington Gore and Gravel Pits, Notting-hill, part of the Uxbridge-road, Westbourne Green, nearly all the north side of Oxford-street, and west side of Tottenham-court-road to Mornings-ton-crescent, Hampstead-road, and all westward, taking in the Regent's Park, St. John's Wood, Paddington, and part of Kilburn. Independently of this boundary, the company is also empowered by act of Parliament to supply the parishes of Brentwood, Battersea, Putney, Richmond, St. James Westminster, St. Ann, Soho, St. Mary-le-strand, St. Clement Danes, St. Paul Covent Garden, St. George's, Bloomsbury, St. Giles in the Fields, and a part of Pancras.

The Chelsea Water Company, of whose works Mr. James Simpson is the Engineer, was established so far back as 1723. The works themselves are situated at the north-east part of Chelsea-reach, on the bank of the Thames, although the supply of water is drawn from the south side of the river. This company has introduced the use of filtering reservoirs, a particular description of which we here give with great pleasure, because we think the Engineer of the establishment, to whose persevering efforts the customers of the Company are indebted for a daily supply of perfectly limpid, pure, and wholesome Thames water (produced solely by his plan of filtration) merits the fullest measure of public gratitude for having set the other companies so praiseworthy an example in a matter of vital importance to the health of the metropolis. The account we furnish is taken from the "Life of Telford," as communicated by Mr. James Simpson, the Engineer of the company.

The managers of the Chelsea water works had determined to prosecute some plan for rendering the quality of the water supplied by them unobjectionable; and, in the spring of 1826, Mr. Simpson commenced experiments and inquiries upon the subject; so that, when Dr. Roget, Mr. Brande, and Mr. Telford, the commissioners of inquiry, visited the works in the summer of 1828, they found the construction of filtering works, of some magnitude, in an advanced state.

So little of a practical nature had been written on the subject of filtration, that the art of conducting the process upon a large scale was yet to be acquired, and improvement to be made upon the works at Glasgow, Manchester, and other places, where it appeared that instances of failure, as well as of success, had occurred. Preliminary experiments were indispensable to warrant expenditure of capital on such works, and several trials were accordingly made on superficies exceeding one thousand square feet, to ascertain the most approved principle, and the fitness of the various materials proposed to be employed. All the modifications of lateral and ascending filters proved disadvantageous; difficulties were encountered in preserving the various strata in their assigned position, according to the sizes of their component particles; and effectual cleansing could not be accomplished without the removal of the whole mass of the filtering medium. All devices by currents, reaction of water, and other means, also proved either inefficient or inconvenient and expensive.

The mode of filtration adopted at the Chelsea works is by descent, and the medium consists of fine and coarse river sand, comminuted shells and pebbles, and of small and large gravel. The materials are laid in a reservoir, their surface being disposed in ridges, which present to the spectator an undulated appearance. The first experiments by descent failed; sufficient care had not been taken in the selection and separation of the materials. Explosions of condensed air in the tunnels for collecting the filtered water deranged the strata occasionally, but were obviated by air drains. The filtration was, in one instance, stopped by the addition of fresh sand, without the old sand having previously been removed, which should be applied as the upper stratum. Although in this case the surface had been thoroughly cleansed previously, a film or puddle was formed on the original sand, and was sufficiently supported by the particles of sand to sustain five feet head of water, at first acting to impede, and eventually to stop the filtra-

\* A poor scholar never considers himself a beggar, nor is he ever so considered—he travels for learning; and this bare fact entitles him to respect and assistance—it is regarded in the light of a pilgrimage, but not beggary.

ion. The process was greatly improved by the introduction of the small shells, such as are usually found at the beach, the flat surfaces of which overlap, and assist in the great desideratum of separating the sand from the gravel, and thus tending to preserve the free percolation of the lower strata, which is essential for ensuring filtration sufficiently rapid for water-work purposes.

The strata on the site of the filtering works, under the vegetable mould, consist of loam, sand, and gravel, resting on the London clay to the depth of thirty feet. The sand and gravel contain powerful land springs, and the masses of ferruginous conglomerate they pass through are so great, that the water is of an objectionable quality; therefore, in constructing the basin to receive the filtering materials, it was necessary to exclude all the land water by clay and cement walling.

An excavation into the sand and gravel, of sufficient depth to admit of the water from the river flowing on to the filtering bed, would have involved too great an outlay; and this circumstance led to the construction of the basin at a level which rendered pumping the water from the river unavoidable; but the consequent subsidence of the water, the command of a constant flow to the filtering bed, and the most perfect drainage, are advantages which result from the expedient of pumping; and the interest of the money saved has more than compensated for the annual expense. The filtering-beds are now in duplicate; they cover an area of one acre, and there are three elevated reservoirs of the same size each. Reference to the accompanying sketch will explain the construction of the filter, and exhibit a sectional view of the arrangement of the various strata used as filtering materials.

The lower stratum of gravel contains the tunnels for collecting the filtered water. They are built with cement blocks, and partially open-jointed; two spaces of an inch and a half on the bed, and the heading-joint of each brick being open. The fine gravel, pebbles and shells, and the coarse and fine sand are laid upon the large gravel.

The water is let on to the filtering bed at nine places, and the ends of the pipes are fitted with curved boards to diffuse the currents of water, and prevent the surface of the sand from being disturbed. The interstices in the fine sand being more minute than the subjacent strata, it is found that the impurities are arrested near the surface, and it has not been necessary to remove more than one inch in depth of the sand at any one time of cleansing. This work is effected by scraping the surface every fortnight, and upon a careful examination it has been discovered that the sediment penetrates to the depth of from six to nine inches, according to the state of the Thames water, the greatest penetration occurring during the prevalence of land floods in the river. Notwithstanding this, however, it is not necessary to remove more than the depth already stated, which contains the grosser impurities, the remainder tending rather to improve filtration, by rendering the interstices between the particles of sand still more minute. From these observations it must not be inferred that the process is merely a fine mode of straining, for something more is evidently effected: an appearance resembling fermentation being discernible when the water is in contact with the sand.

The quantity of water filtered, is from three to four hundred thousand cubic feet daily, according to the demand. The undulated surface of the filtering bed consists of parts of it being worked, and others drained; and it aids in cleansing, by admitting the grosser particles the silt to slide down the ridges, and form a sediment easily manageable. The removal of the sand is effected by lifting portions of the fine sand in succession, and adding fresh sand of the same description underneath them.

These "filtering" reservoirs, which successfully secure the object of their ingenious and scientific construction, occupy about seven acres of ground at the locality already mentioned; in addition to which the company possesses the two famous basins in Hyde Park and the Green Park, the latter of which is close to Piccadilly, both being appropriated to the reception of the filtered water. The gross annual income of this company ranges about £24,000, and its charges to £14,000; and the district supplied by its works contains all that part of Westminster which is south and west of a line passing from Northumberland house, up St. Martin's-lane, through Duke's-court, the old King's-mews, along both sides of Pall-mall East and the south side of Pall-mall and Cleveland-row. Then taking the boundary of the Green Park, on the side of St. James's-street, it passes to the south side of Piccadilly, boundary of Hyde Park, round by Bayswater and Kensington Palace to the half-way house Kensington; thence, in a direct line, it proceeds to Brompton, Fulham-road, Little Chelsea, and down to the river. The quantity of water effectually filtered by this company is, as we have already stated, from three to four hundred thousand cubic feet daily; and the remarkable success of the process cannot be better described than by Addison's nervous and prophetic lines—

So, the pure limpid stream, when foul with stains  
Of rushing torrents and descending rains,  
Works itself clear, and as it runs, refines,  
Till, by degrees, the floating mirror shines,  
Reflects each flower that on the border grows,  
And a new heaven in its fair bosom shows.

The Grand Junction Company concludes the list of the water companies on the north side of the Thames. This company was established 1811; and at the date of the Parliamentary return in 1834 its annual supply of water to customers was 21,702,567 hogsheads. The gross rental of the company in 1833 was £26,154—and the estimated annual current expenditure, exclusive of the expense of filtration, £11,000. The capital expended from the commencement of the works up to that date was £331,174. The pumps of this company are situated a little below Brentford, in which town its principal establishment is located. The company has also a steam engine and three reservoirs at Paddington, for supplying the high service in that district, the water being first raised at Brentford from the bed of the Thames by a most ingenious and effective arrangement of conduits, and then conducted to Paddington through 4,000 lengths of cast iron pipes, a distance of six miles and a half, the total cost of which was about eight pounds per yard. These extensive and well arranged works, in the execution of which a sum of money little short of £200,000 has been expended, are under the superintendence and direction of the Company's experienced engineer, Mr. W. Anderson. The district over which the supply of the Grand Junction extends is bounded by Park-lane on the west, Piccadilly on the south, as far as Arlington-street, including the line of houses on the side next the Green Park to Cleveland-row; returning thence it takes the north side of Pall Mall, as far as the Haymarket, in a line through several small streets to Oxford-street, whence it diverges to various squares and streets in that neighbourhood, and then proceeds to Paddington (the whole of which parish it supplies) and the Edgware-road, finally returning along the Uxbridge-road to Park-lane.

The five companies, of which we have been speaking, are all situated on the north bank of the Thames, their supply being, of course, confined to that side of the river. The three which remain to be mentioned are on the other bank, and their pipes are limited to the supply of the south part of the metropolis, and the borough of Southwark. First on the list is

The Lambeth Water Works, the company for establishing which was formed in 1785. At the date of the return in 1834, it supplied 16,682 buildings, and the quantity of water delivered yearly was 11,988,600 hogsheads. The annual current expenses, exclusive of filtration, were then estimated at £6,500; and the gross rental in 1833 was stated to be £14,808. The capital expended from the commencement of the works to that date, was £182,553. The principal works of this company are situated in the Belvidere-road; but it has also an engine and two large reservoirs at Brixton; and also a large reservoir at Streatham Hill. The supply of water is obtained from the river, immediately in front of the works at Lambeth, by a pipe extending 400 feet into the river, and terminating at a depth of six feet below low-water mark. From this place the water is pumped to the elevated reservoirs at Brixton and Streatham. The district of this company extends from the works at Lambeth, along the bank of the river, to the back of Vauxhall, taking both sides of Kennington-lane, to Kennington Common, and along the Brixton-road to the works at Brixton. It includes also the Camberwell-road, Walworth-common, the Kent-road, Bermondsey New-road, Great Dover-road, along the Newington-road to the Queen's-Bench Prison, and along Great Suffolk-street and Gravel-lane, to Bankside. Up to 1834, this company possessed the valuable monopoly of St. George's-fields, and the populous neighbourhood, but in that year the restriction was removed by act of Parliament. The Directors have since extended their works to North Brixton, Clapham Park, Brixton Hill, Tulse Hill, Norwood, Streatham, and the adjacent

places, and the water is highly approved in those districts.

The Vauxhall Company, established in 1805, has its principal works on the south side of Kennington-lane, near to Vauxhall, where there are two circular bricked reservoirs, about 180 feet in diameter, into which the water flows during spring tides. One of these reservoirs is ten feet deep, and it is capable of holding 1,587,449 imperial gallons. The other, at a depth of twenty feet, contains twice that quantity, which is more than sufficient for the daily supply. There is a third reservoir which will contain about 2,000,000 gallons more, into which the water flows, or is pumped (as occasion may require) from the Thames at Vauxhall Bridge. The water is allowed to settle and become purified in these reservoirs before it is supplied to the consumers. In order to insure an abundant supply of water at all seasons, the company has also established works upon the river side at Cumberland Gardens, adjoining Vauxhall Bridge, where they are now erecting an engine on the Cornish principle, equal to 120 horse power, and have laid down an iron tunnel-pipe, the mouth of which is carried into the Thames as far as the third arch of the bridge (six feet below the lowest water mark) where the water has long been remarked for its extraordinary clearness and purity. The annual supply in 1834 was estimated at 300,000,000 of gallons to 12,046 houses and buildings; but as no exact accounts had been kept so as to enable the company to furnish an accurate return, this estimate must be taken as an approximation merely. In fact, the quantity is known to be much greater, and above 14,000 houses are supplied. At the same period the annual current expenses were stated to be £4,000, and the gross receipts from March 1833 to March 1834 were £8,839. The amount of capital expended upon the works up to that date had been £245,306. The district supplied by this company, though thinly populated, is a very extensive one. It includes Lambeth, Camberwell, Clapham, parts of Southwark, Rotherhithe, and Peckham. Previously to 1834 it was excluded, under a heavy penalty, from supplying a densely populated district commencing from the Thames at White-hart-dock, Broad-street, and comprehending Lambeth-burys, Lambeth-walk, Walnut-tree-walk, Newington, Westminster and Blackfriars-roads, the whole of St. George's Fields, and the greatest part of the borough of Southwark; but to the immeasurable satisfaction of the inhabitants of those places the pipes of the company are now driven throughout a very large portion of this district, and a daily supply of water is abundantly afforded, in place of the limited quantity only thrice a week previously supplied. The extensive works of the Vauxhall Company are under the control and superintendence of William Peppercorne, Esq., who acts as resident and managing director in the absence of a Board of Directors.

The Southwark, or Borough Company, is the last we have to mention, the district of which comprehends Holland-street and Gravel-lane, Great Suffolk-street, Blackman-street, Long-lane, part of Tooley-street, Dock-head, &c., a boundary that includes the whole of the parish of St. Saviour, St. Olive, a great part of the parish of St. George, and also of St. John, Horse-lydown, and a part of Bermondsey. For several years this company's district has been supplied by the Lambeth Company, according to agreement; but meanwhile it has purchased land at Battersea, where reservoirs for receiving Thames water taken from that part are now nearly completed, in which the water will be allowed to settle previously to its being thence distributed throughout the district, by the steam-engines erected for that purpose, on the same spot. This company supplies 7,000 houses and buildings; its consumption of water in 1833 was 7,000,000 hogsheads, and its rental £7,850. William Anderson, Esq., is the engineer.

In the following table the principal statistical points are recapitulated, and a comparison instituted between the years 1820 and 1834, so far as regards the number of houses supplied by each Company; also the separate current expenses for both years, and the gross annual income in 1834. Its accuracy may be relied upon, as it has been compiled from official returns made to Parliament in the year last mentioned.

COMPANIES.	1820.		1834.		Gross Annual Income.
	Houses supplied.	Current Expenses.	Houses supplied.	Current Expenses.	
	No.	£	No.	£	£
New River . . . .	52,082	29,700	73,212	38,000	104,909
East London . . .	32,071	11,402	46,421	15,889	45,234
West Middlesex . .	10,350	9,000	16,000	18,000	45,500
Chelsea . . . . .	8,631	9,572	13,892	13,481	22,906
Grand Junction . .	7,180	8,166	8,784	11,000	26,154
Lambeth . . . . .	11,487	no return.	16,682	6,500	14,808
Vauxhall . . . . .	5,200	3,477	12,046	4,000	8,839
Southwark . . . .	no return.	no return.	7,100	no return.	7,850

By the above table it will be seen that the inhabitants of London paid for water, in the year 1834, the sum of two hundred and seventy-six thousand pounds, an amount almost exceeding belief, were the fact not well

attested. At the present date, probably three hundred thousand pounds are collected by the eight companies within the year.

We cannot close this account of the London Water-work Companies without adverting to a plan suggested by Mr. Peppercorne, (son of the managing director of the Vauxhall Company) for the complete purification of Thames water by the aid of charcoal, the antiseptic and conservative properties of which have long been known. It is not only unalterable by time and indestructible by age, but it also retains its valuable qualities in whatever situation it may be placed, whether exposed to the air for any length of time, or immersed under water for ages. As a proof of the indestructibility of charcoal under water, a quantity of oak stakes were found in the bed of the Thames fifty years ago, in the very spot, where, according to Tacitus, the Britons had fixed a vast number of them, to prevent the passage of Julius Cæsar and his army. They were charred to a considerable depth, retained their form completely, and were firm at the heart. Charcoal will preserve water from corruption for any length of time; it will also restore the foulest and most fetid water to its original brightness and purity. The result of some experiments instituted by Mr. Lowitz of St. Petersburg proved that charcoal powder kept water in a wooden vessel perfectly sweet for four weeks in hot weather—indeed, it would not putrify at all—while the same kind of water, without charcoal, became fetid in a very few days. Water, mixed with charcoal, was kept by the same professor for a whole year, without becoming in the slightest degree putrid, a result which appears to be due to the peculiar property which charcoal possesses, of absorbing the gases and the putrid particles immediately as they are formed, and thus preventing them from acting as a ferment to the rest of the water.

[We have heard of some attempt to rake up the old nonsense about *Afesian* wells, as if the water abundantly supplied by nature on the surface of the earth could be superseded with advantage by that which may limitedly be extracted from beneath its crust. In a proximate number we will say a few words on this subject with a view of showing, that however zealous and well-meaning may be the efforts of certain influential individuals who pin their faith upon the sleeve of others, they are altogether misdirected.]

#### Laplace's Cosmogony.

Two centuries of scientific progression have scarcely enabled some acute philosophers of our era to eradicate the licentious speculations of the old scholastic theorists. It is somewhat remarkable, that the mysticisms of those who were practically ignorant of the earth's form and motion should obtain disciples within the last century; yet some of the most profound reasoners of the age have endeavoured to prove, in common with the elder sophists, that the creation of the world needed not of necessity to proceed from an all-ruling mind; among the most distinguished of these, indeed the leading philosopher of his class, was Laplace, whose theories, however vast and profound, still required some foundation on which to rest, some power or cause previously existing, by which his idea of creation was perfected. His theory of the commencement of the solar system may be thus shortly explained:—that the sun's atmosphere, expanded by heat, reached the limits of that immense portion of space occupied by our system—that it gradually contracted in cooling, and that during the revolutions of this tremendous body of vapours round the sun's axis, the Georgium Sidus, Saturn, Jupiter, and the other primary planets, were gradually thrown off from it into their present orbits, and with the velocity of the atmosphere of which they had formed a part, and that they gradually contracted by cooling into solid globes, having previously, in their turns, at a particular period of their formation, thrown off their satellites.

Now, widely different as this theory appears to be from the commonly understood account of the creation as given by Moses, there are some of its parts essentially the same. In the first place, there is the great and distinct admission that the earth was formed out of nothing; there is also a tacit confession that darkness brooded over the face of the deep; for, although the heat of the sun could pervade the system, its light could not penetrate the dark vapour until it became rarified of the particles which formed the seeds of each ponderous sphere. Even the distinct statement of Moses that the sun was created after the earth, is not declared practically untrue by the theory of Laplace; for, until that portion of the vapour inhabited by our globe was rarified, by its condensation into the matter, and that of the moon also, the sun could not be visible, nor deemed a ruler of the day; neither could the sun be set in the firmament (which is only the atmosphere of its present density, and in which alone man can breathe), until that firmament became what it was by the separation of the waters; which again could be nothing else than the condensation of the vapours, the lighter portion ascending, while the fluid particles (containing a denser air and the germs of

matter) hung to the newly created or gradually forming body. But, granting that the ideas of Laplace,—or of any other reasoner, whose own powers of intellect loudly proclaim a source beyond this world of matter,—are correct to their minutest details, the argument for an original purpose and design remains unshaken: the votaries of chance escape not confusion, and the human mind turns itself with confidence to an intelligent Great First Cause.

Who created the sun, reflecting beings inquire, and planted it in the centre of what was to become Laplace's system of future worlds? Who supplied the due portion of heat to expand his atmosphere through that region of space in which it was to deposit the future abodes of life and intelligence? Who added the rotatory impulse, and adjusted it to that precise velocity which would throw off planets revolving in harmonious stability, in place of comets wheeling in eccentric and unstable orbits? By what power was that heat withdrawn, so as to permit the zones of the solar atmosphere to contract successively into solid planets? Who separated the light from the darkness which brooded over the revolving chaos? Who gathered into the ocean's bed its liquid elements? Who decked the earth with its rich and verdant embroidery? Who conjured up the forms of animal life? And, above all, who placed over this fair empire—MAN—godlike and intellectual—breathing the divine spirit, and panting with immortal aspirations? The Cosmogony of Laplace, even if admitted as a physical truth, would only carry us back to an earlier epoch in the history of creation, and exhibit to us the wonders of divine power, condensed into a narrower compass, and commanding a more intense admiration. But even if science could go infinitely farther back into the remoteness of eternity, and trace all the forms of being to their germ in a single atom, and all the varieties of nature to its development, the human mind would still turn to its resting-point, and worship with deeper admiration before this miracle of consolidated power. Not only the intellect, but the untutored yearnings and desires of man cling to the impelling truth, that an all-directing influence directs his destiny; and he rejoices in the belief, which experimental science daily strengthens and confirms, that the universe displays in itself abundant and soul-confirming proofs of a superior direction. "The appalling note of a reverse assertion, if believed," says an eloquent writer in the *Edinburgh Review*, "falls upon the ear like the sounds of desolation and of death, the life-blood of the affections stands frozen in its strongest and most genial current; and reason and feeling but resume their ascendancy when they have pictured the consequences of so frightful a delusion. If man were thus an orphan at his birth, and an outcast in his destiny—if knowledge is to be his punishment and not his prize—if all his intellectual achievements are to perish with him in the dust—if the brief tenure of his being is to be renounced amid the wreck of vain desires—of blighted hopes and of bleeding affections—then, in reality as well as in metaphor, is life a dream! The capacities and cravings of our intellectual appetite are not given us merely that they might administer to our own corporeal wants, or to the vulgar necessities of our species. Our knowledge of the heavenly bodies—of their nicely-balanced actions and harmonious movements—must have some other and higher end than to regulate a time-keeper, or determine a ship's place upon the ocean? Our study of the sun, which rules by day, and of the moon, which rules by night; a higher aim than if they were merely to replace the pillar of cloud by day and the pillar of fire by night. Man cannot be for ever merely a shepherd pilgrim in this lovely oasis, treading on its green pastures, or listening to the music of its quiet waters; or, in the perfection of mechanism, for ever flying over its surface with the speed of Camilla, visiting every clime, greeting every individual of his race, and compressing into the diminished span of his being all the events of an antediluvian existence? Such suppositions stand opposed to every lesson of philosophy, and to every response of revelation. Philosophical researches, when properly conducted, are the best preparatory education for an intellectual existence, when the mind shall have burst the prison-bars of its earthly durance, and received new revelations of knowledge suited to its improved capacity and proportioned to its previous attainments."

Religion, pure and undefiled, is but the philosophy fitted for the soul as science is for the mind. The fruits of the one is that portion of human excellence which man leaves behind him on the earth to benefit and elevate his species; while the fruition of the former is that which he takes with him to the Great Power from whom he derived existence, and whose glorious attributes he in part exemplified while a denizen of this lower sphere. True religion and true philosophy can never be of antagonistic principles. The religion of cathedrals and the philosophy of schools may, and it is well that they do, jar and confound each other; for their conflict proves that truth is not the sole ingredient in their dogma. The religious and mental aspirations of the inquirer after truth are of another and a better character;—loftier in their purpose, and milder in their elucidation; the reflections of such minds combine in cordial union the emotions, the desires, and hopes of the Christian, as well as of the scholar and the cosmopolite.

#### A New Chapter in the Curiosities of Literature.

It is not in the least degree our intention to infringe on the ground so talentedly and well occupied by the elder D'Israeli. We merely wish, from time to time, to present our readers with whatever curious or remarkable a vast extent of varied and unprofitable reading may have lodged in the store-house of our memory.

The splendid edition of the poetical works of Thomas Moore, Esq., edited by himself, will be found, we have no doubt, on the shelves of a number in the high, middle, and even lower ranks of society; but we may venture to say, that the following effusions are not to be found in any one of the many editions of his works, pirated or otherwise, now extant. Mr. Thomas Moore we think, would not now wish to be called on to acknowledge them; nevertheless, they are his as surely as Lallah Rookh or the Irish Melodies. They were written in 1795, and appeared in "The Sentimental and Masonic Magazine" for the month of August in that year, published by John Jones, of Grafton-street, Dublin. In a preface to one of the volumes of his new edition, Mr. Moore says, he was between seventeen and eighteen years of age in 1798, so that when the following effusions appeared in print he could not be more than fourteen. They partake very largely of the namby-pamby, lack-a-daisical sentiment of the period; yet still they are not despicable for a boy of the age and the time. We should suppose they will now appear as youthful friends long deemed in the grave even by the author himself:—

#### MYRTILLA, TO THE UNFORTUNATE MARIA.

These sorrows, ah, why do they flow,

I pray you, sweet wanderer, tell?

Alas! that the canker of woe

On such a fair blossom should dwell!

Ah! why has the rose on your cheek

Been nipt by the winter of care?

And your looks so distressingly speak

The wildness of woe and despair?

'Tis late—and bewilder'd you roam,

The dew-fall is weeping around;

Oh! come, in my cottage a home

For the children of sorrow is found.

One Parent's the all I possess,

A mother, so tender and dear!

Ah! we too have known, in distress,

How soothing is sympathy's tear.

At present tho' scanty our share,

Nor affluence smile at the door,

Yet, yet we a little can spare,

To succour the wretched or poor.

Sweet nymph! if a passing relief

Soft sympathy's tears can impart,

They shall flow at your story of grief,

And, believe me, shall flow from the heart.

Then come, nor distractedly roam,

The dew-fall is weeping around;

Oh! come, in my cottage a home

For the children of sorrow is found.

#### THE SHEPHERD'S FAREWELL.

Thou seat of my childhood, adieu!

Sweet cottage! where blest I have dwelt,

When the visions of Fancy were new,

Nor the sting of misfortune was felt.

Hope told me that Providence gave

A retreat for my life in thy shed;

And that late when I sunk to the grave,

Yon willow should weep at my head.

But miseries came in a throng—

Alas! who could ever believe

That the friend I had cherish'd so long,

That friend should be first to deceive.

My flocks they all sicken and die,

The threats of oppression increase;

Ah heav'n! I for ever must fly

From my country, my cottage and peace.

From thee, too, thou soul of my life!

And can I then leave thee behind?

I thought to have call'd thee my wife;

Ah Fortune! why wert thou unkind?

Farewell, and my blessing be thine,

I indeed had a bosom of steel,

If I join'd thee in sorrows like mine,

Or taught thee such anguish to feel.

While the tears of compassion are given,

Let thy memory dwell on our flame,

And sometimes, when kneeling to Heav'n

Oh think of poor Theodore's name!

#### Napoleon.

Old things have passed, and from her fearful trance

Paris hath waked, her foot on ancient crowns

And dynasties time-grey, and long renowned;

In headstrong youth, she in Ambition's dance

Doth madly reel, and challenge change and chance;

Her Conqueror forth, his din of battle drowns

The thunder-peals of Jove, and at his frowns

Kingdoms must quail, and bow the knee to France.

She hath her glory—the Promethean rock,

The death-sobs of the martyr of her might—

"Give back, give back my dead"—th' electric shock

Shakes out the bars, and reads the gates of night;

Triumphant France bears home her mighty Brave

To fill,—oh glorious Mockery!—a grave.

## The First Kingdoms.

We are told in Holy Writ that the nations of the earth were divided about the period of the birth of Peleg, who was begot by the great grandson of Shem a hundred and one years after the Flood. In that century, six fruitful generations lived and spread themselves upon the plains; the more daring searched the forests, and drove the wild beast from his lair, while the less venturesome contented themselves with the pasturage of flocks and a life of ease. Nimrod, the grandson of Ham, commenced his kingdom at Babel; and it is not unlikely that the tower originated in the ambitious mind of the mighty hunter, who, beholding in the vast plain of Shinar an arena on which to erect a kingdom of surpassing magnitude, resolved to make himself a governor among his race. We are not to suppose that all the world's inhabitants were congregated on the ever-renewed plain. Noah and his sons were still alive; and, in consequence of the destruction which they had witnessed, and from which they were so wondrously preserved, it is incompatible with the feelings of the human heart, (stubborn and ambitious as it is) to believe that they would attempt to set aside the purpose of filling the whole earth with life, by keeping their descendants in a cluster around them. The younger branches of their families would, in their search of new localities, be anxious to found kingdoms, and make themselves a name among a family the most vast the human mind can calculate. There were at this time neither tribes nor nations, tongues nor countries. Nimrod, however, struck out for himself a path to make his name immortal: he would build a tower, to which the wandering and the lost could look for ever—on which every exile from his home might cast his longing eyes, and claim the fellowship of its builders. Nimrod had led the way into the dark jungles of a wild and luxuriant vegetation—the forests and rocks had echoed with the cry of his beagles, and with the death-bowl of the animals which fell beneath his spear. He had been the first in danger and adventure: he had taught the use of the bow, and how to command the tamer and swifter animals; he was of all others the best fitted to conceive and conduct so vast and laborious an enterprise; and the crowd—the mob—ever too ready to follow in the wake of ambition, bent their shoulders to the burden, and laboured that the mighty hunter should have power to command, to tyrannise, and to destroy. But, lo! an arm unseen arrested the builder in his thriftless toil, while a multitude of tongues and languages wrought confusion and despair. The glorious faculties of his mind were shut up; his noblest attribute in the visible and palpable world, instead of a blessing, became a curse; the power of speech, instead of creating order, introduced strife. Husbands startled at the voices of their wives; children screamed or laughed at the utterance of their parents, and brothers and sisters separated to see and hear each other no more. Suddenly, however, the master intellects of the age assumed the predominance. In the midst of the riot and impotence of Babel, the elements of order, of human grandeur, and moral power, again sprung up. A kingdom had been destroyed, but many arose from its ruin.

Asshur gathered together the people of his tongue, and commenced the empire of Nineveh, from which came the powerful kingdoms of Assyria and Persia. Nineveh became a crowded territory, inhabited by an active and polished people—great from its foundation to its close; proud in its temples, gorgeous in its palaces. But its towers fell, and its myriads were swept away; its very grave has passed from human eye. We seek for an appearance of its site in vain; man is not there; the wild ass trode on the ashes of its tomb; the owl and the bat flitted among the forests which successively sprung in blooming glory from its waste;—ages of verdure heaped up the soil, until pile and mass became buried in their own rottenness.

Some writers attempt to prove that Babylon the Great was no other than a continuation of the first kingdom of Babel;—others that it was a second empire founded

by Nimrod on the ruins of his first attempt, 150 years after the Deluge, and that it continued separate from Nineveh till the year 590; that Ninus, then reigning in the latter kingdom, made the conquest of Babylon, upon which the Assyrian dynasty commenced. The Medes, another portion of the empire, revolted under Sardanapalus: but this did not occur until the united kingdoms had existed eight hundred or a thousand years, and from which time ancient history may be reduced to order, if not to credibility. We must not, however, too hastily come from the dreamy world of the unforgotten past—the far remote and mystic history of our species.

The Canaanites, descended from the son of Ham, are those next mentioned in sacred history, but in profane writings they were better known under the name of Phœnicians. At the call of Abraham, 1920 years before the Christian era, the Canaanites then dwelt in the land promised as a possession to his children. At that time a constellation of petty kingdoms existed in the land flowing with milk and honey; and there they quarrelled, and warred, and committed atrocities upon each other, until they were driven out by the "Robber Joshua," for such was the name given by the flying Canaanite to the appointed leader of the hosts of Israel. Abraham came from Ur of the Chaldeas; he was a Shepherd King; one of that class which conquered Egypt. These latter, however, came from Ethiopia and Abyssinia; although possibly of the same tongue, as we shall have occasion to conjecture.

Egypt is said to have been founded by Menes, who, by a translation of language, is deemed to be the same with Misraim, another son of Ham. The Egyptians worshipped their founder under the name of Osiris, and describe him as the inventor of arts, and the civiliser of the world! In proof of this it is stated that he raised a prodigious army, overran Ethiopia, Arabia, and India; appeared in arms to all the nations of Asia; crossed over to Europe, and there, as throughout all his victorious way, built cities, disseminated artistical knowledge, and received the homage due to a god. But the gods of the heathen were liable to annihilation by the hand of man! His brother Typhon became jealous of his honours, and slew him; only however, to meet his own death at the hand of their common sister Isis. From these persons has the Egyptian mythology been derived. Osiris was the Creator, Isis the Intermediator, and Typhon the Unconquerable Spirit of Evil. Such was Egypt when the pastoral princes of Ethiopia spread their conquests as they increased their flocks; when they made a hostile advent on those who had previously made many a marauding mission on their territory. They totally subverted the dynasty and religion of Egypt. Cattle, which had there been venerated as symbols of the godhead, were, by the intruders, cultivated as merchandise, condemned to menial uses, and slaughtered for food. Abraham was such a trader: there were no holy bulls and rams in his flocks or herds; and had he visited Egypt at any other period than when it was under the dominion of the feared and hated Shepherd Kings, the authorities would have considered him as great an abomination as a later dynasty did the Patriarch Israel and his children. Abraham is described by Moses as speaking in his native tongue to the Egyptian authorities, while Joseph required an interpreter to converse with his brethren. Josephus states that the Father of the Faithful was in the practice of conversing and arguing on astronomy, and other subtle sciences, with the priests of Egypt, which would lead us to suppose that at that early period of the earth's renovation, the bold and inquiring mind of man had soared beyond the globe, and questioned the stars as to their being. If, as we in "The Lost Nation" ventured to conjecture, the Chaldean and Egyptian priests were of one people, it explains at once the startling idea of Abraham, a late denizen in Chaldea, being able to dispute with the learned men of Egypt on those grand and elevated topics which thus early attracted the attention of the thoughtful and inquiring. These circumstances also induce the belief that the learned strangers must have visited Egypt during

the reign of the Shepherd Kings, as the overturn of the public religion would readily afford an opening for a new priesthood. These depositaries of the sciences, whose instructions and marvels must have taken the imaginations of the people captive, could well afford to keep their places during warlike changes, as they directed the public mind, and chained it to their doctrines; while the prevailing idea of religion could be easily ingrafted on their mystic lore, as circumstances called for its adoption. The reign of the Shepherds lasted for two hundred and fifty years, when they were expelled by a prince of Upper Egypt, and driven into Syria and Palestine. The religion of Osiris was restored, the deification of Apis, the holy bull, immediately took place, and the power of the priesthood became that of princes and prophets—controllers of the immortal longings of the people, as well as governors of their actions.

We must again return to the dispersion. The children of Japheth were not long content to dwell in the tents of Shem. It would appear that they were of too active and enterprising a nature to sit all day at the door of a tent, looking complacently on well-fed herds, biting verdant fields. History has not told us whether this monotonous life was relieved by the solace of a pipe, although the Arab now-a-days cannot sit before his curtain in the desert, nor under a tree in the fields, without that bland accompaniment. The grandsons of the younger patriarch, therefore, "divided the isles of the Gentiles" among them. The sacred historian has not informed us what particular islands were so appropriated, but geography and profane speculation point alike to the Grecian Archipelago. If this really was the sunny spot chosen by the younger adventurers, it is highly creditable to their taste, although their descendants made little use of it. When the Titans (a colony of Phœnicians) invaded that country, they found a savage people dwelling in caverns, having no chief or leader, eating human flesh, and ignorant of fire! The Canaanites, as all are aware, worshipped strange gods, and being greatly a maritime people, and intimate by trade with Egypt (which was a vast corn-growing country), the offshoots from their kingdoms consequently carried their knowledge with them. The Titans, therefore, taught the savages the religion in which they trusted, as well as the arts of peace and civilisation with which their intellects and hands were gifted. By an easy transition in a savage mind, the characteristics of such gods were transferred to those who taught them, and the frequent disputes which occurred among the Titans were looked upon as the quarrels of the heavenly host. Hence the whole fable of Olympus, and the loves, wars, miseries, and pleasures of its residents. These Titans, amidst intestine quarrels and future invasions, gradually disappeared, while a new race began to plant immortality on the classic soil of Greece.

Returning to the Phœnicians, at the period when they were driven out by Joshua—when the high hand of Israel took forcible possession of its promised territory, and scattered the obnoxious descendants of Canaan to the unknown lands beyond the Great Sea—we come to the earliest profane writer recognised by historians. This was Sanchoniatho, fragments of whose writings were preserved by Eusebius, and translated into Greek by Philo of Byblos. They contained a history of the gods, of Coelus and Saturn—of the origin of the world—and other beliefs of the Canaanites. These, Sanchoniatho says, he collected from monuments, on which of course alphabet writing must have been cut; consequently it is to these Phœnicians that the world is indebted for written characters, and a language which could be conveyed without the intervention of speech. From them the Egyptians borrowed this bold inroad on primeval rudeness, although they carried it little further than its earliest rudiments of signs mixed with words.\* This powerful herald to

\* If our conjecture of the Mexicans being derived from an Egyptian stock be correct, the Atlantic voyagers must have set out at or prior to this period; and an almost modern proof of this idea can be very readily adduced. When Pizarro landed, the inhabitants painted pictures of

civilisation, the Phœnicians carried with them in their wanderings, as well as the knowledge of navigation, to which all antiquity admits their claim of the greatest practical application. Their first settlements were in Cyprus and Rhodes, from thence they went to Greece, Sicily, and even to Spain. These colonies were planted, according to Strabo, about the time of the Trojan war. Tyre and Sidon were the most illustrious of their cities, the latter being likely founded by the first-born of Canaan. On the dispersion of the inhabitants of the latter by Joshua, we are led to believe that they founded the former, because Homer as well as Joshua mentions Sidon, but neither of them Tyre. A colony from thence planted Carthage, the second in renown to Egypt among the African nations. The elder prophets in Scripture speak of Tyre as a city of surpassing splendour, and as being the most wealthy in the world. Whether or not Pagan writers borrowed their knowledge from the Jewish treasury, or were themselves acquainted with the circumstance, is not easy to determine, but both agree in their glowing description of this early commercial mistress of the world. Its present desolation, its nakedness and lonely look, amply verify the fulfilment of the terrible denunciations which were uttered against it. The curse of Canaan seems to have followed his descendants in all their travels—to have lain dormant only so long that their indomitable industry and grand acquirements might make them a wonder and envy, and their destruction thereby become a more fearful warning and lasting reproach among the nations. Old Tyre was miserably destroyed by Nebuchadnezzar; and the renovated city, on an island at some little distance from the ancient site, was as cruelly annihilated by Alexander the Great. The destruction of Tyre by the Macedonians, and that of Carthage by the Romans, are the most fearful and disastrous events in the whole range of horrible and exterminating war.\*

Such were the early kingdoms of the world, for among them Rome was a child of another generation—a leader of a new host of nations, a herald of other improvements, and an obelisk boldly pointing out a future era in the history of the world. Ere Rome became known or feared, all the earliest kingdoms had fallen to decay, while their offshoots gradually fell beneath its ambitious and conquering arm.

We have only further to remark upon the social condition of these nations, ere we enter on the practical history of Egypt. Conquest and colonisation comprise not all the history of the period. While the warlike hosts went forth to subdue the savage or the soil, and to leave in each promising territory the primal stock of future kingdoms, those who remained at home must not be forgotten. One great feature in the history of the early kingdoms is the condition of woman, who in many instances must have been a slave—as ready and constant an instrument in the hand of man as his sword. Hers was seldom a state of peace—her condition was never free. For the hunter, home had no endearments, and to the marauder she was a perpetual drag upon his movements. Hence women were considered mere toys of pleasure, or instruments of toil. Doomed to perpetual and unrewarded slavery, a neglected drudge, and a despised adjunct to colonisation, she and her children were often neglected or forsaken. To her watchful care over her offspring is the world, in numerous instances, indebted for the population of rugged coasts and sterile islands, and by her humanising influence, under the most adverse circumstances, milder aspects grew upon the face of society. Property also began to be acquired, laws to originate, and judges to be appointed. An acquaintance with these matters is essentially necessary to a just estimate of that period of the world's existence, when the early kingdoms flourished in their proud and glorious pre-eminence—when they wore a diadem of government over seas and continents of their own discovering, and claim from surrounding tribes a tribute of respect and admiration as great as that which is due to them from the earliest posterity.

all they saw, and transmitted them to the Emperor Montezuma; they were acquainted with the initiative of writing, painting, but had never acquired the more simple and useful art itself.

\* This outline of the race of Ham abundantly proves the absurdity of the supposition that the negro is the descendant of Canaan. Climate and barbarian ignorance are sufficient to account for the colour and habits of the much-injured African, without attempting to seek for supernatural causes. To the historical reader the curse becomes more apparent, and appears more heavy, when inflicted on a polished, a brave, and industrious people. They laboured against destiny, struggled with fate, and fell gloriously. They were endowed with the noblest attributes of human genius, and exerted them long and well. Their inventions gave Memory a tablet on which to write the past—Enterprise conveyances by which to carry that knowledge through the world—Industry and Agriculture implements to pursue their callings—yet Extermination dogged their footsteps, and annihilation, like a stormy wave, swept them from existence. The idea that the negro tribes were the doomed of the earth was an impious attempt to excuse the horrors of the slave-trade, and a vile union with which the man-stealer assayed to cheat his own soul, that he was a messenger of divine vengeance, instead of a greedy trafficker in the lives and liberties of his fellow-man.

## Scenes and Sketches of Military Life.

PATRICK O'NEIL—THE IRISH GRENADEER.

CHAPTER VIII.—POVERTY—MISERY—DEATH.

"AFTER cutting the sogering line of business," began O'Neil, "or, to speak nearer to the truth, after it cutting me, and cutting me pretty severely too, I didn't well know what to do with my beautiful self. I was as innocent of the world as a child—that sogering spoils a man altogether—so, after considering various plans, such as play-acting, ballad-singing, dancing, fencing, preaching, and the like, I determined to turn towards home and see if my poor old mother was amongst the living, and try and settle down and do something to comfort her in the latter end of her days, so I set my face again for Ireland. I walked to London the first day—a long walk it was, but the next I took it easy, and only went as far as St. Albans. As I entered the town in the evening I was met by a pair of decent-looking, smartish sort of men, who joined me and began asking me a lot of questions. I knew the moment I took a squint at their square cut whiskers and natty side curls, besides the regularity of their step, and other movements, that they were a pair of marine deserter-catchers;\* so you may be pretty certain I didn't make them much wiser by my answers. They appeared to be puzzled about what to make of me, so they directed me to a public-house to find a lodging, and came in the evening again and treated me to some beer, and we became very jovial. Then they thought to pump me, but they found the water too deep, so they left me alone. I started at day-break the next morning, and hadn't got more than a quarter of a mile on the road, when I again met my marine friends. Their manner was now quite altered; they were no longer civil-spoken or shy-looking, but came up to me without bidding me good morning, and demanded to know where I was going. I gave them a very saucy sort of a short answer, and pitched them to the old boy like winking.

"I say, comrade," says one, "there's no use you carrying it with so high a hand; you're a soldier, you see, and we know it; the cut of your jib is enough for us; so show us your pass, your furlough, or your discharge, if you have the like; if you have not, as I begin to suspect, you must go back with us; so no bouncing or shamming, but back's the word."

"I'm a peaceful traveller, gentlemen," says I, quite calm like in a minute, "I'm neither sailor nor soldier, so let me go quietly on my way, for I have a long journey before me. I don't like to be delayed, stand aside."

"I say, comrade," says the other, "you're no better or worse, in my opinion, than a deserter; so no more palaver about it, but confess the truth at once and come back, we'll use you well."

"Seeing I'm so far on the road," says I, "I don't like to go back, it would spoil the long day's walk I intend to make, and I have just this to tell you, you must show me better authority than your two selves before I turn back an inch—you're not the most inviting sort of companions; I don't like the terms, besides, wishing to keep something like a respectable character, you'll just be after allowing me to choose my own road and my own company, so leave my way,—and as I attempted to move on, one fellow collared me on one side and the other grappled with me on the other.

"Come, you deserter," says one, "none of your confounded nonsense, if you're not as quiet as a lamb, we'll break every bone in your deserting carcass."

"This was going, as I thought, to far; 'hands off,' says I, shaking them away, and whirling the stick, I knocked one fellow down, and as the other came to the charge, I laid his head open a couple of inches, and the blood spouted in a beautiful jet, and streamed along the dusty road.

"Now, gentlemen," says I, "I suppose I may walk on quietly—go back the same way you came, but don't say you were playing with a deserter."

"I jogged gently for two or three miles further, when a hackney coach came tearing after me like mad—as soon as it came up it stopped, and one of the injured marines with a little man, old and withered, got out.

"That's him," says the marine, "that's your man—that's the deserter—if he doesn't submit quietly, shoot him on the spot—there's law for it—show him no mercy."

"Are you a deserter, sir?" says the old man, looking at me from a distance.

"He is, he is, I'll swear to it," says the deserter-catcher, "but don't go near his stick, he has the fence like a light dragoon."

"Not a bit of a deserter, old boy," says I.

"Because I'm a constable, sir," says the old man, "see there's my staff," and he pulled it out of his pocket, and held it out as far as he could that I might look at it, and, I have orders to take you back a prisoner."

"And I see another constable," says a gawky young chap, leaping from the box of the coach, "so you see father and I have made you a prisoner."

"Oh," says I, quite easy like, "if you're a constable that alters the case at once. I submit to you, sir, for I

\* The marines were a notorious flogging body, and, in consequence of the number of desertions which took place from the corps in Chatham, they had men placed in the different towns about the district to intercept the runaways. These men were called, in barrack-room slang, "marine deserter-catchers."

know I am safe, though, when I saw you in company with that highway-looking thief of a salt-water soger, that thought to rob me this morning, I had no good opinion of you, I imagined you belonged to the same gang."

"I was taken back to St. Albans, and brought before the mayor; the marines stated their case like lawyers, said they knew I was a deserter, and that, when they thought to make me prisoner, I fell on them, and nearly murdered them; and they showed their cuts, and made as much of the matter as if they thought they would have me hanged. The mayor asked me what I had to say in my defence, and let me alone if I didn't pitch him the blarney. I told him how I met them in the evening, and how inquisitive they were about me, wanting to know what I had in my haversack, where I came from, and particularly where I was going to, and which way I started, and at what hour in the morning, and how they treated me, and then how they met on the road at a very unusual hour, and, as I imagined, stopped me to rob me. I showed him my discharge—a little illegible here and there, as a matter of course, but then fit to be read in bits here and there, so as that you might make a random guess at what it was. I handed him also one of the finest characters that could be written by a pen, signed by myself in Colonel B——'s name, and with his thick ugly letters, for it's a strange fancy with gentlemen to write very like vagabonds. 'Now, your worship,' says I, as innocent as a child, 'I leave it entirely to your honour, and these gentlemen (the constables) that you sent after me can tell you how quiet and peaceable I came back with them the moment they mentioned your worship's name; though, as you can perceive, your worship, I could twice as easy have knocked the senses out of that boy and that old man, than I could thrash these great good-for-nothing fellows that go stop a man on the King's high-road, who is anxious to travel home as fast as he can, and with but little money in his pocket.'

"This turned the tables completely; the magistrate got into a great passion, abused the marines, and ordered them to pay me five shillings each for my loss of time, and gave me ten himself, saying he fined himself double as he was partly blameable for the delay. If you saw the marines when they tipped over the money to me, how they looked daggers and bayonets at me, it would do your heart good as it did mine.

"Soon after I picked up with a joint-stock company of travelling merchants, whose capital seldom amounted to more than from fifteen to twenty shillings, and knew every part of England better than the road-surveyor. They were gentlemen of a very liberal way of thinking as regarded morality, rights of man, equality, and all that; and, what is more, they practised what they professed. They were much to my taste, and we led a very pleasant sort of an easy life; studied men and manners on a large scale, and bore every change of fortune with the patience and good-temper of angels. They were men of extensive knowledge in the arts and sciences, and could make more out of a pea and three thimbles than all the philosophers and chemists in Europe with all their combustibles and nonsensical apparatus put together. Every gentleman in the company had a share in the risks and profits, and to take a part in the business—but then he always had that part which suited him best—mine was the fighting department, I had to protect the bank—drive away unprofitable intruders—chastise the impertinent lookers-on, and bring the refractory to a true sense of the honesty of our proceedings. We speculated with some considerable profit and reputation, until we came to Swaffham, in Norfolk, as you have heard, and there we had a fair prospect of reaping a pretty decent harvest, but for the obstinate stupidity of a great wooden-headed butcher, who, having lost a few shillings, got into a passion and swore we cheated him. I endeavoured to reason with him.

"Come, man," said I, "you're a green'un, the fellow only moved them too quick for you. But he could not do me that way, I was watching him. 'Here now,' said I, turning to my pal, 'here, queer fellow, here's half a sovereign down on your board; now shift your swiftest, I have my eye on you, are you ready?'"

"There they are, sir," said he, turning them rapidly three or four times, 'now's your time, sport away.'

"Why, here it is you fool," said I, lifting the thimble and showing the pea to the gaping yokels. I then pocketed the money, while my pal, in a seeming rage, challenged me for another game.

"No, no," said I, "I dare say you have not many to spare, it was only to show this gentleman your tricks I played with you at all."

This encouraged the butcher. He started a new game, and, in a few minutes, he was minus three sovereigns and a half. This loss set him beside himself, he turned on me, and said I was an accomplice, called me every thing but an honest man, and challenged me to fight. This was too advantageous an offer to be rejected, so I sent him to grass like winking, and then his brother came at me with a long drover's pole, and a spike of iron in the end of it. This was nothing to me, you know. I stood off from him, came to guard with a neat black thorn; a turn of the wrist whipt the pole out of his hand, and point two in the stomach sent him six yards off on the broad of his back, gaping like a dying frog. The whole fair then fell on me, and got me down; they tied my hands behind my back, and brought

me to the cage. My pals, as a matter of course, became invisible the moment the row commenced. I was carried before a magistrate the next morning; the butcher, like a man, acknowledged that it was he began the affair by challenging me; and I was about being dismissed when the old vulture of a constable had the assurance to tell the magistrate, before my face, that he suspected I was a deserter. I couldn't stand that under any circumstances.

"'You stinking old catchpole,' says I, making a grab at him.

"'Come, come,' says the magistrate, 'you mustn't speak that way to a peace-officer in my presence.'

"'D—— the peace-officer,' says I, 'how dare you speak that way in my presence.'

"'Have you ever belonged to the army, then?' he asked.

"'To be sure I have,' says I.

"'What regiment?' says he, again.

"'The old ——,' says I, 'the old saucy green, first in the field, and last out of it.'

"'Where's your discharge, then?' he says, quite sharp, thinking he had me in a hole.

"'Oh! the discharge,' said I, 'the discharge, is it, you're axing about. I'll just satisfy you on that head with as elegant a bit of a discharge as ever figured itself on a bit of parchment.' So I handed the bit of sheepskin over to him, and he fixed his spectacles closer on his nose, and looked into it quite wise-like. He turned it upside down, and endways, and then looked at the back of it; but it was all the same, for you see the good character they wrote down for me in it at the regiment was too much for my modesty to walk under, and I continued to rub it as clean almost as the day it came off the sheep's back. He looked up and down at it again—took off his spectacles and rubbed them bright—put them on again—and patiently re-examined it all over.

"'Why,' says he, looking over at me, 'I can't read this.'

"'Well, I bursted out laughing, and how could I help it—why he might as well look for the Lord's prayer on a tinker's leather-apron. 'Can't read it,' cried I,—'can't read that: why any one that knew how to read at all could read that.'

"'Well, the old brute got into a terrible passion, and ordered me back to the cage while he wrote to the regiment about me. Old Colonel B—— was not long in letting him into the secret, and I was sent away with a strict charge never to be seen in Swaffham again.

"'Our life was a pleasant rambling sort of a life enough in summer; but from being obliged to be out in fields, and other little inconveniences of that description, when we were not in luck, I got the ague very badly, and it soon reduced me to skin and bone, as you may perceive, and was obliged to give up my situation as fight-master-general to the thimble-riggers.

"'Again I turned my heart towards home, but how to get there was what puzzled my head. After thinking over a great many schemes I at length thought of turning my learning to some account. What's the use, thinks I, of a man having two tongues in his head if he can't makethem support him. Can't I speak a foreign language, and if nobody understands it but myself so much the better. I made free with a large white cloth from a hedge, and I fastened it in large folds round my cap. I nourished a pair of enormous moustaches as long, black, and shining as the mane of a first blood racer. I cut my white trowsers short below the knees, and stuck my bare feet into an old pair of party-coloured slippers. Dressed up in this fashion, with a red handkerchief tied about my waist, and a long pole in my hand, I looked as great and strutted as proudly as the Grand Mogul himself.

"'In this disguise I walked out into the street of a little town in Derbyshire, and commenced singing *Maura Bawn* (fair Mary) *Modha Rua* (red fox) and *Cushla machree* (pulse of my heart) with a most outlandish tone and half through my nose, flourishing my stick and forking up my legs and arms like a play-actor. In five minutes I had every man, woman, and child in the little town about me, and wondering as if I fell out of the clouds. The pence and sixpences poured as fast as I could collect them, and at every handful I put into my belt I curled my mustachious with my fingers, flourished my pole, and cried out through my nose 'me von Grand Turk.'

"'In this manner I travelled through a great part of England, and made plenty of money, seldom receiving less than ten or twelve shillings a day, and once a couple of pounds, but it went as easy as it came. I lived as well as the real Grand Turk himself, and had oceans of drink for nothing, for wherever I put up at night crowds would collect, and I'd drink and dance and sing till all was blue, or until the people would have to carry me to bed. When I had ill luck, the only comfort I had was that I could curse them to my heart's content without being understood.

"'All this time I never minded my ague, and when I reached Liverpool I was scarcely able to crawl. I found myself at death's door without a penny to bribe the porter. I got a passage to Ireland, and here I am after all, something worse off than the day I came into the world.'

The unfortunate wretch struggled on as far as Dublin, where his strength and endurance were at last fairly overpowered by fatigue, famine, and disease. The final

scene is quite in keeping. His lodging was a ruined and empty cellar on Sir John Rogerson's quay, into which the tide flowed at high water. Here, in a kind of hammock made of a piece of old sack, and tied up to the joists, the career of Patrick O'Neil was at length brought to its final close. In this dark and noisome dungeon his lamp of life flickered faintly for a while, and became extinguished for ever. Some charitable people hearing that a human being was in such a state of utter desolation came to see him. They came at the wrong time. The cellar was nearly full of water. They called, and O'Neil could scarcely answer. They told him they had brought him some nourishment.

"'Nourishment,' repeated the dying soldier, 'nourishment! it's too late,—however, come again when the tide is out.'

They came again—the cellar could scarcely be entered—they contrived to approach the hammock, but the tide of O'Neil's existence had ebbed for ever.

There lay the victim of the military flogging system—a miserable wreck, insensible alike to praise or blame—to sympathy or sorrow.

### Progress of Suicide among the Ancients.

#### SECTION III.

THE Romans, perhaps, never showed a more dastardly spirit of mean and cruel revenge than in their persecution of Hannibal from one court to another, after he was oppressed with years and sunk into obscurity. Being betrayed by his host, King Prusias, he had recourse to the poison, which he always kept about him concealed in a ring. "And now," according to Livy, he said, "we will free the Roman people from their constant anxiety, since they cannot have patience to wait the death of an old man. Flaminius will obtain neither a great nor a memorable victory over one, like me, unarmed and betrayed. Oh! how great a proof of the alteration of Roman manners is the transaction of this day! The ancestors of these people warned King Pyrrhus, a powerful enemy, with a victorious army in Italy—to beware of private treachery and poison; and their descendants send a man of consular dignity as ambassador to Prusias, urging him to break the laws of hospitality, and to betray or to murder his aged guest."

What death has heaven assigned  
This great controller of all human kind?  
Did hostile armies give the fatal wound,  
Or mountains press him struggling to the ground?  
No; three small drops, within a ring conceal'd,  
Avenge the blood he pour'd on Cannæ's field!

At the taking of Carthage, when Asdrubal, the Carthaginian general, had meanly deserted his post and fled to Scipio, in hopes of procuring his personal safety, the "undaunted mettle" of his wife was aroused to a state of desperate indignation. Resolved to supply in her own person the want of spirit and resolution in her husband, she ordered the temple, in which she and a few troops had taken shelter, to be set on fire. When this was done, and she had arrayed herself in her richest robes, holding her two children in her hands, she addressed herself to Scipio, who had then surrounded the building with his troops. "You, O Roman!" exclaimed the heroine, "are only acting according to the laws of open war: but may the gods of Carthage and those in concert with them, punish that false wretch, who, by such a base desertion has betrayed his country, his gods, his wife, his children! Let him adorn thy gay triumph; let him suffer in the sight of all Rome those indignities and tortures he so justly merits: but let him first behold in me what he ought to have done!" She then, grasping her children in her arms, rushed with them into the thickest of the flames, and was followed by the faithful troops who had bravely and devotedly adhered to her.

The practice of suicide was so frequent at Rome, that it has been called the "Roman death." But it would be forming a very unjust and erroneous opinion of the ancient Romans, to imagine that they were equally favourers of suicide during all the periods of their empire. Whether the ancient laws of Rome expressly forbade its practice, is a point not clearly ascertained. There is a passage in Cicero, where, speaking of suicide, he says, "When the Deity himself has given any one a just cause of putting an end to his life, the wise man joyfully accepts it; nor does he then break the bonds of his prison, *which the laws forbid*, but quits life as one who has obtained permission from God as from the magistrate." Servius thinks that the laws here referred to were those contained in the Pontifical books, and Grotius and Bishop Pearce follow this opinion. According to these laws, hanging was an infamous death, and the bodies of those who died in this manner unworthy of funeral rites. As hanging was a common method of self-destruction in ancient times, it is not impossible that suicide might be pointed at under punishments annexed to this kind of death; and thus, what was the law of England in cases of *felo de se*, may have been nothing more than a perpetuation of an ancient custom. But whether any law existed in ancient Rome on the subject or not, there seems to have been little necessity for its exertion during the best days of the Republic. One remarkable instance, indeed, occurs of the contagion

of suicide among the lower orders of the people, as far back as the reign of Tarquinius Priscus. After this monarch had employed the Roman people in successful wars abroad, he filled up their leisure at home in works of less apparent honour, but of greater utility. These were to cut drains and common sewers of immense size. The soldiers disdain these servile offices, in which they saw no end of their labours; and many of them laid violent hands on themselves rather than proceed in their work. The contagion of bad example, as usual, spread rapidly; Tarquin ordered the bodies of these self-murderers to be nailed on crosses and exposed as spectacles to the rest of the citizens. The influence of shame and horror on the living checked this sudden rage of suicide. This, however, was only a temporary expedient, adopted to serve a particular purpose. "It was a remedy," says Pliny, "never devised before, nor practised since." But, this extraordinary case excepted, very few instances of suicide are on record in the pure age of the Roman state. Application was rarely made to this action, except as an exertion of public spirit, or an example of private virtue. Curtius and the Decii are immortal instances of the former, and in the latter class the fair Lucretia has for ever associated her name with the idea of chastity. The self-starvation of Menenius Agrippa, out of indignation at the ingratitude of the citizens, the self-murder of Appius Claudius to prevent a disgraceful condemnation, and the suicides of the Decemvirs Appius and Opprius, the persecutors of Virginia, are by no means characteristic of the general turn and temper of the early times of Roman greatness.

The Asiatic armies of Rome, Livy informs us, introduced luxury into the city. Voluptuousness soon tainted the sources of Roman simplicity; and the valour of the patriot dwindled into the ambition of the aspiring citizen. The foundations of Roman virtue became weakened, and indifference succeeded. When the inhabitants of Rome were verging towards these points of indifference, the philosophers and rhetoricians of Greece made their appearance in Italy. In spite of the opposition of the Senate, who passed a decree for the banishment of all masters of rhetoric from Rome, and that of the elder Cato, who foretold, "that Roman manhood would be destroyed when once it was thoroughly affected by Greek letters," with the spread of Greek philosophy, dissipation of life and corruption of manners grew so rapidly, that the progress of a few years enabled a wild unlettered African\* to exclaim, "all things were venal in Rome;" and induced the Roman people to listen to a Roman senator with patience and applause, whilst pleading the cause of traitors and conspirators, and openly avowing, without fear of reprehension, that "death is the end of all our cares; beyond it there is neither room for hopes nor fears."†

The opinions of two sects of Grecian philosophers were peculiarly calculated to catch the attention of the Romans; and both were eminently adapted to promote the practice of suicide; the one by consequences indisputably flowing from their acknowledged principles; the other by the open and direct avowal of its practice. These were the Epicureans and the Stoics. The Epicurean philosophy made rapid progress in Rome; and, in the decline of the republic, the chief Romans were for the most part Epicureans. But while the pleasurable doctrines of the Epicurean philosophy were well calculated to meet the growing dissolution of Roman virtue, the tenets of the Stoic philosophy were as admirably adapted to amalgamate with the ideas of an old Roman, of one who still sighed for the restoration of former manners and rapidly-disappearing customs. Severity of manners, disinterestedness and firmness, were equally expressive of the Stoic philosophers and the ancient Roman; in the former these qualities proceeded from personal dignity, in the latter from love of country. The transition from the old Roman disinterestedness to the self-dignity of Stoicism, though apparently unimportant, was in reality as fatal to the national character, as the descent of Roman youth into "Epicurus's sty." The old Roman, regardless of every thing that appertained to self, never considered his obligations to his country discharged, till he either fell in battle, or endeavoured to gain some great advantage to his fellow-citizens by throwing himself in the way of certain destruction. The Stoic retired from life, regardless of every thing but himself, when he could no longer maintain his former consequence in the state.

During the time of the republic, there was probably no law at Rome against suicides. Under the first emperors, the great families were continually destroyed by criminal prosecutions. The custom was then introduced of preventing judgment by a voluntary death. Thus they procured an honourable interment, and their wills were executed, because there was no law against suicides. But when the emperors became as avaricious as cruel; they deprived those who destroyed themselves of the means of preserving their estates by rendering it criminal for a person to make away with himself through a criminal remorse.

Apicius, the celebrated gourmand, when he found his wealth diminishing, in consequence of his costly banquets, destroyed himself while his digestive powers were yet unimpaired, lest he should outlive the means of luxurious enjoyment.

# Traits and Sketches of Irish Character.

## THE WIDOW.

ONE of the best and most important consequences resulting from the temperance movement in Ireland, is the discontinuance of the dreadful faction fights which so long and greatly disturbed the social feelings of the peasantry. Originating either in political or local differences, these blood-stained contests raged through generations with unholy fervour, destroying the hopes and happiness of families, searing the heart with dreams of vengeance, or tearing it with the agonies of despair. Among the excellent notices by Mr. and Mrs. Hall of the improvements in the Irish character, the causes and consequences of the faction fights form an interesting and instructive episode, while the following tale of the pure-hearted widow gives a chaste finish to the brawls and disturbances which deprived her of her father, husband, and brother:—

"The faction fights, place your honours," said an intelligent countryman when spoken to by us on the subject, "the faction fights are a'most, and may be more than a'most, gone off the face of the country. The boys are beginning to talk about them as things they have seen—like a show or a giant. We ask each other how we were ever drawn into them, what brought them about; and the answer to that, is—Whisky! No gun will go off until it is primed, and sure whisky was the priming. That made more orphans and widows than the fever or starvation. Thanks be to God, if death come upon us now, it is by the Lord's will, and not our own act."

"The faction fights war the bitterest of all—black hatred descending from father to son, against the opposite faction, as if poor Ireland hadn't enough enemies without turning—worse than a wild beast—to murder and destroy her own flesh and blood. Now, there's a poor woman," he said, pointing to a pale patient-looking person who sat knitting at her cottage door; "there's a poor creature! Mrs. Lawler knows what factions come to, and so she ought; she'll tell the lady her story and welcome, if she has any curiosity to hear it. Good mornin'-mornin' to you, Mrs. Lawler, and how's your girlreen ma'am? the lady would be glad to rest while the gentleman and I get up the far hill; and you have always a welcome, like your people before you, for the stranger."

"Kindly welcome," said the widow. "Mary, dust the chair, avourneen."

The cabin was clean and neat, and bearing no evidence of the presence of that sad poverty we had so frequently seen, though it did not dim the smile or lessen the welcome—nor was it difficult to lead the widow to the story of sorrows, which, however, softened by time, were ever uppermost in her mind.

"My mother and myself were widowed by factions—plase God my little girl won't have the same tale to tell, for the Connells and the Lawlers might put salt to each other's potatoes without fear of fighting, now. It was a shocking thing to see the arm of brother raised against brother, only because as battle and murder war in the hearts of their forefathers they must be continued in their own."

"I was born a Connel, and almost the first thing I learned was to hate a Lawler, from the lip out; and yet hard fortune was before me, for the very first passion my heart felt, was the same love it feels still, for a Lawler; it has known no change, though it has known no sorrow; the first knowledge I had of the wild beatings of my own heart was when I saw that girl's father. At yah; it has beat with joy and terror often; but the love for my first love, and my last, was always one; and now, when all is past and gone, and you, Mark Lawler, are in your green, quiet grave, I am prouder to have been the choice of your own noble spirit, than if I was made this moment the queen of all Ireland's ground. O, lady! if you could have seen him! 'Norah,' said my father to me, and I winnowing at our barn-door, with the servant-maid, 'Norah, keep your eyes on the grain, and not after the chaff, and don't raise them over the hedge, for there's many a Lawler will be passing the road this day on account of the fair, and I don't wish a child of mine to notice them.' I intended to do his bidding, and whenever I heard a horse, or the voices of strangers coming down the boreen, I kept my eyes on the grain, and let the chaff fly at its pleasure, until a dog broke through the hedge, and attacked a little beast of my own; so as soon as that came to pass, I let the sieve fall, to catch my own little dog in my arms; there was no need for that, for he was over the hedge, lighter than a sunbeam. Ah, then, I wonder is love as quick at taking in all countries as it is here? Mark Lawler didn't speak ten words, nor I two; and yet from that out—under the bames of the moon, or the sun, in the open field, or in the crowd it was all one; no one but Mark Lawler was in my mind. I knew he was a Lawler by his eyes, and well he knew I was a Connel; but the love would have little of boy and girl love in it that would heed a faction. We, who had never met till that moment, could never stray in the fields without meeting after. Ah! Mary," she continued, addressing her daughter, and yet, in her simplicity, quite forgetting she had been proving the uselessness of the precept by her own confession; "ah, Mary dear, if ye feel yer heart softened towards a young man, keep out of his way intirely, avourneen; have nothing to say to him, don't drive your cow the same road he walks, nor draw water from the same well, nor go to the same chapel, Mary, barrin you have no other to go to: there's a deal of mischief in the chapel, dear, because you think in your innocence you're giving thoughts to God, and, all the time, maybe, it's to an idol of your own making, my darling child, they'd be going; sure your mother's sorrow ought to be a warning, avourneen!"

"Yes, mother," replied the blue-eyed girl meekly.

"Well, my lady, my poor father thought I grew very attentive intirely to the young lambs, and watchful over the flax; but at last some of the Connells whispered how it was, that Mark Lawler met his child unknowing; and he questioned me, and I told the truth, how I had given my heart out of my bosom, and I fell at his feet, and cried

salt and bitter tears until they dropped upon the ground he stood on; and seeing his heart was turning to iron, I, who had ever been like a willow in his hand, roused myself, and challenged him to say a word to Mark's disadvantage; I said he was sober, honest, industrious, and my father was struck with the strength of the heart I took, and listened, until at last he made answer, that if a saint from heaven came down, and was a Lawler, he would not give him a drop of water to wet his lips. He threatened me with his curse if I kept true in my love, and thought to settle the thing out of hand by marrying me to my own second cousin; but that I wouldn't hear to; God knows I did not mean to cross him, but what could I do? Mark sent to ask me to bid him farewell, or his heart would break; I thought there could be no harm in blessing him, and telling him to think of me no more. Mary, avourneen," she said, again addressing her daughter, "if ye really want to break off at once with a young man, take warning by me."

"Yes, mother," was again Mary's gentle reply.

"At that meeting we agreed to meet again; and so we did, until we got a priest to make us one. At first I was happy as a young bird; but soon my heart felt crushed, for I had to carry two faces. My father was more bitter than ever against the Lawlers; and my brother, 'Dark Connel' as he was called, more cruel than my father. At last I was forced to own that I was married. I watched the time when my brother was away: for one storm was as much as I could bear. My father cast me like a dog from the hearth I had played on when a child; in his fury he knelt to curse me, but my mother held a gospel against his lips; so I was saved his curse. The arms of a loving husband were open for me; and until the Midsommer fair I thought my happiness was sure; I worked hard to keep Mark from it, for the factions were sure to meet there; he swore to me that he would not raise a finger against my father or brother, nor let a drop of spirits pass his lips. I walked with him a piece of the way, and I thought all pleasure in sight left my eyes when he waved the last wave of his hat on the top of the hill. As I was turning into our own field, a lark was rising above its nest, singing its glory to the heavens in its sweet voice, when a shot from the gun of one of those squires who are thick among the leaves as spiders' webs, struck the bird, and it fell quivering and bleeding close to where I knew its nest was in the corn. I opened the bending grain to see if I could find it; it was lying quite dead, and its poor mate standing close by. The lark is a timid thing, but she never minded me, and my heart felt so sick, that I went into my house crying bitterly."

"I could not rest; I thought in a few hours I might be like that innocent bird; and taking my cloak about me, I walked on, and on, until I came in sight of the fair green. It was a woeful sight to me—the shouts of the showmen, the screams of the sellers, the lowing of cattle and bleating of sheep, were all mixed together—while the yell of the factions, every now and again, drowned everything in its horrid sound. I knew my own father's voice as he shouted 'Hurroo for the Connells—down with the Lawlers.' I saw him standing before Mark, aggravating him. My husband's hands were clenched, and he kept his arms close by his side that he might not strike. I prayed that God might keep him in that mind, and flew towards them. Just as I dropped on my knees by his side, he had raised his arm—not against my father, but against my brother, who had drawn the old man back; and there they stood face to face—the two young heads of the old factions—blows were exchanged, for Mark had been aggravated beyond all bearing; and I was trying to force myself between them, when I saw my father stretched upon the green, in the very hour and act of revenge and sin. It was by a blow from a Lawler—the old man never spoke another word—and the suddenness of his death (for he was liked by the one and hated by the other) struck a terror in them all—the sticks fell to their sides—and the great storm of oaths and voices sunk into a murmur while they looked on the dying man."

"Oh! bitter, heart bitter, was my sorrow. I shrouded my father with my arms, but he didn't feel me; the feeling had left his limbs, and the light his eyes; however hard his words had been, the knowledge that I was fatherless, and my mother a widow, made me forget them all! While some of the neighbours ran for a priest, and others raised the cry, my brother—darker than ever I had seen him—fell upon his knees, and dipping his hand in the warm blood that poured from the old man's wounds, held it up in the sight of the Connells. 'Boys,' he shouted, and his voice was like the howl of a wild beast—'Boys! by this blood I swear, never to make peace till the hour of my death with one of the name who had done this, but to hackle and rive, and destroy all belonging to the Lawlers.'"

"And the women who were about me cried out at my brother, and said, sure his sister was a Connel; but he looked at me worse than if I was a serpent, and resting his hand—wet as it was—upon my head, turned away, saying 'She is marked with her father's blood in the sight of the people.'"

"I thought I should have died, and when I came to myself I found I was in a poor woman's cabin, as good as half-way home, with two or three of the neighbours about me; and my husband, the very moral of a broken heart, by my side. 'Avourneen gra!' he said, striving to keep down the workings of his heart; 'Avourneen gra! I had no hand in it at all. God knows I wouldn't have hurt a hair of his white head.' I knew it was the truth he was telling, yet somehow the words of my brother clung about me—I was marked with my father's blood."

"And the Connells put the old man's corpse upon a cart, and laid a clean white cloth over it; and carried him past my own little place—keeping over it, and cursing the hand that gave him his death: hundreds of the neighbours mixed with my own people, my widowed mother and my dark brother following; and so they passed by our door; for miles along the road I could hear the loud scream of the mother that bore me high above the voices of all the rest. Oh! it was a horrid sound and a horrid sight!"

"His death was talked of far and near; the magistrates set to putting down the factions, and the priest gave out from the altar, Sunday after Sunday, such commands,

that, without flying in his reverence's face, they could not keep on at the fights in public; every innocent diversion through the country was stopped on their account; but though there was outward peace, yet day after day I was followed by the spirit of my brother's words; the world wouldn't put it out of his head, that Mark struck the mortal blow, and he turned his ear from me, and from his own mother, and would not believe the truth."

"For as good as two years, the husband, whose life was the life-beat of my worn-out heart, seldom left the cabin without my thinking he would never come back. I'd wait till he was a few yards from the door, and then steal out to watch him till he was out of sight. At ploughing, or haymaking, or reaping, his whistle would come over the little hill to me, while I sat at my wheel, as clear as a blackbird's; and if it stopped but for a minute, my heart would sink like death; and it's to the door I'd be. If I woke in the night, I could not go to sleep again without my arm across his shoulder to feel that he was safe, and my first and last prayer to the Almighty, night and morning, was for him."

"My brother was very fond of children, and though he had gone to live at the other side of the parish, I managed to meet him one evening and place little Mary before him; but his face darkened so over the child, that I was afraid she might be struck with an evil eye, and making the sign of the cross on her, I covered her from his sight with my cloak: after that, I knew nothing would turn his hatred, except the grace of God; and though I wished that he might have it, whenever I tried to pray for it for him, my blood turned cold. I've often thought," she continued, after a pause, "what a blessing it is that we have no knowledge of the sorrow we're born to; for if we had, we could not bear life. I had that knowledge; Mark never smiled on me that I did not feel my flesh creep, lest it should be his last. He'd tell sometimes of how things were mending, how there was much bitterness going out of the country; though there was no talk of temperance then, he saw plain enough, that if men would keep from whisky he'd forget to be angry. And every minute, even while I trembled for the life of his body, the peace and love that was in him made me easy as to the life of his soul. At last I persuaded him to leave the country; a new hope came to me, strong and bright, and I thought we might get away to America, and that, maybe, then he'd have a chance of living all the days that were allotted at his birth. I didn't tell him that, but having got his consent, I worked night and day to get off: it was all settled; the day fixed; and none of the neighbours, barring one or two of the Lawlers, knew it, and I knew my brother would not hear it from them; and then my mother lived with him. The evening before the day was come, that time to-morrow we were to be on ship-board. 'I'll go,' says my husband, 'I'll go to the priest this evening, who christened, confirmed, and married me, and who knows all that was in me from the time I was born; his blessing will be a guard over us, and we'll go together to his knee.'"

"We went; and though the parting was sad, it was sweet: we walked homewards—both our hearts full. At last Mark said, that only for me he'd never have thought of leaving the old sod; but, maybe, it would be for the best. I opened my mind to him then entirely, and owned more than ever I had done before; how the dread of the factions had disturbed me day and night; though I did not tell him how my father's blood had been laid on me by my own brother. He laughed at me—his gay wild laugh—and said he hoped my trouble was gone like the winter's snow. Now, this is a simple thing, and yet it always struck me as mighty strange intirely; we were walking through a field, and, God help me, it was a weak woman's fancy, but when I was with him I never thought any harm could come to him, and all of a sudden—started, maybe, at his laugh—a lark sprung up at our feet; we both watched it, stopped to watch it, about three yards from the ditch, and while it was yet clear in sight, a whiz—a flash as of lightning—the sound of death—and my husband was a corpse at my feet."

The poor woman flung her apron over her face to conceal her agitation, while she sobbed bitterly. "The spirit of the factions," she continued, "was in that fatal shot. Oh that he, my blessing and my pride, should have been struck in the hour of hope; Oh, Mark! Mark! long ago you, that I loved so well, were turned into clay—many a long day ago; and still I think when I sit on your green grass grave, I can hear your voice telling me of your happiness; the heart of the youngest maid was not more free from spot than yours, my own darling! And to think that one of my own blood should have taken you from my side. Oh, then it was I who felt the curse of blood!"

"And was it—that it?" we would have asked, "was it your brother?"

"Whisht!" she whispered, "Whisht, avourneen, whisht! he's in his grave, too—though I didn't inform—I left him to God. When I came to myself, the place around—the very sky where the lark and his soul had mounted together—looked dismal, but not so dark as the dark-faced man who did it: he had no power to leave the spot; he was fixed there; something he said about his father and revenge. God help me! sure we war nursed at the same breast. No one knew it but me; and so I left him to God—I left him to God! And he withered, lady! he withered off the face of the earth—withered, my mother told me, away—he was eat to death by his conscience! Oh, who would think a faction could end in such a crime as that!"

"A people who live among the flowers of the earth know little of the happiness I have in taking my child, and sitting beside her on her father's grave; and as month after month goes by, I can't but feel I'm all the sooner to be with him!" When she said this, it was impossible not to feel for her daughter; the poor girl cast such a piteous look upon her mother, and at last, unable to control herself, flung her arms tightly round her neck, as though she would keep her there for ever."

Again and again did her mother return her caresses—murmuring, "My colleen-das will never be widowed by faction now; the spirit is all gone, praise be to the Lord; and so I tell him when I sit upon his grave."

### The St. Lawrence and the Mississippi.

Mr. Hodgson, in his rambles in Canada, says,—“Our sail down the Rapids was extremely pleasant; and although we were becalmed for many hours, we descended on the St. Lawrence in less than two days, a distance which the boatmen seldom re-ascend in less than nine or ten, even with the occasional assistance of locks at the side of the river. I am surprised to hear so little of this noble river. It is computed, I do not know with what accuracy, to discharge one-half more water than the Mississippi. Its depth between Ogdeburgh and La Chine (130 miles) seldom varies more than three feet in the course of a year; while the Mississippi was falling one foot each day when I ascended it. The St. Lawrence is much clearer than the Mississippi, and its current much more rapid; so rapid, indeed, that the Lake Erie steam-boat, which has been in operation for three years, has not been able to ascend from Black Rock to Lake Erie more than twice without twelve oxen. The banks of the St. Lawrence do not present the rich and beautiful cultivation which adorns the banks of the Mississippi in Louisiana; but if they do not exhibit extensive and highly-dressed plantations of sugar and cotton, or the magnificent forest trees peculiar to the south and west, the prospect is never blackened by a range of miserable slave-cabins, or gangs of negroes working like cattle in the field. I cannot describe to you the pleasure I derived from contrasting the various scenes through which I am passing with each other, they have so many peculiar features, and all so highly interesting. It is remarkable, that, rising from the same table-land, and so intimately connected by intersecting branches, which occasionally flow into each other during periods of inundation, the Mississippi and the St. Lawrence present the most striking contrast in their general features. Many of these are mentioned in the observations I will copy for you from Darby; but others, not much less interesting, might be added. The Mississippi is turbid, in many parts so muddy; the St. Lawrence usually limpid. One river is composed of almost an unbroken chain of lakes; the other, in all its vast expanse, has no lakes that strictly deserve the name. Annually the Mississippi overleaps its bed, and overwhelms the adjacent shores to a great extent; an accidental rise of three feet, in the course of fifty years, is considered an extraordinary swell of the waters of the St. Lawrence; this circumstance has occurred here present season for the first time within the lapse of forty years past. The Mississippi, flowing from north to south, passes through innumerable climes; whilst its rival, winding from its source, in a south-east direction, to near north latitude 41 deg., turns gradually north-east, and again flows into its original climate of ice and snow. The Mississippi, before its final discharge into the Gulf of Mexico, divides into a number of branches, having their separate egress; the St. Lawrence imperceptibly expands to a wide bay, which finally opens into the gulf of the same name. The banks of the Mississippi present a level, scarce rising above the superior surface of the stream; those of the St. Lawrence by a gentle acclivity, exhibit the opposing sides of an elegant basin. Much of the surface traversed by the Mississippi is a region of grass, where few herbs or trees rise to break the monotony of the face of the earth; the shores that bound the St. Lawrence, when in a state of nature, are covered with an almost continuous and impervious forest. And, lastly, though rather an accidental than a natural distinction, the Mississippi rolls its mighty volume, swelled by more than a thousand rivers, through one empire; and is, as I once before observed, the largest stream on this globe, whose entire course lies within one sovereignty. The St. Lawrence is, for more than 1,300 miles, a national limit, and, as such, marked with the sanguinary points which distinguish the bounds of rival power.”

### A Visit to Vesuvius.

BEFORE quitting Naples we heard reports that an approaching tumult in the mountain was anticipated: volleys of smoke ascended from time to time from the crater, rays curled in clouds on the summit; the wells at Naples were becoming dry, while those at Resina were overflowing; loud noises too were heard on the mountain, and it was rumoured that fire had been seen by night. Upon reaching the house of Salvator at Resina, the principal Vesuvius guide, he told us that the mountain was in a state of action, that a new crater had been opened the night before, and was sending forth flames and stones. We speedily mounted our donkeys—poor miserable little creatures, which had already been up the mountain twice during the preceding twenty-four hours—and started full of expectation. For some time our path lay between walls built of blocks of lava, strewn with volcanic stones. In about three-quarters of an hour we reached a wide current of lava—that of 1810; it was like a frozen Styx. The scene was one of wild desolation; not a trace of vegetation was seen; black, dark, and barren was the surface of the earth; in some places the lava, arrested in its course, resembled petrified waves, whilst in others it formed a hard, compact surface; our guide pointed out to us the streams of lava of 1819, 1822, and 1833. On a bill formed of volcanic products, raised like a ridge high above the currents of lava that have swept past it on either side, stands the hermitage. One solitary friar has pitched his tent in this wilderness, and has lived here nearly twenty years, never quitting the spot even during the most awful eruptions of the mountain. Here we halted for twenty minutes, to rest our poor little steeds. The lava, which we had before crossed in comparatively regular streams, was now piled about in huge blocks, amongst which we picked our way with difficulty. We soon arrived at the foot of the cone, and were obliged to leave our donkeys, and commit ourselves to the mercy of twelve *portantini*, or bearers. The soil is so loose, and the ascent so frightfully steep, that no animal except man can find a footing. I do not remember ever in my life to have been so entirely overcome with terror as at the scene which followed. The ladies of our party were placed in small arm-chairs, fastened upon long poles, which the men supported on their shoulders. Imagine what it was to be thus lifted up by twelve men, who sank knee-

deep in the ashes at every step, and whose footing was so uncertain and irregular, that I was one minute thrown to one side of the chair, and the next flung violently forward, and then as suddenly jerked back again. All the time the men screamed, as Neapolitans only can scream. The *portantini* who were carrying one of my friends fell down all at once, and this was the signal for my bearers to rush past them, yelling with delight; so wild and uncivilised a set of beings you never saw, and the noise they made was something quite unearthly. I completely lost my presence of mind, and in piteous tones besought the men to let me get down and walk; but instead of heeding my entreaties, they only raced on more desperately.

When I reached the summit, after having endured this terror for three quarters of an hour, I sat down, and buried my face in my hands, unable to speak. After a little while, when I raised my eyes and looked around, what words can picture to you the scene that presented itself! We were standing on the edge of the large basin, in the centre of which were the craters in action. When all our party were assembled, we followed our guide, and proceeded towards them, scrambling over rocks of hot lava, and stepping across deep chasms, from which rose a hot sulphurous exhalation. I can never forget the feelings of that moment; I had lately seen nature in her most grand and lovely forms, and remembered with delight the sublime beauty of Switzerland; but here I beheld her under a new aspect—awful, terrific, and overwhelming—working in the secret places of the earth, with a power of destructive and mysterious energy, and revealing itself to man in fearful and desolating might, I gazed, and thought of Hercules-Neum and Pompeii.

We stopped on a point of lava, and looked into the mighty caldron beneath us: loud subterranean noises were heard from time to time—the mountain seemed shaken to its centre; then columns of bright clear flame spouted forth from the crater, succeeded by volumes of dense black smoke; red-hot stones and masses of rock were hurled hundreds of feet into the air, some falling back into the crater, while others, dashed into a thousand pieces, were scattered around. After standing on this pinnacle for some time, the guide led the way to the very edge of the crater. I felt that I had seen enough, and begged to be left behind, being indeed too cowardly to venture on; the rest of the party, however, had sufficient courage and curiosity to explore further. I asked our guide if there was really any danger; he looked at me earnestly, and simply said, “Gentle lady, I have six little children at home!” Could any words have conveyed a stronger assurance than this touching appeal? It gave me courage, and I proceeded with the others.

And now we stood beside the crater; and as each valley of smoke and flame subsided, we peeped into the abyss. Then came a hollow fearful sound; the earth beneath us trembled, the smoke and flame again ascended, stones were shot up into the air high above our heads. Suddenly the wind changed, and our position was by no means an enviable one; the smoke and sulphurous vapour were blown towards us, and red-hot stones fell in showers around. Every one was now terrified; we fled like a herd of startled deer, and scrambling up the hill as fast as the loose and slippery soil would permit, only turned to look back when we had reached the top. We were now content with a more distant view, and lingered long near the crater, reluctant to leave a spot which we were so unlikely ever to visit again.

At length we prepared to descend the mountain; I had dismissed my chair, and determined to trust alone to my feet: supported by a friend and one of the guides, I advanced down the precipitous descent, slowly and cautiously at first, but gaining courage as we proceeded, I soon ran briskly on, and in four minutes reached the foot of the cone, which it had cost us so much time, toil, and suffering, to ascend.

Remounting our donkeys, we soon joined those of our party who had not ventured on the ascent, and, as we drove back to Naples, related to them our adventures. But how vain were all our endeavours to give utterance to the thoughts and feelings which this day's excursion has awakened! My paper warns me to conclude; in a few days we shall leave Naples, and I shall perhaps not be able to write again to you before we reach Rome: for the present farewell!—*Miss Taylor's Letters from Italy.*

### Woman.

Why is it, woman that to thee,  
Imperial Man, must bend the knee  
And feel a pride therein.  
Is it because thine eye is bright,  
Thy lips are sweet, thy smile is light,  
Unknown to grief or sin?

Whate'er it be, it is not so,  
For anguish and severest woe  
Have wrung thy gentle breast,  
And thou, alas! canst stoop to crime,  
And sink whence thou mayst never climb  
Back to a place of rest.

It is because that only thou  
Can wipe from manhood's anxious brow,  
The sweat of wrathful care.  
And this kind task is only thine  
When love and innocence combine  
To make thee doubly fair.

And fair art thou, and dear thou art,  
When pure affection warms thy heart,  
Though beauty were not thine;  
So that thy bosom heaves with truth,  
Thy years shall be perpetual youth,  
Thy form become divine.

Then gently smooth, and kindly calm,  
Continue thou thy healing balm  
To mitigate our strife,  
And be thy highest, holiest name,  
Thy proudest character and claim—  
A faithful, loving wife!

### Masonic Sublimities.

WHILE we admit to the fullest the claims of the ancient craft to a good old age, we must demur to its attempts to prove a career of long and extended usefulness. It may be that a vast amount of charity is dispensed in the lodges, but when that is so repeatedly boasted of, the inquisitive public would like to be informed more fully of its distribution. If it is to be secret, let it remain so altogether. It may be that in the lodge-meetings all the members are entirely on a level, but when that equality never comes out of doors, again the public begin to doubt; the more especially when it is observed that all the grand masters, and other dignitaries of the order, are invariably the most wealthy and influential that can be laid hold of. We suspect, notwithstanding all that is said to the contrary, that the man with a gold ring on his finger occupies a chief seat in the lodge as well as in the church or meeting-house. The rhapsodies delivered by the various officers on their inauguration, and of which we copy a few extracts from the “Freemasons' Quarterly Review,” are all very well over their punch, but when they are gravely submitted to the public as evidences of a high-toned morality, and of a purer philanthropy than is to be found in the world at large, we must enter our protest against the assumption, and claim for the uninitiated as good resolves and charitable intents as are vauntingly claimed for the sons of mystery and mirth. If the old and thread-bare story, told by Lytton Bulwer, is the only practical evidence that can be adduced in favour of Freemasonry, we place against it every generous action in history and in private life, and ask which way the balance leans.

If any one particular thing could tend to increase my attachment to a society which, so far as my experience goes, contains within itself the germs of almost every social good, and an antidote for almost every social evil; if anything could lead me more decidedly to approve a system, which when rightly adopted, establishes the claims of piety and virtue; which withdraws the mind and heart, at least for a while, from earthly and sensual pursuits; and which directs us to the contemplation of profitable, sublime, and heavenly objects, your favourable interpretation of my general Masonic conduct in the position in which I am here placed, would be sufficient to bind me more strongly to the craft. If it were possible that I could think otherwise than I do of the real nature and genuine effects of Masonry, and could require any additional motive for exertion in its behalf, your concurrence in the views I have taken of the subject, and often frankly stated, would alone stimulate my zeal in the cause I have long regarded as secondary only to that which it is my highest office to promote.—*Rev. Dr. Burrow.*

Masonry is the holy spring where faded beauty refound her homage, where darkened wisdom her light, and weakened power her strength. Masonry is the refuge of threatened fidelity, the mediator of offended innocence, and recompenser of unrequited love. The mingled rights of life she has to regulate, the prejudiced judgment of passion to punish, the actions of the heart to scrutinize. What the clumsy hand of ignorance has thrown together, she shall separate and revive with her genius; what the fire of passion has embraced too hotly, she shall cool with her mildness; and what has been judged too severely by the ignorant multitude, she shall cover with her shield. She throws down the barriers which the prejudice of mankind has erected between man and man; she tears away the golden garment that covers a soulless body; she arraigns heart against heart, spirit against spirit, strength against strength, and gives to the worthiest the prize; she teaches us to value the tree for its fruit, but not for the soil in which it grows, not for the hand which planted it; she protects fortune against the arrows of malicious chance; she seizes the rudder in the storms of life, and brings the leaky ship into the harbour.—*Dr. Boerne.*

As knowledge advances, so far from falling off, Freemasonry had made her progress too; in her science, she includes all other science, and endeavours to give due impulse to their principles. Those who were not of the Fraternity, must not imagine that they who were Masons supposed themselves better than other men; aware of their deficiency in morality and virtue, they put themselves to school, as it were, in their Lodges, and learn those things which improve their moral feelings, and which they bring into practice in their private lives. Those of the exterior world, who had not attended the ceremonial of the forenoon, might look with suspicion upon their proceedings, and perhaps might think some of them absurd and ridiculous. If that was his opinion he should not feel proud of the office which he held; he should not look with exulting feelings on the proceedings of that day, but should rather have shrunk from them; in his opinion, it was impossible for persons to practice the science of Masonry without becoming better men.—*C. T. D'Eymour, M.P.*

For centuries and centuries had Freemasonry existed, ere modern political controversies were ever heard of, and when the topics which now agitate society were not known, but all were united in brotherhood and affection. Even the angry breath of warfare was powerless before the ties of Freemasonry; for during the sanguinary war between England and France, he had been told of the captain of an English merchant vessel who had been captured by a French privateer, and on being recognised as a Freemason, he had been restored to his own country in safety. The celebrated oriental traveller, Mr. Buckingham, when in India, had fallen into the hands of a horde of robbers, and on entering the hut of one of them he was discovered to be a Freemason, his life was spared, and he was again restored to liberty. If then he was now in London, advocating the doctrines of temperance, he was indebted to Freemasonry for his present existence.—*Sir E. Lytton Bulwer.*

If all this were true the world would be much better than it is—men more friendly, and governments peaceably disposed.

### Railroads of the United States.

THE national spirit of the people of the United States is utilitarian. The mass of the population of the republic is devoted to those objects which promote material happiness and personal comfort. Their future fame will be based on the real, and not on the ideal or imaginative.

After the achievement of independence, the first object of the American people was to frame systems of laws suitable to the peculiar cycle of government they had adopted. Having thus raised the walls of their social edifice, they proceeded to develop the industrial resources they had encircled by law and system. The great obstacle to this development was the vastness and extent of their territory, stretching thousands of miles from ocean to ocean. With an unequalled extent of sea frontier they have but few large and accessible sea-ports; and though their fine country be intersected with magnificent rivers, the rapidity of their currents and the severity and length of the seasons throw difficulties in the way of their continuous navigation. Canal navigation was first resorted to to obviate natural impediments, but canal navigation, though it facilitates the transmission of heavy goods, does not quicken or materially increase intercommunication. Steam navigation overcame many obstacles, but still left as many unconquered. The American people felt the want of an agent which should limit distance, defy seasons, and overcome territorial inequalities. Scarcely had this feeling become general, although, perhaps, unexpressed, when a new power presented itself. The spirit of the republic grasped it at once, and has applied it to the wants of the widely scattered Union with practical sense and political foresight.

The united legislature of Great Britain has allowed the capital of its subjects to be applied in the formation of railroads without system or uniform object; the thirteen state legislatures of the United States, though distracted with local partialities and territorial jealousies, have laid down something like a practical scheme in the construction of their lines.

The lines of railroads in the United States completed, in progress, and projected, are destined to run along the Atlantic seaboard, and to connect all its principal cities, Portsmouth, Boston, New York, Philadelphia, Baltimore, Norfolk, Fredericksburgh, and Charleston. From this sea-board they run into the far west, and thus connect pasturage and agriculture with trade and commerce. At Charleston, Pensacola, and New Orleans other lines run into the interior of the west, even to the borders of the Missouri. In the interior of the western territory from Indianapolis and Cincinnati, from Milwaukee Chicago and Detroit, other lines extend to the borders of the lakes, interlocking with numerous canals, and from the banks of these lakes and streams direct lines run eastward to the principal cities; thus furnishing to the whole country commercial arteries through which its life-blood circulates. This has been the labour of twelve years only.

These lines traverse the most settled portions of each state, and terminate at the most important points from the borders of the Western lakes and rivers to the places of shipment on the seaboard. If we survey the map we shall see the termini, at both ends, resting at the principal commercial towns, both in the east and the west. The principal termini of each track upon the Atlantic lines may be found in Boston, New York, Philadelphia, Norfolk, Wilmington, Charleston, and Savannah. And here we may remark, that these lines must be taken in connexion with the routes laid out in British North America, running across the English and United States territories, and designed to connect the upper parts of the St. Lawrence with the ocean, and thus to overcome the obstacles which a Canadian winter opposes to commercial enterprise.

The commencement of the railroad lines of the Atlantic frontier already constructed is at Portsmouth, in New Hampshire. From this point a line (40 miles) has been nearly completed to Boston. Thence a northward track (26 miles) diverges to Lowell—the *American Manchester*—and from that place another line is laid out to Concord. The first section, however, of what is strictly termed the *Atlantic Railroad Line*, extends from Boston to Norwich, and to Stonington, both in Connecticut. The Boston and Worcester line (44 miles) joins the Norwich railroad (58 miles) at the latter town. At Norwich the line unites with steam navigation, and furnishes a rapid conveyance to New York. The Boston and Stonington line passes through the most flourishing towns of Massachusetts to Providence, the capital of Rhode Island. Through Long Island Sound it furnishes a safe mode of communication between Boston and New York all the year.

Passing from New York, we arrive at the line which leads directly to Philadelphia, and from that city another extends to Baltimore, and from Baltimore one to Washington. Crossing the Potomac, there is another track marked out in Virginia, from Alexandria to Fredericksburgh, from Fredericksburgh to Richmond, from Richmond through the low pine lands of North Carolina to Wilmington, with a diverging track to Norfolk, at the mouth of the James river; and also two lines marked out across the whole length of the state of Delaware. From Wilmington, North Carolina, a line is also projected, if it be not already laid out, along the shores of South Carolina to Charleston.

Thus we have a continuous line projected and in the greater part executed, along the Atlantic frontier, in-

cluding the most powerful and populous states, which, when completed, will afford the most splendid route of travel and conveyance to be found in the world, extending from the northern to the southern metropolis of the United States.

From the principal Atlantic cities, as points in the Atlantic line, railroad routes have been projected to the west for the purpose of connecting its vast agricultural treasures with the markets of the east, and also of affording channels of transportation for the western population to the eastern cities, and for the conveyance of eastern goods to the western markets.

Massachusetts seems to have started first in this most brilliant career of internal improvement by railroads; and to this it was impelled, fully as much by necessity as by the possession of capital. A few years ago, this state, then considered as of an insulated position, exported only granite and ice; and it was then a matter of doubt whether its commercial capital, Boston, was not, in fact, retrograding in population and prosperity; all is now altered, the keen forecast and energetic enterprise of its population have burst forth in the establishment of works, which, considering the time in which they have been accomplished, appear almost unexampled, and which must render their city hereafter the great European port. Besides the introduction of a line of steam-ships from England, there has recently been nearly carried out a line of railroads that will connect that city with the shores of Lake Erie, and another line has been projected from it across the Rocky Mountains to the shores of the Pacific, and so connect it by steam navigation with the Pacific states of South America, with Australia, New Zealand, India, and China. Whoever will cast a glance at a map will at once see that the Cunard line of steamers from Liverpool to Halifax and Boston, must become the great line of intercourse between Europe and North America, and this fact, when taken in connexion with the lines already executed from the last-named port to the far west, and with the great scheme projected, will show that our assertion that Boston will hereafter be the great port of the Union is not wild or visionary.

The lines to connect the trade of the west with Boston are worthy of some detail. A route has been commenced and is nearly finished between that city and Albany, which is connected with lines running directly to Buffalo upon the shores of Lake Erie. This railroad continues the line from Boston to Worcester, running to West Stockbridge, and there it intersects the Hudson and West Stockbridge line, passing by the towns of Charlton, South and West Brookfield, Palmer, and Wilbraham. The length of this section, east of Connecticut, is 54 miles, and of that on the west side of the Hudson is 62 miles; the whole length from Worcester to the state line, being 116 miles. The line which this last-named railroad meets, commencing at West Stockbridge, Massachusetts, possessing a branch to Pettsfield, and passing through Lebanon Springs, and through Rensselaer and Columbia counties, proceeds in a southeasterly direction to Greenbush, opposite Albany; its length being 41 miles. This railroad will soon be completed, and will come into keen competition for the western trade with the navigation of the Hudson—at present the most important channel of travel in the Union.

At Albany commences a series of railroads that is continued from that city to Buffalo, and which terminate the great chain of communication from Boston to the Lakes. The first link in the series is the Mohawk and Hudson line, extending for fifteen miles from Albany to Schenectady. From the latter place a track diverges off to Saratoga Springs, a distance of twenty-one miles. The Rensselaer and Saratoga railroad also reaches the same point, commencing at Troy. From Schenectady a railroad has been finished to Utica, a distance of twenty-seven miles, running through the most fertile portion of the Mohawk valley. The Syracuse and Utica railroad is an extension of this line for a distance of fifty-three miles, and is deemed the most productive work in the State of New York. It passes up the southern acclivity of the Mohawk, nearly parallel with the Erie canal, which it crosses when about to enter the town of Rome. Leaving Rome it re-crosses the canal, and terminates at Syracuse. This route is continued to Buffalo by the Syracuse and Auburn line, which runs a distance of twenty-six miles, through a beautiful, fertile, and thickly-peopled country, and then unites with the Auburn and Rochester line. This latter road is not as yet completely executed. The great western track from the latter point is continued by the Tonawanda railroad, extending from Rochester upon the Genessee river to Attica, a distance of forty-three miles. From this point the Attica and Buffalo railroad, thirty miles in length, terminates the grand chain of intercommunication from Boston to the Lakes. This great northern line of railroads to the west would, it was anticipated last winter, be completed throughout its whole extent in July of this year, and would open a channel of transportation for agricultural products and manufactured goods from the Atlantic to the lakes.

From this great line many minor routes connect it with the principal towns of the States through which it passes. And in the great northern line, before described, projected tracks diverge to the shore of Lake Ontario; and on this from Saratoga to the banks of Lake George.

We shall continue this detail of facts on a future occasion.

### Burns Illustrated and Explained.

#### CHAPTER V.—TAM O'SHANTER CONTINUED.

THE storm having fairly caught our hero in its embraces, he sets off at a good round pace. The poet tells us—

That night, a child might understand,  
The de'il had business on his hand.  
Weel mounted on his grey mare, Meg,  
A better never lifted leg,  
Tam skelpit on thro' dub and mire,  
Despising wind, and rain, and fire;  
Whiles holding fast his guid blue bonnet;  
Whiles crooning o'er some auld Scots sonnet;  
Whiles glow'ring round wi' prudent cares,  
Lest bogles catch him unawares;  
Kirk-Alloway was drawing nigh,  
Where ghaists and howlets nightly cry.  
By this time he was 'cross the ford,  
Where in the snaw the chapman smoor'd;  
And past the birks and meikle stane  
Where drunken Charlie brak's neck-bane;  
And thro' the whins, and by the cairn,  
Where hunters fand the murder'd bairn;  
And near the thorn, aboon the well,  
Where Mungo's mither hang'd hersel.  
Before him Doon pours all his floods;  
The doubling storm roars thro' the woods;  
The lightnings flash from pole to pole;  
Near and more near the thunders roll;  
When, glimmering thro' the groaning trees,  
Kirk-Alloway seem'd in a bleeze;  
Thro' ilka bore the beams were glancing;  
And loud resounded mirth and dancing.

In the midst of all these midnight horrors, the only object of his fear burst upon him. The poet has gradually thickened his distresses as he left the scene of his revels. The storm is such as could only have been raised by the foul enchanter for some unholy purpose. Satan and his legions were abroad, and Tam was certain did their labours lie in his locality, that Kirk-Alloway where ghosts and owls cried nightly, should be the place of rendezvous. What an accommodating combination is the cry of owls and ghosts, leaving the mind disordered listener to discriminate, as he best may, which is which, giving, as in duty bound, the larger proportion of the fearful voices to the unquiet spirit which has left its neglected grave. His grey mare, Meg, however, bears him bravely on, passing heedless scenes of human dread, where crimes have been committed and accidents occurred. He half sings, half whistles, some old Scots sonnet, to keep his courage up, in humble imitation of the school-boy who boldly whistled the whole way through the churchyard; he casts a fearful glance on the spot where the chapman, the travelling merchant, was smothered in the snow. He gets safely beyond the large stone, left as a memorial that there drunken Charlie broke the bone of his neck; and he is most careful not to stumble on the cairn heaped on the spot where a murdered child was found. A cairn is a heap of stones thrown together by passengers on a place where murder has been committed, to appease the spirit of the destroyed and to hide the blood of man, which is said to cry to heaven for vengeance. He passes at a respectful distance the place where a woman, better known by the name of her son, viz., Mungo's mother, committed suicide, as a spot to be feared and shunned, and boldly faces the flooded river Doon, which is rolling furiously onward to the sea with its accumulated waters. To a superstitious mind a vast train of terrors arise in passing these dreaded localities, where violent deaths have occurred in all their fearful shapes. First, we have a man perishing in the snow, a lamentable, yet an easy death. Those who have undergone a partial burial in the frozen element—and experience can assist us in the description—can testify as to the pleasurable sensation that follows a sudden protection from the biting blast and blinding drift which the traveller undergoes in passing through a severe snow-storm. By the quick immersion in the snow, not only is the piercing cold kept off, but a smouldering heat is generated which induces the idea of comfort;—it is this very heat, however, this deceitful sensation of ease, which produces death; the vital air is denied admittance with the cold, and the heat by the animal warmth of the body speedily consumes the small portion of atmospheric air carried down by the snow, and the dreaming victim sleeps away his existence, like the charcoal suicides of France, in a pleasing forgetfulness. Of the dire waking of the sleeper in another world, no traveller has returned to tell us. The scene of such an occurrence safely past, disordered Tam next encounters the spot where a drunkard died by being unable to take care of himself, not against the war of the elements, but by the furious tide of his fiery blood, then comes the cairn, where helpless childhood had fallen before heartless cruelty, only to be followed by the equally alarming place where a woman, familiarly described as Mungo's mother, had destroyed herself. This catalogue of fearful localities is wound up by the appearance of a stormy river, roaring in its might till the echoes of the forest answer to its call. Tam rides on by its troubled banks until he may reach the bridge—the "Auld brig of Doon" which Burns has immortalised.

There is an awful sublimity in the expression—

The doubling storms roar'd through the woods.

It awakes at once the quivering, bending, tearing of the struggling trees, the waving of their vexed branches, the scattering of the leaf; a blast sweeps along the ground, whirling up the heaped leaves with a wild rustle;

the wind rises, it catches the branches, and shakes them, and fro like broken waves, crashing them together, and tearing them in agony from their groaning stems. It is a fearful picture of midnight desolation, which the mind can dwell upon, and conjure up new terrors of unearthly sound to vex the troubled ear of night, and make its darkness doubly drear. The line which follows, however, is the weakest, and most imperfect that Burns ever wrote—

The lightnings flash from pole to pole.

In the first place, it is an impossibility, and it is well for creation that it is. Were the whole atmosphere to be impregnated with the electric fluid, and were it possible for lightning to flash across a whole hemisphere, every breathing being would die—every green thing would be burnt up. In the second place, all this could not add to the terrors of one particular spot, although every where would be terrific in the extreme; nor would Tam be aware that such was the case. It is not impossible that Tam knew nothing, and cared less, respecting the poles or of the rotundity of the earth, so he could not comprehend the idea. Far and swift as lightnings flash, a steady eye will at all times detect the spot whence they issue from the clouds, and where they again merge in the darkness of the air, and it may then be noted that it is but a small portion of the visible expanse that is embraced in the lightning's sweep; and how small is that expanse to the human eye compared with the space which lies between either pole. If so great a range of sky were embraced from one foot of this earth, how much more, then, of infinitude would we discover if the human eye had a larger and stronger focus. As new constellations are seen beyond the equator, and as the sea-suns which shine upon the north are there invisible, so much more hidden must be the clouds which kiss the high projections of our latitude, and which carry in their hearts the sulphuric power that breeds the elemental storm. Past as lightning flashes, it moves not with the rapidity of the earth's motion round the sun, and therefore, though it had that increased power, it would be arrested by the earth the moment that it left the clouds. But to return,—Kirk Alloway is reached, and Tam is at a moment shudders; through every crevice an unearthly light is gleaming, while the noise of mirth owns the loud blasts of wind, and renders inaudible the creaking of the trees. The dreaded truth breaks fearfully upon him; the witches are at their revels, and he a lost man. But the potatoes of the night not having yet evaporated, a courage not his own inspires curiosity to witness the cause and means of their roarious mirth.

Inspiring bold John Barleycorn!  
What dangers thou can'st make us scorn!  
Wi' tippenny we fear nae evil;  
Wi' usquabae we'll face the devil!—  
The swats sae ream'd in Tammie's noddle,  
Fair play, he car'd nae de'il's a boddie.  
But Maggie stood right sair astonish'd,  
'Till, by the heel and hand admonish'd,  
She ventur'd forward on the light;  
And wow! Tam saw an unco sight!  
Warlocks and witches in a dance;  
Nae cotillon brent new frae France,  
But hornpipes, jigs, strathspeys, and reels,  
Put life and mettle in their heels:  
A winnock-bunker in the east,  
There sat auld Nick, in shape o' beast;  
A towzie tyke, black, grim, and large,  
To gie them music was his charge;  
He screw'd the pipes and gart them skirl,  
Till roof and rafters a' did dirl.—  
Coffins stood round, like open presses;  
That shaw'd the dead in their last dresses;  
And by some devilish cantrip slight  
Each in its cauld hand held a light—  
By which heroic Tam was able  
To note upon the holy table,  
A murderer's banes in gibbet airns;  
Two span-lang, wee unchristen'd bairns;  
A thief, new-cutted frae a rape,  
Wi' his last gasp his gab did gape;  
Five tomahawks, wi' bluid red-rusted;  
Five scimitars, wi' murder crusted;  
A garter, which a babe had strangled;  
A knife, a father's throat had mangled,  
Whom his ain son o' life bereft,  
The grey hairs yet stuck to the heft:  
Wi' mair o' horrible and awfu',  
Which ev'n to name wad be unlawfu'.

Kirk Alloway, though an old ruined church, the long grass growing among and over the mouldering ruins, it would appear from this description that the communion-table, or some raised fabric in its place, still remained; and, by the potency of bold John Barleycorn, he surmounted all dangers to gaze upon the horrible remains of death and instruments of blood that lay upon the altars of the Great Fiend who presided over their incantations and revels—who became their companion in this world that he might be their tyrant in his next. In a window-seat sat the grim director of their fate, in the shape of an uncouth beast, playing with his own sweet voice on the national bagpipe, whose demoniac drone made roof and rafters "dirl," (vibrate) with the powerful noise. By his supposed charm over the dead, he had raised up the coffins like as they open cupboards, their cold tenants holding a light torch in hand, and gazing with their blank unmeaning eyes on the unearthly raptures of the hags, who tript on their light fantastic toe in their fiercest passion, rejoicing

at the entrance of a new and young member into their dread convulsive. By the lights Tam was enabled to distinguish the unholy sacrifices which were laid upon the desecrated altar.

A murderer's banes in gibbet airns.

But it was not witches and fiends alone that rejoiced in the presence of these sad relics of depraved humanity. It is only a few years since that many parts of England were decorated with these fearful sights, that men at length became able to look upon them without shuddering, and hear, without a twinge of horror, the dried bones rattle together, as the wind passed whistling through each hollow tube, and swung them against the sounding iron chains which bound them to the gibbet. Their removal, by command of the late king, when Duke of Clarence, was a triumph to humanity, however small—a triumph which will not be completed till the gibbet itself shall be destroyed, and blood no more disgrace the statute-book of Britain. It is a fearful thing for man to rush unbidden into the presence of his Creator; for how can the coward suicide, who dared not brave the scoffs and taunts of his fellow-mortals, stand before an offended Deity. It is more fearful still, in a moment of unbridled passion, to imbue our hands in blood, and drive a being like ourselves where we fear to follow; but it is much more fearful of all, if we would seriously reflect upon it, to take the power of life and death into our own hands, and, by a law of our own creating, attempt to legalise the death of any criminal. Laws, to be just, should never confer a punishment that they could not abrogate, nor inflict a penalty they could not restore, in the event of being in error. And what law is made by man, whose whole life is a scene of errors, that can be immaculate? and who is it that is incapable of committing wrong in the administration of justice, however kind his heart—however pure his purpose? It will be a triumph, indeed, when vindictiveness is taken from the law: it may then be hoped that that foul passion will be erased from the human heart, and the kindlier feelings of our nature have larger space in which to operate, and better objects round which to entwine themselves.

Of the other items in the foul catalogue we must defer remark to another chapter.

#### Midnight Larking.

THERE are some people so obtuse, so blind, that they cannot perceive the great and manifest benefits which society receives from our young nobles and gentlemen roaming about the streets, at night-time, to recreate themselves with speers, larks, shindies, phillaloes, and other species of riot, which are highly calculated to keep up that daring, courageous, and chivalrous spirit for which British youth have been so long and justly celebrated. Instead of denouncing, we ought to admire and encourage every plot that may lead to uproar, assault, and battery, or that may inconvenience unoffending, staid, simple people. If there be a man who has never frightened an unprotected woman into fits, thrashed a policeman, upset oyster-stalls, broken gas-lamps, twisted bell-wires into tortuous shapes, and wrenched off knockers, we warrant he is some chicken-hearted craven, better fitted to serve in a gibbet-pie than in the army or the navy. The commission of such glorious acts are commendable in all persons above the rank of tradespeople; for the latter to aspire to such acts would be despicable effrontery, deserving nine months at the treadmill. Such deeds are for nobility and gentry alone, and they make brisk work for the police, the magistracy, the glaziers, the bell-hangers, and the surgeons. Knecker-stealing, as it is vulgarly and scandalously called, is certainly the most laudable employment for a man of fashion. We cannot tolerate a knocker any where except in our museum, where we contemplate it with the same spirit which a warrior feels when he looks upon some trophy of a splendid victory that he has achieved. We can exhibit ten thousand choice specimens of knockers, most of them beautifully embellished with lions' heads, human fists, and other ingenious devices. They have been chiefly obtained from the doors of princes, statesmen, judges, authors, painters, tailors, and bailiffs. Great perseverance was of course essential to the accumulation of so extensive a collection. No one would credit the number of times we have tried, and tried in vain, to wrench the ancient and gigantic knocker off the gate of Temple-bar. That knocker, however, we must and will have, come what will, for it is the most covetable specimen in London, from its having acted a conspicuous part on all occasions when our monarchs have entered the City in all their state trappings. We would give a hundred broken heads for it any night. For years we longed to possess the large knocker that was attached to the British Museum; but we never could succeed in mesmerising the sentinels who protected it. Opiates we contrived to give them; but they would not sleep. We coveted that knocker from an inveterate spite we had been induced to entertain for it, from having knocked so many days in the year without the door being opened. However, we find that some one else has succeeded in eloping with it, and all honour be to him for so gallant an achievement, rendered doubly gallant when we think of the sentinels with their muskets and bayonets. The *Examiner* newspaper has so often indulged in a strain of vehement and unmerited censure upon the collectors of knockers, that some one of that respectable body has wrenched the

knocker off the door of the editor's private residence. The bravest and most indefatigable knocker-wrencher of the present day is Mr. Smith, alias Brown, alias Snooks, alias Scroggins. This celebrated personage has been known to bag forty knockers in one night; and then, in a spirit of valour and defiance, leave the whole of them suspended by a string to the Knocker of Marlborough Police-office. Stealing a key-hole is nothing in comparison with such a chivalrous deed as that.

Midnight larking was too delightful and rational to be neglected by our forefathers. Thomas Shadwell has enlivened his comedy of *The Woman Captain* (1680), with some very excellent sport of this kind, and every brave, sensible reader, will wish he had participated in it. The gallant adventurers in the play are Sir Christopher Swash, who glories in being "a very mad fellow," Heildebrand, and Blunderbuss.

"Sir Christopher.—We have had a rare night on't; we have roared, sung, and ranted; swung constables, broke windows, and committed other outrages to the confusion of the people. We have not been in bed these four-and-twenty hours. On my conscience we broke fourscore pounds' worth of windows. We kept Covent Garden awake all night, and beat fourscore men, women, and children. Was not that well? Come let's march on Blunderbuss and Heildebrand; we will break windows all the way we go, kick every male, from a link boy to a lord; kiss every woman, from a simpering lady to the wide-mouthed jade that cries sprats, swing bum-bailiffs excessively, and astonish the mob. Come along."

In the next quotation we have the worthies scowering or breaking windows by wholesale; and committing a variety of other delectable deeds:—

"Sir Christopher.—Hey boys, bravely done! scower on, break those windows, 'tis Normandy glass, scower on! [A citizen and his wife appear.] Kiss her, boys. Zounds, you rogue do you call the watch! Swinge 'em. There's for you. [They strike the woman, who, with her husband runs off for assistance. Two or three old women appear meanwhile.]

Blunderbuss.—Who are these? they are old and ugly herb women going to market.

Sir Christopher.—I spare no sex nor age. Beldams, you must be kissed for being women, and kicked for being ugly. The town cannot match us, tearing blades. [Enter some apprentices singing and breaking windows.]

Sir Christopher.—Who are these rascals without swords? Apprentices! must such rogues as you usurp the privilege of gentlemen? such scoundrels as you scower? Shall pitiful fellows think to do like us? Let's swinge 'em. [They run off, and some fiddlers enter.] Now let's break windows to this music! 'Tis good for nothing else. Pull off all the knockers, wipe out all the milk scores, and, with lamp-black and a brush, blot out all the signs."

These pretty amusements, however, are interrupted by the reappearance of the citizen, who attempts to prevail on a constable and a watchman to apprehend the offenders, but these functionaries threaten to carry the complainant off to the gate-house as a saucy rogue. The citizen and constables disappear, and then enters Sir Nicholas Peagoose, a quiet gentleman, who is immediately seized by the merry trio, and forced by them to sing a roaring song. Directly he begins to sing, the high constable and a watchman enter, and a battle ensues. Sir Nicholas is knocked down and captured, but the others escape with broken heads. In a subsequent scene the dauntless and invincible Sir Christopher says to a friend—"We have had a skirmish, faith. Would you had been with us! I never saw better scowering days in my life."

We hope that privileged gentlemen who engage in scowering, knocker-stealing, and similar exploits will meet with the honours and rewards that are their due.

PICTURE OF A SLAVE SHIP.—The following horrifying statement, relative to the capture of a Portuguese slaver, is extracted from the log of her Majesty's schooner *Faun*, cruising on the South America station, and written in latitude 22.30, longitude 40 W.—After firing some shots we came up and boarded her. The slaves were all below, with the hatches on; on turning them up, a scene presented itself enough to sicken the heart even of a Portuguese—the living, the dying, and the dead, huddled together in one mass. Some unfortunates in the most disgusting state of small-pox, even in the confluent state, covered from head to foot; some distressingly ill with ophthalmia, a few perfectly blind, others living skeletons, with difficulty crawled from below, unable to bear the weight of their own bodies; mothers with young infants hanging to their breasts, unable to give them a drop of nourishment. How they had brought them thus far appeared astonishing—all were perfectly naked—their limbs much excoriated from lying on the hard plank for so long a period. On going below the stench was insupportable. How beings could breathe such an atmosphere and live appeared incredible. Several were under the loose planks which were called the deck, dying—one dead. We proceeded to Rio Janeiro with the prize. On the passage we lost 13, in harbour 12, from small-pox and debility; a number also died on board the receiving-ship, the *Crescent*. After cleansing the hold and fumigating the brig, it was determined to send the brig with a part of her cargo for adjudication to the nearest colony. We sailed on the 19th of March with 180, well provided with medicines, and directions in what manner to use them. Tapioca and lime juice were also provided. This unfortunate brig left Bahia fort, on the coast of Benguela, with 510 negroes, and 13 days after her capture she had but 375!"

### The Dirge of M'Ivor.

ON the publication of Waverley, more than a quarter of a century ago, a lady transmitted the following lines to Sir Walter Scott, in testimony of his ability, and in the belief that he was the author of the work. Sir Walter, however, declined to accept them as a tribute, stating that he had no claim to the authorship! Now that a popular edition of his acknowledged works are in course of publication, the resuscitation of the splendid and really affecting stanzas on the ignoble death of a devoted hero may not be altogether out of place.

Son of the mighty and the free,  
Loved leader of the faithful brave,  
Was it for high-rank'd chief like thee  
To fill a nameless grave?  
Oh! hadst thou slumber'd with the slain,  
Had glory's deathbed been thy lot,  
E'en though on red Culloden's plain,  
We then had mourn'd thee not.

But darkly closed the morn' offame,  
That morn' whose sunbeams rose so fair;  
Revenge alone may breathe thy name,  
The watchword of despair!  
Yet, oh! if gallant spirits' power  
Has e'er ennobled death like thine,  
Then glory marked thy parting hour,  
Last of a mighty line!

O'er thy own bowers the sunshine falls,  
But cannot cheer their lonely gloom;  
The beams that gild thy native walls  
Are sleeping on thy tomb.  
Spring on thy mountains laughs the while,  
Thy green woods wave in verna air,  
But the loved scenes may vainly smile,  
Not e'en thy dust is there!

On thy blue hills no bugle's sound  
Is mingling with the torrent's roar;  
Unmark'd the red deer sport around—  
Thou lead'st the chase no more!  
Thy gates are closed, thy halls are still,  
Those halls where swell'd the choral strain;  
They hear the wild winds murmuring shrill,  
And all is hush'd again.

Thy bard his pealing harp has broke,  
His fire, his joy of song is past;  
One lay to mourn thy fate he woke,  
His saddest, and his last!  
No other theme to him was dear  
Than lofty deeds of thine,  
Hush'd by the strain thou canst not hear,  
Last of a mighty line!

### Russian Serfs.

WHILE the vast extent of Russia and her thinly scattered population continues to render food, shelter, and clothing cheap and abundant, the peasant may continue to laugh and dance in his fetters, careless or unconscious of his degraded position; but should the pressing evils of want or scarcity arise to disturb his thoughtless gaiety and empty merriment, he will become a morose and discontented slave; his eyes will be opened to a sense of his condition, and woe to that generation, both of lord and serf, in which the light shall break forth; for unless the country is far more generally civilized and enlightened than at present, a revolution must commence in bloodshed and end in anarchy: the elements of true liberty are not to be found as yet in Russia. A man was lately brought back by the police, who had run away from his wife seven years ago. When he was asked his reason for absconding, he said, that he was compelled by his family to marry when very young, that he thought it wicked to have a wife, and that his greatest desire was to become a monk. Since his return, he has thrown himself at the feet of the young ladies whenever he could meet with them, entreating them to intercede with their father to permit him to enter a convent. This, however, will not be allowed, for fear of the example being followed. This man has been to the monastery of Solovetskoï, which is situated on a small island in the White Sea, in a dreadful climate, and frequently cut off from all communication with the main land. Here this poor man wished to have remained, and to have entered the order, the rules of which are most severe; but as he had no passport or permission from his master to show, the monks were prohibited by law from admitting him. When he arrived here he was examined, and it was found that he had on an iron belt next to his skin around his shoulders, and with two iron plates hanging from it one before and the other behind; the whole apparatus weighing between seven or eight pounds; it was rivetted on, and had in some places eaten into the flesh. He had put it on by way of penance for having deserted his family, and he begged earnestly that it might not be taken off; this, however, was done, and when he was afterwards asked, if he should wish it to be given back to him, "No; that there would be no merit in wearing it now, since every body knew of it." As he was not permitted to become a monk, his next request was, that he might be appointed to attend the cattle and sheep in the field, in order that he might not be shocked by the language and profane songs of the other peasants. This request was complied with, but I cannot say whether he has become reconciled to his situation. He is a singular but at the same time evidently a very sincere enthusiast. The conversation about this poor man has naturally produced a variety of stories bearing a resemblance more or less to his case. The following is one of these anecdotes. Some years ago a peasant, named Peter, run away from Krasnoe, and was not heard of for three years, when one day a man was brought by the police as the runaway. Some doubt was expressed by various people as to the identity of the new comer, but he insisted that he was Peter; the fact was confirmed by his wife and father, as well as others who had known him formerly, and the point was at last admitted. The man lived at home with his wife for about a fortnight, but he behaved so ill, that it was determined to make a soldier of him—a most severe punishment to a Russian peasant. Before, however, the threat

could be carried into effect, the man again absconded, and was not seen for about a month, when he had the impudence to appear at Krasnoe at a village feast, to share in the amusements of the day. In the mean time his real character had been discovered, namely, that he was a deserter from the army, and had become acquainted with a brother of the runaway peasant in prison, where he had learned some particulars of his history; and also that he was in person some what like himself; on the strength of which information he had grounded his imposture. When, therefore, he appeared at the feast he was immediately apprehended, and the next morning sent off to prison. He, however, said he had escaped out of gaol a dozen times before, and should do so again. Whether he kept his word I do not know; but it is a singular fact, that the true Peter returned home the same night that the impostor went to prison: how far he was pleased to hear of the temporary usurpation of his conjugal and domestic rights is somewhat doubtful.

### Miscellaneous.

OLD ENGLAND.—The population of Britain at the period of the Roman invasion has been estimated at 760,000. All the unconquered Britons, who dwelt without the limits of the Roman empire, were called Caledonii by the Romans and provincial Britons during the first, second, and third centuries. In the beginning of the fourth century these Britons were divided into two considerable nations, known by the new names of Scots and Picts; about the origin and meaning of these names no satisfactory explanation has been given. Though the northern tribes were barbarous, those who occupied the southern parts of the island were partly civilized. Their dress was of their own manufacture. A square mantle covered a vest and trowsers, or a deeply-plaited tunic of brodered cloth; the waist was encircled with a belt; rings adorned the second finger of each hand, and a chain of iron or brass was suspended from the neck. Their huts resembled those of their Gothic neighbours. A foundation of stone supported a circular wall of timber and reeds, over which was thrown a conical roof pierced in the centre, for the twofold purpose of admitting the light and discharging the smoke. In husbandry they had discovered the use of manure as a manure, and they raised more corn than was necessary for their own consumption. They had learnt the art of making linen; of dyeing wool, yarn, and cloth, different colours, and of bleaching and washing. With the uses of tin, lead, and copper, they were acquainted. Of iron they knew little; nor does it appear Caesar found gold and silver among them. Vessels of earthenware have been found in barrows, which have been conjectured to be the workmanship of the ancient Britons. If Stonehenge were erected, as mentioned, by Ambrosius, it shows some knowledge of architecture, having outlasted all the more solid and noble structures of the Romans. The Druids were the only learned men—the philosophers, priests, and legislators—who communicated their knowledge to the people through the medium of verse. They kept the calendar, and reckoned time by the lapse of nights, not of days. Caesar found a rude kind of money in use, consisting of brass, or rings and plates of iron, of a determinate weight. The Romans not only changed the species, but much increased the quantity of the present coin. It is thought there were greater quantities of coin in the island in the flourishing times of the Roman government than at any period during a thousand years after their departure. Many of the ancient British coins have descended to us; most of them probably struck by Roman artists.—*Wade's British History.*

GEOLOGICAL OPINIONS OF THE ANCIENTS.—Many of the ancient writers, amid the most wild and extravagant fictions, have expressed some rational views of natural causes, and the changes taking place on the face of our globe. Aristotle expresses opinions as to the change of land to sea, and its reverse, which are confirmed by Strabo, whose views are still more extensive and more just. Ovid, in the celebrated passages of the 15th book of his Metamorphoses, has some highly judicious observations, mingled, of course, with the most absurd fables. Thus he gives a full, true, and particular account of the death of the phoenix by fire, and its resuscitation from its own ashes; he indulges in the speculation that the earth is an animal, and that its earthquakes and volcanos are caused by its mines of sulphur taking fire, and feeding on its fat and oily parts till these are consumed! But amid these absurdities he has some remarks which show that the phenomena of nature had been carefully and attentively studied by many accurate observers. He particularly notices the change of land to sea, and sea to land; mentions the occurrence of shells and other marine exuvie at a distance from the ocean, and notices the destruction of hills and mountains by atmospheric agency, and the removal of the detritus into the sea. It is by no means improbable that some of the ideas of Oriental writers as to the immense antiquity of our planet (a fact now fully established by the researches of modern philosophy to be true), may not have been the mere figments of the fancy—may not have originated in sheer imagination—but may, on the contrary, have resulted from the observation of natural phenomena, and may, in particular, have been in accordance with that enlarged and accurate knowledge of astronomy which the ancient Eastern nations, the Egyptians and Chaldeans, possessed in an eminent degree.

STATISTICS OF DUELLING.—Such was the frequent occurrence of duels in the reign of George III., that one hundred and seventy-two were fought (in which three hundred and forty-four persons were concerned); sixty-nine individuals were killed—in three of these fatal cases neither of the combatants survived; ninety-six were wounded, forty-eight of them desperately, and forty-eight slightly; while one hundred and seventy-nines escaped unhurt. From this statement it will be seen, that rather more than one-fifth of the combatants lost their lives, and that nearly one-half received the bullets of their antagonists. It also appears, that only eighteen trials took place; that six of the arraigned individuals were acquitted; seven found guilty of manslaughter, and three of murder—two of whom were executed, and eight imprisoned during different periods.

FORMATION OF ROCKS.—Though several of the agencies which operated during the earliest eras in the physical history of our globe either now exert a comparatively diminished influence, or have ceased altogether yet the general laws of nature unquestionably continue the same, and rocks are in course of formation by various causes, and under diversified circumstances, at the present day. Not only do the coral formations continue in the southern ocean to produce reefs, islands, and, by the connexion and increase of these, to form continents; but in our own islands, accumulations of sand, mud, and shells, are producing fresh layers in the bed of the sea and constituting fresh deposits, which add to the crust of our globe, and will form a subject of interest to the future inquirer into its history; but every river and every stream is in like manner converting its bed into rock, and the operation is often assisted by causes of an extraordinary and singular kind. A very remarkable instance of the nature was brought to light a few years since. During the unhappy and distracted reign of Edward II. several of the English barons took up arms against the Monarch and his favourites, the Gavestons. One of their insurrections was headed by the Earl of Leicester, whose associate in the enterprise was the Earl of Lancaster, the latter nobleman taking charge of the military chest, and the paying the troops, &c. &c. While the insurgent army were crossing the river Dove in Derbyshire, in the night they were attacked and routed by the King's troops, and in the confusion the military chest, with its contents, was thrown into the stream, and sunk to the bottom. The Earl of Lancaster was shortly after beheaded (6 March, 1322), and all trace of the treasure was lost sight of. After the lapse of half a thousand years, on some excavations being made a few years since, for the purpose of deepening the bed of the river, masses of ferruginous breccia—that is, of pebbles, gravel, &c., cemented into rock by the rust of iron, were found, many of them containing coins of the period, silver pennies of Edward I. &c., evidently forming portions of the lost treasure. It would seem that the box containing the money had been bound or otherwise fitted with iron, and that the decomposition of the metal had produced a cement sufficient to convert these pebbles into rock. The circumstance is not altogether unique; and the efficiency of iron to produce such a result is perfectly well known; but the preservation of these coins by so remarkable a cause constitutes a highly remarkable and interesting fact.—*British Queen.*

BEGGARS IN ROME.—The Italian has sentiment in his nature, and the beggar expresses it in the form of his petition. His "Non m'abbandonate," and "Carita, signora, per l'amor di questa imagine!" kindle your imagination if not your heart. How I should like to show you the fellow who sits, like a monarch on his throne, on the steps of the Piazza di Spagna, and whose smile, disclosing teeth strong enough to grind all the grist in Rome, and his hearty salutation "Buon giorno, signor," are well worth the *baïoc* he asks much more as a right than a favour. He is an old receiver of customs, and is well known to have full treasury. "How dare you beg of me," asked Mr. "when you are already so rich?" "Ah, signor, I beg my donkey to feed." "You are well able to feed your donkey." "But I have my nine children, signor." There is no answer to be made to a fellow who confesses to such luxury! Then there is the poor moiety of a man whose trunk (torso!) trussed on to a circular bit of wood slightly concave, comes daily down our street of St. Vitale at a jocund pace, and the two old crones at Santa Maria Maggiore who hobble towards you with a sort of pas-de-deux and seem as well content that one should get your *baïoc* as the other, "equal to either fortune." They are probably partners in the trade. And there is the handsome youth by the French Academy, who has been dying with "sagne di bocca" (spitting of blood) for the last fifteen years without any apparent diminution of the vital current. And the little troop of mountain-peasants whose hunting ground is somewhere about the American consul's, with their bewitching smiles, sweet voices, and most winning ways; a genuine lover of happy young faces ought to peep them for a sight of theirs. Even beggary is picturesque here.—*Miss Sedgwick.*

SABBATH ON THE CONTINENT.—If you recollect that we are now in Protestant Germany, you will be astonished at the laxity of the Sabbath. The German reformer, never, I believe, undertook to reform the Continental Sabbath. They probably understood too well the inflexible nature of national customs, and how much more difficult it is to remodel them than to recast faith. We are accustomed to talk of the horrors of a Continental Sabbath, and are naturally shocked with an aspect of things so different from our own. But, when I remember the dozing congregation I have seen, the domestics stretched half the heavy day in bed, the young people sitting by the half-closed blind, stealing long looks out of the window, while the Bible was lying idle on their laps; and the merry shouts of the children at the going down of the sun, as if an enemy had disappeared, it does not seem to me that we can say to the poor, ignorant, toil-worn peasant of Europe, "I am holier than thou!"—*Ibid.*

MORALS v. DUELLING.—One cause of duelling, and the one which is generally supposed to admit of the most plausible defence, is the vindication of female honour, the punishment of the seducer, vengeance on the adulterer. Yet on this point it cannot occur to the reader, that of the vast number of cases of offence, few are decided by an appeal to arms; while of the duels actually fought between such offenders and the relations of the frail female, scarcely one in ten is conducted under the impulse of feeling, but is pushed no farther than the gossips and the newspaper world seem to require. When the guilty party has received his adversary's fire, and returned it in the air, the farce is finished, to the satisfaction of all, just as in the most trim-py disputes of a box-lobby challenge.

SATURDAY, AUGUST 14, 1841.

PRICE THREE HALFPENCE.

### Random Notes by Railway.

LET the flight of the swallow be as devious as it may, it comes to its own quiet nest at even, and that with a noble share of its spoils of travel. With an equally ambitious feeling, we looked around us rather inquiringly during our three hours' sojourn in Bridgewater. The principal objects which met our view were the bright black dresses of the women, and the broad laughing faces of the men. Our Hebe was not inelegant, though she had no pretensions to fashion. In reply to our inquisitive sporting friend, she gravely told us that there were "a many young men and women in the town, and lots of them unmarried." She admitted that Bridgewater was rather a dull place, except on market-day, when a good deal of business was done, and a great many strange faces to be seen. She thought the railway would increase the traffic of the place, but was very doubtful as to a husband coming to her from that quarter. We have already spoken of her teeth—her teeth were white, and her hands clean, a virtue not always evidenced by tavern attendants in a country town. Indeed, all the women we saw possessed the bright black eye—

"Which, wild as the gazelle's,  
Wins as it wanders, dazzles where it dwells;"

and they made good use of them, for some of the ladies actually stared us out of countenance, a circumstance which we had not deemed possible to occur. The quiet bath air which hung around and upon the borough itself was only disturbed by the harsh pealing of a street organ, the handle of which was most industriously twisted by an itinerant Italian. Our sporting friend suspected that he had decamped from London with the property of a heartless employer, an idea which our usual charity forbade us to entertain, although appearances were rather in its favour. It is astonishing, said he, that so many hundreds of these musicians should perambulate London and its suburbs, all returning honestly at night to Leather-lane, to give up their instrument, with the proceeds of the day, for the sake of a supper and a bed. They must be honest in the main, and it is to be regretted that they are so much at the mercy of a gang of sharpers.

At Bristol, to which we returned the same evening, we next morning entered into a minute investigation of the railway station. The splendid Gothic building erected at that terminus had fewer charms for us than the extensive and well-ordered works; it was visible that a detecting eye was over the whole; neither noise, confusion, nor idleness prevailed. The long train of carriages at rest afforded us an ample opportunity of examining the principle of their construction, the breadth of the rails they traverse, by which it is almost impossible for a carriage to decapitate, and the intricate movements of sliding tables of rails which convey carriages from one line to another. We discovered, (and do not forget this, reader, if ever you get into danger) that the safest place on the line is the very centre of the rails, as in the event of a train coming suddenly up, you have only to lie down and the whole will pass safely over you. The only danger to which a person is ingloriously prostrated is liable is that of a red-hot roller dropping on him from the furnace. To prevent even this, however, we observed that several of the engines are fitted with an ash-pan, an improvement which will, no doubt, extend to all. Another simple but excellent addition has been made to the engines. This consists of a piece of iron being placed before each front wheel, something in the shape of a plough (which indeed it is called), to drive off any obstruction. This secures a clear way for the wheels, and acts as a preventative to the train being driven off the rails.

Returning to the Saracen's Head to breakfast, Boots informed us that Clifton was not a mile distant. Harriet, however, gave it as her opinion that it was at least a mile and a half. This uncertainty of distance being the usual lot of travellers, we resolved to judge for ourselves, a determination which our host assured us was always the

best. We accordingly proceeded to the aristocratic outskirts of Bristol, and while we found that the estimates of distance, like truth generally, lay between contending opinions, we were rejoiced to discover that the natural splendour of the place had not been exaggerated. On a hill looking down upon the ship-yard, in which is concentrated the principal activity of Bristol, terrace rose above terrace, surmounted by handsome trees, interspersed by light green parks. It was a view which our sporting friend described as all that was elegant in nature looking down upon all that was splendid in art. "And do you know," said he, "that the Bristolians will be as proud of that narrow stream, and of those few naked masts, as we are of the forests?" We regretted that the ungracious morning smiled not more pleasantly upon us, and returned to head quarters satisfied that the curtained sun had robbed us of a portion of our visual powers. "Never mind," said our happy-hearted friend, "we shall see more when the railway is carried to Taunton and Exeter. In the meantime let us get on a stage upon our homeward way."

We strolled familiarly through the streets of Bath, admiring its handsome little cathedral, made grey by time and venerable by the impaling hand of ruin. We languished over the departed glories of the celebrated Pump-room. On that spot, where crowds of fashionable invalids had drank mineral water and vomited scandal incessantly—where the follies of the age were made transparent to vulgar eyes, and intrigue lost its romance by its frequency—not a vestige of its splendour remained. Perhaps, indeed, we visited it too early in the day; it was only noon, and the sick might not have ventured forth. The lame and the halt, however, were abroad in their moving panoply. Ladies fat, not fair, but forty, might be seen in hand-carriages, dragged along the pavement like great grown babies, by a man-servant or hireling. The ladies seemed as comfortable and as proud as if they were in a carriage and pair, while the human horse looked as patient as a donkey, and as stiff-necked as a mule. He pulled straightforward, a being of sinews but no soul. In some of the more genteel thoroughfares, a congregation of these vehicles might be seen, somewhat after the fashion of a London cab-stand. We were not saluted, certainly, for a fare; but had there been a lady in the company, we have no doubt our sympathies would have been appealed to. The houses, notwithstanding they are built of clean white stone, have rather a sombre appearance. The town in this respect is more like Seville, which "shineth from afar," than Kilkenny, which, we are told, "shines where it stands." The steepness of some of the streets is rendered somewhat more disagreeable than it ought to be by the culpable negligence of a very important civic functionary, called, in vulgar phrase, the scavenger. The crescents and terraces of the fashionable quarter are well attended to, although it might be as well to pick out the withered grass from between the paving-stones;—that appearance, above all others, gives a look of desertion and decay, and tells more tales of by-gone days and departed splendour than is proper to be made known. Let the magistracy look to it: if Bath is still in the hey-day of its youth, those grey hairs should be plucked from its forehead.

Proceeding again towards the railway, we crossed the river, and clambered up a steep and narrow street, until we arrived at what, if we mistake not, is called the Beechen-cliff. This hill commands an excellent view of the city, and of the half-circle of hills which lie beyond it. In the distance, while the sun is shining, the houses appear as if painted on the steep breast of a hill, the green slopes of which set off to much advantage the colour of the stone. Beneath our feet lay the works of nature and man in strange but not unloving intermixture. The river glided quietly along, like a pious lady going to church; while the railway, with its brown earthen face and iron ribs, betrayed the outline of a future giant, which would yet rise in strength and vigour to astonish the world with his doings. The arrival of the mid-day train brought us down rather hurriedly; our sporting friend, though better

acquainted with the moors, descended rapidly and fearlessly; as became our dignity, we kept our erect position, and walked down leisurely. Having reached the bottom, our friend took us by the button, and earnestly told us that there was more danger in coming down slowly than in haste. "Keep a firm footing," said he; "curl in your toes as you leap; swing your arms; fix your eye on a spot, plant your foot on it, and down you come, speedily and safely." We thanked him for his information, and took our seat in the carriage. He dragged us out, however, to witness the process of filling the boiler with water from the immense tanks which are erected at the various stations, and to explain to us the action of the "buffers" which prevent or soften the concussion of the carriages when a sudden stop is made. In bidding adieu to Bath, we kept our eye fixed on the romantic scene, with a look akin to that of Mary of Scotland, when she sighed farewell to her beloved France, nor was the prospect lost to us until we dropped into the recesses of Boxhill.

We had intended to have visited Reading, but having neglected to inform the very civil and attentive conductor of our intention, the train set off ere we could emancipate ourselves from the thralldom of his lock and key. We contented ourselves, therefore, with admiring the conduct of the officers of the line, who at every divergence of the rails, were stationed with their arm extended, and their hand bent in the exact manner of the rail, so that the engineer could pilot his way with ease and safety through the "breakers." The signal posts and flags, likewise, were an interesting object; they are, we believe, the invention of Mr. Brunel; they work well, and are easily understood. At each post a man is stationed, who telegraphs to another far on the line the arrival of the train, by which means everything is in readiness, all is secure, and hurry and bustle altogether unknown.

Approaching Slough, we obtained a majestic view of Windsor Castle, and the far skirts of the forest, renowned alike in the annals of royalty and the chase. Although the clouds began to frown rather sulkily upon us, we left the train and proceeded to Eton. The College has no great pretensions as a building, but the classic reminiscences connected with it claim the "passing tribute of a sigh." Great men have been educated within its walls, and great boys certainly now occupy their places. Many of the collegians appeared, if we could judge by physiognomy, to be incapable of retaining much learning. Our sporting friend decided on their incompetence of acquiring any, except perhaps, as he naively remarked, to be able to dip into the mysteries of a pudding, or analyse the chemical properties of a lollipop. There were, however, many strong, good-looking lads among them, whose illuminated countenances, like a crimsoned western sky at even, gave promise of a brilliant after-life. All of them, however, smart or stupid, bright or blank visaged, were gifted with indomitable impudence. They appeared to know all the inhabitants of the town, and recognised a stranger on the instant. Some of them would stand still on a sudden, gaze on you with admirable coolness, examine you from head to foot, and, by a contortion of the lip or a swing of the arm, indicate their opinion respecting the visitant.

Here our sporting friend suddenly recollected that he would have a splendid appetite in less than an hour, an article of which we already rejoiced in the possession. We accordingly entered an inn, which either had not, or we did not learn the name. Dinner being ordered, we proceeded to the Castle. Ascending the steep flight of stairs which is supposed to take foot passengers up the hill more easily than the carriage-way (a circumstance very doubtful), we were greeted with a heavy shower of rain which cooled our loyalty and curiosity considerably. "We cannot go round the buildings to-day," said our friend, "it is too wet for that; but let us have a view of the country from the slopes." We accordingly proceeded to the terrace which surmounts the bold ravine, and looked forward to a dreary sky, through a dripping atmosphere. "I see three hares; there, there, and there!"

We dared not dispute, for our friend held us by the button, and the clouds rained conviction rapidly upon us. We changed the subject, and alluded to the payment of fees by the people to see the residence of their sovereign. "Do you know," added he, "that among the many mean things which are done in high places, the practice of taking fees holds a distinguished place. They are said to be the perquisite of a titled lady, who allows a per centage of them to the waiting men and women who perform the duty." On this we made a hasty retreat from the palace, and returned to where a young landlady and a smoking dinner awaited us. A strict regard for truth compels us to admit that Etonian taste had provided us with—We shall tell it in the couplet of our friend, who, to the honour of his heart, had an excuse for, as well as an opinion on, every thing—

"Veal and bacon!  
As good a thing as can be taken."

This produced more argument than our appetites could well agree to, nor was harmony restored between us until our friend had practically proved that a man may take a couple of glasses of brandy and water without doing himself much harm. The craving of the inward man being at length satisfied, the predominant amusement of his mind again welled out. Standing in a niched window, with a bit of bread in one hand, a piece of cheese in the other, with a morsel of each in his mouth, he measured with his grey yet clear twinkling eye the distance between him and the Castle flag-staff. It was not above a mile and a quarter, or so, and he offered in five shots to hit it with a rifle ball! Did we dispute his ability? No; taught by experience, we yielded to his foibles, and found him the most entertaining dog alive. "We must come to Windsor some other day," said he; "I know the guide to the Round Tower; at least he will know a half-crown which I shall give him, and we shall see all the extraordinaries of the place. But it is time we were back to Slough."

On our return, our loquacious sportsman informed us that his lady delighted in a trophy from the country, and as he had no birds to present to her, he would even make bold to leap over a hedge, pluck some stalks of wheat, and make them into a bouquet for his kind-hearted rib. This he did in good style. He would make a capital poacher as well as a tasteful flower-girl. We knew not whether to admire his leap, his cautious tread, or his neat arrangement of a few ears of wheat. He made a beautiful little sheaf; placed the richest stalks at the top, and cut the straw to a nicety. "Do you know," said he, "that these little matters please a woman more than the most laboured or slavish attentions. Only let her know that you think of her in her absence, in the midst of your amusements, or recreations, and she will doat upon you, die for you;—ay, and what is more, make the prospect of her death the most grievous to your imagination."

Happy man, happy woman, thought we. We forgave him all his egotism, told him who we were, and promised to portrait him. His vanity was tickled. "Egad," cried he in ecstasy, "I shall buy a copy, and read it to my wife."

Once more we were safely seated in our carriage. The shades of evening fell rapidly upon us, and the illuminated brick-fields shed their red lustre by the way. We reached the station, and found cabs and omnibuses to all parts of London. A lady greeted our friend; need we ask who she was? We saw the tiny wheat sheaf in her hand ere they drove off. "I shall see you again," cried he. "Which way do you wish to go, Sir?" asked an attendant. "To the Strand."—Reader, believe as now, although you deem all the rest of this paper a fable. An omnibus conductor said to us, "I am sorry we are crowded, Sir; but there is room outside." It was a cad, a veritable cad; but such civility from one of his species we had never seen or heard. Can a revolution have taken place during our absence? thought we. Ascending the top we held quiet converse with the driver. The glare of London met us at every turn. We became convinced that man is a selfish animal in this very ride. Meek and placable as we are, we felt surprised and disappointed that the metropolis had gone on well enough without us, and that we were at perfect liberty to take another trip at our earliest convenience.

### Burns Illustrated and Explained.

#### CHAPTER VI.—TAM O'SHANTER CONCLUDED.

ANOTHER item in the catalogue of oblations laid on the altar of wickedness and sin, as seen by our hero, was

Two span-lang wee unchristen'd bairns.

It was long, and to some extent still is, an impious superstition among the religious-vulgar, that a child who died unblest by the rite of baptism, became the irredeemable property of hell—as if by aught that man could do, though assumed as the fulfilment of a divine command, could save a soul from death; or its non-performance condemn an unerring creature before its appearance at the dread tribunal of the Most High. It would have been well for the peace of the world had man ever more narrowly looked into his individual conduct, than

have busied himself in idle speculations as to the future existence of others. It is in derision of this superstitious belief that the bodies of two unbaptised babes are laid upon the altar as a fitting accompaniment to the bones and gibbet irons of a murderer on one side, and that which is told in the following lines, another dead body, viz. :—

A thief new cutted frae a rape,  
Wi' his last gasp his gab did gape.

Thus Tam, whose courage had almost oozed from his finger's ends while passing the scenes of former evildeeds, is enabled, by a desperate effort, to look upon the sad and disagreeable remains of death in its vilest aspect—in its coldest and most repulsive form. What a train of horrible ideas arise from the perusal of the lines—

A garter which a babe had strangled,  
A knife a father's throat had mangled;  
Whom his ain son o' life bereft,  
The grey hairs yet stuck to the heft.

The garter is a woman's instrument of destruction, and the babe must have been her own, perhaps a living witness of her shame; and thus to hide a frailty, she committed a foul iniquity—a crime so hideous that the great originator of evil and his myrmidons esteem it of a quality frightful enough to grace their unearthly festival. And how befittingly is it accompanied by the knife which a son had applied to a father's throat, with the grey hairs adhering to the handle. Round these dreadful sights the hosts of the Fallen Spirit dance in their wildest ecstasies, and career in the joyous madness of successful crime. However faithful this picture is of the debasing superstitions which kept a people in the darkness of intellectual night, it is more instructive in the sorrowful truth, that these dark beliefs, though they tormented, never improved the mind, nor taught the faculties of man to look beyond them for relief. In this consists the great difference between religious truth and the false sophisms of man. The one instructs and elevates, and produces an earnest and enduring thirst for inquiry, till the truth is gained, and the mind sits down contented with its efforts. But vile superstitions, so far from inducing a search into their mysteries, shut out for ever the desire for knowledge, and keep their darkened votaries as ignorant as the brutes that perish. Even in the Greek mythology, the most systematic of all delusions, the believers only rose to eminence and fame as they doubted the truth of the fables handed down to them by their fathers. For centuries, the most noble Greeks struggled against the prevailing belief in a congregated host of guiding and ruling spirits, and were only prevented from open rebellion and denunciation by the impression which, from the first hour of the creation, stamped itself upon the soul of man, that a Great Unknown presided over the destinies of the human race. They required only an introductory glimmering as to who, or what, or where the true Deity was, to sweep away with indignation and contempt the Titanic fables which had been palmed upon their credulous ancestors as the oracles of the unknown godhead. The last generation of our own country, however, had no such excuse—they prided themselves in the possession of the truth, and blessed God that they were not like the heathen in a land of utter darkness; and yet as foul and degrading superstitions prevailed among them as ever did with the enlightened Greeks of old, to whom the message of truth had never been revealed, and among whom the sages and prophets of the Highest had never walked, nor their sublime predictions been unfolded in the land. Well, indeed, then, did Burns sum up his catalogue of enormities by declaring that there were—

Three lawyers' tongues turned inside out,  
Wi' lies seamed like a beggar's clout;  
And priests' hearts rotten, black as muck,  
Lay stinking, vile, in every nook.

For he considered it was only by the mal-administration of those into whose hands was committed the education of the people, that such a lamentable amount of ignorance prevailed, and such a low standard of morals existed. Can there be a greater criminal than he who assumes to instruct, and yet betrays his trust—who, by example and precept, encourages the downward movement of his race, and all the while receives with greedy hand the unearned wages of his office? And how many thousands of such have disgraced and polluted this fair green earth, to the detriment of all that was excellent, and to the lasting injury of those who confided in their counsels, because they knew no other? What a fearful time the day of reckoning must be to them when the lost—the irretrievably lost, shall rise up and cry for vengeance on their devoted heads? From such a deeply serious subject let us turn away, and look, with Tam, on the less horrible portion of this midnight scene :—

As Tammie glow'd, amazed, and curious,  
The mirth and fun grew fast and furious:  
The piper loud and louder blew;  
The dancers quick and quicker flew;  
They reel'd, they set, they cross'd, they cleekit,  
'Till ilka carlin swat and reekit,  
And coost her duddies to the wark,  
And linket at it in her sark!  
Now Tam, O Tam! had thae been queans,  
A plump and strapping, in their teens;  
Their sarks, instead o' creeshie flannen,  
Been snaw-white seventeen hundred linen!

Thir brecks o' mine, my only pair,  
That ance were plush, o' guid blue hair,  
I wad hae gi'en them off my hurdies,  
For ae blink o' the bonnie burdies,  
But wither'd beldams, auld and droll,  
Rigwoodie hags, wad spean a foal,  
Loupin an' flingin on a cummock, [crutch or staff]  
I wonder didna turn thy stomach.

The strength and power of the poet's description in these lines is so perfect, bringing the withered beldames so forcibly on the eye, and their untiring exertions to keep time to the music of their piper, so felicitous, that scarcely a word is necessary to elucidate the humour of the scene. Ludicrous in the extreme it must have been to witness the old and shrivelled carcases of smoke-dried hags sweating and smoking in the circling dance, while they one by one threw off their foul apparel, and renewed their operations in the unencumbering cover of their rent chemise. It is ridiculous at all times for age to mimic the glow and fervour of youth, and sometimes the attempt certainly approaches to disgust. Thus the poet expresses his surprise that Tam should look delighted on such a scene, declaring that had they been plump and tall damsels, fresh as youth under twenty could make them, even he would have given his only pair of breeches for a sight of the grand carnival—an appropriate offer certainly when we consider that the witches were in the natural disguise of nakedness! It would appear, however, from a farther perusal of the poem—

That Tam kenn'd what was what fu' brawlie.  
There was ae winsome wench and walle,  
That night enlisted in the corps,  
(Lang after kenn'd on Carrick shore;  
For mony a beast to dead she shot,  
And perish'd mony a bonnie boat,  
And shook baith meikle corn and bear,  
And kept the country-side in fear),  
Her cutty sark, o' Paisley harn,  
That while a lassie she had worn,  
In longitude tho' sorely scanty,  
It was her best, and she was vauntie—  
Ah! little kenn'd thy reverend grannie,  
That sark she coft [bought] for her wee Nannie,  
Wi' twa pund Scots ('twas a' her riches),  
Wad ever graced a dance of witches!  
But here my muse her wing maun cur;  
Sic flights are far beyond her power;  
To sing how Nannie lap and flang,  
(A souple jade she was and strang),  
And how Tam stood, like ane bewitch'd,  
And thought his very een enrich'd;  
Even Satan glowr'd, and fidg'd fu' fain,  
And hoteh'd and blew wi' might and main:  
Till first ae caper, syne anither,  
Tam tint his reason a' thegither,  
And roars out, "Weel done, Cutty-sark!"  
And in an instant all was dark.

Thus then it would appear that Tam had forgotten his ain wife Kate, and fed his eyes with the delicate contortions of young and supple Nannie, who that night had enlisted herself in the corps, and in whose favour it was that the festival had taken place. Her shift, that undiscovered garment of female pride, had been an old present from her grandmother when she was a little girl and now, of imperfect length, it displayed her fresh and vigorous limbs to much advantage among the squalid sisters in the black and fearful art. Even Satan himself began to feel a tender longing for his young disciple, and Tam, having lost his reason while gazing on her unblushing gestures, forgets the perils of the place and betrays his presence by a loud and bold approval of the young witch's capering. The moment, however, that an uninitiated human voice broke in upon their mirth, the spell was dissolved; the coffins fell upon the earth, the lights dropped from the unheeding hands of the unconscious dead, and darkness covered with an impenetrable pall the scene of noise and revelry. Then it was that Tam awakened from his trance to a full sense of the dangers that surrounded him. The warning voice of his neglected Kate rung shrilly in his affrighted ears; the storm again welcomed him as he left the protection of the old church wall, and he prepared to fly for safety from the vengeance of those whose wild orgies he had interrupted :—

And scarcely had he Maggie rallied,  
When out the hellish legion sallied.  
As bees bizz out wi' angry fyke,  
When plundering herds assail their byke;  
As open pussie's mortal foes,  
When, pop! she starts before their nose;  
As eager runs the market-crowd,  
When "Catch the thief!" resounds aloud;  
So Maggie runs, the witches follow,  
Wi' mony an eldritch screech and hollo.

The witches, with their loud and discordant yells, have sallied out against the bold intruder, who pushes on his faithful Maggie to escape their deadly clutches; and, at this moment of danger, approaching to despair, the poet exclaims in interested terror—

Ah, Tam! Ah, Tam! thou'lt get thy fairin'!  
In hell they'll roast thee like a herrin'!  
In vain thy Kate awaits thy comin'!  
Kate soon will be a woe-fu' woman!

The long prophesied catastrophe is now about to be accomplished. He has been at length overcast by witches and warlocks; and his wife will have the satisfaction of

considering herself a true prophetess, though at the expense of the life of her reprobate husband. There is no greater pleasure to an irritated woman than to discover her threats prove true, though her better feelings may inwardly revolt at the consummation of her wishes. Thus it is that stubborn pride is their fatal ruin, as, for the gratification of a moment's spleen they rejoice at events for which a lifetime can scarcely afterwards atone. It is this passion, which, above all others, most demeans angelic women, and lowers her in the estimation of those who should love and cherish her with gladness through every storm of life—through all the dark and dreary hours of poverty—through the hopeless vista of raven-winged despair. The flush of anger on woman's cheek, and the unbridled words which then issue from the lips made only for delight, have caused more sorrow, shame, and even death, than all the crimes of man, and they are many—than all the horrors of war and the disasters of famine; and who can number these? And surely, if women could be told this important truth, they would never more revolt against their own high calling, but pursue their proper course in love and peace, distributing the softness of their affections among the sons of men, and purifying the whole earth from the grosser passions which bitterness of temper and depravity of heart have so much and far engendered.

Let us, therefore, suppose that it is for the purpose of consoling his spouse that repentant Tam urges on his faithful steed:—

Now, do thy speedy utmost, Meg,  
And win the key-stone of the brig;  
There at them thou thy tail may toss,  
A running stream they darena cross!  
But ere the key-stone she could make,  
The fiend a tail she had to shake!  
For Nannie, far before the rest,  
Hard upon noble Maggie prest,  
And flew at Tam wi' furious ettle;  
But little wist she Maggie's mettle—  
Ae spring brought off her master hale,  
But left behind her ain gray tail:  
The carline caught her by the rump,  
And left poor Maggie scarce a stump.

The popular opinion which created witches, also prevented them from crossing a running stream, thus confining them to their own particular district. Tam therefore concluded himself in safety when he reached the centre of the bridge; but the same creature whom he had admired so much pressed most closely upon him, and caught his horse by the tail as he sprang over the middle of the arch. This comical conclusion bears within itself the severe moral that our illegal pleasures become our acutest bane;—the effervescing delight speedily dies away, but the cancer remains, poisoning every healthful source of gratification, and following us with its fearful presence into the quietest and most secluded enjoyments of life, whispering in our ear for ever the stunning truth—

"Our acts our angels are; or good or ill,  
They are the shadows which walk by us still."

The poem takes us no further than the keystone of the bridge, for there danger followed no more, and Tam was left at peace, to ride home in what humour he pleased, to still the snarling welcome of his outraged rib. Let us hope, however, that she received him in her kindest manner, and, by her care and assiduity to his comfort, made him resolve to attend his home more closely in future, and also to strive to awaken the pleasures of that early time when they were all in all to each other, and only happy when together and alone.

Nor, let us forget the parting admonition of the poet:—

Now, wha this tale o' truth shall read,  
Ilk man and mother's son, take heed:  
Whene'er to drink you are inclined,  
Or cutty-sarks run in your mind,  
Think ye may buy the joys o'er dear—  
Remember Tam o' Shanter's mare.

Nor let us forget that woman prides herself perhaps too highly on the attentions of her husband, or her lover, and that she only rebels when she has discovered that her lord and master is unworthy of his place. The fickleness of women is the result of the carelessness of man; for even in their haughtiest moods they can be easily subdued by kindness. That is their legal claim upon the rougher sex, who, after all, are ever attached to her, even when they appear most alienated from the fervour of her affections. As it is most natural, so it brings to us a vision of heaven, when two fond hearts glide through the world in lovingness together; and every wedded pair might be that happy couple did they but bear each others' burdens, and strive, with half the zeal they sometimes exert to make each other miserable, to contribute to their mutual happiness. As Woman is the mother of the world, so she should be the instructress—the fountain of wisdom as of pleasure; and she who is most deeply read in the history of her duties will make the best companion, and the truest and fondest wife, though a spark of beauty never lighted up her cheek, nor a jewel sparkled in her hair. It is the native grace, the richness of her modesty, the worth and excellence of her temper, that makes her what she is—and what Nature cries aloud she ever will remain, the best and truest friend of Man!

### Scientific Memoranda.

**RISE OF SCANDINAVIA.**—It is now about a hundred years since Celsius, a Swedish astronomer, declared his opinion that a considerable difference was taking place in the level of the land and sea in this region of the earth. The data on which this supposition was founded were furnished by the changes observable along the entire line of coast. Thus it was shown that at Pitea, in the Gulf of Bothnia, half a mile of land had been gained in forty-five years, and that at Lulea, a mile of ground had been added in twenty-eight years. Ancient ports on the same coast had become inland cities, considerable portions of the gulf had become shallower; many old fishing grounds had been changed into dry land, and small islands had been joined to the continent. The circumstance excited very considerable interest, and volumes were written to account for these facts which were too palpable to be doubted or denied. The opinion generally entertained as to the cause of these phenomena was, that the waters of the Baltic had sunk, and it was conceived that they had done so for several centuries. This diminution of the waters was, however, denied by many, who attributed the change to the elevation of the land, and not the sinking of the sea. The phenomenon continuing to excite very general attention, Mr. Lyell, who entertained considerable doubts on the subject, was induced to visit the country, and the result of his enquiries has completely established the fact, that these changes are occasioned not by the decrease of the waters, but by the rising of the land, the whole of Scandinavia being in course of elevation as far as Abo in Finland, while the adjacent coast of Greenland is suffering a gradual depression. The facts which convinced Mr. Lyell of the reality of this elevation were varied and conclusive, the most important being that not only did the coast present marks of elevation, but there are inland cliffs containing recent shells similar to those now existing in the Baltic, and affording the most satisfactory proof, not only that the land is now in course of elevation, but that the same process has been going on for some centuries past.

**SINGULAR ANCESTRAL MEMORIALS.**—Beecher has shown the possibility of forming a gallery of family effigies moulded from phosphoric glass, the produce of the identical bones of the originals, in which the likenesses might be preserved as truly as they are now by the limner.—M. Chaptal adds, that a skeleton of nineteen pounds weight may be made to yield five pounds of this phosphoric gas.

**INSECTS IN CHALK.**—Professor Ehrenberg has made some remarkable discoveries in the course of his various experiments on chalk. He found that a cubic inch possessed upwards of a million of microscopical animalculæ; consequently a pound weight of chalk contains above 10,000,000 of these animalculæ. From his researches it appears probable that all the strata of chalk in Europe are the product of microscopical animalculæ, most of them invisible to the naked eye.

**FOSSIL TEETH OF AN ENORMOUS SPECIES OF SHARK.**—Within the last few years many extraordinary teeth of a fossil species of shark (*Carcharias megalodon*) have been found on the shore and in the red crag of Suffolk, extending from its south coast to Walton, in Essex, and to which deposit the English specimens seem to be peculiar. These teeth are also found in the beds of Maestricht, and the secondary and tertiary deposits of the United States; but are found most plentifully in the island of Malta.

**DISCOVERY OF A NEW BRITISH PLANT.**—Mr. George Luxford, the printer and botanist, found during August 1837, the *Cucubalus baccifer*, in flower and in abundance on the Isle of Dogs. Although this plant had occupied a place in every British Flora, or floral catalogue for the last century, it seems never before to have been discovered wild, or apparently so, in any part of Britain. In 1724 Dillenius inserted it in Ray's *Synopsis* (third edition, p. 267), as a British plant, under the name of *Cucubalus Plinii*. This he did from misunderstanding that it had been gathered in the hedges of Anglesea by a Mr. Foulkes. Sir James E. Smith, whose figure of the plant in the *English Botany* was drawn from a garden specimen, subsequently denied its right to a place in the British Flora, observing, by way of apology for so doing, that the Rev. Hugh Davies, who was intimately acquainted with the botany of Anglesea, could never discover this species. Mr. G. Don thought he had seen it growing in shady woods near Edinburgh; and because that botanist merely thought so, Dr. Macreight has inserted the plant in the *Manual of British Botany*, published about three years ago. Mr. Luxford observes that it would perhaps be too much to claim its restoration to the British Flora on the ground of its occurrence in this single locality; yet I cannot but believe that I have before met with it, in similar situations, in other parts of England, where, not having been in flower at the time, I have always passed it by, as I did on my first sight of it in the Isle of Dogs, thinking it to be *Cerastium aquaticum*, to which, when not in flower, it bears a very strong resemblance. Moreover, from the very luxuriant state of the *Cucubalus* in the above locality, I should conclude that it had been for a long time in undisturbed possession of the place where it was growing; and the ditch having been cleaned out, and the banks cleared of their rank herbage on each side of this place, it is not improbable that the plant had

been destroyed in the cleared parts. Under the circumstances, I think it may be considered as a naturalized plant, at least until further investigation shall have thrown more light upon the subject.—J. H. Fennell.

**FORMATION OF NEW BEDS OF COAL.**—Coal is of course clearly ascertained to be of vegetable origin, and to have been produced by the drifting into lakes, estuaries, or bays of the primeval earth, of masses of vegetable matter, which, having been covered over by fresh depositions of sand, mud, &c., have, by the combined action of moisture and heat, been bituminized into coal. It may, at first sight, strike us as singular that a substance so extensively distributed as coal, should be produced by agencies of apparently so casual a nature; and, in fact, in our colder climates, nature presents no agencies capable of elaborating results of so magnificent a character; but, in the vast rivers of the new world, the transport of vegetable matter by rivers, and its entombment at their mouths, prevails to so great an extent, that the Mississippi annually bears down in its course whole forests of trees and shrubs, which form rafts of several leagues in extent. These masses thus entombed in the stream, and covered with the accumulations of sand and mud continually deposited by its waters, would, in the course of time, present a series of strata, consisting of coal, sandstone, limestone, &c., which would present a perfect counterpart of our coal fields, with their varied alternations of these beds.

**SUBTERRANEAN FORESTS.**—Not only are trees frequently found embedded in peat, bogs, and mosses, but entire forests are not unfrequently discovered deeply buried in the soil. Several instances of the kind have been discovered on our coasts; the trees thus entombed on the sea shore being usually brought to light by the excavations made by some storm, which has laid bare the superincumbent deposits. The vegetable substance is usually impregnated with iron, and the wood is firm and heavy, so that in Yorkshire the timber thus obtained is frequently used for the construction of houses.

**SINGULAR MISTAKE.**—In the early days of geological inquiry, it was the habit to refer all the phenomena of the earth to the operation of the flood; and a singular error was in consequence committed by a German physician of eminence, named Scheuchzer. A skeleton having been found in a fossil slab, which he conceived to bear some resemblance to the human form, he pronounced it to be the actual skeleton of one of the human race who had perished at the deluge; he accordingly named it *homo diluvii testis*, a man who had witnessed the flood, and the object naturally excited the interest and curiosity of all who beheld it. After this idea had obtained credence for nearly a century, the illustrious Cuvier so much doubted the circumstance, that he solicited and obtained permission to dissect the specimen from its bed, and thus discovered, what he had previously suspected, that the bones were not those of a man, but of a creature of the eutrachian family, a large species of salamander. Various other specimens have since been discovered; and one example in particular from Eningen, is in the British Museum.

**THE TRILOBITE.**—This creature derives its name from its carapace, or shell, being divided into three lobes or divisions; it was of the order of crustacea; and having never been found above the coal formations, is presumed to have become extinct at that epoch. The eye is a most curious piece of mechanism, like that of the fly and other insects, and crustacea; it is conceived to have been fixed, and to have had no power of motion; but this defect, as in the eyes of the fly, was compensated by the numerous lenses placed in the eye, by means of which the creature possessed a most extensive range of vision. "Thus," observes Dr. Buckland, "we find in the trilobites of these early rocks, the same modifications of the organ of sight as in the living crustacea. The same kind of instrument was also employed in the intermediate periods of our geological history, when these secondary strata were deposited at the bottom of a sea inhabited by these creatures, in the regions of Europe, which now form the elevated plains of Central Germany. But these results are not confined to physiology; they prove, also, the ancient condition of the sea's atmosphere, and the relation of both these media to light. For, in these remote epochs, the marine animals were furnished with instruments of vision, in which the minute optical adaptations were the same as those which now impart the perception of light to the living crustacea. The mutual relations of light to the eye, and of the eye to light, were, therefore, the same at the time when crustacea first existed in the bottom of the primeval seas, as at the present moment."

\* We may here state, a reader in Mallow has inquired of us why we could say, in an article inserted in No. 2, entitled "Comparative Youth of Man," that "no solitary relic of the human structure, no fragment of a skeleton, no portion of a bone appertaining to the human osteology is discoverable in the solid rocks," when he recollected being shown in the British Museum a portion of a limestone rock in which a human skeleton was imbedded. The article referred to alludes to the granite, the earliest rock formation of our globe. Geologists are agreed to limestone being a modern formation. The skeleton referred to might possibly be a wreck preserved from the Flood, certainly not further back in the history of our species. The probability is, however, that the piece of rock in which the ribs of a human being are plainly visible is not a thousand years old.

### Distortions of the Female Form.

BEING NO. IV. OF THE EXPERIENCES OF BENJAMIN TRUESTEEL, ESQ.

WE have stood upon a village green, and felt our heart beat pleasantly, while the young of both sexes gambolled before us. Those who desire to witness the ease and grace of the female figure, the free swing of the limbs, and the cloudless pleasure of the countenance, should seek some unfashionable hamlet, and gaze upon the little girls that run, and fall, and chase each other on the verdant turf—struggling and fighting with—ay, and generally soundly beating, the urchins who presume upon their supposed weakness. In the larger towns this natural picture is not often met with; but there is to be found as pleasant a scene even in crowded cities, although their denizens never saw a field of grass. Go to the entrance of an ordinary school; one frequented by the daughters of the humble classes; let it be Saturday at twelve or one o'clock if possible, and a clear healthy-toned laugh will be heard; the delighted visitor will see glowing cheeks, and witness rapid steps and fearless leaps, as the little damsels rush noisily down stairs, and seek their homeward way in little bands together.

This is no doubt quite vulgar—so unfashionable; but it is natural. Woman so brought up springs from the girl in buoyant health and jocund life. Her pulse beats to a more lively strain than the motionless prisoner of a genteel boarding school.—Her chest expands, and free play is given to the ceaseless and unimpeded action of her lungs. Unbound by strong artificial confinement her form grows strong as well as handsome. Like a young tree, glorying in its youth and beauty, she blossoms into womanhood, a delight alike to herself and all around her. Her shoulders evidence the hand of nature; her back the straight and perfect workmanship of a great creator, while her bosom rejoices, not alone in the possession of high health and happy thoughts, but in the conviction that her untrammelled figure is that which Nature's self intended, and which thinking and admiring man must cherish, approve, and seek to make his own.

How different is the appearance of the sickly child condemned to boarding school rules! Her sallow face and consumptive eye betoken the rigid discipline of an unnatural and hateful system of compression. If a trembling delicateness in body were a true characteristic of the female form—if sickness were an inseparable feature in its formation—if a continual danger of falling in pieces were its determined result—then boarding school and fashionable doctrines are the emanation of superior minds, and deserve to be welcomed as an improvement on original creation. Let us admit that Nature is no judge, and that the waist she grants to woman is not sufficiently slender;

—let us suppose that this figure, long accustomed to tight stays and violent compression, at length presents a just idea of elegance and faultless symmetry, why does it occur that the lady cannot keep her gown upon her shoulder? Why is that important item of dress continually slipping off, notwithstanding all the care bestowed on it by the maker? The reason is this, gentle damsels, and tremble when you hear it; in the course of your labours to compress the waist, you have hurt the spine, and driven the shoulder blades from their proper position;—their action is suspended, their growth prevented. Such ladies as defy ill-health, and prefer a small waist to equal shoulders, who love shortness of breath, stagnation of the vital fluids, and distortion of the principal bones and joints of the human frame, will patronise steel busks, whalebone supporters, and good stout corsets, and become careless as to their spine presenting a distortion at the waist. But those who desire to keep the spine in its proper and erect position, who detest indented sides, curved backs, and shoulders not akin, as shown in the annexed engraving, these will permit the spinal joints free growth, and trust to nature, health, and exercise for the completion of a form more perfect, enticing, and enduring than can be produced by all the artifices of changeful art, or the practices of never-satisfied fashion.

The practice of confining a young girl in an iron cage, to make or keep her handsome, among its other hurtful ten-

dences, destroys the muscles of the back, prevents their free play, and makes them diseased for want of action. Rendered thus inactive, they lie dead, and convey no energy to the joints. These in time become weak, and when the lady retires to rest she says to herself, "How could I keep myself without stays? How absurd it is to talk against them; our bodies are so weak that without them we could not walk upright." Tender, delicate, creatures! Have they no friend to tell them that this binding and screwing is the very cause of their weakness, and that the longer they continue that unhealthy practice, they will become still weaker—their spine will get more curved, their shoulders fall further away from each other, and a hollow grow in their side, in which a perpetual gnaw will be felt. Were a lady so afflicted with the danger of falling to pieces to throw off her stays for a month, she would feel acute shooting pains in her shoulders, and a stretching sensation in her back. She would be dying, no doubt. Far from it. Nature would only be reasserting her place and dignity. The muscles of the back would be expanding, gathering strength with ease; each shoot they made towards the shoulder-blade would only be a joyful expansion towards health and activity. The entire sensation would be exactly what is felt by a growing girl, when her limbs expand into those of womanhood, more acute certainly—more sudden, and more lengthened—in consequence of their long and injurious confinement. But what lady could practise philosophy for a month? She could not remain at home so long—she could not endure the visits of her friends in their "elegant" shapes and sloping waists. She could not listen to the remarks—"La! how changed you are. I should not have known you, I declare; you are not like the same person. What is the matter with you?" O woman! child of self-inflicted misery, listen to those who are your friends indeed. Take our advice. Become healthy in mind and body; throw iron bars, whalebone, and all the paraphernalia of stays to the street. Your temper will be sweetened. Majesty will add its charm to grace, and strength make softness more enduring—more pleasant to yourself, and more delightful to him whom you have saddened and pestered long enough with complaints of your own creating.

We are sufficiently acquainted, however, with self-willed ladies of a certain age, not to expect that even our advice, excellent and disinterested as it is, will be adopted. We turn, therefore, to the more ductile minds of the young and blossoming—to those who are always anxious to learn, and only adopt a wrong course because no other is recommended to them. First, then, sweet little romps, keep possession of your skipping-ropes until you are advised that womanhood is come upon you—join in throwing the ball with your brothers, and amuse yourselves night and morning with battledore and shuttle-cock. Thus will your joints become healthy, flexible, and beautifully rounded. Keep stays off your body until you have done growing at least; if your mother compels you to wear them, beseech her, implore her, go down on your knees and beg of her not to destroy the handiwork of nature, but to leave you to the care of the immortal fashioner. It would ill become grey hairs to advise the light heart and agile step to disobey her parent; but old Benjamin is no mean authority;—a gentle rebellion against stays, accompanied by a ready and cheerful obedience to all other commands, is a course of conduct no mother can long withstand.

Among the accomplishments given to young ladies, the study of the harp appears now to be making the piano unfashionable. This is to be regretted, not alone on account of the music, but for the sake of the fair student

herself. Mothers, governesses, and others possessing control over young girls, generally coddle their unfortunate protegee, that she may look handsome while seated on the music stool. They never consider whether or not she will feel comfortable; never waste a thought as to the freedom of her arms or the flexibility of her back. It is vulgar to talk of these matters, says one. It is indelicate says another. No prudent man will take notice of such things, adds a third; while a fourth sums up the catalogue of our delinquencies by calling us an idle old fool! Well, we know the virus of a lady's tongue, as well as the sweetness of her lips; but neither the enticement of the one, nor the dread of the other, shall prevent us ringing the truth in their ears, and calling for liberty to the gentle prisoners who suffer under their unskillful tuition. It is better that mothers should be offended for a day, and their daughters blush for an hour, than that disease and disfigurement should continue to be the doom of those who are elegant by nature, and loveliest when, in the spring and summer of their days, growth has its own uncultured will.

Even at the writing table, the spine becomes cramped when denied free action by the stays. The confinement

school—the labour of her tasks, one thing or every except the just cause, are blamed for the loss of health, appetite, and bloom; when there is nothing the matter except the want of a power to take exercise. Still sickness is allowed to gather strength; still the confinement and distortion continue, until the latter is fixed, the former produces consumption. Then the poor girl becomes a grief to her mother, and a cause of anxiety and expense to her father. A thousand unkind thoughts take possession of his mind, while the mother, instead of consulting him, takes counsel of the neighbours. She advises sea-bathing, some only fresh air; but all agree her health is delicate. She must be taken great care of. The evening breeze must not blow on her, nor the fresh morning air kiss the long dark tresses of her uncurled hair. Pillows are heaped to keep up her head

so that the blood may not lodge in her temples; mattresses are placed beneath her, that the gentle pressure of her body may not feel its own weight. All this care and anxiety is very creditable, only it is completely misplaced. The injury caused to the spine of a young person by compression is greatly increased by such means; the curvature increases by the position in which the maltreated girl is placed. A deal board would be of greater service; a wire run, and as many leaps as she can make before breaking would strengthen her joints, stimulate her blood, and restore her appetite. It is all nonsense about young ladies not eating; growing girls consume a very respectable quantity of victuals, and although their mothers encourage them in the hypocrisy of eating a substantial meal in private, that they may dine more genteelly at table, in expectation of a husband may credit us when we say that a man who is stupid enough to believe that their cheeks and plump limbs are produced by starvation, is not worthy of their hand; he who really possesses their heart should never have cause to suspect them of hypocrisy or deceit, even to the eating of an apple, or the dissection of a giblet pie.

We candidly admit that matrons require some support, more especially while fulfilling the most delicate of their maternal duties. Ladies who charge their natural task of suckling their children are alone allowable to wear a special support; but its assistance ought not to be of a hard, compressive character. Stays have been some time in use, which there are neither steel nor bone, and which laces are not required. We present a view of this article. It will be seen that it is fitted for the lady, did not intend that its shape should yield to Hooks and eyes are only binding powers, attached to it, and flexible and elastic cotton are its peculiar supports;—not certainly after the fashion of French artists, who use a great quantity to make a peculiar project, but by a condensed cloth to which sufficient strength and elasticity is given by needlework, without protrusion of the dress, or compression of the person.

When worn they appear thus. The whole figure is tightly encased, yet on the most gentle breathing the elastic

power yields, and affords free play to the action of the heart and muscles.—The neck is sufficiently exposed, while the bosom is protected, alike from cold and violence. Instead of making the whole labour of lacing the back, by which the assistance of a waiting-maid is made requisite, the straps or

petals of the laces extend round to the front, and are clasped by the wearer herself. These lappets are also formed of elastic material, and extend to each pulsation of the vital organs. Hence, the whole system is protected, and the frame nursed up when necessary, without any injury. It will be seen by a back view, which our allantry com-els us to submit to public inspection, that not only is the spine uninjured by compression, but that the bindings traverse the back in strengthening divergence; nor could the anxious wearer, even were she unwilling, injure herself in any other way than by placing the hooks and eyes too great a distance from each other. Let us not be told that these stays could occupy too much space, and the gentle wearer present a greater breadth than she actually occupied. They are intended merely to protect from the too great expansiveness of the bust in loving mothers. In addition to this excellent motive, however, they will form an admirable support to those whose bones and sinews have been injured by the common stay, as a frame so weakened cannot be expected to possess its natural tension and power.

If the young men of the present day were really worth anything, if their brains were as highly cultivated as their air, they would be of great service in neglecting small-vaisted young ladies, who are proverbially ill-tempered. But our male youths are quite as vain as those of the sister sex, without the excuse. Creatures of the hair-dresser and the tailor, no wonder than strong-minded men are scarce among them; nor is it surprising that ladies, when picking and choosing, say "Bad is the best."

In concluding this subject, we may state that we are prepared to hear of our being voted a handsome silver ten-service by the ladies, and a superb rosewood writing-desk from fathers, husbands, and other brow-beaten individuals, whose peace has been broken by the indiscretion of their female relatives. Some men would get proud under such circumstances, but our natural modesty, our fearless regard for truth, and our determination to expose abuse, even when practised by those we love, will prevent us forgetting the sacred duty we have undertaken to perform. If our female readers do not become better wives, more obedient daughters, and sweeter companions than hitherto, then indeed our labours shall have been in vain. But despair is not a part of our creed. Damsels in search of husbands, look out! Careless wives and negligent mothers, beware! Old Benjamin, with a crutch in one hand, and a pen in the other, will prove to you that he is not to be trifled with.

\*—B. T. respectfully announces to the male sex in general, that he has a rod in pickle for them, which will be lustily brandished on a fitting opportunity.

#### Aviaries.

"WHAT lover of music," enquires the elegant author of the Philosophy of Nature, "is there who is not charmed with the various notes and modulations of our English singing birds? Not one of them breathes a single note that is not listened to with pleasure. In our youth we were delighted with their voices, forms, and plumage. One of the first desires of a child is for a bird. To catch a songster is a schoolboy's greatest achievement. To have one in a cage, to tend upon it, change its water, give it fresh seed, hang chickweed and groundsel over the top, and

thrust sugar between the wires, chirp, and encourage it to sing, are a little girl's chief delight."

In Heresbatch's "Four Books of Husbandry," translated by Barnaby Googe (1586) we read, at page 157, that "cages and houses for birds, wherein were kept all manner and sortes of fowle, were devised by M. Lelius Strabo, at Brundisium, from which time they were first put in use to pen up such creatures, as naturally were accustomed to flee at their libertie in the aire." Whether Strabo was the first deviser of bird cages and aviaries, we ourselves, are not prepared to decide; but the splendid and extensive aviaries which we read of as being appended to ancient Greek and Roman villas contained only such songsters as turkeys, peacocks, geese, ducks, partridges, pheasants, common fowls, and guinea fowls, which were kept to gratify the palate, not the ear. But bird cages are distinctly mentioned in ancient Greek authors. Both the Greeks and Romans had them made of pottery, the bars being formed of thread. In the work of Petronius Arbitrator, (vol. i. p. 139—466 of Burmann's edition, 1743) we find a gilt cage for a magpie hung over the door of one of the ancients, just as we frequently see it over the cottage door in our own times. To an ornithologist, a few captive birds are indispensable, for "in the economy of most birds," as Mr. Blyth observes, "there are a number of little, curious peculiarities which often throw considerable light on their natural history, but which can only be learnt by studying their habits in the cage. By keeping birds confined a thorough acquaintance with their various notes is also obtained, which, of course, greatly facilitates all observation of their habits in the fields. But it is not from newly caught birds, which are wild and timid, that such information and knowledge of their free and unrestrained positions are to be derived. A wild bird, however, soon becomes familiar and fearless, if placed with a number of tame companions; though it is advisable, when newly caught, to keep it a few days by itself." It must not be overlooked too, that, by keeping birds in confinement, we may sometimes enjoy the pleasure of hearing their songs during such months as the wild ones of the same species are silent. Captain Brown mentions, in his edition of Gilbert White's *Selborne*, p. 78, that "Mr. Sweet, who has devoted much time to taming the warblers of the genius Sylvia, has, by diligent observation and appropriate management, actually changed most of the species from annual to perennial songsters. In the month of March, these interesting choristers may be heard in his aviary, pouring forth the familiar strains of midsummer."

But to have all the full measure of delight which a song bird can impart, something more is necessary than merely listening to it singing in its captivity. Instead of the smoky city's barren plain of cob stones, and the piles of bricks and chimney-pots, we must have the luxuriant fields, with their flowers and trees,—green, waving, rustling trees, and the accompaniment of sparkling, bubbling, splashing waterfalls, the gentle trickling of brooks, and the prospect of a variety of pleasing natural objects. If we have not all these adjuncts to a perfect enjoyment of the bird's song, we may happily supply the deficiency if we can summon a vivid recollection of having seen those sights and heard those sounds. James Graham, author of a well known poem on the Birds of Scotland, is quite of our opinion, for he declares that

"Tis the grove, their dwelling place,  
That lends them half their charm! that still is link'd  
By strong association's half-seen chain,  
With their sweet song, wherever it is sung."

Many a reader well knows that he cannot hear a bird sing in the streets without fancying himself climbing the green hills again, and inhaling the scent of the wild thyme and the heather, or sauntering along the banks of some favourite stream. In the aviaries we are going to describe, the birds' songs are heard to the greatest advantage, owing to care having been taken to place them among such mimic sounds and scenery of rustic life, as serve to attune the senses of the hearer to the highest pitch for enjoying the sweet melody of the birds, which are so pleasantly and prettily lodged, that they seem to fancy themselves still at liberty.

#### MR. PURLAND'S AVIARY.

The aviary of Mr. Purland, the well-known antiquary and dentist, of 59, Mortimer-street, Cavendish-square, occupies a room eighteen feet by nineteen, lighted from above, and viewed from the verandah of his museum of antiquities. In this space from forty to fifty merry songsters fly about and sing. Landscapes are painted upon the walls, and the floor, instead of consisting of bare unsightly boards, is hid by a superstructure of imitation scenery, including rocks, hills, fields, forests, and paddocks. The country, for so we may call the *tout ensemble*, is intersected by a broad and winding river, into which the mountain torrents and cascades fall; while living carp and goldfish swim in its stiller waters, and diminutive swans and boats float upon its surface. A communication between the two sections of the country is rendered easy by means of wooden bridges that spread from precipice to precipice. These bridges seem to be as old as the hills themselves, and appear rather insecure, and all this adds to the reality of the scene. While we gaze on the scene we not only fancy ourselves many miles out of town, but among the haunts of our forefathers, whose residences are here modelled with great fidelity. Here is the house in which Richard the Third slept on the night preceding the battle of Bosworth, and yonder is Shakespeare's house at Stratford-upon-Avon; and if you wait long enough you may see him come out to take his morning stroll across the fields, perhaps arm in arm with Ben Jonson. In the prospect we see the Star Chamber, or High Court of Justice; the gateway of Rougemont Castle, as built by William the Norman; the ruins of Fotheringay Castle; the entrance to Carisbrooke Castle; the ruins of Kirkstall Abbey; Great Chalford Manor House; Prince Rupert's head-quarters at Launceston, in Cornwall; and various other memorable ancient buildings, all of which are tastefully and effectively distributed over the varied surface of hill and dale. While we are looking at these pleasant remains of the olden time, we hear the songs of the lark, robin,

siskin, linnet, redpole, bulfinch, greenfinch, woodlark, blackbird, and thrush, and some of them flit by us to alight on the distant ruins, or to sip the stream. The sails of three picturesque windmills, placed in different quarters, are revolving in the breeze; and a detachment of troops, followed by country people with their cows and sheep, are actually crossing over the bridge, and are soon succeeded by other figures. These locomotive automata convey a perfect impression of real life to the beholder. In short, Mr. Purland's aviary is in perfect accordance with our notions as to the most advantageous method of confining birds, with reference to their own comfort, and the gratification of their hearers. His aviary is full of sweet sounds, picturesque effects, rural incidents, and historical associations. It is not only amusing, but really as instructive as his antiquarian museum. They are not altogether private, for we are happy to state that any person applying by letter on one day, and enclosing a penny post stamp, will be certain of receiving an admission ticket for himself and party on the next day; and we need hardly say that the sight is well worth this little preliminary trouble.

#### MR. FOSTER'S AVIARY.

In Church-street, Stoke-Newington, stands a substantial, homely dwelling, in which Mrs. Barbauld wrote her celebrated Hymns. It is now in the occupation of Mr. William Penn Foster, a respected member of the Society of Friends, and one greatly distinguished for affording timely relief to the unfortunate. From his youth this gentleman has been fond of taming animals, but especially birds, and of this class he keeps up a large collection. His parlour-window opens into an aviary, twenty-five feet in length, eight feet in width, and twelve in height, and situated in a neatly-kept flower-garden. On our visit the window was opened for us to enter the aviary, which we did, and stood among some seventy singing birds, which were much too tame and sensible to be alarmed at our presence. To render them as comfortable and happy as possible, they have grassy banks, gravelly paths, live shrubs, dead stumps of trees, pieces of bark, bits of rock-work, a stream, a little pool, and a fountain, placed within their territory. They enjoy an unlimited supply of fresh air, as two sides of the aviary, as well as the top, are formed of netting, the meshes of which permit not merely the air, but the refreshing showers and insects to enter. So tame and reconciled are these feathered captives, that a goldfinch has been known to make its way out through one of the meshes, hop a bit round the outside, and presently show every anxiety to return and join his jolly companions. He knew very well that if he absconded he must have subsisted all the remainder of his life on hedge provender in exchange for the hard-boiled eggs, German paste, liquorice-water, and other luxuries of the aviary. All these birds have the free use of their wings, yet they never attempt to elope from the premises, even when the window and parlour-doors are left open. In this respect they set an example of prudence and steadiness worthy of being remembered by such young misses at school as may be at this very time contemplating a scaling-ladder and flight to Gretna.

The several species at present in the aviary are black-birds, thrushes, skylarks, woodlarks, titlarks, goldfinches, chaffinches, bulfinches, greenfinches, bramblingfinches, siskins, redstarts, redpools, linnets, robins, nightingales, canaries, and ox-eye tits. All of them will come readily to feed from the hand of either their master or mistress. A nightingale, which was procured from the nest, and brought up by the hand, was so exceedingly tame, that he would hop upon the finger of any person, and remain perched upon it, while carried round the room, or even into the garden, to catch the flies upon the walls or the windows. One nightingale began to sing here in the commencement of December, but did not utter his full note till about the middle of April; and we learned from Mr. Foster that a wild one was heard singing, by Mr. William Allen, at Linfield, Surrey, in the beginning of February, 1839. We may add, also, that Mr. Edward Newman says he has frequently seen the nightingale in the neighbourhood of Godalming, Surrey, in October, and once in November, and that he heard one singing there, clearly and distinctly, although not very loud, on December 12, 1823 or 1824. Cowper the poet, too, has written some verses to a nightingale which he heard singing on New Year's Day, 1792. Perhaps the most unusual circumstance which has occurred in this aviary is the skylark breeding in it. Dr. Bechstein, a celebrated German avian, says that skylarks will pair in confinement, but that he never could get them to sit; and one of his neighbours succeeded no better, though he had a hen skylark, which laid from twenty to twenty-five eggs annually. They were obstinate birds, laying eggs for no other purpose than to be eaten; but Mr. Foster has had for seven years a pair of skylarks much more obedient. They made a nest—laid their eggs—their own eggs—hatched them—and reared their young in 1838, and they repeated the same interesting acts in the following year. They fed their young on bread, hard-boiled egg, spiders, and small maggots—"very good wittles I wot," as the Cockney Ariosto sings. A cock greenfinch and a hen canary paired here, built a nest in a small fir tree, and brought up their offspring. At the present time, (July 1841,) a redpole has paired with a canary, and the same redpole has also paired with another canary; a song-thrush's nest may be seen at the very extremity of the netting, where it is most exposed to harm; a hen song-thrush has also adopted a nest of wild young ones, having lost her own; a bulfinch is sitting on a second batch of eggs, her first having miscarried; and a goldfinch has a nest containing three young ones. Some time since, a hawk flew into the garden, and pounced down upon a bramblingfinch which was incautiously resting upon the inner side of the netting. In an instant the pate of the quarry was laid bare of feathers, but the bird is still alive and active. We are happy to hear that Mr. Foster is always ready to oblige any decent person who may desire to see his aviary, and we can assure our readers that it is really a delightful sight, and we heartily wish every body who keeps birds to follow his example of giving them plenty of room in which to sing, fly, hop, skip, and jump.

## Progress of Suicide among the Ancients.

CONCLUDED.

PLINY tells us of a private lady, unknown to fame; who, judging the disorders under which her husband laboured to be incurable, and unwilling that he should live longer in torment, not only advised him to put an end to his wretched being, but promised herself to become the example, the leader, the companion of his death. This she accomplished by tying her husband's body to her own, and then plunging into the Larian lake, which was beneath their chamber window. Pliny, in detailing this event, thus moralises:—"Of how great consequence to an action is the person who puts it into execution; for the very same acts are either highly extolled or greatly depreciated, according to the renown or obscurity of those who perform them;" and he adds, "The person only and not the action was inferior to that of the distinguished Arria." This Roman matron, wishing to inspire her timid husband, who had been engaged in a conspiracy against the Emperor Claudius, with resolution not to fall by the hands of a public executioner, to whose stroke he was condemned, plunged a dagger first into her breast, and with a smile exclaimed: "My Pætus, it hurts not!" This example inspired her husband with courage to imitate it. Martial has, in his 14th epigram, given a happy turn to the advice of Arria—

"When the chaste Arria to her Pætus bore

The dagger, reeking with her bosom's gore,  
My wound, if faith be mine, inflicts no smart,  
'Tis that my Pætus gives must wring my heart."

Resolution seems to have distinguished the women belonging to this family. Thrasia Pætus, a man of excellent character and unshaken integrity, was condemned by the tyrant Nero. When his doom was fixed, his wife, the younger Arria, was very earnest to follow her mother's example and die with Thrasia; but he entreated her to live for the sake of their infant daughter. He then took Helvidius, his son-in-law, and the philosopher Demetrius into his chamber, where, having cut the veins of both his arms, he sprinkled some of the blood on the floor, as an offering to Jupiter Liberator. Turning to Helvidius, "Young man," said he, "behold this spectacle—and may the gods avert the omen from you! but you are born in days, in which it is necessary to strengthen your resolution by such examples of firmness."

Seneca, in his 77th Epistle, tells with approbation a story of one Marcellinus, who, almost worn out with disease, began to think of suicide; on which point he assembled his friends for consultation round his sick bed. Each gave him the advice most suitable to his respective interests and inclinations. But that which pleased him best, says Seneca, was given by a Stoic to the following purpose. "Be not tormented, my Marcellinus, as if you were deliberating on any great matter. Life is a thing of no dignity or importance. Your very slaves, your animals possess it, in common with yourself; but it is a great thing to die honourably, prudently, bravely. Think how long you have been engaged in the same dull course:—eating, sleeping, and indulging your appetites. This has been the circle of life. Not only a prudent, a brave, or a wretched man, in your situation, may wish to die, but even a fastidious one." This reasoning, which pleased Seneca, confirmed Marcellinus, who starved himself to death.

The elegant and accomplished Atticus exhibits the ease and notoriety with which a Roman could determine his own death. At the age of 77, Atticus laboured under a painful disorder; he called his friends into his chamber, and communicated to them his resolution to starve himself to death. "You are witnesses," said he, "how earnestly I have striven against my disorder. In this, I trust, I have given you satisfaction, though it has been to no purpose. I must now consult for myself. I would not wish to conceal from you, that from henceforward I shall cease to nourish my disorder by taking any substance; since whatever I now receive only serves to increase my pains by protecting my life. I should wish you to approve of my design, or not to attempt advising me against it." His friends warmly remonstrated with him against the sacrifice of his valuable life; but Atticus continued inexorable; and the fifth day's abstinence relieved him from bodily pain.

Starving was a very usual mode of suicide among the Romans, especially in cases of obdurate distemper. Strange and unaccountable as it may now appear, there was often an indulgence in the protraction of a voluntary death, of which a sudden one would have deprived its careless possessor. Of this there is a remarkable instance in the self-murder of Petronius. The levity which distinguished his voluntary death accorded with the gaiety and frivolity of his life. The capricious friendship of Nero had begun withdrawn from Petronius, and fully aware that he could not long escape the murderous edict, after a fall from the summit of imperial favour, he determined to die. This *arbitrarius elegantiarum*, during the remaining period of his life, resolved to indulge in a luxurious refinement of that death he was preparing to encounter. He opened and closed his veins at pleasure: he slept during the intervals, or sauntered about and enjoyed the pleasures of conversation with his friends. But his subjects were not of that appropriate and important nature which distinguished the dying lips of a Socrates or Seneca; and as Tacitus observes, "there was no talk of the soul's immortality,

or the doctrines of wise men, but of light poems and wanton couplets." The poet Lucien was another instance of this sort of indulgent serenity in the gradual approach of his death. After the veins of his arm had been voluntarily opened, and he had lost a quantity of blood, he felt his hands and his legs, as it were, already dead, while the vital parts were still warm and vigorous.

Cocceus Nerva, a man of skill and knowledge in the laws of his country, prosperous in his affairs, sound in his health, flourished in court favour, and yet meditated suicide. The Emperor Tiberius urged many powerful arguments to divert him from his purpose. He inquired into his reasons, he soothed and entreated him, and at length professed how prejudicial it would be to his, the Emperor's character and reputation, should his bosom friend thus put an end to his life without assigning a reason. But Nerva was resolute, and died by voluntary abstinence. His friends afterwards intimated a cause which probably swayed with Nerva, but which he wished to conceal from his imperial friend, that he was displeased with the state of public affairs, and anxious for the consequences; that he saw these were daily growing worse and worse, which determined him to die whilst his own integrity was yet untainted.

The circumstances accompanying the voluntary deaths of Lucius Vetus, his mother-in-law Sextia, and Pollutia his daughter, were truly affecting. Vetus, being of the number of those who, in the reign of Nero, were destined to fall victims to the villany of informers, prevented the stroke of the executioner, on the entreaties of the female branches of his family, who determined to bear him company in this bloody catastrophe. He first distributed all the wealth in his possession amongst his domestics, ordering them, at the same time, to remove out of the house everything they were able for their own use; leaving only three couches to support their three dead bodies. They then all three retired into the same chamber, and opened their veins with the same lancet, calmly awaiting a delivery from life. The eyes of the grandmother and father were fixed on the daughter; while those of the daughter wandered from one to the other. It was the earnest wish of each of them to die first, and to leave the others in the very act of expiring. But nature preserved her course, and they expired in the order of their births.

We have seen how prevalent the practice of suicide was in the Roman Empire, whilst it continued heathen; the principle was equally deep-rooted in the breasts of those Scythian or Gothic nations, who were daily pouring down on the Roman provinces. But the Romans and their conquerors agreed in this practice from the most opposite principles; the former to avoid evils in this life, the latter to gain additional rewards in another. The cast and fashion of the times, which, too frequently, either entirely warp the mind from just principles of action, or lead it to interpret these principles according to the habits and practices of the age, excited prejudices in favour of suicide among the early professors of Christianity. Some thought it a duty incumbent to take shelter in suicide as a refuge from the hazard of defection from the faith in Christ. A dread of the want of resolution and constancy to endure the torments of persecution without wavering—a fear of losing the sceptre of virginity, or the crown of martyrdom, induced others to seek a doubtful shelter in self-murder.

An intemperate zeal sometimes led the early Christians, in whose principles there is too often a more than Pagan ferocity discoverable, to accuse themselves before the magistrates, and to demand that condemnation to which the rescript of Trajan rendered them liable, and which they might otherwise have escaped; thus becoming in effect suicides. A remarkable instance of this kind is recorded by Tertullian in his letter to Scapula. When Arius Antoninus was pro-consul in Asia, in the reign of Adrian, great numbers of Christians, who were inflamed with a desire of martyrdom, surrounded his tribunal in a body, and demanded their own condemnation. The Roman governor was struck with the novelty of the scene, and naturally was unwilling to condemn so many self-devoted victims. He, therefore, ordered a few to be led away to death in hopes of deterring the rest; but, finding them still resolute in their wild purpose, he regarded them with a mixture of astonishment and contempt for their obstinacy and madness:—"Miserable wretches!" he exclaimed, "have you not ropes and precipices sufficient to dispatch yourselves, without giving me the trouble of condemning you?"

The most remarkable body of Christian suicides were the Donatists, who caused great trouble and confusion in the African church during the fourth and fifth centuries. The rise and growth of the Donatist schism, "which afflicted the province of Africa about 300 years, and was extinguished only with Christianity itself," is one of the most curious and bloody pages in the progress of the primitive Christians; here, however, we can only notice it so far as it illustrates our subject. That the Donatists had a strong propensity to self-murder, and destroyed themselves in great numbers out of a furious zeal for martyrdom in honour of their sect, is agreed by all ecclesiastical historians. "To kill themselves," says Augustin, "out of respect for martyrdom is their daily sport." "Among the heathens," says Baronius, "you may here and there find one Empedocles, who will burn himself; but among the Donatists there are swarms of such men." "The rage of the Donatists," writes Gibbon, who paints from Augustin, "was enflamed by a

phrensy of a very extraordinary kind; and which, really prevailed among them, cannot be paralleled in any country or in any age. Many of these fanatics were possessed with the horror life, and the desire of martyrdom; and, they deemed it of little moment by what means or by what hands they perished, if their conduct was sanctified by the intention of devoting themselves to the glory of the true faith and the hopes of eternal happiness. Sometimes they rudely disturbed the festivity, and profaned the temples of paganism, with the design of exciting the most zealous of the idolators to revenge the insulted honour of their gods. They sometimes forced their way into the courts of justice, and compelled the affrighted judge to give orders for their immediate execution. They frequently stopped travellers on public highways,\* and obliged them to inflict the stroke of martyrdom by a promise of a reward, if they consented,—and by the threat of instant death, if they refused to grant so very singular a favour. When they were disappointed of every other resource, they pronounced the day on which, in the presence of their friends and brethren, they should cast themselves headlong from some lofty rock; and many precipices were shown which had acquired fame by the number of these religious suicides."

But there was another crown to which the female Christians aspired, and which they laboured zealously to obtain even than that of martyrdom: it was the crown of virginity, on which so high a value was set in the early ages of Christianity. Eusebius, and other ecclesiastical writers, mention many Christian women who put themselves to violent deaths by drowning, leaping from precipices, or other ways, when the confusion of the times threatened them with violation; and so the fathers speak of these voluntary suicides with great tenderness, if not with a degree of approbation; a many of these virgin suicides were admitted into the calendar of saints. Gibbon, whose sympathy, Pore happily remarked, never slept except when women were violated and priests persecuted, in describing the siege and sack of Rome by the Goths (A.D. 410), says: "The brutal soldiers satisfied their sensual appetites without consulting the inclination or the duties of the female captives: and a nice question of casuistry was seriously agitated, whether those tender virgins, who had inflexibly refused their consent to the violation which they sustained, had lost, by their misfortune, the glorious crown of virginity?" This question is fully discussed by St. Augustin in his celebrated work, *De Civitate Dei*, in which he makes some curious distinctions between moral and physical virginity. In this production, Augustin resolves the case of these female suicides to worthy of compassion, but he allows no sort of necessity for their committing such violence on themselves.

On this subject, however, other fathers of the church are not so orthodox as St. Augustin; and amid many instances of this sort, the voluntary self-sacrifice of Pelagia at the shrine of her own chastity, seems to have arrested the chief attention of the fathers, who dwell on the circumstances of her death with much energy. St. John Chrysostom, or the Golden Mouth, wrote a homily in praise of this virgin-suicide. "She was prepared," he says, "at the age of 15 years endure tortures and every kind of pain; but she feared to lose the crown of virginity, to preserve which she destroyed herself. Hence it was perceivable that her host of tormentors and hangmen struck a greater dread into the soul of Pelagia than all their instruments of torture, and from the power of which host she was determined to snatch herself. She aimed both at the crown of martyrdom and the crown of virginity; there being so great a hazard of losing the latter, she just cause to prevent so great an injury to herself by previous voluntary death." The love of chastity procured for Pelagia a place amongst the records of the saints. St. Ambrose, who was an enthusiast for virginity and actually wrote a book, *De Virginitate*, bestows the highest encomiums on the action of Pelagia, and zealously commends, through her, the behaviour of the women, who killed themselves to avoid the hazard of violation. St. Jerome, also, who countenanced the exalted notions of the spiritual worth of virginity, except the case of preserving chastity from his general censures of suicide. "It is not our duty," says he, "to rush to death, but only to submit to it contentedly when brought on us by others. Hence, even in times of persecution it is not lawful to die by our own hands, except when chastity is in danger, but to submit ourselves to the executioner." Lactantius was also of the same opinion.

In the last year of the reign of the Emperor Philip (A.D. 249), a violent persecution was raised in Alexandria against the Christians. So great was the confusion that for some days Alexandria seemed like a city taken by storm. The heathen persecutors seized "the admirable Appollonia, whom old age and the state of virginity rendered equally venerable." Their repeated blows on her jaws beat out all her teeth. At last, she made a great fire without the city, and threatened to cast her into it, if she did not utter certain improp-

\* "Some Catholics, who met them in this mad phrensy to save their own lives, and not imbrue their hands in the blood of these fanatics, insisted first upon binding them before they could proceed to do them the desired good turn in sacrificing them; but, when they were tied, before they came to their senses, and were contented to live, as Theodoret relates."—*Butler's Lives*.

ords. She begged for a moment's delay, as if it had  
en to deliberate on the proposal; but, to convince her  
rescutors that her sacrifice was perfectly voluntary,  
e no sooner found herself at liberty, than, of her own  
cord, she leaped into the flames.

#### An Original Fable for our Young Readers.

ONE summer's day a grasshopper was perched on the  
stalk of a flower, and chirping most beautifully in his  
own conceit. Presently, a caterpillar crawled up the  
same stalk, and politely requested the grasshopper to  
allow her to pass by him that she might satisfy the crav-  
ings of her hunger with the tender leaves that grew upon  
it. Instead of kindly complying, the grasshopper kicked  
the poor caterpillar down, exclaiming, "Begone, thou  
crawling thing! how durst thou have the impu-  
dence to interrupt me in the midst of my music?"  
The caterpillar, who was admired and praised  
by all the poets and musicians, would make way for a  
grasshopper like thee; one who is hated even by  
the market-gardeners? Begone, I say!" The disappointed  
caterpillar made no reply, but quietly turned away,  
and, after a tiresome journey, met with food elsewhere;  
and having eaten some, it soon changed into a chrysa-  
lida. Some weeks afterwards, that disobedient grasshop-  
per was chirping very loudly on the same plant as be-  
fore, when a butterfly settled upon a lower part of the  
stalk, and there displayed her brilliant and beautiful  
wings. The grasshopper saw her, and stopped his music  
while he gazed in admiration upon her magnificent  
furniture. "Lovely creature!" he exclaimed, "I am  
delighted to excess with thy splendid attire. Thou art  
rely the queen of the insect tribe; therefore sit not  
low me, but above me. Sit not there, but let the  
ghost flower be thy throne." The butterfly silently  
took the hint, and having seated herself on the highest  
flower, the grasshopper begged that she would make him  
her minstrel till death. To this the butterfly consented,  
and then the grasshopper struck up a cheerful song,  
thinking it would amuse her. When he ceased singing,  
he expected the butterfly would utter some fine compli-  
ment on his musical talent; but she remained quite  
mute and unmoved. At length he ventured to address  
her with "My noble mistress, how dost thou like my  
music? I flatter myself that I sing better than any  
grasshopper in the universe." "Indeed," replied the  
butterfly, "then I will place thee in a situation where  
you canst better distinguish thyself. Follow me!"

The butterfly flew from flower to flower, and the  
grasshopper hopped after her. They presently came to  
a steep and high bank. The butterfly flew over it with  
ease, but the grasshopper was obliged to use all his  
strength to spring over it, and when he descended on  
the other side, he stuck fast in a muddy bog on the opposite  
bank. The butterfly alighted on a flower close by, and,  
addressing him, said, "See, I have kept my promise.  
I have placed thee in a situation where thou mayest sing  
to thy advantage. There, the robin, the nightingale, and  
every other bird may easily find thee if they desire thy  
acquaintance. Sing, I command thee to sing!" "Ex-  
cuse me, kind mistress," said the grasshopper, "pray  
excuse me, for I am stuck in the mud, and too exposed  
to danger to think of music. Cast thy dignity aside,  
therefore, and condescend to assist thy servant in this  
predicament." "What next!" exclaimed the butterfly  
in astonishment, "hast thou the impudence to ask thy  
superior and noble mistress to soil her gay dress in helping  
thee out of the mud. A pretty notion that I should  
deign to help thee out. Pray, dost thou forget that,  
when, some few short days ago, a poor needy caterpillar  
wanted to pass thee to get at some food which grew over  
thy head, thy haughty pride was offended, and thou  
didst kick the poor wretch down?" "So I did," said  
the grasshopper, "but it was far my inferior." "Your  
superior!" cried the butterfly. "What, sir, am I your  
superior? I would have thee to know that in my youth  
I was a caterpillar, and the very one thou didst so cruelly  
kick down. Am I thy inferior?" "Oh, dear, no!"  
answered the grasshopper, "thou art so far my superi-  
or that I am unworthy of the honour of being the min-  
strel to so great a personage." "Base flatterer!" ex-  
claimed the butterfly, "I will take thee at thy word, for  
thou shalt not have that honour any longer, as thou hast  
declared thyself unworthy of it. Like a prisoner in the  
stocks, thou shalt remain in the mud for having insulted  
me in the time of my youth and privation. Adieu,  
merry minstrel, adieu!" Away flew the butterfly, and  
in a second she was out of sight.

"I am undone! I am undone!" cried the grass-  
hopper, in despair. "No matter, no matter," said a  
frog, who had silently witnessed the grasshopper's disaster,  
and heard the previous discourse; "no matter whether  
thou art undone or overdone, thou art quite as accept-  
able to my appetite; so come along my inside-pas-  
senger." And so saying, the frog swallowed him at one  
mouthful.

From this fable our young readers, and our old ones  
too, may learn that it is not only uncharitable and  
wicked to despise or insult a person whose appearance  
is plain and humble, poor and wretched, but it is also  
most imprudent and unwise to do so; for he may possess  
abilities which may one day raise him so much above  
ourselves, that we may not only long to be in his com-  
pany, but may urgently require some service he may

then be best qualified to render us. How confused and  
ashamed we shall then look, if he say to us, "When I  
was poor and needy you shunned me, and treated me  
rudely; but now that I am prosperous, you court my  
society, and solicit favours of me." If you read the  
biographies of great men, you will find that many of  
those who have conferred the greatest benefits on man-  
kind were poor and humble before they entered on their  
bright career of fame and fortune. As the brightest  
butterfly may come from the lowliest caterpillar, be thou  
civil and obliging to all men, whether they be princes  
or paupers.

#### Jottings of a Rambler.

LAST MAY I walked from the Lower-road, Greenwich,  
to Plumstead, in Kent. Continuing along this road,  
which looked very pretty with its green hedges and  
flowery banks, I entered the lane leading from the river  
side to Charlton Church. In this lane, rendered very  
picturesque by its windings and high rugged banks, I  
saw, for the first time in the year, those pretty creatures  
the peacock-butterfly and the orange-tip butterfly. En-  
tering the little wood on the right hand side of the lane,  
I noticed, in the side of a sand-pit, several circular  
holes, which are probably the old nests of sand martins  
(*Hirundo riparia*). Some of them, however, are at  
present occupied by sparrows, several of which I saw  
flying in and out of them. The catchweed beetle (*Ty-  
maria coriacea*), the oil-beetle (*Meloe proscarabeus*),  
and a few other species of beetles, were crawling about  
on the ground. Leaving the wood, I re-entered the  
lane, from the top of which I enjoyed a fine view of the  
river, sparkling here and there in the rays of the sun,  
which every now and then threw a silvery brightness  
upon the sails of some passing yacht. While looking  
down upon this scene I heard the cry of the cuckoo, to  
me one of the most agreeable sounds, as it strongly re-  
calls the happy days of past springs, and tells of the fine  
days that are to come. Passing through Charlton and  
Woolwich, I came to Plumstead, where I sought refresh-  
ment in the Green Man Tavern. Casting a look round  
the parlour walls, I observed a framed bill, announcing  
that the landlord's "Original Songs" might be pur-  
chased for a few halfpence at the bar, and I immediately  
provided myself with them. Here is a choice specimen  
of this publican's muse, rather a *rum* specimen to be  
sure, and somewhat out of measure; but then we must  
remember his *license* is more accommodating than that  
of common poets:—

Oh! what a strange queer world we move in,  
As every day keeps a-dying;  
Between folks now there's nought but contention,  
In scheming to make some new invention;  
And although we know there's a proverb runs, Sir,  
That there's nothing new comes under the sun, Sir,  
Yet Murphy proves 'tis not a fact, Sir,  
For he has made a new Almanac, Sir!

Chorus—All the people's heads are turned topsy-turvy,  
Through the Almanac of Mister Murphy.

In my young days, Sir,—I recollect it—  
The rain used to come when we didn't expect it,  
And many a time when a-courting I've bin, Sir,  
I've got soaked through with the rain to the skin, Sir;  
But those young gents who to courting incline now,  
May pick out a day when its sure to be fine now;  
And young ladies, too, may their lovers meet, Sir,  
Without any fear of wetting their feet, Sir,  
All the people's heads, &c.

The laundress, too, at the wash-tub plying  
Will look for a fair day, Sir, for drying,  
For the wind it this or that way lays so  
Because this Mister Murphy says so!  
Tax-gatherers now will wear goloshes,  
Put on their capes and their mackintoshes,  
And go collecting every way, Sir,  
From those who save for a rainy day, Sir,  
All the people's heads, &c.

There's some folks wise and some are otherwise,  
And this Mister Murphy's now turned weatherwise;  
I wonder what next they'll bring on the carpet  
For wonder-seeking folks to carp at;  
The moon, they'll prove is made of green cheese p'rhaps,  
For there's nothing now comes amiss to these chaps;  
Or the sun's a fire, and if they could but grab it  
They'd cook the moon with it and make a Welsh rabbit."

Our host is, perhaps, the first instance of a publican  
being a poet. It is barely possible, however, that  
Shakespeare, whose *Life* is very uncertain, was a pub-  
lican. If Mr. Armitage Brown can prove the immortal  
bard to have been a lawyer's clerk on the mere evidence  
of his legal phrases, surely his several notices of public-  
houses and their landlords may induce a suspicion that  
he himself followed the same calling.

In Plumstead churchyard, I copied the following  
singular epitaph from a tombstone, which stands on the  
right-hand side of the path:—

Weep not for me, my parents dear  
There is no witness wanted here  
The hammer of Death was giv' to me  
For eating the Cherries off the tree  
Next morning Death was to me so sweet,  
My blis'd Jesus for to meet,  
He did ease me of my pain,  
And I did join his holy train  
The cruel one his death can't shun  
For he must go when his glass is run

The horrors of Death is sure to meet  
And tak his trail at the Judgment seat."

The boy, who is the subject of this precious epitaph,  
was found, I am told, killed in an orchard; that he was  
supposed to have been murdered, but that there was not  
sufficient evidence to trace the cruel deed to any party.  
The schoolmaster and the poet must have been abroad  
when this beautiful epitaph was written in the year  
1812, only twenty-eight years ago!! Crossing the fields  
to Old Abbey Farm, and then turning to the right, I  
got upon Plumstead Common, or, as some call it, Bostall  
Common. The high road is cut through the common,  
which consists of two or three steep mounds; and hence  
the latter name of it,—*bostall*, signifying in Suffolk, and  
probably here in Kent, *a way up a hill*. From the top  
of the highest mound there is a beautiful prospect of the  
meandering Thames, the opposite county of Essex, and  
the overgrown city of London. Striking across the  
common, I repaired to an old church, that of the adjoining  
village of Wickam. The only thing I here found  
worthy of notice was the simple record in the churchyard  
that, "Under this stone lyeth buried the body of George  
Hamp, who departed this life the 23 of May 1659, at  
the age of 64 years, who hath given five pounds  
towards a stool for the poore of this parish for ever."

#### The Affected Modesty of Authors.

It has been frequently asserted that modesty is ever  
the criterion of genius; but this observation, like some  
other ancient and modern instances, appears to be falla-  
cious, at least when it is meant to signify that the man  
who cultivates his intellect, enriches his mind, and re-  
flects, as it were, the rays of knowledge which he has  
imbibed, should be unconscious of the good he thereby  
confers upon his fellow men, and the acknowledgment  
which is due to him. Indeed, were the axiom of modesty  
true, every writer who should present himself to public  
notice saying—

"Write me down an ass,"

would be considered, because of his modest estimate of  
himself, as a first rate genius, one of those rare creatures  
who

"Do good by stealth  
And blush to find it fame."

Such modesty, however, instead of being the veil of  
bashful genius, is generally a garb assumed to elicit admi-  
ration, compliments, or flattery in any and every shape.  
When an author presents himself before the public,  
holding a fan up to his eyes, and professing the greatest  
unwillingness to speak of his "imperfect" performance,  
and aping all the other forms of literary humility, what  
is this but acknowledging himself to be incapable of  
instructing his very pupils; and these, pleased with the  
pretended deference paid to them, do not believe his  
account of himself and reject him accordingly; but they  
applaud him, assure him that he is not the simple  
Christophero Sly he represents, but a sage indeed.  
Were an author in earnest when he speaks so detract-  
ingly of his works, would he not feel himself ridiculed  
by the responsive applause of those whom he really  
believed to be superior to himself.

Praise undeserved is satire in disguise.

The fact is, that when an author makes the modest pro-  
fession, he thinks the very opposite of what he says, and  
this piece of silly deceit is understood by the public, who  
rather than confess the absurdity of testing genius by  
modesty, are ever ready to censure the author who has  
the temerity to assume the common right of warranting  
the excellence of the goods he offers for sale.

SAYINGS ILLUSTRATED.—"I'm quite at your ser-  
vice," as the roasted sucking pig said to the dinner party.  
"My character is at *steak*," as the butcher said when  
the old lady complained of his bad meat. "You forget  
who you're speaking to," as her Majesty said to the  
parrot. "Mind your own business," as the nobleman  
said to the tailor when he requested his lordship to pay  
his bill. "A little learning is a dangerous thing," as the  
savage said when he learnt to drink spirits. "You'll  
never set the Thames on fire," as the beadle said to the  
pump. "You're coming it strong," as the bishop said  
when the beggar asked him for sumpence. "Can't you  
see where you're coming?" as the chimney pot said to  
the thunder-bolt. "Man wants but little here below,"  
as the doctor said to the prussic acid. "Better luck next  
time," as the duellist said when he received his fatal  
wound. "The least said is the soonest mended," as the  
fool said when he split his inexpressibles. "After you  
is manners," as the policeman said when he pursued  
the thief. "There are more means than one," as the  
miser said when his poor relation called him a mean  
fellow. "Crying won't mend it," as the priest said  
when he broke his fast. "It's harder where there's  
none," as the girl said of the hard frost. "A stitch in  
time saves nine," as the Irishman said when he had a  
stitch in his side. "Don't be in such a hurry," as the  
cook said to the hasty pudding. "The better day, the  
better deed," as Cardigan said when he flogged the sol-  
dier on a Sunday. "Blow me," as the cold meat said  
to the fly. "Wind up your affairs," as the sun-dial  
said to the clock. "Do be still," as the wind said to  
the weather cock. "On the light fantastic toe," as the  
boy said to his chilblains.

### The Humour and Pathos of Charles O'Malley.

THE present number of this excellent serial sustains its usual character in an eminent degree by the rapid change from the humorous to the pathetic, a style of writing in which the author is unsurpassed. The following specimens will amply justify this opinion.

#### HOW TO GET RID OF A MESSMAN.

Dr. Quill is dressing a wound received by our hero, and tells him the following story by way of a salve:—  
 "A little lint here—bend your arm—that's it—don't move your fingers. Now, Mickey, make me a cup of coffee with a class of brandy in it. And now, Charley, for Sparkes. I believe I told you what kind of fellows the tenth were—regular out and outers; we hadn't three men in the regiment that were not from the south of Ireland; the 'Bocca Corkana' on their lips, fun and devilment in their eyes, and more drollery and humbug in their hearts than in all the messes in the service put together. No man had any chance among them if he wasn't a real droll one: every man wrote his own song, and sang then too: it was no small promotion could tempt a fellow to exchange out of the corps. You may think, then, what a prize your friend Sparkes proved to us; we held a court-martial upon him the week after he joined; it was proved in evidence that he never said a good thing in his life, and had about as much notion of a joke as a Cherokee has of the Court of Chancery; and, as to singing, Lord bless you! he had a tune with wooden turns to it, it was most cruel to hear; and then the look of him: those eyes, like dropsical oysters, and the hair standing every way, like a field of insane flax, and a mouth, with a curl in it like the slit in the inside of a fiddle. A pleasant fellow that for a mess that always boasted the best looking chaps in the service."

"What's to be done with him?" said the major; "shall we tell him we were ordered to India, and terrify him about his liver?"

"Or drill him into a hectic fever?"

"Or drink him dry?"

"Or get him into a fight, and wing him?"

"Oh no," said I, "leave him to me: we'll laugh him out of the corps."

"Yes, we'll leave him to you, Maurice," said the rest. "And that day week you might read in the Gazette, 'Pierce Flynn O'Hagerty, to be ensign, tenth foot, vice Sparkes exchanged.'"

But how was it done, Maurice? you haven't told me that."

"Nothing easier. I affected great intimacy with Sparkes; bemoaned our hard fate, mutually, in being attached to such a regiment; a damnable corps this—low, vulgar fellows—practical jokes; not the kind of thing one expects in the army. But, as for me, I've joined it partly from necessity. You, however, who might be in a crack regiment, I can't conceive your remaining in it."

"But why did you join, doctor?" said he; "what necessity could have induced you?"

"Ah! my friend," said I, "that is the secret; that is the hidden grief that must lie buried in my own bosom."

"I saw his curiosity was excited, and took every means to increase it further. At length, as if yielding to a sudden impulse of friendship, and having sworn him to secrecy, I took him aside, and began thus:—"

"I may trust, you Sparkes; I feel I may, and when I tell you that my honour, my reputation, my whole fortune is at stake, you will judge of the importance of the trust."

"The goggle eyes rolled fearfully, and his features exhibited the most craving anxiety to hear the story."

"You wish to know why I left the fifty-sixth. Now I'll tell you, but mind; you're pledged, you're sworn, never to divulge it."

"Honour bright!"

"There, that's enough: I'm satisfied. It was a slight infraction of the articles of war; a little breach of the rules and regulations of the service; a trifling misconception of the mess code: they caught me one evening leaving the mess with—what do you think in my pocket? but you'll never tell! No, no, I know you will not: eight forks and a gravy-spoon; silver forks every one of them; devil a lie in it."

"There now," said I, grasping his hand, "you have my secret; my fame and character are in your hands; for you see, they made me quit the regiment; a man can't stay in a corps where he is laughed at."

"Covering my face with my handkerchief, as if to conceal my shame, I turned away and left Sparkes to his meditations. That same evening we happened to have some strangers at mess, the bottle was passing freely round, and, as usual, the good spirits of the party at the top of their bent; when suddenly, from the lower end of the table, a voice was heard demanding, in tones of the most pompous importance, permission to address the president upon a topic were the honour of the whole regiment is concerned."

"I rise, gentlemen," said Mr. Sparkes, "with feelings the most painful; whatever may have been the laxity of habit and freedom of conversation habitual in this regiment, I never believed that so flagrant an instance as this morning came to my ears."

"Oh! murder," said I; "Oh, Sparkes, darling, sure you're not going to tell?"

"Doctor Quill," replied he in an austere tone, "it is impossible for me to conceal it."

"Oh! Sparkes dear, will you betray me?"

"I gave him here a look of the most imploring entreaty, to which he replied by one of unflinching sternness."

"I have made up my mind, sir," continued he, "it is possible the officers of this corps may look more leniently than I do upon this transaction; but know it they shall."

"Out with it, Sparkes—tell it by all means," cried a number of voices, for it was clear to every one, by this time, that he was involved in a hoax."

"Amid, therefore, a confused volley of entreaty on one side, and my reiterated prayers for his silence on the other, Sparkes thus began:

"Are you aware, gentlemen, why Dr. Quill left the fifty-sixth?"

"No, no, no," rang from all sides, "let's have it."

"No, sir!" said he, turning towards me, "concealment

is impossible:—An officer detected with the mess plate in his pocket—"

"They never let him finish, for a roar of laughter shook the table from one end to the other, while Sparkes, horror struck at the lack of feeling and propriety that could make men treat such a matter with ridicule, glared around him on every side."

"Oh! Maurice, Maurice," cried the major, wiping his eyes, "this is too bad—this is too bad."

"Gracious heaven," screamed Sparkes, "can you laugh at it?"

"Laugh at it," re-echoed the paymaster. "God grant I only don't burst a blood vessel;" and, once more, the sounds of merriment rang out anew, and lasted several minutes."

"Oh! Maurice Quill," cried an old captain, "you've been too heavy on the lad: why, Sparkes, man, he's been humbugging you."

"Scarcely were the words spoken when he sprang from the room; the whole truth flashed at once upon his mind; in an instant he saw that he had exposed himself to the merciless ridicule of a mess table, and that all peace for him in that regiment at least was over."

"We got a glorious fellow in exchange for him; and Sparkes descended into a cavalry regiment—I ask your pardon, Charley—where, as you are well aware, sharp wit and quick intellect are by no means indispensable. There now, don't be angry, or you'll do yourself harm: so good-by for an hour or two."

#### THE STORMING OF CIUDAD RODRIGO.

Whatever the levity of the previous moment, the scene before us now repressed it effectually. The deep-toned bell of the cathedral tolled seven, and scarcely were its notes dying away in the distance when the march of the columns were heard stealing along the ground. A low murmuring whisper ran along the advanced files of the forlorn hope; stocks were loosened, packs and knapsacks thrown to the ground; each man pressed his cap more firmly down upon his brow, and, with lip compressed and steadfast eye, waited for the word to move."

It came at last: the word "march;" passed in whispers from rank to rank, and the dark mass moved on. What a moment was that, as we advanced to the foot of the breach! The consciousness that, at the same instant from different points of that vast plain, similar parties were moving on; the feeling that, on a word, the flame of the artillery and the flash of steel would spring from that dense cloud, and death and carnage in every shape our imagination can conceive, be dealt on all sides. The hurried fitful thought of home; the years long past, compressed into one minute's space; the last adieu to all we've loved, mingling with the muttered prayer to heaven, while, high above all, the deep pervading sense that earth has no temptation strong enough to turn us from that path whose ending must be a sepulchre."

Each heart was too full for words. We followed noiselessly along the turf, the dark figure of our leader guiding us through the gloom. On arriving at the ditch, the party with the ladders moved to the front. Already some hay packs were thrown in, and the forlorn hope sprang forward."

All was still and silent as the grave. "Quietly, my men—quietly!" said M'Kinnon; "don't press." Scarcely had he spoke when a musket, whose charge, contrary to orders, had not been drawn, went off. The whizzing bullet could not have struck the wall, when suddenly a bright flame burst forth from the ramparts, and shot upwards towards the sky. For an instant the whole scene before us was bright as noonday. On one side the dark ranks and glistening bayonets of the enemy; on the other, the red uniform of the British columns: compressed like some solid wall, they stretched along the plain."

A deafening roll of musketry from the extreme right announced that the third division was already in action, while the loud cry of our leader as he sprang into the trench, summoned us to the charge. The leading sections, not waiting for the ladders, jumped down, others pressed rapidly behind them, when a loud rumbling thunder crept along the earth, a hissing crackling noise followed, and from the dark ditch a forked and livid lightning burst like the flame from a volcano, and a mine exploded. Hundreds of shells and grenades scattered along the ground were ignited at the same moment; the air sparkled with the whizzing fuses; the musketry plied incessantly from the walls, and every man of the leading company of the stormers was blown to pieces. While this dreadful catastrophe was enacting before our eyes, the different assaults were made on all sides; the whole fortress seemed girt around with fire. From every part arose the yells of triumph and the shouts of the assailants. As for us, we stood upon the verge of the ditch breathless, hesitating, and horror-struck. A sudden darkness succeeded to the bright glare, but from the midst of the gloom the agonising cries of the wounded and the dying, rent our very hearts."

"Make way there! make way! here comes Mackie's party," cried an officer in the front, and as he spoke the forlorn hope of the eighty-eighth came forward at a run; jumping recklessly into the ditch, they made towards the breach; the supporting division of stormers gave one inspiring cheer, and sprang after them. The rush was tremendous; for scarcely had we reached the crumbling ruins of the rampart, when the vast column, pressing on like some mighty torrent, bore down upon our rear. Now commenced a scene to which nothing I ever before conceived of war could in any degree, compare: the whole ground, covered over with combustibles of every deadly and destructive contrivance, was rent open with a crash; the huge masses of masonry bounded into the air like things of no weight; the ringing clangour of the iron howitzers, the crackling of the fuses, the blazing splinters, the shouts of defiance, the more than savage yell of those in whose ranks alone the dead and the dying were numbered, made up a mass of sights and sounds almost maddening with their excitement. On we struggled; the mutilated bodies of the leading files almost filling the way."

By this time the third division had joined us, and the crush of our thickening ranks was dreadful; every moment some well-known leader fell dead or mortally

wounded, and his place was supplied by some fellow, who, springing from the leading files, scarcely have uttered his cheer of encouragement, himself was laid low. Many a voice, with whose name was familiar, would break upon my ear in tones of daring, and the next moment burst forth in a death cry. For above an hour the frightful carnage continued, troops continually advancing, but scarcely a foot of ground was made; the earth belched forth its volcanic fire that terrible barrier could no man pass. In turn the flame and the boldest would leap into the whizzing flame, the taunting cheers of the enemy triumphed in derision of the effort."

"Stormers, to the front! only the bayonet! try nothing but the bayonet," cried a voice, whose cheerful accents contrasted strangely with the death around, and Gurwood, who led the forlorn hope, fifty-second, bounded into the chasm; all the of sprang simultaneously after him; the men pressed on; a roll of withering musketry crashed upon them, furious shout replied to it. The British, springing the dead and the dying, bounded like blood-hounds their prey. Meanwhile, the ramparts trembled beneath the tramp of the light division, who, having forced the lesser breach, came down upon the flank of the British. The garrison, however, thickened their numbers, bravely held their ground. Man to man was now combat. No cry for quarter. No supplicating lewd mercy; it was the death struggle of vengeance and desperation. At this instant, an explosion louder than the thunder shook the air; the rent and torn up rampart sprang into the sky; the conquering and the conquered were all alike the victims: for one of the great magazines had been ignited by a shell; the black smoke, strewn with a lurid flame, hung above the dead and the dying. The artillery and the murderous musketry were still paralyzed, as it were, by the ruin and devastation before them: both sides stood leaning upon their arms; pause was but momentary; the cries of wounded comrades called upon their hearts. A fierce burst of vengeance, the air; the British closed upon the foe; for one instant they were met; the next, the bayonets gleamed upon the ramparts, and Ciudad Rodrigo was won."

\* This vivid picture of slaughter forcibly recalls the dignant reflections of Byron on the fearful waste of which took place in the Peninsula. The irony and sarcasm conveyed in the following stanzas deserve to be repeated along with every stirring tale of a well-fought battle field:—

By Heaven! it is a splendid sight to see  
 (For one who hath no friend, no brother there)  
 Their rival scarfs of mix'd embroidery,  
 Their various arms that glitter in the air!  
 What gallant war-hounds rouse them from their lairs  
 And gnash their fangs, loud yelling for the prey!  
 All join the chase, but few the triumph share;  
 The Grave shall bear the chiefest prize away,  
 And Havoc scarce for joy can number their array."

There shall they rot—Ambition's honour'd fools!  
 Yes, Honour decks the turf that wraps their clay!  
 Vain Sophistry! in these behold the tools,  
 The broken tools, that tyrants cast away  
 By myriads, when they dare to pave their way  
 With human hearts—to what?—a dream alone.  
 Can despots compass aught that hails their sway?  
 Or call with truth one span of earth their own,  
 Save that wherein at last they crumble bone by bone!"

Enough of Battle's minions! let them play  
 Their game of lives, and barter breath for fame:  
 Fame that will scarce reanimate their clay,  
 Though thousands fall to deck some single name.  
 In sooth 'twere sad to thwart their noble aim  
 Who strike, blast hirelings! for their country's good  
 And die, that living might have proved her shame!  
 Perish'd, perchance, in some domestic feud,  
 Or in a narrower sphere wild Rapine's path pursued."

Not all the blood at Talavera shed,  
 Not all the marvels of Barossa's fight,  
 Not Albuera lavish of the dead,  
 Have won for Spain her well-asserted right.  
 When shall her Olive-Branch be free from blight?  
 When shall she breathe her from the blushing toil?  
 How many a doubtful day shall sink in night,  
 Ere the Frank robber turn him from his spoil,  
 And Freedom's stranger-tree grow native of the soil!"

ARAB CUNNING AND HOSPITALITY.—Some travellers had purchased a kid for their guides, who were elated the prospect of a savoury supper. The poor kid was loose, and ran bleating into our tent as if aware of its coming fate. All was activity and bustle to prepare the coming feast; the kid was killed and dressed with great dexterity and despatch; and its still quivering members were laid upon the fire and began to emit savoury odour particularly gratifying to Arab nostrils. But now change came over the fair scene. The Arabs of whom we had bought the kid had in some way learned that we were to encamp near; and naturally enough concluding that the kid was bought in order to be eaten, they thought good to honour our Arabs with a visit, to the number of five or six persons. Now the stern law of Bedawin hospitality demands, that whenever a guest is present at a meal whether there be much or little, the first and best portion must be laid before the stranger. In this instance the five or six guests attained their object, and had not only the selling of the kid, but also the eating of it; while our poor Arabs, whose mouths had long been watering with expectation, were forced to take up with the fragments. Besharah, who played the host, fared worst of all; and came afterwards to beg for a biscuit, saying he had lost the whole of his dinner.—*Travels in the East.*

"BY EDUCATION MEN BECOME EASY TO LEAD, BUT DIFFICULT TO DRIVE—EASY TO GOVERN, BUT IMPOSSIBLE TO ENSLAVE."—LORD BROUGHAM.

NUMBER 12.

SATURDAY, AUGUST 21, 1841.

PRICE THREE HALFPENCE.

## Edinburgh Filth versus "London Dirt."

"O would some power the giftie gie us,  
To see ourselves as others see us,  
It would from many a blunder free us,  
And foolish notion."

So said great-hearted Robert Burns, and so, at humble instance, say we. If there is one class more than another which requires to keep this supplication continually on their lips it is literary men, and more especially those who set themselves up as beacon-fires and universal enlighteners. If to assume a knowledge of the whole range of the arts and sciences,—if to be philosophers of the old school as well as political economists of the new, if to compile from other men's labours a whole library of information, and publish it as their own, be not beyond the bounds of modesty, such giant intellects ought at least to speak the truth on unimportant matters; and although a poor sweeper of a London street-crossing, did, in his ignorance of the mighty genius who had trod upon his pathway, touch his hat for a halfpenny, the universal informationist might have kept his temper as well as his coin, instead of exposing himself to the ridicule and contempt of all who know any thing of the great metropolis.

In thus alluding to the ill-natured misrepresentations of the conductors of an Edinburgh contemporary, who, on our first appearance, kindly informed the public that *they* were not responsible for anything except what emanated from themselves, we beg distinctly to state that our admiration of Scotland and its capital is as fervent and less selfish than theirs can be—that we abominate all attempts to excite prejudice between different towns and their inhabitants—that our desire from the beginning has been to expose the stupidity and wretchedness of such prejudices, and to assist in the distribution of better feelings, so that all classes of all districts might look upon each other as common dwellers in a common country. Nor need we repeat, that in giving to this Journal the name of its *bona fide* proprietor, we did so from no motive of deceit, no desire to imitate any existing publication. In the outset, we broadly announced the distinction, which, we confidently assert, has been well and ably marked, not only on the face of our Journal, but in the articles it contains, and the spirit of charity and good will to all with which they abound.

The *Edinburgh Journal*, some week or two ago, delighted the ignorant and disgusted the liberal, by a shamefully distorted and positively untrue account of London and its thoroughfares, and ungraciously contrasted the crowded and busy streets of the metropolis with the half-deserted promenades of Modern Athens. Not the least offensive quality of the article in question was the waspish style of superiority in which it was written, and the beadle-like authority with which improvement was demanded. To reason with such a villifier, and on such a subject, would be useless. Ridicule is the only appropriate weapon we can wield, and our readers will perhaps determine for us whether or not we know quite as much of Edinburgh, and more of London, than our great would-be instructors.

The system of cleaning practised in Edinburgh is recommended for adoption in London. The routine of scavenging in the northern capital is this, and "we place all the credit of this work upon it." About four in the morning a solitary street-sweeper may be seen or heard pursuing his calling, gathering with a long-handled broom all the mud and dirt he can collect into heaps by the gutter. At seven the dust bell awakens lazy housewives and servant-maids, and out they rush, in night-gown and night-cap, with their domiciliary treasures; these are arranged in goodly show on the edge of the pavement, awaiting the arrival of the cart, which, attended by two men, receives into its steaming jaw all that haste and carelessness can throw into it. The top and sides of the vehicle are plentifully covered with dripping perfume, and its track may be discovered by a long line of equally savoury particles which have been dropped by the way. The cart fairly out of sight, the scavenger goes to breakfast, with what "appetite he may,"

On his return, in an hour or two, with his broom, shovel, and barrow, he makes an attempt to polish up the street, by carrying away a portion of the loose material, which, be it recollected, he deposits in a quiet corner until the evening. At ten at night, the bell is again heard; the same regimented parade of buckets, slop-pails, and all the miscellany of the scullery, the wash-tub, and the chamber, takes place. This is the favourite hour for servant girls to loiter at "close-heads" and "entry-mouths;" this the chosen time when the enamourata of a kitchen maid is certain of an interview; for she must wait until the cart has passed, for fear the pail should be broken or stolen; and she does wait longer, pail in hand, until she has heard all that Sandy has to say, or until her mistress, some six or eight floors up, calls lustily for her to come and wait supper.

This is the every day cleaning of Edinburgh—a system against which the inhabitants complain, both loud and justly; but the political economists who manage the "watching and cleaning," are too frugal to adopt any change. The sewers of Edinburgh are more extensive than they were formerly, but the inhabitants cannot use them; they dare not, as formerly, throw their refuse to the street, that it may run to the grating of a sewer or not, according to its consistence; the cleaning committee are not inclined to allow the valuable material to run to the sea; it is much more profitable to hoard it up all day within doors, and to bring it out, as we have described, that it may be sold.

Suppose it were possible that the crowded Strand could permit so large an assemblage of vessels on the edge of the pavement, would the putrid effluvia be less gratifying to the olfactory nerve of the passengers than the "paste" which is said to abound in the middle of the road?

It is not our intention to poke our noses into the filthy recesses which abound in Edinburgh, as well as in all other large towns. But when we are told that every part of it is swept at least once a day, we sigh for the classic region of the College Wynd, the romantic beauties of Halkestone, and the delicate odours of the Pleasance. Where are the dungheaps which adorn and redolence Rose and Thistle lanes, in the hilly centre and very heart of the New Town? Where is the Low Calton? Has the gutter of Leith Wynd been covered up, or does it still rush proudly down the steep declivity? Have the putrid spots of the Vennel been swept from human eye? Do children no longer decorate the Grey Friars, church-yard wall? Do the arches of the bridges present no memorials of human visitation? Does that open receptacle at the foot of the Advocate's Close still gladden the light of day, or has the rude hand of improvement disturbed its venerable depth? Is the delectable corner at the foot of the "North Brig," still alone in its glory? Has all the "steep-slope down" to the Fish-market been once and for ever swept? Can that odouriferous lane, which leads from the Mound to Milne's-court, have been insulted by a scavenger's broom? Have our friends forgotten the purlieus of Old Broughton, or are the book-stall visions of Leith-walk, where they struggled through their boyhood, become like an ill-remembered dream? If all or one of these localities present an appearance of "unsunned snow," Edinburgh is a romantic town indeed, and romance can alone be spoken or written by its bold defenders.

There is a story of a miller who could not sleep beyond the noise of his own mill, and it is very possible that a person long accustomed to the morning and evening parade of Edinburgh might have his sense of smell offended by its absence while he walked the streets of London. His notion of smell must exactly be that of Dryden's idea of sound:—

"A horrid silence next invades the ear."

So a horrid absence of effluvia tickles his nasal organ, and he looks about for the cause. A man is seen sweeping the midway, and as a matter of course the turning up of

the mud must cause the sensation.\* Notwithstanding the vast number of carriages which traverse the streets of London, and the great quantity of mineral powder which must accumulate from the iron and stone—aye, and notwithstanding that the streets are only cleaned when the contractors please to take the mud away—the thoroughfares of London, we hesitate not to say, present as clean and comfortable walking as those of Edinburgh, which are somewhat carelessly swept every day. Every day! Why the main road to Laurieston, leading to the Meadows, (the St. James's Park of Edinburgh) is a disgrace to civilised society. The dust of Princes-street, the most fashionable promenade in the city, is outrageously annoying, and the piles of mud which are gathered along the Gardens have been the burial place of many a shoe, not to allude to the destruction of stockings and trowsers. Talk about the inhabitants of London being compelled to sweep the pavement in front of their houses, and of its likely to be better attended to by remunerated functionaries, and, more than all, of Edinburgh as a specimen of footway cleanliness! Why the unwieldy brooms of the scavengers can never get into or round a corner, as inimitable Reeve used to describe; every lamp-iron in Edinburgh is begrimed with mud, and surrounded some inches high by an accumulated crust, resulting from the visits of the dog tribe.

We are told, too, that even at the West End, "the olfactory sense is met by streams of fetor at nearly regular intervals." This, we are informed by the same authority, arises from the dust-holes being under the area stairs! where for six weeks the decayed vegetables and filth accumulate until taken away! The dust-holes under the area steps at the West End! Let him search London through, and he will not be able to point out a street of houses so constructed. There may be one or two instances of solitary buildings, but in the fashionable squares—Bah! Can this writer be aware that the closets and outhouses of almost every house in London lead direct to the sewers, and that they present no opening in any public thoroughfare—that even the rain water is carried off to an upper drain (some feet below the surface) ere it reaches the common aqueduct beneath.

It would appear that the acute-eyed gentleman who beheld dust-heaps beneath area stairs, never saw the streets cleaned, although he watched for several days in succession. Appropriate employment! Delicate duty! Why did the contractor, instead of sending his labourers in the morning, not distribute them over the metropolis at mid-day? True, the thronging cavalcades would have formed a somewhat dangerous interruption; but that could be of small moment in comparison to the gratification it would have given the learned Athenian. But great as this disappointment was, it might have been greatly worse. With a candour truly astonishing we are given to understand, that "perhaps 500 persons may be seen sweeping the pavement before their doors." That, although found fault with, is at least an acknowledgment that we have some slight notions of cleanliness. Who were the happy five hundred immortalised by his critical approbation? Were they merchants, clerks, or shop boys—or only charwomen? How were they dressed—were they good looking—what were the colours of their hair—had they dark-eyes or blue—did they wear aprons—were they in their shoes, or upon pattens—did any of them present the delightful Scottish characteristic of barefeet? These are statistics of thrilling in-

\* By the bye, we must laugh at the impudence of the assertion that crossing-sweepers at night "sweep the dirt over the path which they have up to that moment kept clean," and call it "shutting up shop." The veracious scribe must have heard some one make mention of Reeve, in the character of Jack Rag, who performed this feat in the Adelphi Theatre; and by some process of philosophic thinking convert it into the practice of all the men, women, and children who thus seek a precarious livelihood—precious, indeed, when "information" philosophers come in their way.

terest, with which, alas! we have not been favoured. But perhaps we shall have the pleasure of reading them in a second edition. Let us not be told, however, that these happy few, "are dirty to a degree which makes them and their city nearly insupportable to the sensations of a provincial." People who sweep the pavement of their own accord are not a filthy race, although they never see a nightman's cart, nor accept the gratuitous advice of one whose notions of civic parsimony were rejected by his colleagues in the Town Council of Edinburgh.

As to the bye-courts and lanes of London never being cleaned, "because the trouble is not compensated by the value of the refuse there to be collected," we need not pronounce this to be a grave misrepresentation of truth. Stepping from the Strand, from Fleet-street, Oxford-street, or any of the other great thoroughfares, passengers are immediately removed from noise and bustle into clean and quiet courts innumerable. In Edinburgh, the same broom which sweeps the causeway streaks the pavement with its discoloured filth; in London, the birch and hair brooms of the inhabitants perform their different offices. If a small portion of the water applied every day to the paved courts of London were thrown on the streets of Edinburgh, the stone would not depend so much on rain to restore it to its colour, or to wash from its surface the *souvenirs* of nursery-maid protégés, as is every day evidenced at the railings round Queen-street Gardens.

We are likewise told the Joe Miller anecdote of the snow getting mixed with the dirt, and of the dustmen refusing to carry away the former, even at the request of the Lord Mayor. In the month of February 1823; or 1824, Edinburgh was visited by a snow-storm of almost unexampled severity; the snow was piled up in the streets in immense masses, and, as a natural consequence, much mud and filth got mixed with it. In the month of April a considerable portion of these masses was unremoved. In Prince's-street even—aye, in front of the Register Office,—the sun had to exert its influence alike on the snow and the foreign matter intermixed with it before the cleaning committee wholly removed it. Let a like date be given to the Joe Miller plagiarism, and perhaps we shall believe it.

But of the two hundred thousand tons of soot—how can we dispose of that? It is scattered over the town, we are told, and becomes mixed with the mud. Well, let it be so; some of it is surely carted away. In another sentence, however, it seems that the greater portion of the soot is blown to the north-eastern suburbs, where the ground rises three-quarters of an inch per annum in consequence of this deposit.

Happy London, to have a fixed and periodical wind which blows thy iniquitous smoke in one direction! Happy onion-fields, which are thus manured by the breath of heaven! Let us go to this remarkable place, where, no doubt, the trees will be covered up to their waists, and all the houses descend at least a few steps to the street floor. Where are we? Why in Bishop Bonner's Fields, the very spot purchased by Government for Victoria Park? Why did Parliament not consult our Edinburgh friends ere they threw away a hundred thousand pounds on such a filthy and unhealthy locality? There stands the house of the remarkable prelate, coeval with the reign of Elizabeth; but the ground has not risen upon it. In the vicinity is the cottage of Jane Shore, a building which has stood since the days of Edward IV; but it keeps its dignity still, while the earth is as modest and retiring as ever. The trees show their roots above ground as in other places; the sky is not darker, though the grass is greener, than in the city. The houses in the Whitechapel, Hackney, and Mile-end Roads are not so black as St. Paul's. We must wait for further information on this subject, for it would be unpollite to say that Baron Munchausen furnished the information to Edinburgh.

We are far from asserting that the mud of London streets is pleasant, or that improvement has reached perfection in the habits of cleanliness. But we do affirm that Edinburgh is not entitled to become our monitor. The Scottish capital is built upon a number of acclivities, down which the rain pours its sweeping and clearing influence with much effect. Yet even with that advantage, combined with the splendid open spaces which abound throughout, Auld Reekie is not in a position to claim any superiority over London. Nor is it one jot more healthy: the breezes from the hills are sweet and refreshing in summer; they are bracing in winter; yet disease holds there as powerful a sway as in London. There is not a plain in the world, on which so great a mass of houses are built, and on which so vast a number of human beings are congregated, so healthy as London: over its immense surface the wind is continually playing—not in the violent gusts which sweep round Edinburgh Castle certainly—but in sufficiently active breezes to carry off, to all points of the compass, the heated and smoky atmosphere which rises from it. That wretchedness and want too fearfully abound in the metropolis is true—that idleness and dirt keep loving company together, is common here as every where else—but that insolent bravado or provincial pride will remove them, we indignantly deny. We had thought that the common shrewdness of their countrymen would have taught the conductors of the *Edinburgh Journal* that such a barefaced insult on the inhabitants of London—that the downright falsehood of calling them personally dirty—would not operate to their

advantage. Their long continued attempts at a narrow and selfish political as well as domestic economy, and the haughty air with which their remarks are set forth in the article in question, preclude them having any claim to patriotism. As an attempt to excite prejudice, it will fail. As a means of perpetuating the foolish idea of superiority entertained by some classes in Scotland over Englishmen, it will fail. As a method by which to extend their reputation and profits, it will fail. It is altogether a suicidal act, and as such might have been left to receive its own punishment. But the London public are not devoid of spirit. They look to their own publications to assert their claims to at least equality with even the self-styled tutors of the Modern Athenians. This much we may also add, that the inhabitants of London are neither so unreflecting nor intemperate as to suppose that the citizens of Edinburgh approve of such vain and vile attempts, of which the present is a specimen; and they know also that their purposes as human beings, their interests as fellow-countrymen, and their privileges as citizens of one commonwealth, can be best promoted by kindness and conciliation towards each other, however much it may be the interest of some to keep prejudice alive, and indirectly inculcate the continuance of National antipathies.

### Fairy Lays and Legends of Ireland.

#### INTRODUCTORY SONNET.

Of Fairyland, the rede I wish to trace!  
Start not, thou mother, pressing to thy breast  
Thy rosy cherub. Safe within such nest  
Long may thy calow love-pledge find a place.  
And, maiden, vain the fears that in swift chase  
O'er thy soft cheek pursue the paling rose;  
Nor thou, the fiery-hearted, turn thy face,  
Give to thy quailing eye its old repose,  
Nor mar thy lip and brow with such fierce grace.  
Yet Sybil, with the brow of wrinkled woes,  
Thy legends of the fearful, mystic race,  
Falleth not idly on our charmed ears;  
Still, as a vision'd world the tale appears—  
Of Fairyland, the rede I wish to trace!

#### THE CHANGELING; OR, SPORTEEN AND THE FAIRY. CHAPTER I.

The pastoral Barrow is, perhaps, one of the most beautiful rivers in Ireland—winding in its varied course "by tower and town," through glen and glade, sweeping woodlands and rich valleys from its source to its junction with the silver Nore; and from thence, until buried in the bosom of the Haven of Waterford, its waters are said not to reflect one gloomy or barren scene. On the banks of the ancient *Breba*, and not far from the good town of Carlow, in the midst of his few but fruitful acres, resided James O'Callaghan and his "good woman" Judith, with "a small family" of about ten children, who were all remarkably healthy, robust, and hearty, except the youngest, who, after some time, turned out a weak, squalid, ill-favoured, impish brat, far different from the rest of the children, and unlike in face and manners any thing living on this earth—it was evidently cursed, or a *shee-oge*.\*

It was a fine day in the latter end of harvest—all the farmer's family, man, woman, and child, were abroad in the fields, except Judith and the ill-thriving brat. She could not stir from him—she had him in her lap by the fire-side, alternately scolding and soothing him, and lamenting her hard hap in being obliged to stop at home to nurse him. She sought, by every means in her power—by every wile and stratagem, to calm its torments and lull it to sleep. At one time venting her impatience in calling it the most opprobrious names, then apostrophising it by the most endearing terms which the Irish language, abounding in tender epithets, could afford. Sometimes ready to burst out crying with vexation, and anon singing snatches of the beautiful song "Gentle Barrow," composed in the vernacular by a district bard, and part of which, if we may be excused attempting an humble and free translation, would flow in something like the following

#### BALLAD.

Flow on gentle Barrow  
Thy green banks between.  
Spain has her Darrow,  
And proud France her Seine;  
With her blue-rushing Rhone,  
As fleet as an arrow;—  
Oh! I love thee alone,  
My own gentle Barrow.

Thy melody bringeth  
A soothing—a power—  
To hearts that grief wringeth,  
At evening's lone hour;—  
Of days that are gone—  
Of ages of sorrow,  
Still sadly sing on,  
My own gentle Barrow.

In the isles of the east—  
There the golden fruit glows,  
And the bulbul sings best  
To his own Persian rose;  
Where dark eyes dart love,  
In bright scenes afar, oh!  
I'd ne'er wish to rove  
From my own gentle Barrow.

\* *Shee-oge*—young fairy.

Farewell, gentle Barrow;  
The sun seeks the main;  
Yet his beams of the morrow  
Shall bless thee again.  
Thy current's not slow,  
Thy green banks not narrow;  
Then in melody flow,  
My own gentle Barrow.

"Miau! miau! miau!" still squealed the little b, untouched by her solicitude to give him comfort, and with all its might, and with an agony of pain, seeing its shrivelled features that well might inspire commiseration.

"Och! och! och! ochone!" cried the tormented mother. The heavy sorrow may "miau" you out of sight o' me for one sperrit of my eternal torment what 'ill I do with you at all? Am I to sit here day under you, and the corn shakin'? Och! what come across you?—here I am, wore to a thrave with the like o' you, these two long years, and change for the better. Och, may the sorrow whip away from me. Well, then, no, *alanna bawn* (my darling), hush now, and I'll get goodies for my crutheren; there now, *ma paustha bra* (my own child, ever). Is it into the cradle you'll go, *ma gra gal* (white love). Oh! that's the good child 'ill go into its own cradle for his own *waher beg* (poor mother); as she attempted to incarcerate him in the wicker-basket by her side.

"Miau! miau! miau!" screamed the struggling wretch, kicking and twisting its old-fashioned face in a thousand different contortions of agony.

"Och! och! I wish *Croagh Phadruig* was down the throat of you, wid my heart and blessing!" cried the irritated woman, losing all patience. "Och, what chance was it that came over you at all?—it's you that was the fine armful, out and out; and look at you now, ye misfortunate *shoghrawn* (cast off) of misery. Thunight and day that "miau" is never out of your head 'till I'm dwindled off the face o' the earth with you. It's into the grave you'll sink me, unless some good angel whips you into the other world afore my heart bruk entirely—och! och! och! ochone!"

Here the sun beams, shining in the open door, were darkened; and turning round, an individual, known by the mirthful sobriquet of the *Sporteen*, saluted her with a bow and a caper. He was the fashioner of the parish—a wandering tailor, who, without any known place of residence, moved about from farmer's house to cabin wherever a frieze coat or "a nate pair of corduroys" were to be made. He acquired the appellation of the *Sporteen* from the lightness and gaiety of his disposition. He never appeared in trouble, but ever merry, singing and happy. All day "he cantille ranted and sang" a his work—danced in the evening with the girls—threw a stone, or wrestled a fall with the boys, or set the young ones to play or to fight, a thing very easily done at all times. His prices were generally small; but, as he was boarded and lodged where he worked, his life was one of ease, and "hang care" was ever his motto.

"Hoo! the top of tin thousand mornin's to you, Mrs. O'Callaghan, jewel," shouted the *Sporteen* as he entered. "Hoo! its yourself that looks brave and comfortable, me darlin' woman, this blessed mornin'; be me sowl, you look as fresh as the day you were tied to Jenny O'Callaghan;—an' sure you do, and more o' the same luck to you. I'll be bail now, it's a fine new big-coat he's wanting, or may be its a dacent jock or a mantle for yourself, or a pair o' small-clothes for either one or the other of you?"

"Och! the sorrow go wid you, Sporteen," replied the wearied dame, "but you started the very heart within me. Lord save us! Cloak, indeed!—oh no, *wurra*, I'm the last that's thought of, though its breakin' my heart and losin' my sowl I'm here workin' and slavin' for him and his childer. Cloak, indeed! the sorrow cloak. No faix, it's the big coat for himself, and two or three jackets for the *gossouns*. Och! and this weary child is worse nor all upon me. Och, och! go sleep, you bould little devil, go sleep—Hush, there then, *alanna*, and I won't be crass."

"Arrah; then show him to me here, Mrs. O'Callaghan," said the *Sporteen*, pleased at the appearance of a good job. "Give me the darlin'. Come to me, you angel o' the world! It's a rale charmin' beauty the jewel is, and the very born pictur of yourself, Mrs. O'Callaghan, dear—if he was fat. A small morsel more of flesh 'ud do the diamond o' the nation all the good in life—to be sure it would. Hurroo! my hearty! there you go—there's a toss for my fine goiant of a boy—there's a hoise! A thrife of fat, Mrs. O'Callaghan, 'ud make an uncommon improvement in the posey o' the country—be my sowl it would. Hurroo! *ma bouchel* (my boy) you wor—another hoise and another toss for the pride of ould Eirien," and he commenced capering and tossing the child about the house. "Hurroo! my fine bouncin' fellow you wor—there you go

Up to the collar beam,  
Down to the floor,  
Out on the windee, and  
In on the door.

Be me sowl it's a rale Sporteen you'll be, if you live—Hoo! it's a rattlin' big bully fellow you'll be—be me sowl you will, if you stand it another year. Hoo! it's the flower o' the County Carlow you'll be next spring, if you don't happen to lie out this winter. Won't you

be a taylor, or a carnell in the army, or a fine big fat bishop with a jolly red nose—be me sowl you will, if you can, and why not?" And perceiving the withered features of the imp relax into something like a grin of pleasure, "Look there, Mrs. O'Callaghan—look at the beauty, how killin' delightful he smiles at you. It's all exercise he wants—the playnix is killed for want of the amusement—there wouldn't be the likes of him in the seven counties if he had the exercise. Hurroo! my fine fellow, indeed there wouldn't. Hurroo! again. Och, if we had a tchune on the pipes now, it's we that 'ad put some of them on their best steps and thribles—we'd show them the fun—we'd put them through their facin's—to be sure we would—Hurroo!" and the little nglly told fairly laughed out into the face of the bantering taylor.

"Och! the sorrow be from you, for one Sporteen," cried the mother, delighted to see the least glimpse of gladness on its features. "It's you that can do anything, I believe, as well as make a breeches. The dickens be wid him but I'm at him this live-long day, and couldn't get him to stop the *mau* for one minit, if I was to kick the fits for it, barrin' I was to choke him, and there now you have him burstin' laughin'. Well—well; the ould Puck himself can't beat you out."

"Och! be me sowl, the jewel 'ill laugh with the Sporteen," replied the taylor, proud to get so far into the good graces of the mistress, for it was his general maxim, keep in favour with the "woman of the house," and you need not fear the master. "Won't you laugh with the Sporteen, *ma bouchet*? Look at that now—Hurroo! There, now; won't you go into the cradle, *avick*? (my son) to be sure you will for your own Sporteen. Husho—husho—husho;" and placing the child in the cradle without its crying out, much to the astonishment of the farmer's wife, he sat down beside it, and began to rock and sing the old croon that women use to lull their children to sleep.

The Sporteen commenced business next day, and continued at his work during the ensuing week. Sometimes employed sewing the jackets for the children; sometimes nursing and pleasing the young imp; but as often as he could courting Bridget, the farmer's eldest daughter, a bright-eyed, rosy-cheeked, pleasant-smiling *colleen dhás* (young girl). The farmer, after sitting on his "big coat," swore that "there was not such a taylor 'ithin the four wide walls of the world as the Sporteen." Judith, his wife, declared "that the sorrow take his match as a nurse she ever kem across;" while Bridget vowed "she didn't know what to make of him, he was so teasin' and tormentin'—the dickens the like of him ever she met."

The courtship of the Sporteen was quite characteristic—seated on the kitchen table, before the small four-paned window, "he worked and sung from morn till night," and ever as Bridget came past in her household avocations, he saluted her with a home-thrust of his needle that made her bounce, though she prudently made no noise, for she well could interpret the merry taylor's winks and leers, and was not displeased with his tricks, yet she dreaded any one else should understand them.

"Why, then, the dickens take you, Sporteen," said she one day, when her mother's back was turned, "what do you mane by stickin' your devil of a needle into me? That I mayn't do an ill turn, the Lord bless and keep us, but it's sore all round I am, the way you do be gettin' on."

"It's just to put you in mind of confirmation, Bridget, you darlint—the way you'd be thinkin' o' me, you blumin' rose o' the wilderness—for I love you with all the vains o' me heart—be me sowl I do—and I want to take you out o' hardship, and a dirty farmer's house, and make a dacent tradesman's wife of you; and them two sparklin' dimens in the head o' you put me through my work ontirely, the way I do be lookin' at you—they make me set two stitches instead of one!—Och, the Lord betwene us and harm, them eyes weren't med for the good of your sowl or the Christians any how—Och 'twas the unlucky day I ever kem to sow a stitch to Jemmy O'Callaghan. Och, Sporteen, if the good forthen doesn't befriend you to soften the tindher heart of the raal Diana, you're the undone ninth part of a man. But, Bridget, *gul he cugger, amourneen dawn*, (come here, whisper my fair darling,) I have something or another to tell you this evening—I don't know well what it is yet—but meet me in the haggard; will you? Just slip round when you milk the cows."

"Maybe I would, Sporteen," replied the rosy girl, "but the goodness parsue me, what 'ud become of me if my mother or any of the boys 'ud see us."

"The devil a danger," cried the Sporteen, "be me safe self there's not a shady of fear for it. Och, the darlin' Vaynus of the world you wor—the Phaynix of creation you wor," and he nimbly leapt from the table, threw his arm around her milk-white neck, and kissed her budding lips to the echo, while a shrill cackling laugh from the cradle made the "rafters" dirl."

"Let me go, Sporteen," cried the alarmed girl; "let me go, you bould devil—the dickens be wid you, here's my mother. Och, let me go, don't you hear her foot at the door."

A step was heard approaching the threshold ere the Sporteen had time to regain his perch on the table. He ran to the cradle, and lifting the skeleton-like child, with well dissembled solicitude he began to soothe it as usual.

"Och, the cock o' the walk you wor, my rattlin bully boy. Hurroo! there now, sure you'll never cry again the sorrow tear. If you hadn't your own Sporteen, it's dead you'd be by this time. Sure the devil a one o' them can plase you like meself. There, now, go to your cradly house again, and don't let me hear a word out o' the purty head o' you."

"Ah, then, it's laughin', I thought I heard him as I was comin' in," said the mother.

"You're right ma'am jewel, quite right; and it's seldom wrong you are," readily replied the taylor; "sure enough it's laughin' he was—he always cries first and laughs after."

The Sporteen continued a longer time than might be deemed necessary with Farmer O'Callaghan. In consequence of his love for Bridget, he invented sundry excuses to remain from day to day. A great many articles wanted repairing, and sundry little plans were set on foot between him and "the mistress" to make the boys appear "oncommon dacent" on Sundays; besides, he was so useful in pleasing "the etarnil tarmint" that she did not know what to do without him, and often honest Judith declared that "she wished the sorrow might overtake her affther a hard chase, but she'd like to keep him in the house for that alone."

All the children loved him for his pleasant disposition, but the peevish wretch in the cradle, above them all, seemed to have taken a particular and extraordinary liking to his comic and rollicking manner. The little imp would never be easy except when entertained with the songs and frolics of the Sporteen, and then he screamed and chuckled with such a hideous appearance of joy, that it was truly frightful to look upon. This unnatural predilection surprised even the taylor himself; and though, when the meagre ill-favoured thing grinned horribly delighted at him, he felt afraid and was almost ready to drop on the paved floor; still as he had an interest at stake in the heart and affections of Bridget, he gulped down his disgust, and fondled and dandled it as if it was the second edition of a seraph.

While affairs were in this train with the Sporteen, he got up one fine morning to keep an appointment with his love, who arose at early dawn to bring water from a distant spring in the fields to make her butter. After enjoying his half hour's stolen interview, and as he was returning along another pathway, which led through a lonely dell, he perceived to his no small surprise an earthen pitcher rolling merrily along before him. He paused, and stared in wonder—on it rolled. He gazed about him, there was not an individual to be seen for miles; yet endowed with a self-existing principle on went the pitcher. He rubbed his eyes until tears sprung into them—he shook his head and pulled his hair, still there it was before him, turning away rapidly down the glen, and, what added to his astonishment, was the intuitive caution with which it avoided every stone, deep cut, or precipitate descent in its path.

"Well, be me sowl, that's something a body doesn't see every day, any how," said he to himself. "I suppose now that it's full of water, and rowlin' home of its own accord to some dacent ould *collough* (hag) on its side that way, 'thout spillin' a drop. Well, the likes o' that I never dhreamt of before. Hush, its comin' to a drain!" The pitcher approached to the edge of a furrow filled with water—it paused a moment on the brink, and then leapt over.

"Well leapt pitcher," cried the taylor; "bravely done, ah, then, sure it's no harm in life to get nearer to you."

He drew close to it—it was *bona fide* a common earthen pitcher, and, moreover, he thought he had often seen it before, but where he could not then remember. On it moved, rolling over and over, leaping across or avoiding every impediment opposed to it. The Sporteen "gazed, amazed and curious," at the locomotive vehicle, but his alarm and surprise were raised to the highest pitch, when he heard a voice from within it commence singing one of his own favourite songs, in a tone which seemed familiar to his ear, and which appeared to be a ludicrous imitation of his own style—

Oh—a—of all the thrades a-going

A taylor's is the best—a—

For when other thrades are tired

He can work and sit at rest—a—

He—a—earns money plenty,

And he dhinks his flowin' can—a—

And where e'er you steer you may never fear

The sportin' journeyman—a—

"Well sung and sweet, pitcher," shouted the taylor in extacy, "every bar of it, and a bar above me—

Oh—a—I'm the sportin' journeyman—a—

"Come, rouse it again, your sowl to glory—that's the time o' day—hurroo!"

Still on went the pitcher faster and faster, singing away as merrily as the lark that towered in the grey cloud above them, and on followed the Sporteen until his patience and curiosity were exhausted. Rushing forward, half reckless and half desperate, he endeavoured to catch it, but it eluded his grasp, and went so rapidly that he could scarcely keep pace with it.

"Stop, now, till I join you in the chorus itself," cried the taylor, still attempting to clutch the rolling vessel. "Stop, I tell you; if you don't, may you be turned into a praytee, and the crows eat you. May you be smashed into a thousand *smithereens* (small pieces). The curse of Crummell on you, can't you rowl easy!

That's right, 'now I have you—no indeed I haven't. Off again, powderin' away; the devil pounce the singin' out o' you, can't you wait and give me a verse." Thus he ran on after the pitcher, endeavouring, between persuasion and force, to get it into his possession; but just as he thought to lay his hand on it, off it went like the gliding stream, or a ray of light, affording nothing tangible to his grasp. At length he paused for want of breath, and fixed an eye of mischief on the pitcher. It seemed also to rest as if in sympathy, yet the instant he was about to move towards it, it was off again as quick as ever.

"Easy, my gay pitcher," said he, "be me troth I'll lose a fall or be even with you; I'll thry what sort of metal you're made of afore we part company; be me sowl I will; here's at you, touch and go." And lifting a round pebble, he took aim, and threw it with all his force. "A miss, by the powers of delph! Well, it's no matter, an offer is as good as a blow, but the first goes for nothing; here's at you again! Another miss, by all that's lovely—and that's my Bridget! At it again—it's no sheep's head—faint heart never won fair lady—a coward was never worth a groat, and the third time is the charm." So, taking a steady and deliberate aim, he threw, hit the mark, and smash went the pitcher.

"Well shot, be me troth!—well done, Sporteen!" he shouted in joy, and attempted to cut a caper, but stood petrified with horror when he saw Mrs. Judith O'Callaghan's "eternal tarmint" leap nimbly as a monkey from out the ruins.

[We must delay the second and concluding chapter till our next. We shall thereafter resume the publication of "Scenes and Sketches of Military Life," which are from the same talented pen as that which portrayed the "Sporteen."]

### The Shop Milliner.\*

CLIO assist, as I my rhymes prepare,  
To sing the praises of a maiden fair;  
A bonnet-builder eighteen years of age,  
Religious, pretty, talented, and sage;  
Hazel her eyes, and glossy is her hair,  
Her form is elegant and light as air,  
Her ruby lips are pouting, soft, and ripe,  
Through which her teeth shine beautiful and white,  
Radiant as pearls within a coral bed,  
Transparent white relieved by lustrous red;  
Her breath is sweeter than the full perfume,  
Of a rich bed of violets in June;  
Her pretty mouth has such a winning smile,  
As would the heart of anchorite beguile;  
And then her voice so liquid is and sweet,  
Like to the music of the spheres at night;  
That those who hear it are enhanced with bliss,  
And fain would give the owner fair a kiss.  
Tho' some declare that she is but a fag,  
But that I deem the malice of a wag;  
For certes in the art of bonnet building  
None can dispute that she is highly skill'd in;  
Then with what grace and dignity she stands  
Behind the counter—what respect commands;  
Descants so ably on the caps and lace,  
How each is suited to each varied face,  
Until her eloquence quite overflows,  
Upon the merits of the flowers and bows;  
Till J—nes the milliner declares aloud,  
That of such talent he is very proud;  
And as a proof of his most regard,  
Takes care that she shall work exceeding hard;  
Heedless alike both of her health and strength,  
He only reckons his increasing wealth.  
And when the labours of the day are done,  
She listlessly returns unto her home;  
"Victuals I want, and victuals I must have,  
The bread, the cheese, the butter how I crave,"  
Are her first words—her supper finish'd she,  
Calls on her mother in no gentle key,  
"Oh, mother! mother! pray do come to bed,  
For I with weariness am almost dead,"  
And never lets her mother rest a minute,  
Until they are deposited within it;  
But in her sleep her mind still wanders o'er  
The various actions of the day before;  
"This bonnet, ma'am," she murmurs in her sleep,  
"Is very tasty, elegant, and cheap;  
The shape is suited to your style of face—  
Allow me, ma'am, to recommend this lace;"  
And here her mother brings her to a stop,  
With "Mary pray in bed do drop the shop."  
When morning comes she hurries on her clothes,  
And in a bustle off to business goes;  
With her mouth cramm'd so full of bread and butter,  
That she a single sentence cannot utter;  
And in her hands a piece of such a size,  
She bears away, and munches at the prize,  
Fearful lest she should be a second late,  
She trembles when the clock chimes half-past eight.  
So runs the life of this young bonnet builder,  
And from all earthly ills may Heaven shield her,  
May she increase in knowledge of her art,  
And of all bonnet-builders get the start,  
Until she is esteem'd by every one  
In bonnet-building quite a paragon! R. M. L.

\*Notwithstanding the playful manner in which our contributor has sketched this interesting character, our readers cannot fail to observe the under-current of sympathy which prevails throughout towards this toiling and ill-requited slave. A continual round of sickening attendance and labour is her hapless lot; and it is not surprising, therefore, that many of her class seek refuge from the drudgery in hasty and ill-considered marriages. Industry deserves a better fate; but, like virtue, it is too often its own and own reward.

### The Jesuits.

THE world has never witnessed so wonderful a display of human ingenuity and talent as the system of the Jesuits' policy; they reared a power which bade defiance to all existing governments, and acquired such an ascendancy over the minds of kings, rulers, and princes, that they guided at will the affairs of nations, shook the Pope on his throne, overthrew dynasties, and, under the garb of humility and self-denial, enjoyed a power almost unlimited. This sect was founded in A.D. 1540, by Ignatius Loyola, a Biscayan, a man of vigorous and commanding intellect: having won Pope Paul the Third to think favourably of his design, he was by him appointed the first general of the order. Previous to this time, in the early part of the fifteenth century, man had begun to call in question Papal authority and infallibility, and to assert the right of private judgment. Jerome of Prague and John Huss had aroused a spirit of free inquiry. The Popes, alarmed at the progress of the new doctrines, were well pleased to favour a sect whose avowed purpose was to support and defend Catholicism; and while Luther and his followers were pulling down the Papal throne on one side, the Jesuits were employed in propping it up on the other. The success which attended the Jesuits may be as justly attributed to the zeal and ability of the immediate successors of Loyola—Loyneza and Acquaviva—as to himself. They confirmed and perfected the laws which he had formed, adding others, founded on the most profound and accurate knowledge of the human heart. Their College was established at Rome, where their general resides; and it was said that "the hilt of the sword was there, whose point was every where." The members were exempted from the duties of other ecclesiastical bodies; their sphere of action was the world: to study the dispositions of men in power, to ingratiate themselves into their confidence, to flatter their weaknesses, and accommodate themselves to their passions: these were the purposes for which they lived. There was scarcely a court in Europe in which they were not the confessors of princes and nobles; and by the extent of their learning and abilities, as well as by flattering the vices of the powerful, they secretly gained a political and moral influence, the extent of which was only felt on great occasions; they mingled in every event, and took part, though unseen, in all intrigues and revolutions. The course of education to which the younger members were subject was severe and profound in the extreme; on their superior learning rested much of the power of the order, and none but men of the highest intellect were admitted to offices in the college. The young aspirants passed through a probation of many years, and then gained admission to the mysteries of the institution by slow and laborious steps. Besides the vows of celibacy, poverty, and obedience to papal authority, there was another still more solemn, by which they resigned themselves body and soul into the hands of the general—binding themselves to reveal to him, or to the officers he should appoint, every secret thought of their hearts, every half-formed wish: each individual was a spy on the actions of his brethren, and any concealment of the faults of another was a crime. So firmly were the parts of the machine compacted, so admirably did wheel move within wheel, that the general became aware of everything that was passing throughout Europe; and as he had the minds and hearts of all his subordinates laid bare before him, he knew the exact tools he had to work with; he could remove his forces from one place to another, subject the weaker to more strict surveillance, or, where he found a firm and trusty disciple, place him in the post of danger: his commands were never questioned. Fearful and terrible was the power which the Jesuits possessed, and they have exercised it in too many instances in oppressing man, and subjecting him to spiritual despotism. They shrank from no means, however atrocious, public or private, by which they could attain their end; deceit, fraud, treachery, ingratitude, and all the blackest crimes sully their history; they considered everything justifiable which established their power and tended to save Catholicism, shaken to its foundations by the attack of Luther and his successors. All, however, is not dark in their history. In the sixteenth century, under St. Xavier and Ricci, they introduced the blessings of Christianity and the results of European science within the forbidden precincts of China and Japan, where all subsequent missionaries have failed even to retain what the Jesuits had acquired. The only maps of China which we possess were made from their trigonometrical survey of the empire; and all the best information which exists in Europe respecting those interesting and puzzling countries is to be found in the "Lettres Edifiantes," a collection of most valuable histories and records of the progress made by the society for the propagation of the faith.\* In the seventeenth century they colonized part of South America, and their institutions in Paraguay were founded in a truly Christian spirit; while other nations conquered and oppressed the poor Indians, the Jesuits instructed them in the arts of civilized life, and were their real benefactors. Their ambition and power, however, were found to be so formidable, that they were expelled from many of the courts of Europe. Charles the Fifth of Germany, meeting with great opposition to his schemes from the Jesuits, gave them a severe check; and during the middle of the eighteenth century they were banished from Spain, Portugal and France. In 1773 they were totally suppressed by Clement the Fourteenth, who, from his liberality, was called the Protestant Pope, and whose death was said to have been hastened by poison administered by a Jesuit. They have since regained some degree of power; in Naples they are restored to court favour, and hold offices of trust in the State; their chief desire is to superintend the education of the young, and in that city they are the directors of the military and other public schools. At Florence so strongly was the disapprobation of the people expressed at an attempt made to restore the Jesuits, that the Grand Duke wisely desisted;

Papers, expressive of the odium in which they were held were posted on the promenades, laid in the duke's box at the opera, and even thrown into his carriage as he passed along the streets. In Venice they are watched as rigidly as the Jews, and although permitted to purchase property and reside in the city, they are obliged to obtain a written permission from the government, which must be renewed every three years. In Rome we see them continually in the streets, and they present a striking contrast to the friars; their countenances bear the marks of intelligence, although shaded by a dark melancholy, with a repulsive and impenetrable expression. They are always seen in pairs, in accordance with the system of espionage kept up amongst them.

### The Lone Farm House.\*

SOME years ago, a solitary cabin in the west of Ireland was beset by a number of armed men at dead of night, thirsting for the blood of the unfortunate inmates. They battered in the door, and, in spite of all resistance, had dragged out the farmer to be piked or bludgeoned, when his wife, perceiving that escape was hopeless, with singular presence of mind, caught up their only child, a boy not five years old, and hid him away in the old-fashioned chimney. "My child," said the brave-hearted woman, "they are murdering your father; my turn will come next, but I shall struggle with them hard, and by the turf I am now lighting look well at their faces, boy, and avenge our death hereafter." Soon the ruffians did return, and long and gallantly did she struggle by her own hearth-stone, while from his dark hiding place the poor child, with white cheeks, did his mother's bidding, and stared silently at her murderers. Five months afterwards, three of the miscreants were convicted and hung, chiefly on the evidence of that boy. Such was the narrative with which Sir Robert Peel once powerfully excited the House of Commons, when stricter laws were demanded to keep down crime in Ireland; and yet, if the bare occurrence of such atrocities were a good reason for sterner punishment, many and many an instance might be found in civilized Protestant England. The following case occurred, no doubt, some time ago, but still so recently as to be within the "memory of the oldest inhabitant," and therefore sufficiently connected with our own times to retain its original interest.

About thirteen miles from Shrewsbury, on the main road to Ludlow, the long, straggling village of Church Stretton occupies the centre of a narrow valley, shut in by low wooded heights, through which many a winding glen leads westward through the Longmynd hills towards Bishopscastle and the Stiperstones. This part of the county is even now wild and barren, the haunt of grouse, and snipe, and screaming plover; but still some fields have been enclosed, and sundry farms marked off where, fifty years ago, all was soft marsh or green heather. Far in the centre of the waste, at least three miles from any village, there stood, at the time we speak of, a lone farmhouse, completely shut in by three round grassy hills, between two of which a cart-track led out to the high road, while between another pair a little brook trickled and trickled by, on its way to the distant Severn. In the hollow and on the hill-side were patches of barley and oats, and a few rods of potatoes; but all the rest was a bare mountain sheep-walk, without a tree or a corn-field to vary the monotony of grass. It was a desolate spot in winter, when the swollen stream rushed hoarsely down the glen, and fierce blasts came raging and howling through one or other of the hollows;—nor would every woman have borne the savage solitude with the courage and indifference displayed by the good wife of Longhope Farm.

She was, indeed, no ordinary character. Her father had occupied a few acres of land at Pilverbatch, a small village about four miles from Longhope, but, for several years before his death he had been a complete cripple, unable to labour, and supported solely by the vigorous activity of his daughter Rebecca. She managed everything herself—ploughed, dug, hoed, and made hay, in turn; bought and sold to the best advantage; kept the house in order, and husbanded their slender resources with the utmost economy. When the old man died, and the necessity for such constant exertion no longer existed, she listened to John Morgan's proposal that they should marry, make a joint-stock of their little properties, and try to earn an honest livelihood out of one of the mountain farms. Accordingly, the marriage took place, and a lease of Longhope was obtained on favourable terms.

Three years had elapsed, and the farmer was now a thriving man, owing in a great degree to the good sense and activity of his helpmate. For some time she had done all the household work unassisted, until the birth of a child, in the second year of the marriage, obliged her to engage the services of a young girl from Pilverbatch, named Jesse Williams. In winter, two or three labourers and shepherds were generally lodged about the farm, but in summer time it often happened that, for days together, there was no one at Longhope except the good wife, her child, and her maid. Both Morgan and his wife, from living so near the border, were half Welsh people, and both were kind-hearted and hospitable whenever opportunity offered.

Little Jesse, on her first arrival, had been quite dismayed by the loneliness and solitude; but habit and active employment, together with occasional visits from a village sweetheart, soon reconciled her to the change. It must be confessed that her admirer, young Harry Watkins, was by no means above the ordinary race of mortals, for he was slouching and lumpish in his appearance, a thought passionate, and as obstinate as a Kerry pig. On the other hand, he was a hard-working lad, who supported both himself and his aged parent; and he had somehow managed not only to settle in his own mind that Jesse should be his wife some time or other, but also to impress the same notion upon her, she scarcely knew how. It was therefore almost a matter of course on every fine Sunday afternoon, for Watkins, in his bright red waistcoat, and Jesse, in her blue cotton gown and gipsy bonnet, to roam

"over the hills and far away," or else to stand side by side in the aisle of one of the neighbouring churches.

But "the course of true love never did run smooth." Even in the solitude of Longhope, a rival intervened to disturb Harry Watkins's calm security. On various occasions Jesse had been sent to Church Stretton, to cure household articles of woman's gear for dame Morgan, and, being a pretty, fresh-coloured lass, she had attracted the notice of Joe Garbett, or Larking Joe, as he was called, who was not long in making her acquaintance. Truth, Joe was by no means bashful, nor afflicted by doubts as to his personal merit. He was a slight, active fellow, with light brown hair and grey eyes, the left eye half closed, from a confirmed habit of winking. There was a knowing, jaunty air about him, which made him a favourite among the clodhoppers for "main clever," a character which he laudably endeavoured to maintain by constantly taking them in. Numberless were the pints of beer he drank at their expense, by means of tricky wagers, skilful doses of flattery; yet Joe was always a welcome guest at the taproom of the Talbot or Buck's Head, where his songs or ready-witted jests gave life and animation to the circle of heavy-headed beer-drinkers. The old farmer, indeed, shook their heads, and prophesied that he would come to no good; but among the "lads of the village," as we may add, the lasses, too, Joe was a universal favourite. He soon managed to establish himself in Jesse's good graces, who was greatly flattered by such a conquest;—indeed, he might almost be considered as her first love, for her old sweetheart she had known from a child, and change from a playfellow to a lover had been scarcely perceptible. Garbett, too, was so much more insinuating, attentive, constantly walking part of the way back with her, carrying her basket, and chatting with a gaiety which contrasted strongly with Harry Watkins's matter-of-fact conversation. He took great care, however, not to come near the farm, and there was so little intercourse between Longhope and the neighbourhood, that Jesse's new love might have remained unknown for a long time, if she herself had not given mysterious hints on the subject to Watkins. It was some time before he comprehended her and when he did, his behaviour was so outrageous, and he treated Jesse so much like a criminal for daring to have another admirer, that her spirit rose against it, and she declared her determination not to be scolded by him any more;—he need never come after her again, she added, for Joe Garbett was a hundred times kinder and handsomer and away she bounced, like a Welsh pony when a stranger tries to catch him, leaving Watkins dumb with amazement, his face rivaling in colour the scarlet waistcoat below.

The result was, that Harry Watkins, on the very next Sunday, went to Longhope, and told dame Morgan his grievances. The good dame, knowing him to be a steady respectable lad, and having heard that Garbett was a very reverse, spoke seriously to Jesse, and even insisted on her giving up this new acquaintance altogether. But her interference only made the damsel more obstinate than before, and more resolved both to be "off with the old love" and to be "on with the new." She was obliged, however, in future, to meet Larking Joe secretly, and the worthy himself took especial care not to be seen in the neighbourhood. Thus matters remained until the twenty second of August, 17—, a day to be marked blood-red in the calendar of fate, so pregnant was it with death and anguish to the inhabitants of Longhope Farm.

It was the week of Ludlow fair, and farmer Morgan had attended, as usual, both to sell his sheep and wool, and to buy fresh stock for the winter feed. The sheep sold well but winter stock being in great demand, the farmer determined not to buy at the fair, but to try his luck at Bishopscastle, where there was to be a cattle sale on Saturday. So, tying up his money, a good deal of which was in guineas and silver, in a canvass bag, he mounted his nag and made for Longhope. A ride of sixteen miles brought him to Church Stretton, where he drew up at the Buck's Head for an hour, to enjoy a pipe and tankard in the crowded taproom. Larking Joe, as usual, was one of the party and though the farmer knew nothing of the affair between him and Jesse, he had the natural contempt for him that a hard-working man is sure to feel towards an idle scapegrace, nor could all Joe's songs and jests attract his attention. But Garbett himself was not so indifferent.

The quick-witted fellow had caught the heavy sound of the money-bag in the farmer's great coat as he threw it off, and when Morgan cautiously transferred the treasure to his coat pocket for greater security, Joe's eye had lighted for an instant on the bulging canvass. That momentary glance, was enough to raise in his evil mind the ghastly vision of a horrid crime. Unconscious of the coming doom, the farmer smoked on, and when his pipe and pot were both expended, rode stoutheadedly away to his lone house among the hills. Far up the glen he saw the cheery blaze of his own hearth, kindled, most likely, for the commonest purposes, yet "it looked like a welcoming," and he pressed on the faster to gain the comfortable fire-side. A sturdy halloo brought out a herdsman, who took charge of his horse, and Morgan was soon installed in the chimney-corner, talking over the events of the day with his wife, while Jesse bustled about arranging the materials for a right substantial supper.

Rebecca Morgan suited her husband exactly. Her courageous temper, persevering industry, and good management, were just such many virtues as the stout man knew how to value; he felt a respect for his helpmate, consulted her on all occasions, and availed himself of her strong good sense without a particle of jealousy, or the least dread of being hen-pecked. There was no sentiment or refinement in either, but good old English feeling was not wanting. And when their early time of rest arrived, and the couple stood by the bed where their child lay, soft and warm, sleeping the summer's night away, the farmer's "God bless 'un" and the mother's light kiss on his cheek, were truer far, and, if rightly looked at, far more affecting, than if the expression of parental love had been clothed in daintier phrases;—yet the heart that will feel little interest in the homely affection of a rough yeoman in his lone farm-house, will soften at once beneath the

graceful sorrowing adieus of the cold-hearted Mary of Scotland!

Little cared the bluff farmer for such reflections. The live-long night he snored and slept with a vigorous enjoyment of rest that knew no interruption, and when Saturday morning rose bright and clear, out he tumbled, got into his clothes, dipped his head into a bucket of water, and routed out the shepherds and herdsmen with a bustle and activity that would have astonished the farmers of our degenerate days. In less than an hour he and all his men were off across the mountains in Bishopscastle, and, as Morgan intended to drive home whatever sheep he might purchase that same day, he was not likely to return before dark. As they were leaving the farm, one of the shepherds fancied he saw a man's face looking down on them from the hill top, but it vanished too quickly, and the bumpkin cared too little about the matter, to think it worth mentioning to his comrades.

While the men-folk were away, the good wife and Jesse were busily engaged the live long day in brewing a cask of home made—and hard work it was to fill the copper from the brook, ladle out the hot wort, and set it to cool in the mash tubs. But all was done before dusk; the cooled liquor thrown back again into the boilers to remain until Monday, the mash tubs all cleaned up and turned over on the floor, and everything set in order, to the high satisfaction both of mistress and maid. Dame Morgan had just sung her little Johnny to sleep, and, leaving him in the bed, had returned to the large room, which, like the cobbler's stall, served for kitchen, and parlour, and all, when she saw three men enter the farmyard and approach the house. She went to the door immediately, when one of the three stepped forward, and very civilly asked her to give them a bit of bread and cheese and a cup of beer, as they had lost their way among the hills.

Such claims on her hospitality had frequently occurred in that wild country, and she made no difficulty about giving the refreshment they required; but not liking that the room she had just cleaned up should be dirtied again by these strangers, she called Jesse, and bade her carry some bread and cheese and ale into a sort of open shed across the yard, where, in fine weather, the shepherds commonly took their meals.

The moment Jesse set eyes on the men, or, rather one of them, she started, and reddened, and cast such furtive glances at her mistress, that the latter guessed instantly that one of the men must be Joe Garbett. She felt a great inclination to pack the whole of them off without ceremony, for coming in that underhand way where they were not welcome; but, on second thoughts, she determined to wait until her husband returned, and leave him to deal with them. Jesse bustled about to hide her confusion, looked out a huge brown loaf and half a cheese, and, bidding the men follow her, she tripped gaily across the farmyard.

She had not been gone a minute before a scream roused dame Morgan's anger still more against the men who, she imagined, had been rude to her little maiden, and brimful of wrath, she hurried to the door.

Ha! there is no romping there! Shrieking in wild rrrror, the blood gushing in streams through the hands that clasped her throat, Jesse was staggering out of the shed. Close at her back followed one of the men with a bloody knife, and, cursing fiercely, thrice he stabbed the poor girl with all his might. The blows forced her against the shed, and the smallest man of the three, springing forward with an oath, caught up a broken ploughshare, and drove it on the victim's head with crushing violence;—she dropt, and there was no more shrieking.

"Murder!" issued unconsciously from dame Morgan's lips in a hoarse whisper—the next instant her own fearful danger flashed on her mind. To shut the door and down with the wooden bar was instinctive. What next? Alas! she could neither resist nor fly. There was not a moment to think. The mash tub caught her eye—she flung herself down on the floor, pulled the tub over her, and had just time to coil herself round before the ruffians burst in with fierce excoations. She heard their horrible threats, the eager search made for her, the furious rage they showed when she was not to be found. All agreed that it was impossible she could have escaped, and again and again every hiding-place was ransacked except the one—nay, two of them even sat down on the tub, and reproached one another with having murdered Jesse too soon, as they wanted her to tell them the "old 'un's" hiding-place.

There she lay close coiled, knees, elbows, and head all jammed together, not three inches from them, in fear doubtless—in mortal, agonizing fear—but still with every faculty sharpened to a painful acuteness, and not without a silent hope that the good God would even yet protect her.

O heart of proof, stand firm! She heard one of the ruffians start up, and declare that he could soon find out where she was. Then there was a cry—the cry of her little Johnny—the mother's heart sprung to her lips, for she had not thought of danger to him.

"Ay, burn the kitten," said one, with a mocking laugh, "and the old cat will soon come out."

"Well done, Joe," replied another, "clap his toes to the bars."

Mercy! mercy! they are torturing her child! His shrill screams of pain ring in her ears—there is a hissing sound as of burning flesh—oh! she cannot bear it—the devilish practice will succeed—the tub rises—no, it falls again, and the miscreants have not seen it move.

"I can't save him, I can't save him," muttered the strong-hearted woman to herself with maniac rapidity. She gnawed her arm to the bone, but it felt not, for she dared not stop her ears, and the piercing cries of her child thrilled through her brain with a bitter agony that mocked all other pain. Scream after scream continued, she knew not how long, and still, with resolute courage, she lay silent and motionless as the dead, baffling the hellish scheme of those bloody murderers. At length they too wearied of the poor infant's cries.

"Stop the reptile's squalling, Joe," said one, surlily;—the next instant there was a dull heavy sound, as of something soft swung against the wall, and the cries imme-

diately ceased. Then the mother knew that her little boy was dead.

The ruffians must have proceeded to search the house for plunder, since the next thing the miserable woman remembered was the rattling of money over her head. They had actually chosen the bottom of the mash-tub as the place on which to divide their booty, and talk over their future plans! After counting out to each other the price of blood, which was, after all, an inconsiderable sum, they spoke of her own unaccountable escape, and the danger there was that she might be able to recognize them. All agreed that they must quit that part of the country, but it was at last arranged before they went, that they would, on the following Sunday night, break into the house of a Mr. Harper, near Longden, which had been marked by the gang for plunder on account of the quantity of plate it was known to contain. And then, with brutal oaths and grumbings at their scant booty, the miscreants went away, not dreaming that a just Providence had posted in the very scene of their crimes a living witness to work out the destined retribution.

In about an hour afterwards, when it was almost dark, the farmer and his men came down the glen, driving a large flock of sheep before them. But this time no cheerful blaze greeted Morgan's return. He rode a short distance ahead, and when he found the door of his house ajar, and no light within, he dismounted hastily, and entered in some apprehension. No one was there; he called out "Becky!" "Jesse!" but they came not. Dreadfully alarmed, he rushed to the smouldering fire, thrust in some sticks, and stirred it into a blaze. The quivering light fell strongly on a white bundle at his feet, streaked with red. He lifted it up—good Heavens! it is the bloody corpse of his child! His shout of horror brought in the shepherds, and all stood gazing in dumb consternation, when, to their infinite terror, a mash tub which lay on the floor slowly rose up, and the form of a woman gradually uncoiled itself into a kneeling posture, like one rising from the grave. The face was deadly pale, and the open eyes stared vacantly upon them. At this fearful apparition, the men shrank back in superstitious dread, and even the stout farmer quailed. "Becky!" at last he uttered, in a doubtful tone. She nodded. "Becky!" he said again, more confidently. She stretched out her arms, and Morgan, recovering his self-possession, caught her up like a feather, and vehemently demanded his child. The rough embrace roused her from the trance into which she had fallen—"Johnny is dead!" she said, piteously wringing her hands—"Johnny is dead!"—and that was all she would answer.

"Search the place!" shouted the farmer furiously, "there has been murder here!"

And while the men, with lighted sticks, and what weapons they could find, hurried through the house and out-buildings, again Morgan questioned his wife as to what had happened. But it was in vain; and, carrying her to a seat by the fire, he was about to join the men in their search, when all at once she burst into a loud laugh which froze his very life-blood.

"They burned him—ha! ha! ha!" she yelled frantically—"they burned Johnny till he screamed so,"—and she imitated the poor child's cries with strange exactness, ending in a fit of violent convulsions. It took four strong men to keep her down while it lasted, but afterwards she was so weak that Morgan carried her to bed without any opposition, and she lay quiet enough, muttering to herself incoherently.

The men had brought in Jesse's dead body, and as it was quite clear that murder had been committed, one of the shepherds set off on horseback for Church Stretton, to obtain assistance. The people there were almost all in bed, but as he rode through the village, hollalaing "Murder!" at the top of his voice, every one rushed out to learn the news.

Within half an hour, all the men in the place had started for Longhope, and a rigorous examination was made, both on the farm itself, and over the neighbouring hills; but nothing was discovered, and the only chance was, that dame Morgan might be able to give some clue to the mystery. The village surgeon had already bled her, and administered a strong opiate, so nothing could well be learned from her before the morning. Meantime, the rumour of what had happened spread far and wide, and, during the forenoon of Sunday, people kept pouring in from all the neighbouring villages in crowds. Among the foremost was Harry Watkins, to whom poor Jesse's fate seemed most incredible. He shed a few natural tears on first seeing her dead body, but the sight of her gaping wounds roused his dogged temper, and all other feelings were absorbed in the one burning thirst for vengeance. As yet, however, no one could point out the murderer, and he stalked moodily about, with flushed face and set teeth, glaring without reply at any one who spoke to him.

At last it was buzzed about that dame Morgan had awoke quite sensible, and that the constable was taking her depositions; upon which Watkins forced his way to the bed-room door, where his well-known connexion with the murdered girl procured her admittance. There were only four others present, consisting of the farmer, the constable, and his assistants, to whom dame Morgan, propped up in the bed with pillows, was faintly telling her tale of horror.

"I could not save him, John, indeed I could not," she said, in a deprecating tone, as she spoke of their tortured child; and, in spite of her husband's kind assurances and hearty commendations, she looked up in his face again and again, repeating the same pathetic appeal, "Indeed and indeed I could not save him!"

The intelligence she gave showed clearly that Joe Garbett had been one of the three men. Above all, the intended robbery at Longden was of the last importance, and the constable, enjoining on all present the utmost secrecy, hurried off to make arrangements for capturing the villains that very night at Mr. Harper's. The crowd of idlers without, unable to gather any information from the man of office, closed round Harry Watkins with eager inquiries; but he only shoved them surlily aside, without noticing their questions, and strode away over the hills at

a desperate pace. Meantime preparations were made, with the utmost caution, for seizing the three desperados. Mr. Harper was warned of the intended robbery; one by one, the constables of Church Stretton and Longhope, with four assistants, dropped quietly into his house; Morgan, too, would be present, in spite of all remonstrance; the family were directed to go to church as usual, and when the bell ceased tolling, three or four men hid themselves in the front parlour, and the remaining three, with Morgan, in the drawing-room at the back. The house stood by itself, having pleasure-grounds both in front and rear, and stables and other offices at each side. Half an hour had scarcely passed before a pane of glass cracked in the drawing-room windows; one, two, three men were heard jumping in, and out burst the farmer on the foremost, with a huge oak stick in both hands, one blow of which beat the ruffian down in an instant. A second was also secured without difficulty, and Joe Garbett, the third, was seized by the collar at the same instant by the constable of Stretton and his assistant. But that alert villain threw off his coat in a twinkling, and sprang at one bound through the open window. The constable drew a pistol and blazed after him, then threw himself out headlong, closely followed by the men from the parlour. But the fugitive was lithe of limb as a greyhound;—life, dear life, hung on his speed, and he would probably have got clear off but for an unexpected aid. A man jumped from the shrubbery right in Garbett's path, dealt him a dreadful cut with a broad axe which almost shivered his cheek off, and brought him heavily to the ground. Again the axe was raised in both hands, and down it came with full swing, not on Joe's head indeed, but so close that it grazed his left ear. Before a third blow could be struck, the pursuers came up, and found their new ally was young Harry Watkins. He was perfectly mad with rage, and they had great difficulty in wrenching away the axe, and preventing him from finishing Jesse's murderer at once. As soon as Garbett recovered his senses, the three miscreants were handcuffed, and carried off to Shrewsbury gaol, there to await their trial.

The sensation created in the neighbourhood by a crime so atrocious was intense, and nothing perhaps in the whole business excited greater horror than Joe Garbett's cold-blooded murder of poor Jesse, whose sweetheart he had professed himself. People asked each other if it was possible that Joe, larking Joe, whose songs and jests they had so often laughed at, could be guilty of such unheard-of cruelties. But in truth there was nothing wonderful in it; his native wit and high animal spirit concealed a character of selfish hardness, a mind utterly callous to all human sympathies. The very habit of jesting on every one and everything, both indicated the man's heartlessness, and tended to increase it. Still, there was undoubtedly an apparent contrast between his pot-house levity of manner and his actual atrocities at Longhope, which deepened the general feeling of abhorrence against him. When the trial took place, and the jury, without leaving the box, returned a verdict of guilty, a loud cheer ran through the court, though promptly and sternly rebuked by the presiding judge; and as the miserable men were carried back to gaol, the mob followed with curses both loud and deep, the women, especially, loading Garbett with expressions of utter loathing and detestation.

At that period the law gave to convicted murderers but short shrift between sentence and execution, little more, in fact, than was necessary to set up a gallows. An immense crowd attended on the morning of the execution, and when the three prisoners appeared on the platform for the last time in this world, they were received with a mingled yell of exultation and abhorrence. It was the only thing that seemed to affect the wretched Garbett—that universal expression of bitter detestation by his fellow-men. Hardened as he was to all other considerations, the village favourite yet felt acutely, even at that fearful moment, the loss of his little world's applause.

The hangman's office was soon done—the white caps drawn down, the rope adjusted; the sheriff dropped his handkerchief as a signal, the bolts were drawn, the platform fell, and in a few minutes three lifeless carcasses swung in the breeze. This was all that remained of the murderers of Longhope Farm.

#### Literary Courtship.

It was in the crowded and fashionable saloon of M. Suard, where all the most distinguished wits were wont to assemble, and where Guizot saw, for the first time, the woman who was destined to exercise a noble and beneficial influence over his whole life. The circumstance which occasioned the marriage of M. Guizot was somewhat tinged with romance. Born of a distinguished family which had been ruined by the revolution, Mademoiselle Pauline de Meulan had found resources in an education as solid as varied, and to support her family had thrown herself into the trying career of journalism. At the period in question she was editing the *Publiciste*. A serious malady, however, brought on by excess of toil, obliged her to desist from her labours. Her situation was a cruel one; she was almost in despair, when one day she received an anonymous letter in which, while she was besought to preserve her tranquillity, an offer was made of discharging her task during the continuance of her sickness. This offer was accompanied by an article admirably written, the deas and style of which, by a refinement of delicacy, were exactly modelled upon her own. She accepted the article, published it, and regularly received a similar contribution until her restoration to health. Profoundly affected by the incident, she related it in the saloon of M. Suard, exhausting her mind in endeavours to discover her unknown friend, and never thinking of a pale, serious young man with whom she was scarcely acquainted, and who listened to her in silence as she pursued her conjectures. Earnestly supplicated through the columns of the journal to reveal himself, the generous incognito at last went in person to receive his well-merited thanks. It was the same young man just alluded to, and five years afterwards Mademoiselle de Meulan took the name of Madame Guizot, and became the wife of the present Prime Minister of France.

### Island Adventurers.

In 1681, a Mosquito Indian was accidentally left on the island of Juan Fernandez by Captain Watling. For three years he lived upon fish, goats, seals, rock-fish, snappers, cabbage-tree, and a variety of herbs. He built himself a hut, and made his bed with goat-skins. Upon Captain Watling's revisiting the island, the Indian saw the ship at a distance; and, knowing it to be an English one, killed three goats, dressed them with leaves of the cabbage-tree, and brought them down to the shore. The ship anchored, and a Mosquito Indian who was on board, with other sailors, landed. Running to his brother Indian, he threw himself upon his face at his feet. The islander lifted him up, and then fell at his feet in the same manner. He was afterwards hailed by the crew, when his joy was signified in every action.

Not long after the departure of this Indian, Alexander Selkirk was left, with his own consent, upon the same island, and passed upon it several years\*. His history is well known. It was he that planted the oats which Commodore Anson saw growing some years afterwards. The island rises high out of the water, and has a steep shore, fine woods and savannahs. The soil in the vales consists of a black and fruitful earth; and there is good water in almost every part. It has been peopled by the Spaniards; and there is a regular garrison and a governor. From this account we learn that Juan Fernandez was stocked with goats by the discoverer; and first planted with oats by a man who was unfortunate enough to be cast upon it.

Upon a rock, twenty-nine miles north-west of Noaheevah, in the South Seas, an American passed three years. With three companions (who died soon after their landing), he had quitted his ship for the purpose of procuring feathers. The rock upon which they were cast was barren and desolate; but he contrived to live upon the flesh and blood of birds. The skulls of his companions were his only drinking vessels. In 1818 the crew of the Queen Charlotte discovered a fire on the rock, made of dried sea-weeds. Knowing the rock to be barren, their curiosity was excited; and the captain sending off a boat, they discovered the forlorn seaman, and took him to Bombay. This man had a few seeds in his pocket; and he planted them, but they refused to propagate.

In the year 1808 or 1809, a sailor, named Jeffery, on board the *Recruit*, having stolen a little spruce beer, his commander, Captain Lake, set him on shore on the uninhabited island of Sombro, in the Atlantic archipelago. Two months after this, the *Recruit* returning to the same latitude, the captain sent a boat, with several seamen, in order to retake the man on board; but he was no where to be seen:—and the crew concluded that he had been devoured by the large birds which frequent that barren rock in vast numbers. Jeffery, in the meantime, having been landed, with only the clothes he had on, was left, helpless and hopeless, to endure all the agony of the apprehension of being devoured by birds; or of dying of want. There was no shelter, and the heat of a tropical sun almost drove the unfortunate man to madness. The island being a low rock, after searching for some time, he discovered water in some of the hollows, and a considerable quantity of birds' eggs, and a few limpets. On these he lived for nine days; during which time he observed several ships pass in the distance, to which he made signals, but without effect; until he was discovered by the master of an American schooner, who took him on board, and landed him at Marblehead, in the state of Massachusetts. In the mean time, the conduct of Captain Lake having been reported to the Commander-in-Chief of the West India station, he was tried before a Court-Martial, and sentenced to be dismissed from his Majesty's service. The Parliament of Great Britain, too, having at the instance of Sir Francis Burdett, recommended a search for the unfortunate seaman, he was brought to England, and arrived in London in the month of October, 1809. When I first saw him, I was particularly struck with the modesty of his manners, and the grave simplicity of his conversation. Deeply impressed with gratitude to Heaven for his preservation, there was a solemnity of tone in the artlessness of his remarks that struck me with admiration. He was about one-and-twenty years of age. Captain Lake's family having compensated him for the sufferings he had experienced, Jeffery left London for Cornwall, where he was born, in order to visit his mother. He was met near Polpero by his father-in-law, who, soon after his first greeting, returned to apprise his mother of his arrival. The whole village now came forth to meet him; and nothing could exceed the joy with which he was welcomed. The meeting between him and his mother was affecting in the highest degree. She gazed upon him with bewildered anxiety, as if she could scarcely believe what she saw; but, recovering herself, they rushed into each other's arms, and for some moments were lost in sobs and tears. Nothing but the arrival of Jeffery was talked of; while the joy of the villagers, and the tumultuous endearments of the mother and son, consecrated an evening that will for many

years be remembered in that village with the liveliest satisfaction.

The Gallipagos islands, situate about 200 leagues west of Peru, are of volcanic origin; and every hill retains evidence of being the crater of an extinguished volcano. The only one, ever inhabited, was taken possession of by a native of Ireland (Watkins), who quitted his ship; and taking up his abode there, built a hovel, planted potatoes and pumpkins, and lived a miserable life, for several years, on tortoises and other marine animals; bartering vegetables for rum, and other necessaries.

The island of Tristan d'Acunha is an entire mass of lava. It rises 5,000 feet above the sea, in the form of a cone. With the exception of a plain, six miles in length, and two furlongs in breadth, this island is entirely covered with cope-wood; and not a day passes without rain. The common thistle, the lichen, a species of goosefoot, and storks-bill, are found there. There, too, are found two or three species of seal, of which the leonine is so little alarmed at the presence of men, that persons may get on its back, and be carried into the water. The black albatross breed there in a gregarious manner; and, upon being touched, throw out a deluge of fetid oil fluid. Wild goats and hogs, too, are seen among the bushes, a few having been left by early navigators. In 1814, this island was inhabited by three men; an American, named Lambert, a Portuguese, and a native of Minorca. They lived upon fish and birds' eggs, and covered their huts with straw and seal-skins. Lambert took possession of the islands, and constituted himself sole sovereign by a formal instrument, in which he stated, that as no power whatever had publicly claimed them, he had taken possession of them for himself and his heirs, with a right to convey them, by sale or free gift, as he or his heirs should think proper. He farther declared, that his motive for taking possession was to procure for himself and family a competence and a house far beyond the reach of chicanery and misfortune; and that in order to ensure this, he would devote himself to husbandry, and supply ships, calling there, with any articles he might be able to procure. By this document, he invited ships to lay by, opposite the cascade, where they would be visited by a boat from the shore, and supplied: and he promised, that himself and his people should be governed, in their intercourse with crews of ships, by the principles of hospitality and good fellowship. On taking possession, he built a hut, thatched it with a coarse grass, and planted cabbages, turnips, carrots, parsnips, and beet; lettuces, onions, radishes, parsley, and potatoes. All these grew better in winter than in summer, in a soil of vegetable mould. At this time, there were between three and four hundred acres of land, well adapted for cultivation; and a meadow of about fourteen acres. At the end of a year's occupation, he had a small flock of geese. The fowls bred three or four times a year:—but all his English and Muscovy ducks, and his turkeys, excepting three, died from eating the entrails of fish. He had eight sows and four boars; seven of which he caught on the island. He, as well as his pigs, lived chiefly on the flesh of sea-elephants, which abounded in two ponds of ten or twelve acres in extent. There were, also, from twelve to sixteen wild goats. The little black-cock was also in great numbers, very fat, and its flesh delicate. On the mountains were petrels, sea-hens, mollahs, the albatross, and other birds. Among the sea-cliffs they caught grampers, mackarel, and a beautiful species of cray-fish. Having collected about a thousand gallons of oil, Lambert wrote to a friend, Capt. Briggs, giving him an account of the island, and proposed, that he should purchase a schooner of about twenty-five tons, make his brother master of her, and send it for the oil and skins he had collected, with three or four boats, and provisions for twelve months: Briggs to find the money and take half the profits. Lambert remained on the island till May 17, 1812: when, under pretence of collecting wreck, he and one of his companions quitted the island in a boat; leaving his empire in possession of Currie and the native of Minorca. Currie had accompanied Lambert under an engagement of receiving wages and a share of the produce, during his stay: but received nothing. After Lambert's departure, he and his companion suffered many hardships; and the chief of their stock was taken from them by the vessels that came to the island. Upon Napoleon's arrival at St. Helena, it was deemed advisable to take possession of this island; and the Falmouth frigate was, in consequence, despatched, and arrived in the month of August, 1816. Currie and his companion immediately placed themselves under the captain's protection.

New Island (one of the Falkland Islands) has, of late, become remarkable for having been the solitary residence of a Captain Barnard, an American, whose vessel was run away with in the year 1814, by the crew of an English ship, which, on her passage from Port Jackson, had been wrecked on the south side of this island. Capt. Weddell, in his voyage from the South Polar regions, met with Capt. Barnard in 1821, and from him learnt the following account:—"Capt. Barnard was at New Island with his vessel, in the performance of a voyage for seal-furs, and when on the south side of the island, he met with the crew of a wrecked English ship. Their number was about thirty, including several passengers, some of whom were ladies. He kindly took them to his vessel, treated them with all the hospitality

which their destitute condition required, and promise to land them, on his passage home, at some port in the Brazils. Owing to the additional number of people hunting parties were frequently sent to procure supplies; and when the captain, with four of his people, were on an excursion of this kind, the wrecked crew cut the cable and in defiance of the Americans who were on board, run away with the ship to Rio Janeiro; whence they proceeded to North America." On Capt. Barnard's return he was struck with astonishment at finding his ship carried off. On reflection, however, he soon guessed the cause; which he attributed to the fear of being taken to America, where they would become prisoners of war. Nothing in the way of supplies having been left for him and his four companions, he was forced to consider how they were to subsist; and recollecting that he had planted a few potatoes, they directed their attention to them, and in the course of the second season obtained a serviceable supply. They had a dog, which now and then caught a pig; and the eggs of the albatross, which were stored at the proper season, with potatoes, formed a substitute for bread, and the skins of the seals for clothes. They built a house of stone, still remaining on the island which was strong enough to withstand the storms of winter, and they might have been comparatively happy but that they were cut off from their relations and friends. To add to the misfortunes of Capt. Barnard in being separated from his wife and children, his companions, over whom he exercised no authority, but merely dictated what he considered was for their mutual advantage, became impatient even of this mild control, took an opportunity to steal the boat, and he was left on the island alone. Being thus abandoned, he spent the time in preparing clothes from the skin of the seals, and in collecting food for winter. Once or twice a day, he used to ascend a hill, from which there was a wide prospect of the ocean, to see if any vessel approached; but always returned disappointed and forlorn:—no ship was to be observed! The four sailors, in the meanwhile, having experienced their own inability to provide properly for themselves, returned to him after an absence of some months. He still found much difficulty in preserving peace among his companions; indeed one of them had planned his death; but, fortunately, it was discovered in time to be prevented. He placed this man alone, with some provisions, on a small island in Quaker Harbour; and, in the course of three weeks, so great a change was made in his mind, and when Capt. Barnard took him off, he was worn down with reflection on his crimes, and became truly penitent. They were now attentive to the advice of their commander. In this way they continued to live, occasionally visiting the neighbouring island in search of provisions, till the end of two years, when they were taken off by an English whaler, bound for the Pacific. Capt. Barnard informed Capt. Weddell, that a British man-of-war had been sent expressly from Rio Janeiro to take them off, but by some accident the vessel, though at the Islands, did not fall in with them.—*Bucke.*

### Medical Virtues of Animals.

PERHAPS it is because the proverb says all flesh is grass, that physicians draw so largely upon plants to repair the injuries sustained by animals. Anciently, however, the goodwives and doctors, (leeches, as they were then called,) prescribed a variety of animal substances for the cure of all the ills which flesh is heir to. Insects, fish, reptiles, birds, mammals, and in short every living thing, was reckoned good against some complaint or other. We intend in this article to give the reader some idea of the medical zoology of ancient and modern times. Our examples have been collected from numerous works, old and new, which we have read at different periods.

As Spallanzani found from experiment that the gastric juice of animals will preserve meat for some time from putrefying, this fluid has been used as an antiseptic. Dr. Good observes that "physicians have availed themselves of the corrective quality of the gastric juice of various animals internally in cases of indigestion and debilitated stomach, and, externally, to check mortification, and as a stimulus to ulcers."

Our forefathers ascribed extraordinary powers to such creatures as were at all regulated by "the dark, dismal, dreamy night." Hence the bat and the hedgehog, both nocturnal animals, were thought to possess singular properties. Albertus Magnus affirms, that if we will but anoint our eyes with a hedgehog's right eye fried in oil contained in a brass vessel, we shall enjoy the faculty of seeing distinctly by night, and so we may lie in bed reading or catching fleas without the assistance of a candle. Pliny recommends, and listen to him all ye barbers and barber-surgeons, a mixture of hedgehog's gall and bat's brains for the removal of superfluous hair. We should make no objection, not the slightest, to the bat's brains; but we should hesitate in applying the hedgehog's gall, lest we should come out in prickly armour soon afterwards. Bear's grease is extensively used to promote the growth of hair and sometimes to cure the ring-worm. Album græcum, (not a Greek album, but the white manure of dogs,) was formerly used for the cure of soar throats and other disorders; and the strong smell of the fox is still supposed by some persons to repel infectious diseases. The *Viverra civetta* produces, by secretion, the drug well known by the name of civet. Castor, a secretion from the beaver is occasionally used as an antispasmodic. A writer in the *Magazine of Natural History* (vol. iv. p. 286) says that the concretion

\* Selkirk was not wrecked on the island of Juan Fernandez, as most persons suppose; but, having a great dislike to his captain, he was left there at his own desire.

variously called bezoar hystrices, bezoar porcinum, pietro del porco, or lapis malacensis and obtained from the gall bladder of the Indian porcupine, was formerly employed as an aperient and stomachic. The bezoar found in the paco is, also, prized for its medicinal virtues. The lard of the common hog is of great use in medicine, being an ingredient in various sorts of plasters, either in its pure state, or in the metamorphosed form of pomatum; and the editor of the *Maids' Wives' and Widows' Penny Magazine*,—a magazine long ago exploded,—assures his fair readers that “a rind of pork bound upon a wound from a needle pin, or nail, will prevent the lock-jaw” (vol. i. p. 14). Who, indeed, but a Jew or a Mahomedan could have a lock-jaw when near a piece of pork? We have known nurses give a baby a rind of pork, instead of a coral, to assist their teething, and who can doubt that it tempts the teeth to come sooner than they otherwise would? It is said that there is hardly a part of the rhinoceros's body but what is esteemed by the natives of the country it inhabits as an antidote to poison. Its dried blood, more especially, is in high medical repute among the Hottentots. The substance called musk, and so long celebrated as a perfume and an antispasmodic, is obtained from the Thibet *chevrotain* (*Moschus moschiferus*). It is a most powerful remedy in cases of nervous and hysterical disorders. The antlers of deer abound in that salt which is the basis of the spirit of hartshorn; and the remains of them, after the salt is extracted, being calcined, furnish the valuable astringent called burnt-hartshorn. It was once supposed that shavings from the hoof of the elk acted as a preventive of the falling sickness, &c. It was probably the horn of some species of antelope which was anciently sold at a high price as the horn of the fabulous quadruped called unicorn, and which was famed as an antidote to poison, and as a cure for many diseases. By the way, we may mention that Thomas Bartholinus wrote a most learned treatise of nearly four hundred pages, and illustrated by a variety of figures of one-horned men, women, horses, rhinoceroses, birds, snakes, and insects; and we have not been able to find any copy of it in any of our national libraries, the only one which we have seen being contained in the choice collection of ancient philosophical works in the possession of Mr. J. H. Fennell, the natural historian. In this rare treatise, entitled *De Unicorni Observationes Novæ* (Amsterdam, 1678), there is a whole chapter devoted to the medicinal uses of the horn, which was considered so precious that the Landgrave of Hesse records that he saw in the treasury of St. Denis, France, the great porphyry vase, and “the unicorn” meaning probably the precious piece of unicorn's horn, said to have been presented to the treasury of St. Denis, by Suger, and which for many centuries was regarded as one of its chief ornaments. Cuvier was of opinion that the notion of such an animal existing as the unicorn originated in some specimen of the oryx (*Antelope oryx*, Pallas) that had lost one of its horns, which are “slender, two or three feet long, straight, pointed, and round.” The paseng, or Persian wild goat (*Capra aegragus*) is the animal from whose intestines is occasionally obtained a concretion, called oriental bezoar, and one in universal repute for its medicinal virtues, though now but little esteemed, and that only where the medicinal art is not so advanced. Goldsmith tells us that “it has been given in vertigoes, epilepsies, palpitations of the heart, colic, jaundice, and in those places where the dearth, and not the value of medicines, is consulted, in almost every disorder incident to man. In all, perhaps, it is equally efficacious, acting only as an absorbent powder, and possessing virtues equal to common chalk, or crab's claws.” The blood of the ibex (*Capra ibex*) is said to be used in Germany for the cure of the pleurisy. The common goat's milk is often recommended to the sick as a substitute for asses' milk, which is also esteemed medicinal. Phthisical patients are said to have been cured by drinking warm goat's-milk, with a teaspoonful of arthorn every morning and afternoon of several successive days. Many patients used to resort to various parts of Ireland and Scotland to drink it in the form of whey. It is not improbable that the milk of the goat derives some salutary qualities from the medicinal herbs which it feeds so extensively. Dr. Mead and other writers mention the dried blood of a he-goat as a remedy for the pleurisy and inflammatory complaints. The strong and strong smell from he-goats has been regarded as beneficial to nervous and hysterical persons, and so refreshing to horses that he-goats have been kept in stables entirely on that account. Mr. Fennell, in his *Natural History of Quadrupeds* (1840), page 403, remarks that “as we know that the goat eats of many plants which would prove injurious, if not poisonous to the horse, it is not improbable that the latter is preserved by the goat picking the useful plants out of the fodder.” The breath of cows is considered good for weak lungs, and consumptive persons were, therefore, advised to frequent cow-houses. The cow's milk is recommended in fevers by some physicians, though others do not approve of it. Herds have been dignified with the title of English bezoar said to possess all the supposed virtues of the oriental bezoar. They have been employed as alexipharmica or antidotes against poison, the plague, or the small-pox. The gall, liver, spleen, and urine of bovine cattle have also a place in the materia medica.

In the second class of animals, comprising the *Cetacea*, we obtain ambergris and spermaceti from a species of whale. The lapis manati, prized by the Indians of

Guiana and the West India Islands for its reputed virtues in convulsions, colic, disuria, &c., is obtained from the *manatus*, another species of cetacean. Blumenfroh, in his *Manual*, (p. 283,) says it is “merely the bampam or bulla ossea” of the animal; but Dr. Hantley, in the *Quarterly Journal of Science*, (April 1830), says that is incorrect, and that manati stones are, in reality, only certain petrous bones found within the cavity of its cranium.

In the third class of animals, comprising birds, little is to be found relative to the materia medica. New-laid eggs are regarded by Ovid as amorous incentives; and the white of new-laid eggs, mixed with lukewarm milk, is generally considered highly nutritive to weak and sickly persons. Bingley, in his *Tour through North Wales*, (1800,) says “I have been informed that a disorder similar to St. Anthony's fire, and called yr eryr, or the eagle, is supposed to be always cured, if a man or woman, whose father, grandfather, or great grandfather, have eaten the flesh of an eagle, spits upon and rubs the part affected. A servant girl belonging to a friend of mine, residing in Wales, says that she was cured of this complaint by an old man, whose grandfather had eaten of the bird's flesh; and that he assisted the charm with some words which she did not comprehend.” We opine that the saliva of a man or woman will be found to be quite as efficacious in this disorder without his or her “father, grandfather, or great grandfather” having feasted upon the flesh of the eagle or any other bird that wings the air. The Ostiars believe that the skin, bill, and claws of the kingfisher, kept in a purse as a sort of amulet, will preserve the owner from all disease; and that if a woman be touched with one of its feathers capable of floating upon water, she will become enamoured of the experimentalist. Sorry, very sorry, are we to declare, that we have touched several young ladies with the lightest of the kingfisher's feathers, and it produced no remarkable effect whatever, except in one instance, when having applied it to the nose of a charming and beautiful heiress she sneezed immediately. Ovid, who entirely overlooks the magic feather, mentions “the froth of which the halcyon builds her floating nest,” as an ingredient in a composition for removing freckles from the face, and we doubt not that if any freckled individual can succeed in finding either the said froth or floating nest, he may have some prospect of a cure thereby. Whether the South Sea bubble and sinking fund have in any way affected the halcyon's, or king-fishers affairs we know not, but certain it is that now-a-days it never uses froth in building or launches its nest upon the waters. Had we found a floating nest of froth we should have imagined it to be the pleasure yacht of some fairy publican, and have searched it, not for eggs, but for any stores of aniseed and whisky which he might have had on board to facilitate angling by intoxicating the poor, simple, and uneducated fishes. Maplett, in his scarce little work, entitled *A Greene Forest, or a Natural History*, (1567), assures us that the peacock's dung is “many wales medicinal,” and adds that the bird conceals it on that account, which to say the least is a very selfish act, quite unworthy of so beautiful a bird. Goose grease is sometimes used for the cure of ringworm. The oil which the fulmar elaborates by feeding on the blubber of the whale is esteemed at St. Kilda as a certain remedy for both internal and external complaints. Martin mentions its having been successful in cases of rheumatism in London and Edinburgh. Aristotle, Ælian, Heliodorus, and other ancient gentlemen tell us that the flesh of the sea-lark or dully, is an infallible cure for the jaundice; and some even assert that it may be immediately cured by merely looking at the bird.

Such were the vaunted properties of animals. Reptiles, fishes, and insects had also their medical value, which we shall detail in our next.

#### Scientific Miscellany.

##### ORIGINAL AND SELECT.

**THE NEBULAR THEORY.**—The discoveries of Astronomy have not only extended over the existing world of celestial bodies, but recent investigations have revealed the probable mode in which new worlds are called into being, and shown the process by which they are gradually and imperceptibly moulded into shape. Sir William Herschel, and his no less gifted son, Sir John, in conjunction with the French astronomer, Laplace, had, for a considerable period, observed certain masses of luminous vapours in different portions of the heaven, and presenting various appearances in the course of their progress towards a definite form and character, some appearing as mere films of light, others gathering into separate masses, others assuming something like a globular shape, while others presented a dense central nucleus of light surrounded by a luminous mass like the tail of a comet, so that a series was thus to be observed from groups of round bodies illuminated in their centres to separate nebulae with single nuclei, to a central disk, constituting a nebular star, and finally to an orb of light with a halo like our sun. By such a process it is conceived, that our planetary system was formed. The sun is conceived to have been once a diffused nebulosity, a scattered mass of vapour, which has condensed into its present form; and, during this process of condensation, it is believed the planets were succes-

sively thrown off, the most distant as Herschel, being the first followed by Saturn, Jupiter, Mars, the Earth, Venus, and Mercury. The assertion that the solid earth has condensed from a mass of vapour, will seem strange and startling to the mind unaccustomed to scientific inquiry; but when we reflect that water may be frozen into a substance, ice, which is as hard as a rock, or again may be melted into water, or sublimed into vapour, and again condensed into water, and frozen again into ice, or finally, may, by chemical decomposition, be reduced to its two component gases, oxygen and hydrogen, we may cease to wonder at phenomena which are produced by the same laws, and may be explained on similar principles.

**THUNDER STORMS.**—The distance of a thunder-storm, and consequently the danger, is not difficult to be ascertained. As light travels at the rate of about 66,420 leagues in a second, or nearly 200,000 miles in one second of time, its effects may be considered as instantaneous within any moderate distance. Sound, on the contrary, is transmitted only at the rate of 1,142 feet in a second. By accurately observing, therefore, the time which intervenes between the flash of light and the beginning of the noise of the thunder which follows it, a very accurate calculation may be made of its distance, viz., when you observe the lightning, and 10 seconds elapse before you hear the thunder, you are two miles out of danger; if five seconds elapse between, one mile out of danger; but if you only distinguish one second to elapse between the lightning and thunder, then you may estimate yourself only 1,142 feet from the dangerous fluid, and the nearer to the light you hear the thunder within one second, you may count yourself in danger. By having a knowledge of these things, there is no better means of removing apprehensions. If the thunder rumbles seven seconds, you must be aware that the electric fluid has passed through space from the atmosphere to the earth, a distance of nearly one mile and a half. Sometimes the fluid skips from one cloud to another before it comes to the earth. There is no danger to be apprehended from the thunder, but that it operates as a warning when well calculated.

**DISCOVERY OF THE FOSSILISED RELICS OF MONKEYS AND OPOSSUMS IN THE LONDON CLAY.**—A mammiferous tooth was found by a lad employed in the quarry at Kingston (there called Kyson), close to the town of Woodbridge, in Suffolk. Mr. Colchester obtained possession of it, and having shown it to Mr. Charlesworth, learned from his examination, that it was the tooth of a mammiferous animal, and would possess a high geological value if the stratum from which it came were really a bed of the London-clay formation. Subsequently, Professor Owen having seen the tooth, pronounced it to belong to one of the “mixed feeders,” and ultimately decided that it was the tooth of an opossum of the restricted genus *Didelphis* and allied to the Virginian opossum. Mr. Colchester, having obtained a second and much larger mammiferous tooth, with a considerable portion of the jaw remaining attached to it, and from the same quarry as the former one, Professor Owen compared it with the corresponding tooth of a well-known monkey of the genus *Macacus*, with which he pronounced it to be identical. Professor Owen subsequently found, however, that the first discovered tooth, instead of being as he had said, that of an opossum, belonged to one of the most common and best known of the monkey tribe—a *Macacus*. As the remains belonged to the monkey commonly exhibited in this country, Mr. S. V. Wood thought it possible that it might have been accidentally introduced into the heap of sand from which it had been sifted; but on contrast with recent jaws, its disagreement in colour, and general appearance was such as to declare it a genuine fossil. Since the discovery of these two specimens Mr. Colchester has obtained a third specimen, widely differing from either of them, and said really to belong to an opossum of the genus *Didelphis*. It should be stated that these fossil remains were found in the upper part of a bed of sand about ten feet thick, which is covered by a mass of London-clay about seventeen feet thick; and it may be added that the molar teeth of the monkey tribe, and those of the opossums, in some instances so nearly resemble, that, without the most careful examination, those of the one may be mistaken for the other.

**MACHINE FOR COMPOSING AND DISTRIBUTING PRINTING TYPES.**—The *Moniteur Industriel* states, that M. Gaubert, a teacher of mathematics at Antwerp, has invented a machine which, by merely throwing the letters into a kind of hopper, arranges them as they fall out on an inclined plane, so that they may afterwards be collected to form words by touching the keys of an instrument, resembling the key of a pianoforte. The 296 letters and characters in a compositor's letter-case are first separated into twenty-five series by an oscillating movement of the hopper and the inclined plane. The most numerous of this series contains only fifteen different characters, the thickness of which is not the same; they are separated, at the will of the compositor who touches the keys, whilst passing on plates with holes like key-holes, so adapted as only to admit each one its proper letter. It is stated that by means of this apparatus, 124,000 letters may be lifted in eight hours, whilst a skilful compositor, by the present system, can scarcely set 12,000 in the same time.

## Ode to Burns.

THE Poet to us and the world hath given  
The intellectual treasures of his soul;  
And from the face of iron power hath riven  
The masque by which the proud the poor control.  
And he has told the houseless wretch to think,  
That though an outcast, he is still a man;  
And he has taught the mighty they may sink  
Before the workings of great Nature's plan,  
Nor of creation's progress longer lead the van.

The humble cottager, the rustic hind,  
The poor mechanic, once esteemed so vile,  
By him are taught the majesty of mind,  
The worth and pride of independent toil.  
With clearer step they tread their native earth;  
With closer gaze they look on all around;  
With more content they eye their humble hearth;  
For he was but a tiller of the ground,  
And yet could charm with music's matchless sound.

The cottage maid, while sitting at her wheel,  
Will sing his songs of love, and feel them true;  
And to her breast a tender throb will steal,  
As one loved youth appears to fancy's view.  
And when he welcome comes at night, to hear  
Her warbling voice among the garden trees,  
The kiss how sweet, the clasp how fond, how dear,  
When maiden's artless bosom strives to please,  
And man his proffer'd suit accepted sees.

And woman—the first gift of heaven to man,  
With tearful eye shall read his truthful page;  
How in one tide his strong affections ran—  
How her kind smile his sorrows could assuage;  
Then she, dear woman! will delighted learn  
Her generous task how she may best fulfil—  
How she may make the soul of man to yearn,  
And mould him to her pleasurable will,  
By loving to the last, unchanged in good or ill.  
What recks the heartless world's unfeeling frown,  
If woman smiles unrummured near;  
What though despair and want have cast us down,  
If still we are to faithful woman dear.  
Her voice can charm the stricken wretch's woe—  
Can comfort him who pines and grievous mourns—  
Can bid the stream of hope rejoicing flow,  
And, as the pulse of life again returns,  
Will whisper tales of love, and sing us songs of Burns.

## The Spoiled Child.

"Oh Jephthah, judge of Israel, what a treasure hadst thou!"

MR. QUICK ("Little Quick") had also a "treasure," namely, "one fair daughter, the which he loved passing well,"—too well! It followed, then, that she was in infancy so honoured, petted, and "spoiled," that in comparison with her wild and whimsical desires the famed requisition of the "top tile off the chimney," was a moderate and justifiable demand.

One day, a friend "dropping in" upon Mr. and Mrs. Quick at their dinner-hour, found these fond parents and their "treasure" already seated at table, although the dishes were yet covered. The hospitable couple insisted on their friend's participation of their homely meal; and he, in compliance with their wish, took the fourth side of the board, immediately opposite to the young mistress of the house (then about six years of age), who, by right of custom and her own sovereign will, chose, day by day, whatever position, caprice, or local speculation, connected with certain edibles, pointed out to be most desirable; and there the high chair of the little despot was ordered to be placed. On the present occasion, having forestalled her dinner by eating a lump of cake, which had palled her appetite, and rendered the present meal an unwelcome superfluity, the little dear was seated next to her doting father as a mere looker on.

The main dish upon table, when uncovered, excited the curiosity of Miss Quick, who either had not seen the joint before, or had forgotten the name of it, which she now eagerly demanded; and upon being told that it was a saddle of mutton, she stood up, and promptly announced her intention to ride upon it forthwith. To this preposterous recreation the parents were fain to treat the little imp's forbearance. In vain; for she declared saddles were made to ride upon, and to ride she was resolved. After much ado, her patient father and mother luckily suggested that the obvious heat of the seat she aspired to, and the inconvenience likely to arise from such exercise, would distress her, and spoil her new frock, the difficulty seemed surmounted, and the child desisted from further importunity; but immediately after, perceiving the dish almost overflowing with the juice of the mutton, she cried out, "Oh, let me put my foot in the gravy! I will put my foot in the gravy!" The father, albeit not unused to such eccentric fancies, was a little startled at his sweet pet's novel desire, and exclaimed in a tone of assumed wonder and of deprecation, "My precious love! what a preposterous thing you propose! it's quite out of the question. Now be a dear, good child, and let me help Mr. — to some mutton." "Oh!" reiterated the little treasure, "I will put my feet in the gravy first!" In vain the devoted parents urged, threatened, and coaxed; in vain promised that the next day, when they were without a visitor, she should do whatever she pleased; all, all in vain! for upon a more determined opposition, the sweet little angel yelled out her wishes in such a piercing key, that her mother, a very mild-mannered person, addressed her husband, "My dear Mr. Quick, I'm afraid we shall

have no peace until we allow the dear child to do as she likes." "Well, but my love," urged Mr. Quick, in reply, a little ashamed of their mutual weakness before their guest, "What will Mr. — say to such a proceeding? It is really improper." Mr. —, willing to see to what extreme parental folly could go, withheld both his opinion and permission, preferring a state of neutrality; and Mr. Quick, finding the little tyrant's determination warmer every minute, and the mutton cooler, proposed a compromise, namely, that the little darling should have another dish brought in, and placed in a corner of the room with some of the gravy in it, and then paddle about whilst themselves and friend were at dinner, and return to table when the fruit came in. No; the "treasure," at the very top of her voice, once more declared that she would have the dish, and nothing but the dish, before her; and, further, that she would not abate one drop of the gravy. At this perplexing juncture, Quick turned towards his friend, in apology for the scene before him, assuring him at the same time, that "it was of no use to thwart the dear child, who would have her way." Then calling for another dish, the poor father placed the shivering saddle upon it, and lifting that from the table containing the gravy, carried it to a remote corner of the room, where he was followed by the "little duck;" who, after a persuading kiss from the goose her father, consented to have her shoes removed, and to remain splashing about until the dessert appeared upon the table. When the little nuisance graciously allowed her foot-bath to be taken away, she reascended her high chair, and there further showed how hateful lovely infancy may become from improper indulgence, by pushing about and knocking down whatever was offered that she did not approve. Screaming forth her preference, she at length declared in favour of a large pear, the largest in the dish, upon which she had placed her affections. Mrs. Quick, unwilling to incur by fresh denial another contest with her powerful superior, with prompt kindness smilingly placed the coveted pear upon her daughter's plate; when, to the alarm of the beholders, the little fury threw it back upon her mother with all the ferocity of a full-grown termagant, exclaiming, as she did so, "Why did you give it to me? I wanted to snatch it!" Mr. Quick himself related this story to the person now telling it, at the same time congratulating himself that his child had grown into a sensible, rational woman, notwithstanding her parents' early endeavours to make her a fool.—Fraser.

## Paragraphs.

**DIFFUSION OF ORATORY.**—If we may trust our newspapers, we are a nation of orators. Every meeting overflows with eloquence. Men of all conditions find a tongue for public debate. Undoubtedly, there is much more sound than sense in our endless speeches before all kinds of assemblies and societies. But no man, I think, can attend our public meetings without being struck with the force and propriety of expression in multitudes, whose condition has confined them to a very imperfect culture. This exercise of the intellect, which has almost become a national characteristic, is not to be undervalued. Speech is not merely the dress, as it is often called, but the very body of thought. It is to the intellect what the muscles are to the principle of physical life. The mind acts and strengthens itself through words. It is the chaos till defined, organised by language. The attempt to give clear precise utterance to thought, is one of the most effectual processes of mental discipline. It is, therefore, no doubtful sign of a growing intelligence of a people, when the power of expression is cultivated extensively for the purpose of acting on multitudes.—Channing.

**WOLSEY AND MENZICOFF.**—The father of the Suffolk Cardinal was a butcher; yet the son enjoyed preferences no subject but himself ever enjoyed. Rector of Lynton; Prime Minister to Henry VIII.; Bishop of Lincoln, of Durham, and of Winchester; Archbishop of York; Administrator of Tournay; Bishop of Bath and Wells; Administrator of St. Albans; Lord Chancellor; Cardinal; joint Legate; and lastly, the Pope's Legate for life.—Ruined in a day, with all his preferences! Miserable; yet, with all his vices, not unworthy of our admiration for his abilities; and not unworthy our esteem for many great and splendid qualities.—"Vain pomp and glory of the world, I hate ye." To the memory of this man Shakespeare has been much more faithful than historians. With the fate of Wolsey, we associate the rise, elevation, and fall of Menzicoff; who, from being the son of a soldier became the favourite of Czar Peter the First, and the conqueror of Charles the Twelfth, in defeating General Lewenhaupt. Then we hold him created field-marshal, first senator, regent;—and so rich in lands, that he could travel from Riga, in Livonia, to Derbent, on the frontiers of Persia, and sleep every night on an estate belonging to himself. His vassals consisted of one hundred and fifty thousand families: he became chief minister to Peter the First, to Catherine the Czarina, and to Peter the Second; and so powerful that kings courted his favour. In this meridian, he was stripped, in one night, of all his authority and influence; divested of all his honours and wealth, and from being the greatest of subjects, sunk into being one of the lowest. Banished to Beresow,—one of his daughters mended his clothes, and washed his linen; while the other, who had been betrothed to Peter the Second, undertook the care of his kitchen!

**THE GREAT IRON STEAMER AT BRISTOL.**—This wonderful vessel will probably combine a greater number and variety of untried principles than were ever before united in one enterprise of the same magnitude and importance. The vessel herself—her enormous magnitude (about 8,500 tons, it is said)—her material (plate-iron)—her engines, nearly 1,200 horse-power—her cylinders 120 inches in diameter! no piston rods! no beams!—the connecting rod laying hold immediately on the piston, and a moving hollow casting playing through a stuffing-box in the top of the piston to give play to the said connecting rod! an unlimited application of the expansive principle; and, to crown all, no paddle wheels! no apparent propelling power, but an unseen agent revolving under her quarters, and enabling her to "walk the waters like a quail of

life." Verily, we live in an age of wonders; and if the mechanical genius of the era give safe birth to this creature of its conception, and foster her into vigorous maturity, will be difficult henceforward to set any bounds to locomotion over the deep.

**THE DEEDS BEFORE LEPANTO.**—Lepanto is in its interesting, as giving an exact idea of an ancient Greek city, being situated in a commanding position on the side of a mountain running down to the sea, with its citadel, the top, and enclosed by walls and turrets. The port shut within the walls, which run into the sea, and are erected on the foundations of the ancient Naupactus. A distance was the promontory of Actium, where Cleopatra with her fifty ships, abandoned Antony, and left to Augustus the empire of the world; and directly before us, surface dotted with a few straggling Greek caiques, the scene of a battle which has rung throughout the world the great battle of the Cross against the Crescent, when the allied forces of Spain, Venice, and the Pope, amounting to nearly three hundred sail, under the command of Don John of Austria, humbled for ever the naval pride of the Turks. One hundred and thirty Turkish galleys were taken, and fifty-five sunk; thirty thousand Turks were killed, ten thousand taken prisoners, fifteen thousand Christian slaves delivered; and Pope Pius VI., with his fervour, exclaimed, "There was a man sent from God and his name was John." Cervantes lost his left hand in this battle; and it is to the wounds he received here that he makes a touching allusion when reproached by a rival. "What I cannot help feeling deeply is, that I am stigmatised with being old and maimed, as though it belonged to me to stay the course of time; or as though my wound had been received in some tavern broil, instead of the most lofty occasion which past ages have yet seen, or which shall ever be seen by those to come. The scars which a soldier wears on his person, instead of badges of infamy are stars to guide the daring in the path of glory. As I mine, though they may not shine in the eyes of the envious, they are at least esteemed by those who know where they were received; and even were it not yet too late to choose, I would rather remain as I am; maimed and mutilated, than be now whole of my wounds, without having taken part in so glorious an achievement." I shall perhaps, be reproached for mingling with the immortal names of Don John of Austria and Cervantes, those of George Wilson, of Providence, Rhode Island, and John Williams, a black of Baltimore, cook on board Lord Cochrane's flagship in the great battle between the Greeks and the Turkish fleets. George Wilson was a gunner on board one of the Greek ships, and conducted himself with much gallantry, that Lord Cochrane, at a dinner in commemoration of the event, publicly drank his health. In the same battle, James Williams, who had lost a finger in the United States' service under Decatur at Algiers, had conducted himself with great coolness and intrepidity in several engagements, when no Greek could be found to take the helm, volunteered his services, and was struck down by a splinter, which broke his legs and arms. The historian will probably never mention these gallant fellows in his quarto volumes: but I hope the American traveller, as he stands at sunset by the shore of the Gulf of Lepanto, and recalls to mind the great achievements of Don John and Cervantes, will not forget George Wilson and John Williams.—Stephens.

**RAILWAYS IN THE UNITED KINGDOM.**—The number of railways in the United Kingdom, for which Acts of Parliament have been obtained, is seventy-one; of which fifty-four, in length 1,393 miles, are wholly open; nine are partially open, 497 miles in length, of which are now open; seven, whose length is 292 miles, are commenced, or not yet open in any part of their line.

The Baron de Beranger relates that, having secured a pick-pocket in the very act of irregular abstraction, he took the liberty of enquiring whether there was anything in his face that had procured him the honour of his being singled for such an attempt. "Why, Sir," said the fellow, "your face is well enough, but you had on thin shoes and white stockings in dirty weather, and so I made sure you were a flat."

**THE MOON.**—Mr. Arago, the celebrated astronomer, been giving lectures to crowded audiences on the nature of the moon. He contends that this planet is not an inhabited body, and that it is without any kind of vitality, either animal or vegetable. He denies also that it has cities, seas, rivers, or lakes, but admits that it has mountains and valleys, which, however, he says, are of primitive formation.

## Confession.

BY DR. BOWRING.

BUT for my father's angry talking,  
I'd frankly own that I was walking  
With one—whom he could not discover;  
Frown he or not—it was my lover.

And if my father would not scold me,  
I'd tell him what my lover told me;  
And what he gave—a secret this is—  
Scold he or not—'twas love's sweet kisses.

And if my father would not wonder,  
I'd tear the secret's veil asunder;  
Wonder or not—my lover made me  
A sweet and solemn vow to wed me.

He vowed—sincere and eager hearted—  
E'en while he kiss'd me as we parted,  
With thee he would not leave me longer,  
But claim me when the wheat is stronger.

SATURDAY, AUGUST 28, 1841.

PRICE THREE HALFPENCE.

### Social Condition of the Early Races.

THERE need be little dispute concerning the supposition that the antediluvian world was well versed in luxuries and refinements, and that its inventions and speculations approached too nearly to impiety; nor can it be doubted that the preserved remnant retained a knowledge of many arts, and practised them to some extent, on their second creation upon the solid land. Noah became a husbandman, and succeeded in the manufacture of wine. Nimrod was a mighty hunter; the bow, the javelin, and the spear must therefore have been called into use. Among the builders of Babel there must have been architects as well as artificers; nor could their labour be altogether out of love; some remuneration must necessarily have been awarded, and if the question of a metallic or a paper currency did not disturb the work, payment in kind must have given first evidence of the truck system.

But all this march towards improvement was arrested by the dispersion. Some, more acute than the rest, would cat themselves in spots, the resources of which were not altogether unknown while the weak, their resolute, and the ignorant would be driven to and fro, strangers in the land, a burden to themselves and those around them. It is not likely, at such an anxious and fearful period, that charity largely prevailed. Self-preservation would pre-empt, and the outcast be driven further and further away, until he found himself in the secluded forest, or, at least waste, a bewildered wretch, looking on the world as an enemy, ferocious and deadly in the workings of a roused soul. This was the savage—this became the progenitor of many such. What little knowledge of art the original group might possess would be forgotten with the recollections of the past—the absence of all artistical instruments would prevent knowledge, even if retained, from being transmitted to others. The stone or brick building would be hastily and gladly exchanged for the hut of bark, or reeds, or grass. The skin of the wild beast would furnish a ready-made web from which to manufacture dress, while the absence of materials, as well as the desire to outshine, would dispense with any elaborate embroidery. While larger bands, therefore, carried with them all the refinements of their elder state, the smaller parties, located in secret places, would become acquainted with wretchedness, and consume their days in ceaseless toil to procure a precarious subsistence.

Is it any stretch of fancy to suppose that of these dwellers in the wilderness many fell by famine, many by the fangs of the beasts of prey, many by their companions in starvation? Others, certainly, would prosper; having planted themselves in pleasant places, where the earth produced her choicest fruits in glad abundance, and where broad flowing streams protected them from the prowlers of the wood. Among these civilization would make some progress. The necessity of toil to which the hunter was doomed, would not compel them to be content with the most miserable existence, would not induce them to make their wives hewers of wood and drawers of water. If we may judge by what we know of women now, in a life of comparative repose they would be the first to invent articles of finery—the first to deck their hair with shells, or flowers, or berries—the first to raise the song of triumph over want and misery. They would also be the first to startle at the rising sun, to shrink at the voice of thunder, and hide themselves from the electric flash. On them would superstition cast its triple-folded pall—fear, hate, and love, making to them a mythology of unseen deities, while their senses overpowered the innate struggles of the mind, and shrouded in impenetrable darkness the glimmerings of the soul. By them would the naked and fearless youth be reared—to them would the blushing daughters of the desert listen. Age upon age would the dreams of imagination gather, until confusion sat down with ignorance, as speculation roved at will through a long, long midnight of intellectual darkness.

There were in the early ages as many classes of these wanderers as there are at present grades in civilized so-

ciety. The more happily situated at once assumed the patriarchal form of government; the younger looking up to the elder, or originator of the encampment, in the same manner as the herd looks to the wild horse who leads his troop to graze. It is well known, however, that the chieftain-horse has frequent occasion to chastise the insolence of some growing colt, who, presuming on his manhood, attempts to make free with the cherished privileges of his chief. This young rebel is driven off—seldom, however, without securing some gentle mare to share with him his fortune and his fate. So it was with the human dweller in the wild. The rising generation could not permit the patriarch absolute possession of all that was fair and beautiful in their eyes, so some eloped; while others set up an undisguised rivalry of their superior's pretensions.

These parties knowing that the patriarchal system, violated in their own persons, could not well be carried out, began another form of government, which promised greater liberty to those who sought its protection. This was the institution of tribes or clanship, by which so much was common property, and so much personal. To entrap the wild bird, to hunt the buffalo, to rob the stream, these were common duties; the treasure, however, once gained, became the victor's own. He had his hut—his wife, one or more—and he called himself happy and independent. Against this system that of the patriarchs could not uphold itself: man is an encroaching animal; he loves advancement; some fear danger, some despise it; but few desire not to be better off to-day than they were yesterday.

A man, however, could not keep a hut without repairing, beautifying, or extending it. A savage therefore, who had some pretensions to taste might adorn his wigwam with rude workmanship, or decorate it with the spoils of his spear. Others, would have their eye caught by the flowers of the field, some have their palates tickled by the simplicity of roots and herbs, which epicure and savage alike admit give an excellent zest to frequency of animal food. These small properties, while they instilled pride into their possessors, excited covetousness in the less industriously disposed. Hence small thefts led their usual course to large ones. The unsophisticated dweller in the wild, by a somewhat longer process certainly, thus beheld the necessity of laws as well as the denizen of the crowded city. Unfortunately, however, for the uncivilized, every man became his own judge, jury, and executioner; by a rapid process of condemnation, the culprit was punished when he was caught; and if his tribe or family protected him, then a war of extermination commenced, and ferocity grew and flourished like a rank and baneful weed, before whose progress healthful life fell down, a reeking oblation to ignorance and hate.

But the jurisprudence of the more polished races was not of so greatly an improved character. The economy of crime was not at all understood: the deprivation of life was the only recognised punishment. Some nations, however, set a higher value on certain virtues than others. With the warlike races, treachery and cowardice were capital offences; with the more peaceably disposed, the disruption of conjugal fidelity was esteemed, and perhaps not unjustly, the greatest crime which could be committed against the welfare of society. The Spartans encouraged successful theft as the first symptoms of genius; they punished its discovery as a certain sign of the lack of talent. Their women were heroically virtuous, yet modesty was a term unknown in their language. The girls were polished and educated savages, severely chaste but proudly indelicate. On the other hand, the Athenian women became tenderly correct, entirely bashful, yet, alas! not altogether trustworthy. Jealousy was a fever unknown in Sparta; it raged violently in Athens, and gloried in the number of its victims. Young Rome assayed to be rigidly virtuous, yet voluptuaries dazzled the eye and heart with their splendours, introduced a looseness into conversation, which then, as now, gradually swayed conduct, and led to domestic ruin and national prostration. Not all the glories of Caesar could enable him to command

the conjugal fidelity of his wife—not all the dangers of of Antony could tear him from a treacherous wanton. It is mentioned as not the least of the triumphs of Augustus, that he withstood all the wiles of a dangerous woman, and preferred the glory of the Roman name to the faithless embraces of the fair Egyptian.

Marriage, eagerly desired wedlock, was instituted by the first great countries on their formation. It appeared to the acute founders of the most majestic nations that this great social compact was the only sure and lasting bulwark against which the rage and waste of storm and time could beat in impotence; it was—and, indeed, it is—the only pillar that can be reared to which generation after generation can look; on which the lines of genealogy can be traced; and more, much more than that, it is the best and most exalted record of love; it is the only means yet given to the world by which a mother can look her children in the face without a blush; it is alone the cause why youth is compelled to reverence the beings which gave it birth, which endears their counsel, hallows their affection, and purifies, elevates, and adorns with garlands of perpetual bloom the fond solicitude of women. Yet for how long a period of the world's existence has this coveted state of existence been denied her? Even when granted to her longing heart, the method has been cruel, the purpose heartless. The Sabine rape, when the early Roman adventurers sought to perpetuate their stock by a robbery of the best and fairest of a neighbouring state, was not more remote from personal regard than royal marriages are at the present day. In the early times of kingdoms, when men struggled for existence, when policy was bewildered, and knowledge a spirit of unknown visitation, the great importance of faithful women soon became evident. Then it was, that, instead of the present fashion of a lady bringing with her a dowry, as a bribe for lordly man to accept her love, in less sophisticated ages the man purchased his wife with a good round sum, and in many cases had to give substantial security as to her well-usage. This practice, however, is now confined exclusively to the savage races—to those who for ages have been taught nothing, who have done as their revered fathers did, nor sought or sighed for change. The bargain of Jacob for his beloved Rachel should be read and studied by every damsel, that she may not make herself too cheap. Nor let impatient marriageable daughters think that such was a practice common to the Hebrews alone. If classic learning is of no other advantage it at least tells us this, that Homer speaks of it in his Iliad—he makes Agamemnon say, as a compliment of some magnitude to Achilles—pardon a free translation from the purest Greek:—"I will give thee my daughter in marriage, and seek no compensatory return." This very sensible practice of considering women of some value also obtained in ancient India, in Gaul, Thrace, Germany, and even in Spain. If we are to believe recent travellers—but they are such imaginative fellows that we can scarcely trust them—the same practice prevails, even to this day, in China, Tartary, Morocco, and, though last, oh, certainly not least,—among the majestic tribes of North America. In New Zealand, when a gentleman savage takes unto himself a wife, he leaves tribe and kindred and goes to live with his father-in-law. That is no improvement, however, on the prevalent idea of every married couple having a hut, a cottage, a "first-floor back," or a palace of their own.

The poor creatures in Turkey, under the fiat of Mahomet, are kept in no enviable condition—the prettiest girls being most securely caged. Denied to have possession of a soul, they are not expected to think or act for themselves, but merely to do as they are bid, and die when they cease to be pleasing. Somehow or other, some of them at times contrive to do a deal of mischief, in revenge for the slavery in which they are kept. If improvement can procure any sure footing among the Mussalman races, the women will have great cause of rejoicing, and a servitude of nearly five centuries be abolished. History was never better spoken by the lips of Poetry, than in the words of

Gulnare, in Byron's "Corsair." Speaking of her being the favourite of the Pacha, and of its being supposed that she admired him, she exclaims—

"My love stern Seyd's! Oh—No—No—not my love—  
Yet much this heart, that strives no more, once strove  
To meet his passion—but it would not be.  
I felt—I feel—love dwells with—with the free.  
I am a slave, a favour'd slave at best,  
To share his splendour, and seem every blest!  
Oft must my soul the question undergo,  
Of—"Dost thou love?" and burn to answer, "No!"

Another line from the same fair captive tells us the fate of the unfaithful and disobedient to the Turkish chiefs—

"There yawns the sack, and yonder rolls the sea!"

Herodotus, a garrulous old Greek, who, amongst a great many truths, relates some matters which the slow of faith are not always inclined to credit, says that in Assyria, (only about four thousand years ago!) there prevailed the very pretty practice of assembling the marriageable girls once a-year, in every village, and putting them up to auction. The more beautiful, it seems, brought rather respectable prices, which formed a fund by which to portion the less attractive though perhaps best-hearted women. Thus, an opulent gentleman could purchase a beauty; but she was not his slave; she was his wife, his equal; and he was told that he might be proud and happy of having secured so great a treasure at so cheap a rate. Then, a poor fellow who longed to have a partner, at the latter end of the sale would be asked—"Now, my good Sir, here is a very nice young woman, how much will you take to keep her well and make her comfortable? If you won't, you know, another will!" These Dutch-auction sort of bargains, be it recollected, were at all times accompanied by the important saving clause, that the purchaser must give security for his good behaviour. If any separation took place, no matter from what cause, he had to give back the money to the authorities; but what became of the discarded our historian does not mention. We may be certain, that could Herodotus have said anything to their advantage he would have done so, therefore we must suppose that there were unfortunates in old Assyria as well as everywhere else. He tells us, however, that if a lady could prove ill-usage on the part of her husband, that the law took him in charge and taught him better manners.

The progress of women has at all times been considered a safe index by which to judge of the social advancement of a country; whether or not historians have always determined correctly, would be as difficult to decide as whether woman have always acted wisely. Even yet, important as they think themselves, they are only in the position of the caged lion; they know not their strength; and it is well they do not, for truth compels us to state that they would not know how to use it. The education of woman is so much neglected, that it is not supposed necessary for her to know the history of her sex. It is not deemed requisite that her judgment should be matured, her mind expanded, and her thoughts directed towards improvement, by the lessons of antiquity—by the examples of heroic women—of faithful wives and loving daughters—of the honours which great nations have bestowed upon female virtue—of the applause with which a Greek audience used to receive the mother of a hero—of the precedence which at all times was given to the lover of him who died in the battle's van. These fountains of ever-living history have now been opened up—their treasures shall be laid at the maiden's feet as well as on the housewife's table. Come, then, all of the gentle sex and read of the mysteries of departed ages with us, for your interest and honour, as well as profit, are as much involved as are those of the hard-headed, selfish-hearted creatures who rejoice in the name if not always in the attributes of man.

### Fairy Lays and Legends of Ireland.

THE CHANGELING; OR, SPORTEEN AND THE FAIRY.  
CHAPTER II.

ERE the Sporteen had recovered from his surprise at the unexpected appearance of the imp, he was thus saluted:—

"Why, then, your sowl to this and that, Sporteen, what did you break my coach for?"

"Was it you that was in it?" asked the Sporteen, with eyes starting from his head.—"Well, be me sowl I didn't know it, though something told me your sweet voice was not altogether strange to me."

"It was me!" cried the fearsome creature, "and that was a nice way to serve me after all the good I done for you. It's long ago you'd be kicked out of Jem O'Callaghan's but for me; and often might I tell about you and Bridget—if I did what would become of you?"

"Why, Jem would stick the pitchfork to the ring in me," said the Sporteen, affecting a careless air.

"And Judy would break the tongs on your ugly head," added the denizen of the pitchfork.

"Stop there, now," said the Sporteen, "never speak about handsome heads as long as you're alive; but keep dark about Bridget, and I'll buy you a new pitcher, or I'll stale you one, which is all the same to you, I suppose."

"Oh, you're a nice boy, Sporteen," said the imp, archly eying him, "laying schemes to steal away the door man's daughter. Yes, you please the father

wheeld the mother, flatter the children, and have a fair face and a sweet word for every one, while you're whetting the knife to cut open their hearts."

"And aren't you a nice boy, too," said the Sporteen, "to be tormentin' the life out of the poor people all day, and rowlin' about the fields in your pitcher all night."

"Not a word more about that, Sporteen," said the toad, "I don't blame you in regard of Bridget; she is certainly a sweet pretty colleen, and if you hadn't interfered I had a great notion of courting her myself."

"You!" said the Sporteen in wonder; "and do you think my Bridget would look at the likes of you?"

"The like of me!" repeated the little man with an offended air, as he strutted amongst the fragments of his coach—"the like of me! why you bandy-legged wielder of a pair of shears, would you compare your sheep-face, your bandy legs, and your bony body to a nice, smart little fellow like me. If I thought her worth my wooing I could win her from you with one wink of my merry black eye."

"Why, then, all I'd have to say to that," said the tailor, "would be sweet bad luck to her taste, but she'd be a complete connishure."

"What is that you say, you long-stitching rascal?" asked the imp with a dark scowl.

"Och, nothing," answered the Sporteen, in a conciliatory tone. "But sure enough it's a fine bright eye that's in the head of you, and be me sowl you spake like the priest of the parish; it's your tongue that's well hung on its hinges any how. I would not wish to meet with a purtier spoken boy of a summer's day; but for your life don't say a word more about Bridget, or maybe I'd be tempted by something or another to let you fall in the fire or give you a loving squeeze, some day when I'd be dandin' you."

"And I suppose I'm not to mention your meeting with Bridget in the haggard, or at the well this morning?"

"If you do," answered Sporteen, "I'll swear 'twas you broke Judy O'Callaghan's pitcher."

"Well, I'll make a child's bargain with you," said the imp. "Do you keep my secret, and I'll keep yours."

"Done, and a bargain be it," cried the tailor; "but what excuse will you make about the pitcher?"

"Look at this, Sporteen," said the elf, fixing up the pieces of the broken vessel. "Poo!" and he blew upon them; they fastened together with a crash. "Now I must make haste home to old Judy," he added, "she will be looking for her morning amusement, and it would be a pity to disappoint her." He leaped into the remodelled pitcher like a flash of lightning, and turning it on its side, away he rolled as quick as the wind, singing—

"Oh—a—I am a sportin' tailyur,  
And I rove from town to town—a;  
And—a where I get a job of work  
I'm willin' to sit down—a.  
I—a—can cut a lady's mantle,  
Make a breeches for a man—a;  
And—a—the girls all cry as I pass by  
There's the sportin' journeyman—a."

"Well sung, me darlint," shouted the tailor, "every bar of it; that's my rattlin' fine pitcher; the sorrow take the one o' them like yourself; and they needn't be sorry," he added, in an under tone. "Och, be me sowl, if I knew what sort you wor before, it's I that 'ud give you a wrastle with the red coals, my boy; troth, I'd toast you at the end of the tongs, my nate little chap, be my troth I would. I'd tach you to pimp on gentleman's private affairs. I'd make the corner too hot for you. Och, Judy O'Callaghan, it's you that has the fine family of it; if there's many of them like that fellow—a nice two years' nursin' you have after your hands—it's you that may boast of it, and here's luck. A mighty sweet-tongued relation my Bridget has; and he to talk about coortin' her too. Och, the unnatural beast! Wont I have a grand brother-in-law in the king of the fairies; the devil so elegant a tailyur in the County Carlow as you'll be Sporteen."

He amused himself in soliloquies of this kind until he thought it was time to return without exciting a suspicion that he had had a meeting with Bridget. As he approached the house he could hear the piercing screams of the imp within, and he trembled as he entered. Judith had "the etirnal tarment" in her lap, trying every method to quiet and soothe him. She rubbed him with her warm hand, shook him by the heels and sprinkled him with holy water. All her efforts but seemed to add to his torments, and he shrieked and kicked as if racked with every ache and pain in the catalogue of human diseases, so bitter and incessant were his cries.

"Och, Sporteen, where in the world wor you?" cried the harassed and worn-out woman; "here I am since I got up sthrivin' to stop the screech of this sarprint of misery—baw! you devil, will you bite the nipple of me?" The Lord pursue us, sure he was sint in revinge of my sins—och; a monum beg," (my poor soul) and she fervently smote her breast; "and there's that little girl breakin' her heart at that weary churnin'. Here, take him, Sporteen, but don't hurt the poor lambie bawn—don't handle the poor creature so rough. There now, he's with his own Sporteen."

"Augh, aye," said the tailor, "give me the beauty of the world, I'll handle him as tindhers as if you had him by the hair of the head. Ah, then, Mrs. O'Callaghan jewel, war all your childher like this darlint when they wor his age?"

"Och, no, Sporteen, they wor all fine bullockes, with big heads, that 'ud eat as much strabout as a flock of mowers; but I dunna what kem across that dim at all at all; but take care of him, Sporteen—take care of the poor weeny darlint;" and she bustled out to the barn where Bridget was churning.

As soon as she went out, the little imp twisted up his features and burst into a fiendish cackle.

"Ha! ha! ha! Well, Sporteen, dont I amuse Judy in fine style?"

"Be me sowl you do," answered the Sporteen, mechanically.

"But take care, for the life you love, never on your lips to whisper what has passed between us," said the elf.

"Never fear," replied the Sporteen, and he trembled at the idea of holding such a hideous object in his arms. The creature felt him shake, and turning his fierce eyes on him. "Stop, Sporteen," said he, "stop, lay down in the cradle, don't bring me near the fire, lay down easy, you cabbaging thief; dont you think but remember what you said about dropping me in the this morning. If ever I hear a word respecting me, ever you attempt to hurt a hair of my head, I'll be on the disagreeable necessity of cutting your throat with your own shears some fine night."

"Sure, its only jokin' I was about the fire," said the tailor; "no more, upon me sowl," and he laid softly into his wicker shell; "and I'll give you leave to darn my sowl and body together, or bleed me to death with my own needle, if ever I speak a word about you."

"You're a pleasant hearty fellow, like myself, Sporteen," said the imp, "and that's what made me take such a liking to you—would you like a merry time the pipes?"

"To be sure I would," said the Sporteen; "and as was always my greatest divarshin, and the height of delight of a Sunday evenin'."

"Well, when Jude and Bridget go to the market tomorrow, I'll show you some sport, never fear. I reckoned one of the finest pipers between the sea and Shannon," said the nasty monster, with one of those demoniac sneers.

"I don't doubt you, at all, at all," said the Sporteen, "after the specimen of your singing I had this morning; I'd take your word for more than that in the music way."

"Hark! I hear a foot-fall," said the imp, lying in his cradle and feigning to be asleep.

Next day Judith and Bridget went to the market Carlow, to dispose of their butter and eggs. The father and the elder branches of his family were at their lab in the fields, and the younger children were gone to village school, so that the house was left to the management of the imp and the tailor. When all were gone sat up in the cradle.

"Shut the door, Sporteen," said the elf, "shut the door and fast; now put that long arm of yours up the chimney and hand me down my pipes." The tailor put his arm up the chimney, "in the left-hand corner you'll find them—take them down carefully, you botch," he snarled. The tailor handed him a very neat set of ivory-mouthed bagpipes, which he screwed and turned with much nicety of ear and touch. "Stand out on the floor there before me now, Sporteen," said she, "I'll give you the 'Rakes of Kildare,' in a fashion I never danced to before. Now for a caper—that's a nimble taylor—heel and toe—up and down—double treble, cut—see saw, hands across—cover the buckle double and treble again—down the middle—back again—shuffle—flourish—hurroo! hurrups!" and the little imp, in a paroxysm of delight, jumped out of his cradle and joined the tailor in the dance. Where the latter exhibited any signs of weakness or fatigue, he changed the measure and encouraged him with his "hurroo and hurrups, Sporteen," and he continued play and dance so long and with so much energy, that at length the poor tailor, breathless and exhausted, sank down motionless on the paved floor.

The tailor continued the favourite at farmer O'Callaghan's—he made rapid advances in Bridget's affections, and was "the wonder of the world" at pleasuring the wicked imp. He at length succeeded so far in the grand wish of his heart as to induce the farmer's daughter to promise to "run away with him the very first convenient opportunity, but the "eternal torment" made him dance his life out almost, whenever he could find the house alone. After some time the neighbours began to take notice of the constant noise and merriment that was carried on at the farmers in the absence of the mistress, and they soon roused her suspicion that all was not as it should be between the tailor and the child. Without imparting these suspicions to any person, she set about finding out the truth of the stories which she heard. She contrived a pretence of having some business to transact at a distance, and sent Bridget on an errand to Carlow, that she knew would detain her some space. The house, as usual, was left to the care of the tailor and the child, and when she thought a sufficient time had elapsed, she returned by a private way.

The mirth and music as she approached the house made her heart throb, and her hair stand upright. With trembling limbs she approached a back window and beheld the pair in the midst of their diversions. The

child, whom she always found unable to stand alone was now capering about the floor with the agility and vigour of a merry-andrew, while he played on the pipes and whooped and halloed to cheer on the fast-sinking tailor. She was horrified and thunderstruck—she was convinced the thing which she had believed to be her child was nothing better than a *Shee-oge*, and half-distracted she flew to an old crone in the village, well known as the oracle in all cases of the supernatural, and recognised among the peasantry by the title of "the Grand Adviser." She communicated all she had heard, all that she feared. The unfortunate tailor was sent for immediately, and terrified into a confession of every thing he knew, except what concerned himself and Bridget. He was then dismissed, and between "the Grand Adviser" and Judith they concocted a plan which may be explained in manner following:—

Judith revealed all to her husband; he was bewildered, with the strange and fearful tale, and at once entered into her scheme. That night the family was assembled round the fire. The Sporteen was in the corner playing tricks with and amusing the imp, or at whiles winking at Bridget, who sat opposite to him; the farmer and Judith were seated in front, the minor branches forming an outer circle, or occupying the spare seats in the nooks.

"Musha, then Jemmy," began the old woman, turning the stocking which she was knitting into her lap, and looking up with a simple air into her husband's face; "the sorra take me but I'll bet you any thing you wouldn't guess what's runnin' through my head these couple of days."

"Nothin' in the world, Jude agra (my love), but what a comb would take out, sure," answered Jemmy.

"Och, the goodness take you, but your 'cute—but it's not that I mane at all—guess again."

"If it's anything else I couldn't—there's nothing that had any sense about it could stop in such a foolish head," replied the farmer.

"Why, then, the sorra go from me," said she, "but I had a notion of takin' the darlin' there as far as my aunt Honor's, at Leighlin, and washin' him in the blessed well of the holy Saint Lazarene. Do you know but I think it might bring him to himself; besides, Honor is a mighty knowledgeable woman in 'arbs and all sorts of cures."

"But how can you go and leave the churn-in' to Bridget?" said the farmer, putting in feigned objections. "Besides, I can't spare the horse and car from the work." "Augh, never fear but I'll manage that," said she. "We'll be up early at the churnin', and as soon as I take my bruchwast, I'll take the darlin' dimen' o' the world on my back, and set off; and who knows but the return of the holy saint's wather, and our prayers, 'ud restore his health."

"Well, then, go in the name of the Three Best;" replied Jemmy, "may be it was the goodness put such thought in your heart; never say now or hereafter that hindered you to do the creature a service."

During this conversation the restless eyes of the imp wandered with a keen and alarmed scrutiny from the tailor to Judith, and from Judith to the farmer. He crept up his wrinkled meagre features at the Sporteen with the most malicious twist, but he, not pretending to hear what was uttered, or to notice his gestures, continued laughing, joking, and singing, in his usual manner, with the greatest apparent happiness and indifference.

The following morning the Sporteen met Bridget at the spring in the fields, and without hinting at what occurred, he laid a plan to carry her off during her mother's absence with the child, Bridget agreeing to take with her whatever money or value she could lay her hands on that was portable, and proceed immediately to Carlow, where they could easily get married before any alarm could be excited at home by her absence.

As he was returning through the glen, he again overtook the pitcher rolling before him, and the imp within himing as ever—

The lassies swear that I'm the lad  
That's pleasant to their mind—a—  
In every town that I go through  
A new sweetheart I find—a—  
To kiss them and to court them,  
And to place them is my plan—a—  
And the girls all cry, as I pass by,  
There's the sportin' journeyman—a—a.

"Well sung Pitcher," shouted the tailor, "devil a either myself could do it. Hoo—

To kiss them and to court them,  
And to place them is my plan—a—  
And the girls—"

The pitcher suddenly stopped, raised itself on one end, and the "eternal torment" stood before him with a sither and journing brow.

"Sporteen," says he, "I am afraid you are a mighty fine rogue and a very great rascal."

"What the puck do you mane," asked the tailor, "or what's the matter with you at all—at all."

"I mean that you are a traitor," said the wretch.

"Is it me?" cried the tailor, "me! Oh, honour bright, be my soul! Me, indeed! turn traitor to myself; let alone you that I have such a findher regard for—what the puck could put the like ov that into your head?"

The imp held down his head, and pausing a few moments, he resumed.

"From what I heard last night, I think you have deceived me—I fear at least that there's something wrong afoot. I do not like going such a long journey with that old cat Jude, to try her *pisherogues* on me" (superstitious incantations.)

"Och, is that all you're afraid of, oh ho! ah ha!" said the tailor, forcing a laugh. "Well, the dickens the like o' that ever I heard of. Sure it's the commonest thing in life—to be sure it is."

"If I thought there was any harm to follow," said the elf, "I could easily contrive to break her leg or her arm before she'd go far—or her neck for that matter. It is not that I care about the journey, if I was sure you did not betray me."

"Me! is it me!" cried the tailor; "by them tin crasses," and he placed the fingers of both hands crosswise, "I never whispered it even to a stone. Me! I wouldn't tell St Pether' or my mother—oh no! Will I swear by the —"

"Don't mention names, Sporteen," said the creature, interrupting him. "However, you'll have fine sport while we are away, running off with Bridget, and I'll have a pleasant ride on old Jude's back, and never say that I can play a merry tune on the pipes if I don't canter the courage out of her before we come back."

"I'd take your word for more than that," said the Sporteen; "and if I don't manage Bridget, never ask me to take a step with you again."

"Well, good morning to you, Sporteen, and I wish you success with your intended, and myself a pleasant journey" said the imp, disappearing within his pitcher, and turning it over, away he went merrily down the dell.

As soon as the morning's work at the farm-house was over, and the breakfast ended, Judith prepared herself to depart with the elfish child. The Sporteen placed "the darlin' beauty o' the world" on her back, and turned the skirt of her gown over him, which she pinned securely in front. She bid them all good bye, like one who does not intend to return for some time; and the imp, turning round and making a motion like a jockey springing in the stirrups, winked wickedly at the tailor.

As they journeyed along Judith felt her burden grow heavy and heavier at every step until she was nigh sinking with his oppressive weight. With a throbbing heart—with weak and wearied limbs, she proceeded along the high road for about two miles, when she turned off into the fields, and struck down a bye-path which led over a narrow plank that bridged a turbid stream, where it flowed to join the limpid waves of the gentle Barrow. As this was a well known short cut, no suspicious inference could be drawn from her taking it. She continued on in her plodding gait until the path descended by a winding route through a wooded slope to where the board spanned the banks of the current. The waters were confined, but black and deep-looking, with little curling eddies that whirled playfully away beneath the pendant branches of the slender-leaved willows that fringed the shores and swept the surface of the waters. She reached the plank, and slyly extracted the pin which secured the imp to her back. She touched the bridge with doubt and fear—she looked on the rolling waves and felt the creature stir on her back, and was nearly failing in her purpose. As she expressed it, "Her heart swelled, and was nearly choking her." She gazed around with a wild, bewildered eye. "Shall I turn back," she thought, as the dark stream made her shrink. "It is a dreadful trial for a weak and wicked sinner, and what if after all it should be my own child that I am about to destroy;" but then the dancing scene with the tailor flashing across her mind in all its horror, dispelled each doubt and obliterated every trace of feeling from her bosom, and she stepped firm and renewed on the tottering pass. With a slow and steady pace she reached the centre, where, suddenly wheeling round, she gave her burden to the waters.

"In the name of God, his Holy Son, and Blessed Mother, whoever or whatever you are," she cried aloud when she heard the loud splash behind her, "go back to your own people, and send my child back to his."

She turned to look—he was sitting tailor-wise on the stream, and sailing on as fast as its billows could bear him. He fixed an eye of demon-like malignity on the wonder-stricken woman, as he shook his tiny hand, and every hideous feature of his face became twisted up and corrugated, to give utterance to one fiendish snarl.

"Ha! Jude, you old vagabond," he screamed, "I am sorry now, whilst I had you in my power, that I didn't knock the life out of you. However, I have one revenge. The scheming tailor has run away with your daughter, and all that you were worth in the world. Ha, ha, ha!" and with an exulting cackle, he disappeared beneath the overhanging branches.

Judith's eyesight appeared to be forsaking her, and she was near falling into the water at this astounding intelligence. She forgot the fairy child and everything connected with him, and gathering up the loose folds of her gown, she rushed towards her home a distracted woman. She burst open her door, and searching hastily in her chest, she found that her gathering of years—her *all*—was gone. She screamed and danced about in agony and phrenzy of mind. Her cries awoke a blooming, chubby, blue-eyed innocent that was sleeping in the cradle. She went to it—it laughed up in her

face with the attractive laugh of infancy, and extended its little arms to her from its rosy slumbers. She felt—she knew it was her own child. She took it up, and it nestled like a little bird into her bosom, and her heart throbbed and warmed to it with the mysterious and undefinable mother's love. She clasped her arms over it, and falling on her knees with a fervour of devotion she never knew before—"All praise be to God in Heaven," she ejaculated; "if one is lost we have one restored, and everything that's in the hand of God is right and good."

We have now but to remark that the Sporteen and Bridget were soon after reconciled to the honest farmer and Judith. The tailor commenced business in the town of Carlow, and became a settled industrious man, and in the course of a few years attained to wealth and respectability, although never until the day he died was he recognised by any other cognomen than the Sporteen; whilst the restored child grew up, the pride of Farmer O'Callaghan's family, the comfort of his old age, and the wonder of the Barony.

### Natural Changes.

**SUBSIDENCE OF LAND.**—We have already had occasion to advert to the oscillations which portions of the solid land has undergone; in a recent number we mentioned the elevation of part of the coast of Sweden, and we have now to call attention to the opposite phenomenon of the submergence of a tract of country, and its conversion from dry land to water. This phenomenon is by no means of so rare occurrence as is commonly supposed; and one of the most recent, and most remarkable, is that recorded to have happened in 1819, at Cutch, in Bombay. A violent earthquake occurred on the 16th June of that year, in this district, which converted the principal town, Bhooli, into a heap of ruins, and threw down all its stone buildings. The most important and most lasting effects of this visitation, consisted, however, in its having converted the tract round Sindree from dry land to sea, in the course of a few hours; the newly-formed waters extending for a distance of sixteen miles on each side the fort, and probably, exceeding in area the lake of Geneva. Neither the rush of the sea into this new depression, nor the movement of the earthquake, however, threw down the small fort of Sindree; the interior of which became a tank, the water filling the space between the walls, and the four towers continuing to stand, so that on the day after the earthquake, the people in the fort who had climbed to the top of one of the towers, saved themselves in boats. Immediately after the shock the inhabitants of Sindree saw at the distance of five miles from their village, a long elevated mound, where previously there had been a low and level plain. To this uplifted tract they gave the name of Ullah Bund, or the Mound of God. This elevated country appears to be fifty miles in length, sixteen in breadth in some parts, and its elevation about ten feet throughout. For some years after this earthquake, the course of the Indus was very unsettled, till, in 1826, it burst its banks above Sindree, and forcing its way in a more direct course to the sea, cut through the Ullah Bund. The perpendicular cliffs thus laid bare, consisted of beds of clay filled with shells. In addition to this modern event, a tradition prevails of an earthquake which about three centuries before upheaved a large area of the bed of the sea, and converted it into land in the district now called the Reum of Cutch; so that numerous harbours were laid dry, and ships wrecked and engulfed; in confirmation of which account it was observed, in 1819, that in the jets of black, muddy water, thrown out of fissures in that region, there were cast up numerous pieces of wrought iron and ship nails.

**REMAINS OF MAN ENTOMBED IN BEDS OF EXISTING SEAS.**—The danger and exposure of the life of a seaman is of course proverbial, and the number annually engulfed in the bosom of the vasty deep forms a fearful and appalling amount. It is calculated that more than 500 British vessels alone, of 120 tons burthen, with all, or nearly all, on board, are annually entombed in the waters. Add a corresponding number for other nations, and we have an enormous sacrifice of human life, while in a single naval action several thousand individuals share a watery grave. Many of these corpses are devoured by predacious fish ere they reach the bottom, others when they rise to the surface float in a state of putrefaction. Many of these decompose on the floor of the ocean, where sediment of some kind is deposited over them; others fall upon a reef, where corals and shells are becoming agglutinated into a solid rock, or subside when the delta of a river is advancing; and thus these skeletons are preserved for an incalculable series of ages.

**AN EPIQUEURE IN CLIMATES.**—Mr. Bucke, in his admirable work on "Nature," says,—"Since, then, the emoluments of Nature are not to be enjoyed, to the fullest advantage, all the year, I would in this aspire to imitate the conduct of Lucullus. January, therefore, I would spend in Portugal; February in the Madeiras; and March in Spain. April in Sicily; May in Lapland; June in Italy; July in Switzerland; and August in France. September in England; October among the variegated forests of America; November in Crete, and December in the islands of the Cape de Verd."

### The Daughter.

BEING NO. V. OF THE EXPERIENCES OF BENJAMIN TRUESTEEL, ESQ.

Of our great love for woman a large proportion of the glad feeling has ever been forcibly taken possession of by little girls, although well-remembered affection is permitted to keep its place, even when the objects of its hope and pleasure have left their father's hearth, and become the bride of the stranger. How many glad faces have we seen become grave! how much gaiety have we witnessed sobering down to the placid but monotonous routine of household life! No matter. Doubtless we shall see many more rise to our knees, place their tiny hands courageously in our ample waistcoat pockets, and abstract what seemeth pleasing to them. Looking back on the early years of many happy wives and mothers, we feel some slight difficulty in selecting a heroine for our present paper: they were good daughters doubtless, but they are equally excellent helpmates, and we believe they are so satisfied with their present state, that they would rather be given to the world as obedient wives and loving mothers than in any other character. This arises from their valuable acquaintance with us—from the strict attention they have paid to our precepts, and the happiness they have experienced in walking by our counsel. We shall therefore seek for the picture among our yet young acquaintances; nor can we do wrong in selecting the only daughter of a kind and valued friend of ours, in whose happy home Benjamin is a frequent and welcome guest, and where the only strife among the sons and brothers is, who shall be the kindest and most attentive to their laughing-eyed and jocond-hearted sister.

Returning homeward from the city of an evening, our friend anxiously employed in the vain task of endeavouring to prove to us that we are getting old, he will clench his argument by saying that his daughter is of the same opinion. This he well knows will induce us on the instant to walk briskly forward, to knock familiarly at his door, and challenge the fair occupants as to the truth of the assertion. It has ever been our pride and privilege—a pride of which we frequently boast, but a privilege which we never abuse—to command the support of the female branches of a family. Whatever argument we advance, we have swift tongues in its favour; and fathers, husbands, and brothers must hide their diminished heads before the influence of Benjamin. But this article is not about ourselves—it is intended as an evening scene with our young friend Sarah.

Of her personal appearance we shall not condescend to speak, nor will womanish vanity be offended at our omission. Were she more lovely than she is,—were her eyes less bright,—or her skin of any or every hue—she would still be the same to us. What care we for rosy cheeks, if an ill-natured canker lies beneath—what are pretty lips in our estimation if they are giving to pouting—there is nothing more odious to our vision than white teeth when they encase an evil tongue. The women we love are those who are proud of their own acquirements, not of those which they can neither alter, cultivate, or improve. An amiable disposition, a cheerful temper, an obliging manner,—these are priceless treasures in the female world: they require watching, culture, pruning;—they are the best, the loveliest, and the purest adornments of woman. Possessing these, our young friend is sufficient to us, so we shall not state whether her hair is dark or light, whether she wear it in paper or shaded; her eye may be black, blue, or grey, "now brightly bold or beautifully shy;" her nose aquiline, Roman, or neither. Still we can almost say with Burns—

"Nature made her as she is,  
And never made another."

For young, dutiful, light of heart, and improved in mind, she is a pleasant specimen of Creation's handiwork.

Kind looks and happy words to her father—a joyous welcome to her brothers, a confident pressure of the hand to us, and a ready assistance to her mother, are performed at one and the same time. There is neither haste nor bustle in her movements, nor impatience at any delay in others. Should her mother become ruffled at the inattention of the servant girl, at the delay of supper, or perhaps at not being prepared to meet us as she wished, then the little laughing lips assert all matters to be correct, or the small but ready hand makes them so. There is no affection in our young friend—no disagreeable backwardness, and, more certainly, no forwardness. A chaste and elegant propriety gives grace to all her movements, while there is an entire absence of straining after effect. She knows well that her father and her father's friend look beneath the surface of intentions, and that they love her best in the unveiled modesty of nature. Her own well-cultured mind tells her also that unless her reputation is based upon generous actions, mild words, and well-considered duties, that the dear-loved name of daughter is undeserved—that the unruffled temper might be checked, or the perpetual smile which shines upon and gladdens all converted into peevish gloom. She knows that to command the good-will of her friends she must command herself. That secret she learned from us, and in return she gratifies us with the music of our youth at her piano.

One delightful evening we do remember well. We had been talking of the dreadful crimes of war, of the congregated dead, of the flying defeated—of the heartless victor—of the mourning among widows and sireless children—when our dear young friend invited us to hear the sonata of the "Battle of Prague." The slow sounds of warlike music, as if in the distance, awakened to a gallant march, in which our fancy heard the heavy tread of square and column, each step accompanied by the tumultuous swell of heaving hearts and pulses beating rapidly. Then the deep-toned wire gave out the fearful word "Advance," and the signal cannon swung its heavy boom across the field. Ere it dies away the cheery bugles sing, in an encouraging and inspiring strain, while the cavalry are heard to march in order forward. From the other end of the field the echoes are awakened by the trumpet's lordly call, and the answering cannon proclaim—"the

battle's opening roar." Shot follows shot; then comes the hurried attack, the roll of musketry scarcely heard in the drowning noise of the martial music which vibrates on the smoky field. Then the conflict slackens, the flying bullets are heard to hiss, only again to be silenced by the martial clang, and the thundering cannon's proclamation that death and havoc are rioting in gluttonous glory among flowing blood and stifled groans. Again the trumpet sounds along the plain. The infantry have retired, the clash of swords is heard, the sharp clear ring of antagonist metal dins the ear, when lo! the galloping of horses, the bounding of the fearless animal, the haughty spring of its proud rider, rushing nimbly by! Trumpets again break on the air, and the light horse come gallily on to share the battle and bestrew the plain. Then comes a sweep of cannon, winged with swift destruction, even the mimic sound of which called forth a tear. Yet at that moment, when lifeless and disfigured masses bespoke its dreadful carnage, the "hoarse dull drum" replied to the death-charged shot, and bold defiance rent the air. That long cannonade was decisive, though followed by a running and scattered fire. They flee! and the flashing sword pursues. The fiery charger leaps over the dead and the dying, his hoof enters the gash of the bleeding wretch, that his rider's sword may cleave the flying to the earth. Oh, hark! it is the trumpet of recall. The soldier wipes his bloody brand on his horse's mane, and he returns leisurely as from a good and glorious work. Low and moaning sounds break forth; there are groans, and calls for water, and stifled sighs and bursting sobs. Death is gathering up his spoils. Again the glad trumpet breaks forth: the notes of victory are proclaimed, the warlike host stands still—the martial bands advance, and in the sight of carnage, in the hearing of despair, the horrid mockery of "God save the King" is performed in the midst. The living place themselves in order: they dare not ask for friend or brother yet. The ready march is sounded; a gay Turkish air leads them from the field, the horses dancing to the bells and cymbals of the vain-hearted Ottomite. The clanging finale finishes the scene, and those who escaped the battle's danger are sent to rest, "by tower, or fort, or tented ground," to the simple melody of "Go to bed Tom."

During the performance of this really splendid piece of music, the whole family became absorbed in the sensations it produced. Much as we were taken with it, our attention was rivetted on the fair pianist, whose gentle heart at times seemed lifted up with the greatness of the subject; and ever and anon would the "laughing devil in her eye" wander from the page to demand our admiration. Never till that night did we fully understand the true meaning of the poet, where, among the attributes of female loveliness, he mentions—

"The mind—the music breathing from her face."

Nor did we think that the accomplishment of a young girl could have given such a tone and zest to family converse. There is an old proverb, which we were inclined to dispute, but now to its truth we give our willing adhesion, that grey hairs may learn wisdom from children. The proud father seemed to have victory in his eye as he glanced approvingly upon us, while the delighted mother enjoyed her pleasure quietly. The brothers held up their heads like peacocks; there was no speaking to them. A silent enjoyment appeared to pervade the happy circle, which gave us leisure to reflect on the many and varied scenes of domestic life which we had witnessed—to ponder on the anxiety, the canker, and the grief which the indiscretion of daughters have caused. Here at least was a universe within itself—order and harmony prevailing among the greater and lesser satellites. Need we say who, to us and all, was the bright and the morning star.

"She rose, where'er I turned mine eye,  
The morning star of memory."

It must not be supposed that comparative opulence is the source of all this comfort and gratification. It is our conviction, from that we know of our young friend, that were a less elevated station in society assigned her, were the fear of poverty to disturb the occupations of her sire, or the dread of household difficulties to intrude themselves on the cares of her mother, that her sweet disposition would exert its influence, and pour the same joyous balm over the nights and days of the family. Not a mere creature of circumstance or impulse, but a well-educated deep-thinking girl, guided by principles of unerring rectitude, and elevated by a pride which virtuous morality can alone instil, we believe that her playful laugh and her pleasant countenance would radiate and cheer the dulllest scene of life. Without such a conviction her present excellences would be to us only the drapery of her conduct—the veil which hid the real woman from our view. Happy and contented, not alone with the state of existence in which Providence has placed her, but with the company of her relations and friends, it is these feelings of domestic comfort which gives to her a peculiar charm, and have impelled us to select her as an example of filial duty and obedience—as one of many who, true to their name and station, make the title of daughter a household god, worshipped by all its inmates.

Yet, experiences of human happiness tell us that pleasant ring shall be broken. It is a matter of no importance when sons, like comets, fly off, and seek other systems. They are men, and can battle with the ills of life as well as those who have gone before them. But when a cherished daughter enters on a pilgrimage of matrimony, the pride of the mother—of the true and feeling hearted mother—is softened;—the boasting confidence of the father is subdued—and even the well-tried heart of old Benjamin begins to feel a fluttering sensation. It is the way of the world, and our only duty is to cultivate the guileless mind that it may know the proper path, and rejoice for ever in well-doing. When the hour of household separation comes—for, be it known, all our female friends get married, and their husbands are ever glad to see us—we shall be there to hear, and see, and feel the commingled griefs and pleasures of the day. When the parting kiss goes round, we shall not be forgotten; nor shall an old man's choicest blessings fall fruitlessly on the head of her who never caused to her parents an uneasy thought, nor ceased for a moment to be beloved by her brethren.

### The Valley of Edom.

THE historical travels of Mr. Stephens have done much to elevate the character of American literature. A denizen of the "youngest country in the world," he has been most fortunate in his visits to old places, and equally felicitous in his description of the scenes and circumstances which came under his notice. The following description of the Valley of Edom, followed as it will be by a visit to the tomb of Aaron, possesses a peculiar interest, as being remarkably plain and interesting account of one of the most wonderful places in the world:—

Petra, the excavated city, the long-lost capital of Edom, in the Scriptures and profane writings, in every language in which its name occurs signifies a rock; and through the shadows of its early history, we learn that its inhabitants lived in natural clefts or excavations made in the solid rock. Desolate as it now is, we have reason to believe that it goes back to the time of Esau, "the fath of Edom;" that princes and dukes, eight successive kings and again a long line of dukes, dwelt there before any king "reigned over Israel;" and we recognise it, from the earliest ages, as the central point to which came the caravans from the interior of Arabia, Persia, and India, laden with all the precious commodities of the East, and from which these commodities were distributed through Egypt, Palestine, and Syria, and all the countries bordering the Mediterranean; even Tyre and Sidon deriving the purple and dyes from Petra. Eight hundred years before Christ, Amaziah, the King of Judea, "slew of Edom the valley of Salt ten thousand, and took Selah (the Hebrew name of Petra) by war." Three hundred years after the last of the prophets, and nearly a century before the Christian era, the "King of Arabia" issued from his palace at Petra, at the head of fifty thousand men, horse and foot, entered Jerusalem, and uniting with the Jews, pressed the siege of the temple, which was only raised by the advance of the Romans; and in the beginning of the second century, though its independence was lost, Petra was still the capital of a Roman province. After that time, it rapidly declined; its history became more and more obscure; for more than a thousand years it was completely lost to the civilised world; and, until its discovery by Burckhardt in 1812, except to the wandering Bedouins, its very site was unknown.

And this was the city at whose door I now stood. In few words, this ancient and extraordinary city is situated within a natural amphitheatre of two or three miles in circumference, encompassed on all sides by rugged mountain five or six hundred feet in height. The whole of this area is now a waste of ruins, dwelling-houses, palaces, temples and triumphal arches, all prostrate together, in undisturbed confusion. The sides of the mountains are smooth, in a perpendicular direction, and filled with low and continued ranges of dwelling-houses, temples, a tombs, excavated with vast labour out of the solid rock, and while their summits present nature in her wildest and most savage form, their bases are adorned with all the beauty of architecture and art, with columns, and porticos and pediments, and ranges of corridors, enduring as the mountains out of which they are hewn, and fresh as if the work of a generation scarcely yet gone by.

Nothing can be finer than the immense rocky ramp which encloses the city. Strong, firm, and immovable. Nature itself, it seems to deride the walls of cities, as the puny fortifications of skillful engineers. The only access is by clambering over this wall of stone, practical only in one place, or by an entrance the most extraordinary that Nature, in her wildest freaks, has ever framed. The loftiest portals ever raised by the hands of man, the proudest monuments of architectural skill and daring, sink in insignificance by the comparison. It is, perhaps, the most wonderful object in the world, except the ruins of the city to which it forms the entrance. Unfortunately, I did not enter by this door, but by clambering over the mountains at the other end; and when I stood upon the summit of the mountain, though I looked down upon the vast area filled with ruined buildings and heaps of rubbish, I saw the mountain-sides cut away so as to form a level surface, and presenting long ranges of doors in successive tiers or stories, the dwelling and burial places of a people long since passed away; and though immediately before me was the excavated front of a large and beautiful temple I was disappointed. I had read the unpublished description of Captains Irby and Mangles. Several times the sheik had told me, in the most positive manner, that the way was no other entrance; and I was moved to indignation at the marvellous and exaggerated, not to say false representations, as I thought, of the only persons who had given any account of this wonderful entrance. I was disappointed, too, in another matter. Burckhardt had been accosted, immediately upon his entry, by a large party of Bedouins, who swore "that they should never enter the territory nor drink of their waters," and that they would shoot them like dogs if they attempted it. And I expected some immediate opposition from at least the thirty or forty, fewer than whom, the sheik had told me, we never to be found in Wady Moussa. I expected a scene of some kind; but at the entrance of the city there was no creature to dispute our passage; its portals were wide open, and we passed along the stream down into the area, and still no man came to oppose us. We moved to the extreme end of the area; and, when in the act of descending the foot of the rock on which stood the temple that had constantly faced us, we saw one solitary Arab straggling along without any apparent object, a mere wanderer among the ruins; and it is a not uninteresting fact, that this poor Bedouin was the only living being we saw in the desolate city of Petra.

For about two miles it lies between high and precipitous ranges of rocks, from five hundred to a thousand feet in height, standing as if torn asunder by some great convulsion and barely wide enough for two horsemen to pass abreast. A swelling stream rushes between them; the summits are wild and broken; in some places overhanging the opposite sides, casting the darkness of night upon the narrow defile; then receding and forming an opening above

through which a strong ray of light is thrown down, and illuminates with the blaze of day the frightful chasm below. Wild fig-trees, oleanders, and ivy were growing out of the rocky sides of the cliffs hundreds of feet above our heads; the eagle was screaming above us; all along were the open doors of tombs, forming the great Necropolis of the city; and at the extreme end was a large open space, with a powerful body of light thrown down from it, and exhibiting in one full view the facade of a beautiful temple, hewn out of the rock, with rows of Corinthian columns and ornaments, standing out fresh and clear as if but yesterday from the hands of the sculptor. Though coming directly from the banks of the Nile, where the preservation of the temples excites the admiration and astonishment of every traveller, we were roused and excited by the extraordinary beauty and excellent condition of the great temple of Petra. Even in coming upon it, as we did, at disadvantage, I remember that Paul, who was a passionate admirer of the arts, when he first obtained a glimpse of it, involuntarily cried out, and moving on to the front with a vivacity I never saw him exhibit before or afterwards, clapped his hands, and shouted in ecstasy. To the last day of our being together, he was in the habit of referring to his extraordinary fit of enthusiasm when he first came upon that temple; and I can well imagine that, entering by this narrow defile, with the feelings roused by its extraordinary and romantic wildness and beauty, the first view of that superb facade must produce an effect which could never pass away. Even now, that I have returned to the pursuits and thorough-engrossing incidents of a life in the busiest city in the world, often in situations as widely different as light from darkness, I see before me the facade of that temple: neither the Coliseum at Rome, grand and interesting as it is, nor the ruins of the Acropolis at Athens, nor the Pyramids, nor the mighty temples of the Nile, are so often present to my memory.

The whole temple, its columns, ornaments, porticoes, and porches, are cut out from and form the solid rock; and this rock, at the foot of which the temple stands like a mere print, towers several hundred feet above, its surface smooth to the very summit, and the top remaining wild and misshapen as Nature made it. The whole area before the temple is perhaps an acre in extent, enclosed on all sides except at the narrow entrance, and an opening to the left of the temple, which leads into the area of the city by a pass through perpendicular rocks, five or six hundred feet in height.

It is not my design to enter into the details of the many monuments in this extraordinary city; but to give a general idea of the character of all the excavations, I cannot do better than go within the temple. Ascending several broad steps, we entered under a colonnade of four Corinthian columns, about thirty-feet in height, into a large chamber some fifty feet square, and twenty-five feet high. The outside of the temple is richly ornamented, but the interior is perfectly plain, there being no ornament of any kind upon the walls and ceiling; on each of the three sides is a small chamber for the reception of the dead; and on the back wall of the innermost chamber I saw the names Messrs. Legh, Banks, Irby, and Mangles, the four English travellers who with so much difficulty had effected their entrance to the city; of Messieurs Laborde and Linant, and the two Englishmen and Italian of whom I have before spoken; and two or three others, which, from their character of writing, I supposed to be the names of attendants on some of these gentlemen. These were the only names recorded in the temple; and, besides Burckhardt, no other traveller had ever reached it. Many of my countrymen, probably, as was the case with me, have never known the existence of such a city; and independently of all personal considerations, I confess that I felt what I trust was not an inexcusable pride, in writing upon the innermost wall of that temple the name of an American citizen; and under it, and flourishing on its own account in temples, and tombs, and all the most conspicuous palaces in Petra, is the illustrious name of Paulo Nuzzo, dragomano.

Leaving the temple and the open area on which it fronts, and following the stream, we entered another defile much broader than the first, on each side of which were ranges of tombs, with sculptured doors and columns; and on the left, in the bosom of the mountain, hewn out of the solid rock, is a large theatre, the pillars in front fallen, and containing thirty-three rows of seats, capable of containing more than 3000 persons. Above the corridor was a range of doors opening to chambers in the rocks, the seats of the princes and wealthiest inhabitants of Petra, and not unlike a row of private boxes in a modern theatre.

The whole theatre is at this day in such a state of preservation, that if the tenants of the tombs around could once more rise into life, they might take their old places on its seats, and listen to the declamation of their favourite players. To me the stillness of a ruined city is nowhere so impressive as when sitting on the steps of its theatre; once thronged with the gay and pleasure-seeking, but now given up to solitude and desolation. Day after day these seats have been filled, and now silent rocks had echoed to the applauding shouts of thousands; and little could an ancient Edomite imagine that a solitary stranger, from a then unknown world, would one day be wandering among the ruins of his proud and wonderful city, meditating upon the fate of a race that has for ages passed away. Where are ye, inhabitants of this desolate city? ye who once sat on the seats of this theatre, the young, the high-born, the beautiful, and brave; who once rejoiced, in your riches and power, and lived as if there was no grave? Where are you now? Even the very tombs, whose open doors are stretching away in long ranges before the eyes of the wondering traveller, cannot reveal the mystery of your doom: your dry bones are gone; the robber has invaded your graves, and your very ashes have been swept away to make room for the wandering Arab of the forest.

But we need not stop at the days when a gay population were crowding to this theatre. In the earliest periods of recorded time, long before the tragic muse was known, a great city stood here. When Esau, having sold his birth-right for a mess of pottage, came to his portion among the mountains of Sier; and Edom, growing in power and

strength, became presumptuous and haughty, until, in her pride, when Israel prayed a passage through her country, Edom said unto Israel, "Thou shalt not pass by me, lest I come out against thee with the sword."

Amid all the terrible denunciations against the land of Idumea "her cities and the inhabitants thereof," this proud city among the rocks, doubtless for its manifold sins, was always marked as a subject of extraordinary vengeance. "I have sworn to myself," said the Lord, that Bozrah (the strong or fortified) shall become a desolation, a reproach, and a waste, and a curse, and all the cities thereof shall be a perpetual waste. Lo, I will make thee small among the heathen, and despised among men. Thy terriblest hath deceived thee, and the pride of thy heart, oh! thou that dwellest in the clefts of the rocks, that holdest the height of the hill; though thou shouldst make thy nest as high as the eagle, I will bring thee down from thence, said the Lord." "They shall call the nobles thereof to the kingdom, but none shall be there, and all her princes shall be nothing; and thorns shall come up in her palaces, nettles and brambles in the fortresses thereof, and it shall be a habitation for dragons, and a court for owls."

I would that the sceptic could stand as I did, among the ruins of this city among the rocks, and there open the sacred book and read the words of the inspired penmen, written when this desolate place was one of the greatest cities in the world. I see the scoff arrested, his cheek pale, his lip quivering, and his heart quaking with fear, as the ruined city cries out to him in a voice loud and powerful as that of one risen from the dead; though he would not believe Moses and the prophets, he believes the handwriting of God himself, in the desolation and eternal ruin around him. We sat on the steps of the theatre, and made our noonday meal; our drink was from the pure stream that rolled at our feet. Paul and myself were alone. We scared the partridge before as we ascended, and I broke for a moment the stillness of the desolate city by the report of my gun.

All round the theatre in the sides of the mountains were ranges of tombs; and directly opposite they rose in long tiers one above another. Having looked into those around the theatre, I crossed to those opposite; and carefully as the brief time I had would allow, examined the whole range. Though I had no small experience in exploring catacombs and tombs, these were so different from any I had seen, that I found it difficult to distinguish the habitations of the living from the chambers of the dead. The facades or architectural decorations of the front were everywhere handsome; and in this they differed materially from the tombs in Egypt; in the latter the doors were simply an opening in the rock, and all the grandeur and beauty of the work within; while here the door was always imposing in its appearance, and the interior was generally a simple chamber, unpainted and unsculptured.

I say that I could not distinguish the dwellings from the tombs; but this was not invariably the case; some were clearly tombs, for there were pits in which the dead had been laid, and others were as clearly dwellings, being without a place for the deposit of the dead. One of these last particularly attracted my attention. It consisted of one large chamber, having on one side, at the foot of the wall, a stone bench about one foot high, and two or three broad seats, in form like the divans in the East at the present day; at the other end were several small apartments, hewn out of the rock, with partition-walls left between them, like stalls in a stable, and these had probably been the sleeping apartments of the different members of the family; the mysteries of bars and bolts, of folding-doors and third stories, being unknown in the days of the ancient Edomites. There were no painting or decorations of any kind within the chamber; but the rock out of which it was hewn, like the whole stony rampart that encircled the city, was of a peculiarity and beauty that I never saw elsewhere, being a dark ground, with veins of white, blue, red, purple, and sometimes scarlet and light orange, running through it in rainbow streaks; and within the chambers, where there had been no exposure to the action of the elements, the freshness and beauty of the colours in which these waving lines were drawn, gave an effect hardly inferior to that of the paintings of the kings of Thebes. From its height and commanding position, and the unusual finish of the work, this house, if so it may be called, had no doubt been the residence of one who had strutted his hour of brief existence among the wealthy inhabitants of Petra. In front was a large table of rock, forming a sort of court for the excavated dwelling, where probably, year after year, in this beautiful climate, the Edomite of old sat under the gathering shades of evening, sometimes looking down upon the congregated thousands and the stirring scenes in the theatre beneath, or beyond upon the palaces and dwellings in the area of the then populous city.

Farther on, in the same range, though, in consequence of the steps of the streets being broken, we were obliged to go down and ascend again before we could reach it, was another temple, like the first, cut out of the solid rock, and, like the first too, having for its principal ornament a large urn, shattered and bruised by musket-balls; for the ignorant Arab, believing that gold is concealed in it, day after day, as he passes by, levels his murderous gun, in the vain hope to break the vessel and scatter a golden shower on the ground.

But it would be unprofitable to dwell upon details. In the exceeding interest of the scene around me, I hurried from place to place, utterly insensible to physical fatigue; and being entirely alone, and having a full and undisturbed range of the ruins, I clambered up broken staircases and among the ruins of the streets; and looking into one excavation, passed on to another and another, and made the whole circuit of the desolate city. There, on the spot, every thing had an interest which I cannot give in description; and if the reader has followed me so far, I have too much regard for him to drag him about after me as I did Paul. I am warned of the consequences by what occurred with that excellent and patient follower; for before the day was over he was completely worn out with fatigue.

The shadows of the evening were gathering around us as we stood for the last time on the steps of the theatre.

Perfect as has been the fulfilment of the prophecy in regard to this desolate city, in one particular has its truth been more awfully verified than in the complete destruction of its inhabitants—in the extermination of the race of the Edomites. In the same day, and by the voice of the same prophets, came the separate denunciation against the descendants of Israel and Esau, declaring against both a complete change of their temporal condition; and while the Jews have been dispersed in every country under heaven, and are still, in every land, a separate and unmixed people, "the Edomites have been cut off for ever, and there is not any remaining of the house of Esau."

In the morning Paul and I had determined, when our companions should be asleep, to ascend Mount Hor by moonlight; but now we thought only of rest, and seldom has the pampered tenant of a palace lain down with greater satisfaction on his campied bed, than I did upon the stony floor of this tomb in Petra. In the front part of it was a large chamber, about twenty-five feet square and ten feet high; and behind this was another of smaller dimensions, furnished with receptacles for the dead, not arranged after the manner of shelves extending along the wall, as in the catacombs I had seen in Italy and Egypt, but cut lengthwise in the rock, like ovens, so as to admit the insertion of the body with the feet foremost.

We built a fire in the outer chamber, thus lighting up the innermost recesses of the tombs; and after our evening meal, while sipping coffee and smoking pipes, the sheik congratulated me upon my extreme good fortune in having seen Petra without any annoyance from the Bedouins; adding as usual, that it was a happy day for me when I saw his face at Cairo. He told me that he had never been to Wady Moussa without seeing at least thirty or forty Arabs, and sometimes three or four hundred; that when Abdel Hag (M. Linant), and M. Laborde visited Petra the first time, they were driven out by the Bedouins after remaining only five hours, and were chased down into the valley, Mr. Linant changing his dromedary every three hours on the way back to Akaba; that there he remained, pretending to be sick, for twenty-four days, every day feasting half the tribe; and during that time sending to Cairo for money, dresses, swords, guns, pistols, ammunition, &c., which he distributed among them so lavishly, that the whole tribe escorted him in triumph to Petra. This is so different from M. Laborde's account of his visit, that it cannot be true. I asked him about the visit of Messrs. Legh and Banks, and Captains Irby and Mangles; and drawing close to me, so as not to be overheard by the rest, he told me that he remembered their visit well: that they came from Kerek with three sheiks and three or four hundred men, and that the Bedouins of Wady Moussa turned out against them more than two thousand strong. His uncle was then the sheik, and he himself was a young man; and, if his account is true, which cannot, however, be, as it is entirely different from theirs, he began the life of a knave so young, that though he had no great field for exercise he ought then to have been something of a proficient; he said, that while they were negotiating and parleying, one of the strange Arabs slipped into his hands a purse with a hundred pieces of gold, which he showed to his uncle, and proposed to him that they should use their influence to procure the admission of the strangers, and divide the money between them; and so wrought upon the old man that he procured their entrance, telling the tribe that one of the strangers was sick; and if they did not admit them into Wady Moussa, he would take them to his tent; and, added the sheik, his eyes sparkling with low cunning, my uncle and I ate the whole of that gold without any one of the tribe ever knowing anything about it.

One piece of information he gave me, which I thought very likely to be true: that the road to Petra, and thence through Idumea in any direction, never could be pursued with assurance of safety, or become a frequented route, because the Bedouins would always be lying in wait for travellers, to exact tribute or presents; and although a little might sometimes content them, at others their demands would be exorbitant, and quarrels and bad consequences to the traveller would be almost sure to follow; and he added, in reference to our visit, that, as soon as the Arabs should hear of a stranger having been at Petra, they would be down in swarms; and perhaps even now would follow us into the valley. I was satisfied that I had made a fortunate escape, not, perhaps, from personal danger, but from grinding exactions, if not from robbery; and, congratulating myself upon my good fortune so far, I began to feel my way for what I now regarded as important before I had thought of the journey to Petra, namely, a visit to the tomb of Aaron.

My companions opposed my going to it, saying that no Christian had ever done so; and that none but Mussulmans went there, and they only to sacrifice a sheep upon the tomb. I told them that I also designed to sacrifice; and that, like them, we regarded Aaron as a prophet; that my visit to Petra was nothing unless I made the sacrifice; and that my conscience would not be at ease unless I performed it according to my vow. This notice of my pious purpose smoothed some of the difficulties, as the Arabs knew that after the sacrifice the sheep must be eaten. The sheik was much more liberal or more indifferent than the rest, and my desire was finally assented to; although, in winding up a long discussion about the pedigree of Aaron, one of them held out to the last that Aaron was a Mussulman, and would not believe that he lived before Mohammed. He had an indefinite idea that Mohammed was the greatest man that ever lived, and in his mind this was not consistent with the idea of any one having lived before him.

My plans for the morrow being all arranged, the Bedouins stretched themselves out in the outer chamber, while I went within; and, seeking out a tomb as far back as I could find, I crawled in feet first, and found myself very much in the condition of a man buried alive. But never did a man go to his tomb with so much satisfaction as I felt. I was very tired; the night was cold, and here I was completely sheltered. I had just room enough to turn round; and the worthy old Edomite for whom the tomb was made never slept in it more quietly than I did. Little did he imagine that his bones would one day be

scattered to the winds, and a straggling American and a horde of Bedouins, born and living thousands of miles from each other, would be sleeping quietly in his tomb, alike ignorant and careless of him for whom it was built.

### Medical Virtues of Insects, &c.

MANY reptiles have the reputation of possessing medicinal virtues. The entrails of the crocodiles that haunted the island of Pharos, on the Nile, were celebrated for removing freckles and other ungainly spots from the face, and also for blanching the skin, and hence Ovid recommends those ladies who have a swarthy complexion to use the "Pharian varnish," as he calls it. The common stellio (*Lacerta stellio*) was formerly much in repute for its medicinal qualities. In the east, the scinck (*Lacerta scincus*) is used as an antidote against poison, and as a cure for elephantiasis. The common guana (*Iguana tuberculata*) is used medicinally in the West Indies. Toads have been employed in cases of cancer. In the Appendix to Pennant's *British Zoology* (1769) vol. iii. there are some lengthy letters on this subject, addressed by Messrs. Arscott and Pitfield to Dr. Miles, and to the Bishop of Carlisle. Mr. Pitfield says he saw toads applied to the cancered breast of a woman, for eighteen or twenty days, and that they produced neither pain nor nausea. He did not expect any beneficial result from them, on account of the extremely bad nature of the case, but he doubts not that toads in such complaints may afford relief by extracting the virus, and so cleansing the affected part. He says the toads very eagerly adhered, and extracted the foulest of the virus until they dropped down dead. They often swelled and appeared agonised; perspired exceedingly; became pale; sometimes vomited and then became lively again. After sucking, he says, they increased in weight from a drachm to nearly an ounce. The first person who so applied toads is said to have been a woman near Hungerford, who used also to allow them when dead to remain in contact with her cancerous breasts, by way of cataplasms. Although toads might possibly afford relief in these cases, yet we cannot look upon them as possessed of any power to cure. The toad was also celebrated for having "a precious jewel in its head," to which medical properties were ascribed. Maplett, the old natural historian, says this stone or jewel is "available against envenoming;" and Fenton, in his *Secrets Wonders of Nature* (1569), says it has the power "to repulse poysons," and adds, that "it is a most sovereign medicine for the stone." This "precious jewel," rendered so celebrated by Shakspeare's well-known allusion to it, was variously called toadstone, crapaudina, borax, stelon, bufonites, or krottenstein. These celebrated toadstones, however, are reported to have been merely the fossil teeth of the sea-wolf or some other fish. The boa constrictor abounds in fat, which is used by the people of the plains as a remedy for rheumatic pains, ruptures, strains, &c. The Egyptian viper was in great repute among the ancient physicians, and is imported, every year, in considerable numbers to Venice, where the apothecaries use it in the composition of medicinal treacle and other compounds. It is from its great medical reputation, that the viper is represented in the ancient figures of Minerva, Medica, and Esculapius. Those patients to whom its flesh was recommended, usually eat it boiled, and in a fresh condition, that its virtues might be more powerful; but it was sometimes administered in a dry pulverised state. Pliny and Galen bear testimony to its efficacy in curing ulcers, elephantiasis, and other diseases; and Dr. Mead states that he witnessed good results from its use in a difficult case of leprosy. Sir Kenelm Digby, according to Keyser, fed his wife upon capons that were fattened upon the flesh of vipers, and though she is said not to have long survived this system of diet, yet there can be no doubt that it was prescribed by her indulgent lord from some humane medical motives. Had she died after eating only one or two of these viper-fed capons, we might give it as our verdict that she was killed with kindness; but, as it is to be inferred that she ate many of them, and as we know that the venom of snakes taken into the stomach does not prove fatal, we cannot award Sir Kenelm the merit of having destroyed his fair lady by over-kindness. Our suspicion is, that she died of the chicken-pock. In Pennant's time, the flesh of the viper was used as a restorative, but he suspects that physicians did not greatly rely on its virtues. The fat of the viper, officially termed *axungia viperina*, was formerly applied as a cure for its venomous bite. The celebrated adder-stone, or adder-gem, believed to possess the power of ensuring constant success and great patronage to its possessor, and also to assist teething, cure the chine-cough, and expel the ague, was said to be the egg of the adder; but, the fact is, it was made of glass.

Fishes' spawn is recommended by Ovid to recruit the exhausted powers of the human frame. Pennant says that the oil of the basking shark has been used as a cure for bruises, burns, and rheumatic complaints; and the pulverised eggs of the angel shark are, according to Mendelet, a sovereign remedy for diarrhæa. The swimming bladder, or sound, of the sturgeon, when cleansed and dried, constitutes the official *ichthyocolla*, or common isinglass. Gesner says that the jawbones, hearts, and gills of pike, are very useful to stop blood, to abate fevers, to cure agues, to oppose or expel the infection of the plague, and are, in many other ways, medicinal. Isaac Walton, the kingfisher of the fishers, says the

physicians of his day made "the gall, and stones in the heads of carp to be very medicinal." From the mackerel, a substance called *garum* was obtained, and used for both culinary and medicinal purposes. William Yarrell, a worthy successor to old Isaac, says, that "those persons who have been able to overcome the repugnance arising from the natural smell and taste of the oil which is extracted from the liver of the ling (*Lota lotia*), have found it effectual in severe cases of rheumatism, when taken in small beer in doses of from half an ounce to an ounce and a half. Formerly from fifty to sixty gallons of this oil, and also that from the liver of the codfish, were dispensed in one large establishment for this purpose, and it was found to act best when the perspiration was increased. The exudation from the skin of those to whom it was administered always became tainted with it." As early as the time of Dioscorides, physician to Anthony and Cleopatra, the shock of the electric ray (*Torpedo vulgaris*) was prescribed, and especially for pains in the head. It was at that early period, in fact, that medical electricity was first practised. In later times it was applied to the cure of gout; the patient keeping his feet on this electric fish until the numbing shock extended to the knees.

Insects of many sorts have been enlisted into the medical service. Pliny speaks of a Blatta (but, from his description, it appears to be the church-yard beetle (*Blaps mortisaga*), which he says will, when applied with oil of cedar, infallibly cure ulcers that defy other applications. Latreille informs us that *Blaps sulcata*, an Egyptian species, is used by the Turks to alleviate pain of the ear, and to cure the sting of the scorpion. Blumenbach says that the lady beetle (*Coccinella*) and a species of oil-beetle (*Meloe*) have been prescribed as cures for the tooth-ache. The *Cantharis vesicatoria* is extensively used as a stimulant, diuretic, and blister. Dr. Clarke relates that the Egyptian women eat the sacred beetle (*Scarabæus sacer*), believing that it renders them prolific, and hence they adopt it as the symbol of the sun that fertilizes the soil. Kirby and Spence in their comprehensive *Introduction to Entomology* (vol. i. p. 33) tell us that it was formerly conceived that "nine caterpillars of the moth of the wild teal, enclosed in a reed or goose-quill, were a remedy for the ague." The same celebrated entomologists, after alluding to the administration of cowage and pulverised spun glass as an anthelmintic, or destroyer of intestinal worms, hint the probability of equal efficacy attending the substitution of the tenacious prickly spines, or hairs, of the caterpillars of the tiger-moth (*Arctia caja*) and other lepidopterous insects. Hooper, in his *Medical Dictionary*, says "six or seven bed-bugs are given inwardly to cure the ague, just before the fits come on, and have the same effect as everything nauseous and disgusting." If we ever prescribe them it will be as emetics, and one perhaps will be a sufficient dose. In Shaw's *General Zoology* (vol. vi. p. 501) it is observed that "woodlice (*Oniscus aspidiotus*), though but slightly esteemed in the present practice of physic, once maintained a very respectable station in the materia medica, under the title of millepedes, and were regarded as aperient, resolvent, &c. They were ordered in cases of jaundice, asthma, and many other disorders, and were either taken living, being swallowed in their contracted state, as pills, or variously enveloped in syrups and marmalades, but were more generally pulverised, and then mixed with other ingredients." Honey, the produce of bees, Ovid regards as an amorous incentive. The black-pointed fangs of a large species of spider found in Campeachy, New Spain, are stated, by Camper, to be used by the natives as tooth-picks, on the supposition that they possess the power of expelling the tooth-ache. In England, the spider's web is the court-plaster, or styptic of the poor people. The spider itself is recommended by birdfanciers as an almost universal cure for disorders in birds. Wilson, the American ornithologist, recommends spiders in cases of sickness or dejection in the mocking-bird, a species of thrush. The writer of the article *Aranea*, in the *Encyclopædia Londinensis* says that "spiders are found to contain a great deal of volatile salt; in consequence of which they are sometimes useful in agues, if taken inwardly. A scruple of the spider's web, in many instances, is said to have proved successful, given an hour before the fit of an ague and an hour after it. This produces no sensible effect, and may be given when bark is not safe." Elias Ashmole, the renowned collector of natural curiosities, has left behind him the following memorandum:—"April 11, 1681. I took, early in the morning, a good dose of elixir, and hung three spiders about my neck; and they have drove my ague away. *Deo gratias*." In these times, so much are spiders neglected, we fear it would be hopeless to advise even a naturalist to hang a spider round his neck. No persuasion would overcome the aversion and other objections that would be raised.

A species of fresh-water crab (*Thelphusa*) peculiar to the south of Europe and the Levant, *le de rivière* of Rondeletius, enjoyed great celebrity among the Greeks, for its supposed medicinal virtues, and is frequently represented with the utmost accuracy, on the coins of Agrigentum. Edible snails (*Helix pomatia*) were once extensively used for the cure of consumptions, and snail-water was admitted into the pharmacopœia of the last century. Charles Howard, Earl of Arundel, introduced them into this country for the cure of his countess. It

was this species that used to be cooked and eaten by ancients in the belief that it was an incentive to lo. Leeches of the species *Hirudo medicinalis* are highly used in phlebotomy, and are very extensively imported from Italy, Spain, and Germany, into Europe and America. The latter quarter of the globe is reported to contain its waters an inexhaustible supply of these useful creatures, but the practitioners in some of its larger cities will only use those that are of foreign importation. France, they are collected for use and even for exportation; but yet a great quantity is imported at Paris. Moreau stated at a sitting of the Paris Academy of Sciences (May 26, 1834,) that in 1817 the quantity imported into France amounted in value to only one hundred and seventy-seven francs, or about seven pounds sterling; but, he added in 1832, the quantity was greatly increased as to be valued at one million, seven hundred and twenty-four thousand, six hundred and francs, or nearly seventy thousand pounds sterling. Nereides, or *marine scolopendra*, are mentioned Galen and Dioscorides as ingredients in a composition for the cure of injuries received from those creatures when living. Sponge, which is considered as an anir substance, is used, either in a calcined state or in the form of lozenges, as a deobstruent.

It may be observed from the above collection of examples that, in former periods a vast number of animals were prescribed as cures for diseases, although it is plain that in most instances they could have no beneficial effect upon them whatever. Faith, and the course of nature, were the actual cures. In modern times animals perform but little in the mysteries of medicine, because physicians find it preferable and more convenient to resort to the chemical elements of which animals, as we saw plants, are composed. Still, however, we think the properties of animals deserve investigation by competent members of the medical profession.

### The Life and Age of Man.

THE natural divisions of human life are six, viz. infancy, childhood, boyhood or girlhood, adolescent manhood, old age. These epochs are marked by certain changes in the constitution, which take place at periods varying in each individual, but the average period which has been defined. Infancy extends from birth to the completion of the first set of teeth, which take place at the end of the second year: childhood extends from the completion of the first dentition to the completion of the second dentition, about the seventh or ninth year: boyhood or girlhood, from the completion of childhood to the age of puberty; adolescence, from the close of boyhood to the twenty-fourth year, and from the close of girlhood to the twentieth year of the female: manhood follows: and at periods varying according to the pursuits, and general tenor of the mode of life, old age comes on.

In the first moment of existence, the infant seems to indicate by its cries, that the new sensations it experiences are of a painful kind. The sensation of cold is in all probability the exciting cause of the infant's cries. The effect of the cries is beneficial in assisting the new function of respiration. The infant is perfectly helpless—its life is dependent upon paternal care: if left to itself, in the first three years of existence, it would infallibly perish. For two or three months it requires no food, warmth, cleanliness, and sleep; these wants are indicated by its cries, which will never for a minute be disregarded by the tender parent or nurse. The infant requires, during the first four or five months, the most simple food—the mother's milk is the proper, and should be the only, aliment. The mother should know that giving nature's food to her offspring is a duty which cannot be neglected without resigning her own best joy and risking the life and health of her offspring. Some have supposed that the moral qualities of the nurse at imbued by the infant with the milk it sucks; and the hiring milk, and hiring mind, may be received from the wet-nurse, and thus

"She who to her babe the breast denies

The sentient mind, the living man destroys."

The lining membrane of the digestive canal—of the stomach and bowels—is very irritable in infants, and readily excited to inflammatory disease, by any change from the most simple diet, or by the use of irritant medicines. In the infant's body the fluids abound; the capillary arteries are numerous; every part of the body is possessed of extreme irritability; and its actions are readily excited to a diseased state by stimulants. It is this condition of the body which renders it susceptible of injury from all unnatural food—all except the mother's milk. Many mothers indeed, cannot, from various causes, afford this nourishment to their offspring: but none will lightly forego the duty, when they consider that six out of every seven children brought up without the mother's or wet-nurse's milk, die before they attain advanced age.

The infant is very susceptible to the influence of cold the surface of the body, and the internal surface of the lungs, to which the air has access, are affected by cold air, and by it the blood is driven from these surfaces into the internal structures, and thus inflammation of the lungs is produced, which is a frequent and fatal disease in children. Remember, then, that infants are to be carefully screened from cold air, and kept in a moderate and regular temperature.

About the end of the seventh month the teeth begin to

appear through the gums; and about the second year the first set of teeth, twenty in number, are complete. Infants are liable to convulsions, and other diseases, when teething; and life at this period is very insecure, one-third of the infants born, dying before they reach the twenty-third month. Difficult teething, and the diseases caused by it, may be prevented, by care in supporting the child's health, by simple diet, cleanliness, warmth, and pure air, and by avoiding all stimulating diet and drink. At this early period of life we cannot too diligently soothe and caress the little being. The cheerful word, the tender smile, and the loving caress, of parent or nurse, have power to promote the better feelings, and retard, if not annihilate, the germs of passion in the little breast.

In the infant's body the small arteries are numerous and active; the circulation is rapid, and respiration frequent. The formation of bone is carried on in the cartilaginous extremities of the long bones. The body is soft, the outlines rounded, and the growth of the whole system is carried on. Sensations of pain and pleasure are frequent and transient. The senses of touch, seeing, and hearing, are in active exercise from an early period, and their use should be encouraged. Imitation of sounds, by the vocal organs, is observed at this early period. Round smooth bodies—agreeable colours—pleasant sounds—should be presented to the infant, and time allowed for his attention to be occupied by them.

The termination of the period of childhood is marked by the completion of the second set of teeth, and occurs from the seventh to the ninth year.

In childhood, the circulation of the blood is rapid; the respiration frequent; and the numerous capillary vessels build up and consolidate the whole system. The bones become harder—the muscles more energetic in their contraction; and the child acquires the power of walking and running, and of using all the muscular powers—lessons begun in infancy and completed in childhood. The senses are constantly acquiring food for the mental powers—stores for after life: muscular energy is quickly expended—quickly renewed; and we see the young of all animals bound with buoyant joy at simply feeling life.

In early childhood the head is liable to diseases, for it is to this part that the vital actions tend; for this cause we must avoid too early mental application in school studies. We may leave the mind to choose its own food, taking care that plenty be offered; but should direct our attention, from the earliest periods, to the moral affections. Example, precept, and encouragement should unite their powers to promote love and truth in the young breast.

Boyhood or girlhood, the age succeeding childhood and preceding puberty, is an important epoch. The circulation is less rapid and the breathing less frequent than in infancy, but the capillary branches of the arteries are still actively employed in rearing and completing the fabric of the man: the hard parts are more ossified, the muscles are firmer, the growth of the body rapid. Nutritious food, playful exercise, pure air—must be allowed in abundance to girls and boys, or the vital economy will be deranged; and scrofula, consumption, rickets, crooked backs, and other diseases, will be produced. The cerebral organ is firmer, and less mobility of mind exists; the susceptibility to impressions is great; the perceptive powers are acute; the memory retentive; and now it is that great stores of ideas are laid up, on which, in after-life, the reflective powers are exercised. Yet let not the schoolboy or girl be overworked, in the endeavour to acquire mental stores. Let us remember that this period is the prelude to the better part of life; and that by overtasking the mental powers, we may exhaust the powers of the brain and destroy the general health; and thus, while over-zealously sowing the seed, we may be destroying the fruit.

In the age of adolescence the blood in the arteries and veins becomes more nearly equalized, the respiration is less frequent, the structure of the body is completely formed and consolidated, the functions are completed; the imagination and feelings are heightened; new thoughts and feelings fill the mind, and all the future is tinged with the rosy gleam of hope. Now it is that Love exerts its powers—but we will not rudely raise the veil, though the subject claims the anxious attention of the young, and of their parents and guides. Now it behoves the youth to call reason to his aid, diligently to repress his passions, and calmly to look forward—extending his views to the whole course of his duties here and hopes hereafter.

With the age of manhood, the perfection of mind and body are attained; we are capable of persevering and long-continued exertion; changes of climate are well borne, and the body is subject to few diseases; the blood in the arteries and veins is equalized in quantity; the circulation and respiration are less frequent; the body does not increase in height, but attains more bulk and is often clothed with fat; the brain, in common with other parts of the body, is of firmer texture—less susceptible of the impressions of the senses and of the feelings—more capable of reflection and abstraction, and persevering attention; the mental view is enlarged; and man, looking around, contemplates the course appointed for him to run. Some fix their eyes on the immediate goods which are spread around them in benevolent profusion: power, riches, knowledge, pleasure—attract their gaze, fix their attention, and engross their souls; if the voice of conscience, sickness, or the death of friends throw on their field of vision a view of the goal towards

which they run, and of the unknown land beyond—they hastily avoid it, and return to their idols. Others, earnestly looking forward, see the end of their earthly course, and humbly listen to the voice which tells them of a home beyond—and yet they labour cheerfully, and execute their mission as they travel on.

Old age may be retarded by attention to the laws of health. The law of health—of culture of mind and body—is, that every organ of the body must be duly exercised. Exercise of an organ of the living body determines the vital powers to that organ: the circulation of the blood is increased in the part; the nervous energy of the ganglionic or vital nervous system is determined to the part; and the nutrition, growth, and life of the part are increased. This is true of the muscular system: active exercise increases the size and vital power of the muscles—witness the legs of the dancing-master and the arms of the sailor: this is true of the vital powers of digestion and respiration—witness the enormous powers of consuming food of men who live to eat, and the *corporation* acquired thereby; and the powers of *wind* acquired by men trained to pugilism or other active sports; this is true of the functions of the brain—witness the powers of the practised speaker in public assemblies.

So far the rule is simple—exercise increases the power of an organ: yet inordinate exercise injures or destroys an organ; and this may be effected directly, by stretching—till they burst or break the delicate vessels or fibres of which an organ is composed; or indirectly, by depriving the organs not exercised, of their due share of sanguineous and nervous energy, and thereby deranging the general health; for injury of a part of the body quickly becomes an injury of the whole.

This law of physiology is of wide import: it points out that the immoderate indulgence in the pleasures of the table tends to debase the human mind, by withdrawing the nervous power from the organ of the mind, enjoyed in its highly developed state by man alone, and centring it on the digestive organs, enjoyed in common with all other animals: it points out (though we admit the benevolence of that law which declares that man shall live by the sweat of his brow) that the inordinate labour of those who work in factories, especially of children, prevents the due culture of the mind, by depriving its organ, the brain, of a due share of the vital power, and preventing its development: it points out the erroneous notions of the ancient sages, who believed that man's intellect was capable of unlimited culture, and ultimate perfection, independent of bodily organs: it points out how sad the penalty which may be paid by the aspiring genius—the *Kirke White*—who overtakes his mind. I knew an amiable youth whose return to school had been delayed. Night and day he laboured to recover his place in his class by committing to memory three hundred lines of Homer's *Iliad*: fruitless labour! he succeeded—and was prostrated by an inflammation of the brain, the natural consequence of inordinate exertion of that organ. This law of physiology—that inordinate exercise of an organ injures the part or the whole of the body—should be borne in mind by the educators of youth. In the young, the vital powers of the circulation, and of the ganglionic or vital nervous system, are exercised in building up all the organs of the body and fitting them for the race of life. Exercise of every part is therefore required, for exercise aids in the development of every part: but the vital, nutritious, or assimilating powers especially require much exercise, to prepare the new material which is wanted for the growth of the body. If then we inordinately exercise the organ of the mind—the brain—by too much mental application (and in some constitutions a little is too much) we concentrate the powers of the body on that organ, and deprive the other organs of their due share: thus arresting nutrition, growth, and health at their source. Let your endeavour be duly to exercise every organ of the body. But remember the rule of "not too much," in your muscular exertion, in your sensual pleasures, and your intellectual occupations, and so shall you secure "a sound mind in a sound body."

Old age comes on at periods varying according to the manner in which life has been spent. With the temperate—those who have neither idly neglected, nor foolishly spurred, their mental and bodily powers—its approach is late and imperceptible. With those, on the other hand, who have led a life of sloth and sensuality; who have overtaken the mind and body in the acquisition of temporal goods; or who have been condemned, by ignorance or injustice, to unceasing and immoderate labour for their daily bread—old age comes on apace, and grievously afflicts the body.

In old age the body becomes firmer, the solids abound, the bones are very brittle, the cartilages become changed to bone, circulation and respiration are slow, the capillary arteries are fewer in number, and the greater part of the blood of the body is contained in the veins; the brains become firmer, the senses less acute; and a growing indifference to the pleasures, pursuits, and feelings of mankind precedes the total separation from them. We need not here stop to inquire why death is part of the economy of life: we cannot conceive how the present system could be carried on without it. Spring-time and harvest, the love of offspring, the hopes and fears, the trials and virtues of human life, are inseparably connected with it; and we feel that it would be as reasonable to grieve that we had not been in existence eternally, as to repine at death.

But there is a view of death which will open a glorious evidence of the Divine goodness. The death of the individual might have been more uncertain, while the death of the average number might have been equally secured by other and more distressing means. Disease, violence, famine—might have been the executioners of the Divine will. Some men might have been allowed to reach centuries, nay thousands of years, of existence on this earth; and how strongly would this chance have attracted the hopes and fears of mankind! How recklessly would the wicked man have pursued his path of sin, casting his hopes upon an eternity of existence here! Power, wealth, pleasure—would have been inconceivably more valued, and man's soul would more enthusiastically have sought them. The dread of death would have increased in some; and apparent injustice would have prevailed in the fate of the victims. Christian believers would have been sickened by hope deferred; and would have longed, apparently in vain, for the day when they might see their Redeemer's face.

But God is merciful, and in wisdom hath he done all things. Our living bodies are so constituted, that death is a consequence of life; and that too at a regulated period, varying with the species of living beings, and varying slightly in the individuals of a species. This law of growth, perfection, decay, and death, is dependent upon the action of the vessels which circulate the nutrient fluids. In the early periods of life, the small arteries called capillary arteries—whose office it is to build up and maintain all the structures of the body—are numerous, energetic in action, and exceed in volume the veins which return the blood to the heart. As life advances, the excess of number and volume of the arteries gradually diminishes, and the number of the veins increases; and in old age, the small branches of the arteries are almost lost, while the quantity of blood in the veins far exceeds that of the arteries. These conditions of the blood-vessels cause the softness, excess of fluids, and growth of the young body; the perfection of the adult; and the gradual decay of structure and loss of functions, which mark the period of old age, and terminate existence by a gentle and gradual decay.—*White's Lectures on Man.*

#### Electro-Magnetic Printing.

Mr. Bains's electro-magnetic printing machine is now exhibiting in the Royal Polytechnic Institution. It was recently introduced and explained in a succinct lecture on the subject, and by a comparison between the inventions of Professor Wheatstone and others with the ingenious instrument now for the first time brought under public notice. The principle upon which electro-magnetism has been applied already, not only to telegraphic communications, but also to clocks, &c., having been explained in this journal already, that any attempt at even a descriptive outline of the explanatory lecture would be idle repetition. Suffice it to say, therefore, that the invention which it was the object of the lecturer to describe, surpasses its predecessors in this striking and most important point—viz., that while previous inventions required the constant attention of some agent at the terminus to which the communication was to be made, this instrument might be left at the terminus wholly unprotected and unwatched, and yet the information communicated from the other extremity of the line would be found legibly in type by the curator, on his return after a short or prolonged absence. Mr. Alexander Bains, the inventor and patentee of the machine, was in attendance, and explained its capabilities. The apparatus consists of a dial-plate, inscribed with the alphabet and numerals, with a revolving hand, worked by ordinary clock-work. On the other side of the room stood the important portion of the invention—that which furnished in type the communication to be sent forth from the dial-plate already described. Between these two machines a connexion (capable of being extended in practice to any length) by means of wire conductors, communicating with two electro-magnets placed on a frame, and connected with a cylinder covered with paper, upon which the type was to leave its impression—an horizontal wheel, in which types to correspond with the letters and figures on the dial were fixed. This wheel was ingeniously brought in contact with an inking roller, and these three portions of the machine were all brought into motion horizontally. Difficult as it is to describe even a simple piece of machinery, we again essay to describe to our readers the *modus operandi*. The party directing the communication stands at the dial-plate first described, and fixes a peg under the letter desired to be communicated. The index or revolving hand performs its rotation until its progress is arrested by coming in contact with the peg. A small trigger is then pulled, the galvanic power is then brought to bear by the aid of the communicating wires upon the two electro-magnets, with their machinery on the second frame, and the letter thus communicated is printed upon the paper affixed to the cylinder. The operations excited universal admiration, and the machine itself is well worthy the attention of the curious; for, though at present it may fall as a speedy means of communicating information in print, still by the adoption of a code of signals (by which one letter or character might be construed to denote a sentence or describe a subject) the invention might be made extremely valuable in the times in which we live. A visit to the inventor will, however, be amply repaid by the interest his explanations afford.

## An Old Irish Heroine.

GRANA OF THE ISLES.

Just opposite Westport, at the entrance to Clew Bay, lies Clare Island, the residence of the ancient chieftainess of the county Mayo and of its multitude of isles—Grana Uaile. One square and strong tower yet remains of her stronghold on the island shore. Of this "heroine of the west," Mr. Otway gives the following somewhat interesting account:—

"Grace O'Mealey, which has been corrupted into Grana Uaile, was the daughter of Breanhaun Crone O'Maille, tainst or chieftain of that district of Mayo surrounding Clew Bay, and comprising its multitude of isles. This district is still called by the old people The Isles of O'Mealey; and its lord, owning, as he did, a great extent of coast, and governing an adventurous sea-faring people, had good claim to his motto, 'Terra Marique Potens.' Breanhaun Crone O'Maille dying early, left a son and daughter—the son but a child; the daughter, just ripened into womanhood, seemed to have a character suited to seize the reins of government, and rule over this rude and brave people. Setting aside, then, at once the laws of tanistry, that confined the rule to the nearest male of the family, she took upon her, not only the government, but the generalship of her sept, and far exceeded all her family in exploits as a sea-rover; and from her success, whether as smuggler or pirate, as the case might be, she won the name of Grace of the Heroes. Acting in this wild and able way, she soon gathered around her all the outlaws and adventurers that abounded in the islands, and from the daring strokes of policy she made, and the way in which she bent to her purpose the conflicting interests of the English government and the Irish races—she was called the Gambler. As a matter of policy, she took for her husband O'Flaherty, Prince of Connemara; and there is reason to suppose that the grey mare proving the better horse, the castle in Lough Corrib, was nearly lost to the Joyces, by O'Flaherty the Cock, but was saved and kept by Grana the Hen, hence it got the name which it still keeps, of *Krisblane na Rirca—the Hen's Castle*. Be this as it may, Grana's husband, the Prince of Connemara, dying soon, she was free to make another connexion, and in this she seems to have consulted more her politics than her affections, and became the wife of Sir Richard Bourke, the M'William Eigher. Tradition hands down a singular item of the marriage contract. The marriage was to last for certain (what said the Pope to this) but one year, and if at the end of that period, either said to the other 'I dismiss you,' the union was dissolved. It is said, during that year Grana took care to put her own creatures into all M'William's eastward castles that were valuable to her, and then, one fine day, as the Lord of Mayo was coming up to the castle of Corrig-a-Howly, near Newport, Grana spied him, and cried out the dissolving words—'I dismiss you.' We are not told how M'William took the snapping of the matrimonial chain; it is likely that he was not sorry to have a safe riddance of such a virago. We shortly after this find Grana siding with Sir Richard Bigham against the Bourkes, and doing battle with the English. The O'Mealeys, on this occasion, turned the fortune of the day in favour of the president of Connaught, and most of the M'William leaders being taken prisoners, six of them were hanged next day at Cloghan Lucas, 'in order to strengthen the English interest.' It is probable that it was in gratitude for this signal aid afforded to her lieutenant, that Queen Elizabeth invited Grana over to the English court; and it certainly confirms the Irish-woman's character for decision and firmness, that she accepted the invitation of the Saxon, of whose faithfulness the Irish nation had but a low opinion. Accordingly, Grana sailed from Clare Island, and before she arrived at the port of Chester was delivered of a son, the issue of the marriage with M'William Eigher. He being born on ship-board, was hence named *Tohaduah na Lung*, or *Toby of the Ship*, from whom sprung the Viscounts Mayo. It must have been a curious scene, the interview at Hampton Court between the wild woman of the west, and the 'awe-commanding, lion-porter' Elizabeth. Fancy Grana, in her loose attire, consisting of a chemise, containing thirty yards of yellow linen, wound round her body, with a mantle of frieze, coloured madder-red, flung over one shoulder, with her wild hair twisted round a large golden pin as her only head-gear, standing with her red legs unstockinged, and her broad feet unshod, before the stiff and stately Tudor, dressed out (as we see her represented in the portraits of that day) with stays, stomacher, and farthingale, cased like an impregnable armadillo—what a 'tableau vivant' this must have been! and then Grana, having made a bow, and held out her bony hand, horny as it was, with many an oar she had handled, and many a helm she had held, to sister Elizabeth, (as she called her,) sat down with as much self-possession and self-respect as an American Indian chief would do before the President of the United States. Elizabeth, observing Grana's fondness for snuff, which, though a practice newly introduced, she had picked up in her smuggling enterprises, and perceiving her inconvenienced, as snuffers usually are when wanting a pocket-handkerchief, presented her with one richly embroidered, which Grana took indifferently, used it loudly, and cast it away carelessly; and when asked by Sir Walter Raleigh, why she treated the gift of her majesty in such a way, the answer of the wild Irish girl was of that coarseness that ought not to be read by eyes polite. Moreover, it seems Elizabeth was not happy in the presents which she proffered to the Vanathess; she ordered a lap-dog, led by a silken band, to be given to her. 'What's this for?' says Grana. 'Oh, it is a sagacious, playful, faithful little creature, it will lie in you lap.' 'My lap!' says Grana; 'it's little the likes of me would be doing with such a thing:—keep it to yourself, Queen of the English, it is only fit for such idlers as you:—you may, if it likes you, fool away your day with such vermin.' 'Oh, but,' says Elizabeth, 'Grana, you are mistaken, I am not idle; I have the care of this great

nation on my shoulders.' 'May be so, said Grana, 'but as far as I can see of your ways, there's many a poor creature in Mayo, who has only the care of a barley-field, has more industry about them than you seem to have.' Of course, Elizabeth dismissed her soon; she offered, at her last audience, to create her a countess. 'I don't want your titles,' says Grana, 'arn't we both equals? if there be any good in the thing, I may as well make you one as you me. Queen of England, I want nothing from you—enough for me it is to be at the head of my nation; but you may do what you like with my little son, Toby of the Ship, who has Saxon blood in his veins, and may not be dishonoured by a Saxon title:—I will remain as I am, Grana O'Maille of the Isles.' It was on her return from England, and when driven by stress of weather into the small harbour of Howth, that the often-told circumstance occurred respecting her abduction of the young St. Lawrence. Landing from her vessel, she and some of her followers proceeded to the castle and demanded admission, but were refused, on the ground that the noble owner was at his dinner and could not be disturbed. 'Oh, the Saxon churl!' said Grana, 'it's well seen he has not a drop of Irish blood in his big body; but he shall smart for it.' And so he did, for Grana, on her return to her vessel, entering into a comfortable cottage, and finding therein a beautiful boy, the eldest son of the baron, (who was at nurse, according to the Irish fashion,) she carried him off, and brought him with her to the western land, where she kept him many a day, and did not restore him, until, besides receiving a large ransom, she made a stipulation that whenever a Lord of Howth sat at his dinner, his doors should remain open for the admission of all strangers. It is said that the St. Lawrence's have kept to the covenant ever since; if so, the observance in its spirit of open hospitality may explain why the lords of Howth are not the wealthiest of our nobility. Grana continued on her return to strengthen her power, and had strongholds guarding all the harbours along the coast of Mayo; and so active and vigilant was she, that it is said that in her castle at Clare Island, where her swiftest vessels were stationed, the cable of her chief galley was passed through a hole made for that purpose in the wall, and fastened to her bed-post, in order that she might be the more readily alarmed in case of an attempted surprise. At her death it would appear that the power which was but concentrated by individual vigour and ability, dissolved with the spirit that gave it energy."

## The Shop Milliner.

NO. II.

THE following picture of an unfortunate and ill-natured old maid, wasting her life in one unvarying round of cheerless toil, is too painfully accurate to require description. Yet why should labour and thrift not be able to secure a late independence? Why should the labourer be always poor? Why should not industrious human beings, like bees and ants, lay up a store for winter? It is a poor, unnatural, and unjust excuse to say that better prices cannot be given for their labour. Can fine ladies, when looking at their pretty bonnets in the glass, not think that cheerlessness of heart, and poverty of purse, have been the compulsory movement of its making? Perhaps they will think so yet, and the drudge be better rewarded than she is.

I understand, my dear, that you are old,  
And toothless, with a most shrivell'd skin;  
And that your breath redolent is  
With smells unsavoury and unpalatable;  
Offensive to the nasal organs of mankind;  
A lean, sallow, and unfavour'd mortal,  
The antipodes of beauty—a wretched maid,  
Doom'd for age to lead a viewless life,  
Without a spouse, childless, and friendless,  
To pass the unvaried tenor of your days  
In endless bonnet-building—to see  
The daily passing crowd, and feel  
That no one sympathises with your lot.  
And when with weariness your aching eyes  
You raise from off your work monotonous,  
The same old dreary church-yard meets your gaze,  
And then you meditate upon the many ills  
You have endured through life, and dwell  
Upon the dark prospect of the future,  
Until large tear-drops from your gummy eyes  
Chase in succession down your sallow cheeks;  
And then you hear the deep bell toll,  
And wish 'twere for yourself, having no hope  
On this side of the grave; anon  
Your melancholy reverie is disturbed  
By the harsh voice of a selfish task-master  
Inquiring about bonnets, caps, and lace:  
How ill in unison with your sad thoughts  
Are trifles such as these! Then you depart  
Unto your lonely, solitary chamber;  
Cheerless you eat your thrifty supper, and then  
Retire to bed, your earnest prayer to Heaven!  
Being—that you may never wake again

M.R.L.

## Varieties.

**HUMAN FATE.**—At Feversham we reflect on the fate that attended the ashes of Stephen, king of England: a valiant, clement, generous, and magnanimous prince: who never, even when barbarism was almost characteristic of the times, executed an enemy: and who, if he had been permitted to enjoy the throne in peace, had proved a blessing to the whole kingdom. To him are we indebted for the revival of the best portion of the Saxon laws. He died at Canterbury, and was buried at Feversham abbey. When monasteries and abbeys were dissolved, his bones were taken out of the leaden coffin, in which they were deposited, for the sake of the lead; which, being sold to a plumber, his bones were thrown into the neighbouring river!—*Bucke.*

**HOUSEHOLD BREAD.**—Take ten pounds of flour and three quarts of water which is about lukewarm if in summer, and rather warmer in winter. Put the water in a large pan, and add a table-spoonful of salt. Add a portion of the flour, stirring it up well until it is of the consistence of butter, adding rather more than half a pint of good yeast; then add some more flour, mixing the whole well and put the pan, covered with a cloth, and throwing flour over the dough, before the fire for a few minutes. About a third of the flour is to be kept back in the first operation, and is to be kneaded in when the mixture which has been placed before the fire has risen properly. Put the dough again before the fire, and let it rise for a few minutes, then knead again, and bake in a quick oven, having previously put the dough into pans, and pricked the surface of the dough with a fork, and placed it again before the fire in the pans. The baking, in an ordinary oven, requires about an hour for a four-pound loaf, and fifteen minutes for a loaf of three pounds. If a heated oven is used, it must be well heated before the dough is put into it. If potatoes be mixed with the bread in the proportion of an ounce or two ounces to the pound, the flavour will be improved. The potatoes must be first boiled in their skins, then skinned, and when dry, rubbed well with mill or water boiled and allowed to stand for a few minutes before it is used. Then add the mixture to the dish in which the dough is mixed. Rice may also be used. Take a pound of rice to ten pounds of wheat flour, boil it in quart of water until the rice has become a complete pulp. Strain off the water, and beat the rice well in a mortar until it is completely crushed, and is entirely dissolved; then add the water in which it was boiled, and a pint of milk, and boil the whole together for an hour. Strain off the liquid and add it to the dish in which the dough is made, suppressing as much water from the process as the quantity of liquid obtained from the boiling of the rice will supply. The dough must be thoroughly kneaded. Only soft water should be used for bread-making; filtered rain water is the best. If the water be hard, a drachm of carbonate of soda may be added to three quarts of water, but this is unnecessary when the water is of a soft nature. Rolls are to be made, take a portion of the dough and mix it up with a few table-spoonfuls of cream in which the whites of two or three eggs whipped have been put; knead them carefully, and add a little flour, if they be too moist. The dough for rolls should be taken off when it has risen the second time, as above stated, before the fire. After taken the dough from the fire the second time, it must be kneaded for half an hour on a board strewed with flour, intended for loaves, but the rolls will not require more than five or six minutes kneading. They are then to be baked in a quick oven until they are nicely browned. A minute or two before they are done, they should be taken out of the oven, and a brush dipped in the white of egg be passed over the top; then they are to be put into the oven again for one or two minutes. When there is reason to suspect either from the appearance or smell of the flour, that it is not good, and there is still a necessity for using it, let it be baked for an hour in a very slack oven, and add to it, when making into dough, about ten grains of fresh carbonate of ammonia, carefully powdered, for every pound of flour. This will frequently correct any bad properties of the flour, and render the bread palatable. Milk may be substituted for water in the manufacture of bread, but it does not improve the flavour if the flour be good.—*Merle's Domestic Dictionary.*

**ANGLO-SAXON SLAVES.**—The population of England at the close of the Anglo-Saxon period, has been estimated at 1,800,000. In thirty-four counties the burgesses and citizens are made to amount to 17,105, villans to 102,704, bordars to 74,823, cottars to 5,947, serfs or thral to 26,552; the remaining population consisted of freemen ecclesiastics, knights, thanes, and landowners. Two thirds of the entire population subsisted in different degrees of servitude, though the persons strictly slaves were not above one out of every seven of the higher laborious classes of villans, bordars, and cottars. The price of a slave was quadruple that of an ox. Slaves and cattle formed the living money. They passed current in the payment of debts, and in the purchase of commodities at a value fixed by law, and supplied the deficiency of coin. The manumission of a slave to be legal had to be performed in public, in the market, in the hundred court, or in the church at the foot of the principal altar. The lord, taking the hand of the slave, offered it to the bailiff, sheriff, or clergyman, gave him a sword and a lance, and told him the ways were open, and that he was at liberty to go wheresoever he pleased.

**WARLIKE VENGEANCE.**—When Clovis, the founder of France, was employed in conquering new dominions, the original settlement of his people was subjected to a terrible invasion on the part of Basin, the ancient host of King Childeric, and husband of the mother of Clovis. He brought with him across the Rhine the choicest of his Thuringian troops, and all the warriors he could allure to his standard by hopes of prey, promises of an easy victory, and of large rewards. The helpless inhabitants of the invaded districts—their protectors being at a distance—were speedily subdued and compelled to deliver to the fierce king a large number of hostages, on whom were avenged with fearful and unheard-of tortures the ingratitude of Childeric. Many had their legs and thighs slit, and were suspended from the branches of trees by the nerves separated from the flesh; others were fastened to stakes and thrown upon the high roads, where, after having heavily laden carriages driven over their bodies, they were abandoned to the wolves and birds of prey. More than two hundred young women were stripped and fastened by the arms to the necks of wild horses, which, being turned loose in the plains, lacerated and tore to pieces their helpless burdens amid the briars and stones over which they passed.

## The Rationale of Lynch-law.

EVERYBODY talks about Lynch-law; and yet it may be doubted whether there is any portion of the American stem—for it is a necessary part of their system—which more thoroughly misunderstood, and therefore more completely misrepresented. The object of this paper is to explain to our readers what Lynch-law really is, to distinguish its several species, and, finally, to give what appears as a rational explanation of its principles. We should have called our paper an apology for Lynch-law, only that practice Lynch-law has occasionally degenerated into something distinct from its original character, and assumed features for which no apology can be made.

Many of our readers are aware that the thickly-peopled States of America, are continually pouring out a stream of population towards the newer states and territories of the north-west. America is, in truth, the largest colonizing country in the world. The older states may be said to breed people for the waste territories; and the facilities which the extensive water communications afford for these emigrations are an important item in the rapid increase of population which America exhibits.

A considerable part of this migratory population—these owners of settlement, overstep the boundaries of the existing jurisdiction, and establish themselves on lands not yet surveyed by the authorised surveyors of the government, and therefore not within the limits of any established territory.

The land regulations favour this unauthorised occupation of the soil; they give to the squatter, as he is called, a presumptive right to the land he occupies, on paying the government price of one dollar and a quarter, or about 5s. 1. per acre.

This encouraged, the squatters become considerable communities, and as they live without the pale of civilization and the ordinary legal tribunals, necessity long since compelled them to make laws for themselves: and as men from habit have a tendency to adhere to the forms of institutions to which they have been accustomed, the law so established has generally been a pretty close imitation of that which prevailed in the established territories. This species of quasi-law must have existed before the term Lynch-law was adopted; and it is still growing up on the west bank of the Mississippi, where it subverts the end of justice, even more perfectly than the established law which exists in the older portions of the union.

Mr. Cary, an American author, who has written several works on political economy, tells us that at this day, upon lands belonging to the United States, and not yet surveyed or offered for sale, are numerous bodies of people who have occupied them with the intention of availing themselves of their right of purchase when they shall be surveyed, mapped out, and brought into market. It is not to be supposed that these pioneers consist of the *élite* of the emigrants to the West, and yet Mr. Cary assures us "that they have organised a government for themselves, and that they regularly elect magistrates to attend to the execution of the laws, (meaning the laws to which they have been accustomed) and they appear in this respect to be worthy descendants of the pilgrims."

The law thus established is administered with all the forms to which the people have become accustomed, so as to impart to it that solemnity which strips the law of vindictiveness, and erects it into a sanctuary. In proof of this the following cases are selected as the most recent.

To the westward of Lake Michigan is an extensive district called Iowa. We believe it has recently been erected into a "territory," with an organized government; but until very recently it had neither been surveyed nor opened for settlement, and yet some thousands of squatters had established themselves thereon. A settlement and town had grown up, called Dubuque, and in this locality a murder was committed. The murderer was well known, and relying perhaps on the absence of regular tribunals, he did not attempt to escape. The better portion of the people of Dubuque, however, took counsel how they might

best punish this murder, and check others. They accordingly applied to the authorities of the state of Michigan, but they decided that Iowa was not within their jurisdiction. It seemed hard to the applicants, however, that a mere river should cut them off from justice upon a technicality which people can seldom understand, and as they were determined the murderer should not escape, they first chose constables, and caught their man; they then elected one of the most respectable citizens judge, another sheriff; and after the latter had impanelled a jury in due form, the murderer was tried, found guilty, sentenced to death, and executed.

At another place, called Snake's hollow, in the same district, the public found themselves compelled to take the law into their own hands, but from the peculiar circumstances of the case, they were compelled to do it less formally, and therefore ineffectually. The story is thus told by Captain Marryatt:—

"A band of miscreants, with a view of obtaining possession of some valuable diggings, lead mines which were in the possession of a grocer who lived in that place, murdered him in open day. The parties were well known, but they held together, and would none of them give evidence. As there were no hopes of their conviction, the people of Snake's hollow armed themselves, seized the parties engaged in the transaction, and ordered them to quit the territory on peril of having a rifle bullet through their heads immediately. The scoundrels crossed the river in a canoe, and were never after heard of."

Now, viewing these and similar proceedings with English eyes, there is only one objection that can be urged against them, and that objection falls to the ground when applied to America. It is a theory of the English constitution that the Queen is the fountain of justice. Any assumption of judicial authority upon British territory is therefore absolutely illegal, and any person taking part therein would render himself liable to civil action for damages at the suit of the party committed under the usurped authority. This is understood by every one, and when a case of well-administered Lynch-law, in which substantial justice was done, was stated by the writer to gentlemen of distinguished legal acquirement, the objection was at once made by him. Something of this sort may have arisen in Capt. Marryatt's mind when he speaks of the people of the West punishing under Lynch-law, "upon their own responsibility." Responsibility to whom or to what authority? We shall presently see that their only responsibility is to themselves, a feature of American constitutional law which strips Lynch-law proper of illegality.

The first principle of the American constitution is the sovereignty of the people. This is not a mere idle phrase, such as, in times of yore, whig politicians were wont to use as a clap-net at a political dinner, but is really the all-pervading spirit of the American system. In some of the state institutions, for instance, is a provision, that periodically the people shall elect a convention to revise the constitution, and if by accident the constitution of any state should become inadequate to the wants and circumstances of a growing people, there is no doubt that the people possess constitutionally the right to meet together and change the constitution so as to suit their altered condition.

A case of this kind occurred in Maryland so recently as 1836. Owing to an original defect, the constitution, like a worn out time-piece, suddenly stopped. It was found that the election of a senate became impossible, and as no legislation could take place without a senate, a convention of the people was called, and a new constitution drawn up and agreed to. Thus was a peaceful revolution effected in a few weeks.

The ultimate authority therefore rests in the whole body of the people; in theory and practice, they are the fountain of justice, and when a portion of the people occupy for the first time a new and unsurveyed section of the waste lands of the United States, the organization of proper judicial tribunals is both lawful and right.

It should now be mentioned that there is no judicial system common to the whole of the states. Each state is sovereign within itself, so that there is no superior au-

thority to which a body of the people not residing within any state or territory can be responsible, in the political sense in which Captain Marryatt has used the word.

Something analogous to Lynch-law has been established by Englishmen too, though that name has not been applied to it. In many of the islands of the Pacific which have been declared to be "territories not within her Majesty's dominions," considerable numbers reside; in Hawaii, for instance, they are sufficiently numerous to maintain a newspaper. These communities have been compelled to make law for themselves, and we believe in most cases it is found to conduce to the ends of justice. But the most remarkable case of British Lynch-law occurred in New Zealand in 1839.

In the autumn of that year a body of 1200 Englishmen, many of them of the higher and middle ranks, and all of them respectable in the classes to which they belonged, emigrated to New Zealand, their numbers being afterwards increased by subsequent emigrations.

They had applied to the government for the protection of law, and it was denied them; but as they carried with them their whole property, and their families—as they constituted a complete section of society, law and order were absolutely necessary to them. Accordingly, before their departure, they entered into an agreement to obey the laws of England, and they elected a chief magistrate to preside over its administration.

They were soon afterwards advised that this agreement among subjects of her Majesty was illegal, and they were compelled to modify their plan.

New Zealand had before been classed among those "territories and islands on which her Majesty has no authority," and after the departure of the colonists, a declaration was issued by the government in which this doctrine was reiterated, and New Zealand was designated a "substantial and independent state." The course of the colonist was now easy. They assembled the sovereign and independent chiefs who had jurisdiction on the territory the settlers occupied at Port Nicholson, and from them they received conditional authority to exercise British laws. The original agreement was then published, with the authority of the chiefs appended to it, and law and order at once reigned on the shores of Port Nicholson.

Under this law, rights were effectually maintained, and on several occasions the supremacy of the law was admirably vindicated, and so thoroughly convinced was every living soul of both the legality and the effectual character of the Lynch-law of New Zealand, that when the Queen's authority was at length happily established, the proceedings which we have described were neither disputed or disturbed.

As the Bay of Islands had been occupied by English for upwards of a quarter of a century before New Zealand became a British Colony, something in the nature of Lynch-law must have been established there, or the people could not have existed as a community. Indeed, this may be inferred from a paragraph in the Bay of Islands newspaper, in which it is broadly asserted that society was better protected before regular laws was established than it was subsequently.

If Lynch-law had been confined to the class of cases we have stated, but little objection—none in short that was not of a technical character—could be argued against it, but there is no doubt that it has been abused in America, as law has been violated in all other countries. And it is this violation of law which has brought Lynch-law into a degree of disrepute which it does not merit. Let it be recollected that of the quiet operation of Lynch-law we never hear. The efficient manner in which it serves to preserve order in the districts west of the head waters of the Mississippi is never recorded; we know nothing of the ninety and nine cases of good effected by it; and are therefore apt to judge of it by the hundredth case of exasperation which is sufficiently extraordinary or atrocious to make a newspaper story.

In all countries, the people, in cases of excitement

have snatched the administration of justice out of the hands of the constituted authorities, and have themselves inflicted the punishment which they deemed well-merited. The case of Captain Porteus is known to every one, and it is not many years since pumping and ducking was the common summary punishment inflicted on pickpockets.

In America cases of this kind are of occasional occurrence, where public opinion is in a more active state than in this country. The following somewhat amusing case is related by Captain Marryatt, whose chapter on Lynch-law is one of the best in his book, in most respects not very conspicuous for just or liberal views of the Americans. It exhibits a striking picture of the state of society in the West.

There was a bar-keeper\* at some tavern in the State of Louisiana (if I recollect right) who was a great favourite—whether from the judicious mixture of the proportions in mint juleps and gin cocktails, or from other causes, I do not know; but, what may appear strange to the English, he was elected to an office in the law-courts of the state similar to our attorney-general, and I believe was very successful; for an American can turn his hand or his head to anything. It so happened that a young man, who was in prison for stealing a negro, applied to this attorney-general to defend him in the court. This he did so successfully that the man was acquitted, but Judge Lynch was, as usual, waiting outside, and when the attorney came out with his client the latter was demanded to be given up. This the attorney refused, saying that the man was under his protection. A tumult ensued, but the attorney was firm; he drew his bowie-knife, and addressing the crowd, said, "My men, you all know me; no one takes this man unless he passes over my body." The populace were still dissatisfied, and the attorney, not wishing to lose his popularity, and at the same time wanting to defend a man who paid him well, requested the people to be quiet a moment until he could arrange the affair. He took his client aside, and said to him, "These men will have you, and will Lynch you in spite of all my efforts; only one chance remains for you, and you must accept it. You know that it is but a mile to the confines of the next state, which, if you gain, you will be secure. You have been in prison for two months; you have lived on bread and water, and ought to be in good wind; moreover, you are young and active. These men who wish to get hold of you are half drunk, and they never can run as you can. Now, I'll propose that you shall have one hundred and fifty yards' law, and then, if you exert yourself, you can easily escape." The man consented, as he could not help himself; the populace also consented, as the attorney pointed out to them that any other arrangement would be injurious to his honour. The man, however, did not succeed. He was so frightened that he could not run, and in a short time he was taken, and had the usual allowance of cow-hide awarded by Judge Lynch. Fortunately, he regained his prison before he was quite exhausted, and was sent away during the night in a steamer.

Most recent travellers in America relate cases of Lynch-law such as we have given above; but the more numerous cases, in which Lynch-law is employed for the sake of establishing order and promoting justice, afford no incidents for travellers' stories. If we have enabled the reader to distinguish between the two classes of cases, he will easily understand how numerous the first must be in proportion to the last. It only remains to add, that the title originated in the name of a person of acknowledged uprightness, who was usually elected judge in one of the newly-settled districts; and it is generally understood to be on account of the substantial justice administered by the original Judge Lynch that has caused his name to be given to his successors. If this be the case, the application of his name to the cases of the violation of law is a perversion to be regretted.

### Burns Illustrated and Explained.

#### CHAPTER VII.—THE COTTER'S SATURDAY NIGHT.

THE purpose of the present notice is to display the heroes and heroines of the cottage in their homely guise; and by the aid of Nature and her own high-priest—the Muse of Burns—to discover in their objects of interest and pleasure, as much so as if they had been the inmates of palaces, high in worldly rank, and boasting that most artificial of all claims to greatness—gentle blood and ancient pedigree. The sun that shines upon the marble hall, and glitters back from gilded tower and stately dome, sheds the same warm and healthful gleam upon the humblest hut; and kisses with as much delight the little mirror hanging on the maiden's bed, as ever it poured its noon-day ray on tapering spire or golden

\*Most likely he was by education a lawyer, who had become a bar-keeper by accident, or perhaps because he had a share in the tavern. This variety of employment is not uncommon. The writer of this paper was well acquainted with the Attorney-General of Vermont, who afterwards kept an ironmonger's shop in one of our colonies, and subsequently went back to his own state and became treasurer thereof. The writer also recollects travelling with a very intelligent companion, who for half the day, while passing through a certain district, where he appeared to be well known, was called *Judge*, and during the next half of the day he was suddenly transformed into Colonel.

minaret. The summer breeze "with healing on its wings," fans not alone the richly-adorned tresses of the noble fair, but woes as well the wildly-waving locks of the cottage maid, on whose ringlets diamond never glistened—the wealthiest treasure that ever graced her forehead being the "silken snood" her lover gave. That Being who stamped upon the brow of man the intellectual image of his greatness, has gifted with lofty thoughts and sublime imaginings the shepherd on the hills, not less worthy than are those of which peer and prelate boast possession. It informs him that it is man alone that arrogates a birthright superior to his fellows—that it is man alone who teaches submission to a star upon a fellow creature's breast, forgetful that the stars of heaven speak of the greatness of power as separated from its exercise—of the divinity of beauty as distinct from pride in its possession—of congregated millions in number, yet harmony prevailing among them all!

It is only men possessing not a spark of heaven's poetic fire—whose eyes never saw other beauty than that which was palpable to their senses—that desire to share in the power, or wealth, or comforts of others. They can imagine the appropriation of that which is, but they allow themselves not even to dream of the creation of new and other blessings. Sordid as is the unrefined essence from whence they sprung, Nature hath walked among them in all her heavenly shapes, but they have recognised her not. The right arm of independence has never been stretched forth, and envy and discontent must be their lot for ever. But he who feels the young and tender workings of a growing destiny within him—who says unto himself "I will not leave the world as I found it"—becomes a poet in his heart; even the light which leads astray is light from heaven; the hidden fire will warm his breast and cheer each onward endeavour, though it may never burst forth in flame. This little spark which heaven hath lent may only suffice to paint with joy and beauty all things he looks upon, in so far as his own eye and ear are concerned; but such a man, though he never dazzle the world with his brightness, nor leave a name of which posterity shall speak, will scatter pleasures round his path, and become the centre of a circle of enjoyments which will only cease when his grey hairs are forgotten. The world, indeed, though crowded with men like him, hath abundant need of more; and, perhaps, by opening to the inquiring eye the beauties and delights which men of immortal speech have bequeathed to all time, the flint of selfishness may yet be touched, and a spark of Nature fall among, and kindle, the softer and better qualities, which, in some corner or another, lie dormant in the coldest human breast. And to assist, however humbly, in this good work—let us look upon peace dwelling with poverty, and pleasure, purer than ever visited the glaring haunts of heartless fashion, and more lasting than all the purchased luxuries of voluptuous life, residing in a cottage on the moor.

The "Cotter's Saturday Night" is a picture of Burns's own family, ere the last misfortune had fallen upon his father's house. It originated in the effect which his father's words, "Let us worship God," had upon the poet's mind, ere the world had dashed the wilder workings of his brain. The stanza in which this striking sentence occurs was at first the commencement of the poem, ending with the prayer which the aged cottagers offer up for the prosperity of their children. It was composed while the Bard was at his daily occupation, following the plough upon the mountain side. He completed it in its present shape, introducing Jenny and her lover at the request of Mr. Robert Aiken, a gentleman who early discovered the poetic abilities of Burns, and who stood his friend till death stepped in between. The poem is inscribed to this gentleman, and was published in the first edition of the author's works. The wonder and admiration which it excited was divided between the ideas that a cottager should so spend his Saturday evening, and that a cottager could so well describe it.

My loved, my honour'd, much respected friend!  
No mercenary bard his homage pays;  
With honest pride, I scorn each selfish end:  
My dearest need, a friend's esteem and praise:  
To you I sing in simple Scottish lays  
The lowly train in life's sequester'd scene;  
The native feelings strong, the guileless ways;  
What Aiken in a cottage would have been;  
Ah! tho' his worth unknown, far happier there, I ween!  
November chill blows loud wi' angry sigh,  
The short'ning winter day is near a close;  
The miry beasts retreating frae the plough:  
The black'ning trains o' craws to their repose:  
The toil worn-cotter frae his labour goes,  
This night is weekly moil is at an end,  
Collects his spades, his mattocks, and his hoes,  
Hoping the morn in ease and rest to spend,  
And weary o'er the moor his course does hameward bend.

The scene opens near a dreary moor, on a chill November evening; the cold grey shades of twilight are giving place to the darker and more gloomy clouds of night. The miry beasts have left the field, the plough remaining in the furrow;\* the crows, which have followed the team all day, picking up the earth-

\*Who is it that has not seen, on a Sabbath morning, that solitary witness in the stubble field, without thinking of Burns and his Mountain Daisy—and of his passionate illustration of Elijah meeting Eliza, and throwing his inspiring mantle over him.

worms turned out by the plough-share, now gath' together, and take wing to their distant nests; the worn cotter collects the rude and humble instruments of his husbandry, gathering happiness with each implement of toil, for this night is not only one of ease and peace, but to-morrow is a day of rest—a day so need to the working man, that through all ages it should remain devoted to the comforts of the poor, and the relaxation of the exhausted, despite the heartless attempt of hypocrisy and fraudulent sanctity—a day so sacred in religion to the necessities of all mankind that nations who know not the object of its institution, nor the important advent which it commemorates, have by intuitive instinct set it aside as one on which the ordinary duties of life are to be disregarded. The mistake credulity of the French populace will ever remain record of its value to those who depend upon the weekly labour. In the rage for changes by the Directory, the Sabbath was set aside, and a decade instituted in its place; the working-classes then thought that the number of their idle days was lessened; yet they found that their wages were not only not increased but that nine days' toil brought no more remuneration than had that of six—a proof given by man that he is the God of the Sabbath is also the friend and protect of the poor.

At length his lonely cot appears in view,  
Beneath the shelter of an aged tree;  
Th' expectant wee-things, toddlin, stacher thro'  
To meet their dad, wi' flichterin noise an' glee.  
His wee bit ingle blinking bonnily,  
His clean hearth-stane, his thrifty wife's smile,  
His lispin infant prattling on his knee,  
Does na' his weary kjaugh and care beguile,  
And makes him quite forget his labour and his toil.

The old man's family of children—the rich reward of homely love—are waiting at the door; the faces glistening like the evening sun, their voices like the wood-lark singing—their footsteps pattering like rain-drops on the summer-leaf. His appearance is an instant signal for them to set off to meet him. A tip shout is raised, which never yet fell upon a parent's ear, but pleasure rained upon his heart, or else he could not be an average estimate of man. The youngest has fallen to the rear, waiting on the return of the others then, instead of running to its father, it runs away—a girl flies from her lover—in the certainty that it will soon be overtaken. He carries the little runaway to the door, having divided "his spades, his mattocks, and his hoes," to be carried by the others. The door is open and the cheerful fire attempts to cast a gleam of light and comfort to meet him at the threshold; but its kind endeavour is frustrated by the form of his wife, who with her smile must be the first to greet him to his home. The little runaway is now displaced, for there is another and a younger which claims the exclusive possession of his knee. He sits down upon an old wooden chair,—it was new on his wedding-day!—the infant prattles in his lap,—his children gather round him, young runaway standing between his knees. The door is closed by his careful wife, and she stands looking upon him, as his back is towards her, with a beam of love in her eye, and a blessing on her lips. The old man turns round to look on her, and pain, and toil and hopeless poverty are alike forgotten. There is that moment a pleasure so intense within those humble cottage walls that the human voice is not equal to its utterance; and he who would share in these enjoyments must gather materials for himself; for, assuredly poor as they are, the cottage couple have not a child to spare, nor one of their little voices to give away. To them the music of each infant tongue is like news from a far country—a promise from a better land.

Belyve, the elder bairns come drapping in,  
At service out, among the farmers round:  
Some ca' the plough, some herd, some tentie rin  
A cannie errand to a neebor town:  
Their eldest hope, their Jenny, woman grown,  
In youthfu' bloom, love sparkling in her e'e,  
Comes hame, perhaps, to shew a braw new gown,  
Or deposit her sair-won penny-fee,  
To help her parents dear, if they in hardship be.

With joy unfeign'd, brothers and sisters meet,  
An' each for other's weelfare kindly spiers:  
The social hours, swift-winged, unnoticed fleet;  
Each tells the uncouth that he sees or hears;  
The parents, partial, eye their hopeful years  
Anticipation forward points the view.  
The mother wi' her needle an' her shears,  
Gars add claes look amais at weel's the new;—  
The father mixes a wi' admonition due.

Their master's and their mistress's command,  
The youngers a' are warn'd to obey;  
And mind their labours wi' an eydent hand,  
An' ne'er, tho' out o' sight, to jaunk or play:  
And O! be sure to fear the Lord alway!  
And mind your duty duly, morn and night!  
Lest in temptation's path ye gang astray,  
Implore His counsel and assisting might:  
They never sought in vain who sought the Lord aright!

It is the custom in country parts of Scotland to permit younger servants in a family to visit home each Saturday evening, and Burns, in availing himself of this privilege, has given the cottagers nearly a dozen children, a number which enables their eldest hope, their Jenny, to be sufficiently woman-grown. The affectionateness with which brothers and sisters are made to

meet, and the wonders and strange events—the *uncos*—which they rehearse to each other, are well calculated to induce a parent's partial eye to look with fondness on a numerous offspring. But present necessities give no place to future prospects. The mother, having laid aside her spinning-wheel, unties each little bundle brought home by her industrious younglings. Her needle and her shears are plied with cheerfulness, and while her son looks with wonder at the metamorphosis of his torn jacket into something of a respectable appearance, the father takes the opportunity of instilling into him that advice the value of which must ever be enhanced by the kind and affectionate manner in which it is given. If there is one thing more than another that sooner sets the seal of manhood on the brow of youth, it is the iron hand of poverty, which presses into active service the unfeeling energies before their nurturing can well have ceased. But there is a pleasure even in this early instigation to labour. The growing struggles of independence strengthen the tiny arm; and gratifying to young and old is the victorious flush upon the cheek of boyhood, when the lad first deposits in his mother's quivering hand the small reward of his weekly toil! And yet these earnestly industrious, little, very little men, are deemed by a haughty, superficial world, as less respectable than the unproductive children of an unproducing race. If there is not a more glorious spectacle upon the earth than a good man struggling against adversity, the most interesting episode in that oft-repeated drama is the advent of a boy upon the world, assisting, from his earliest years, the wants of those that gave him birth; and Robert Burns himself is the most perfect example of this sturdy independence upon record.

But, hark! a rap comes gently to the door;  
Jenny, who kens the meaning o' the same,  
Tells how a neebor lad came o'er the moor,  
To do some errands and convoy her home.  
The wily mother sees the conscious flame  
Sparkle in Jenny's e'e, and flush her cheek,  
With heart-struck anxious care, inquires his name,  
While Jenny haffins is afraid to speak;  
Weel pleased the mother hears it's nae wild worthless rake.  
Wi' kindly welcome, Jenny brings him ben;  
A strappan youth; he takes the mother's eye;  
Blythe Jenny sees the visit's no ill ta'en;  
The father cracks of horses, ploughs, and kye.  
The youngster's artless heart o'erflows wi' joy,  
But blate an' laithfu', scarce can weel behave;  
The mother, wi' a woman's wiles, can spy,  
What makes the youth sae bashfu' and sae grave;  
Weel pleased to think her bairn's respected like the lave.

Gentle, indeed, though was the lover's knock at the cottage-door, what a cannonade it sent through Jenny's simple heart. With beating heart and flushing cheek, she tells the story of her heart's first love. He came over the muir with her, to do some errands and convoy her home. But why he did this little unpretending service is the mystery of the moment; and all an anxious mother's fears are up to know the worst, as Jenny can scarcely move her lips to speak his name. "Well pleased the mother hears it's nae wild worthless rake;" and Jenny, quivering like a leaf, is permitted to open her father's door, and introduce to her notice the blushing youth, whose gainly step and manly speech, that "first made Jenny's heart leap light," at once take the mother's approving eye.

O happy love! where love like this is found!  
O heart-felt raptures!—bliss beyond compare!  
I've paced much this weary, mortal round,  
And sage experience bids me this declare—  
"If heaven a draught of heavenly pleasure spare,  
One cordial in this melancholy vale,  
'Tis when a youthful, loving, modest pair  
In other's arms, breathe out the tender tale,  
Beneath the milk-white thorn that scents the evening gale."

Is there, in human form, that bears a heart—  
A wretch! a villain! lost to love and truth!  
That can, with studied, sly, ensnaring art,  
Betray sweet Jenny's unsuspecting youth?  
Curse on his perjured arts! dissembling smooth!  
Are honour, virtue, conscience, all exiled?  
Is there no pity, no relenting ruth,  
Points to the parents fondling o'er their child?  
Then paints the ruin'd maid, and their distraction wild?

It is indeed the sweetest cordial that heaven hath sent to fallen man, to sit among the young and whispering trees, while the moon is silvering with her light the summer leaf, and the stars twinkle through the openings of each amorous branch,—a gentle wind from the sunny south sighing back its plaintive moans to the melodious murmurings of the passing brook—to sit with her whose pretty lips have spoken the one dear word, whose eyes are ever gazing with increasing fondness, and searching deeply in your own for responsive brightness. It is an hour of holy quiet, for speech would be profanity—it is an hour, the memory of which will steal upon the heart like a well-remembered dream, when the object herself shall have passed away; or, what is more distressing still, when she may have ceased to awaken the pleasurable sentiments of early years, and by her conduct have estranged for ever the animating hope that that hour and all its pleasures may yet return again, to bless the weary heart with smiles of love, and change the tear of woe to drops of melting joy. It needs not guilt to break a husband's heart; the absence of content, the mutterings of spleen; the untidy dress, and cheerless home;

the forbidding scowl, and deserted hearth; these, and other nameless neglects—without a crime among them, have harrowed to the quick the core of many a man, and planted there beyond the reach of cure the germ of dark despair. Oh! may woman, before that long sad night arrives, dwell on the recollections of her youth, and cherishing the dear idea of that tuneful time, awake and keep alive the promises she then so kindly gave; and though she may be the injured, not the injuring one—the forgotten, not the forgetful wife—a happy allusion to that hour of peace and love—a kindly welcome to a comfortable home—a smile of love to banish hostile words—a kiss of peace to pardon all the past, and the hardest heart that ever locked itself within the breast of selfish man will soften to her charms, and bid her live, as she had hoped, her years in matchless bliss—loved, loving, and content—the soother of the sorrowing hour—the source of comfort, and the spring of joy!

### The Pitcairn Islanders.

THE peopling of Pitcairn's Island has excited much interest in Europe, and in all the British Asiatic settlements. Captain Bligh having sailed, in 1790, in order to plant the bread-fruit tree in one of the South Sea Islands, his crew mutinied, and putting him in a boat, they sailed for Otaheite, where each sailor took a wife. With these women, and six Otaheitan men servants, the mutineers again set sail; and after passing a Lagoon island, which they called, Vivini, and where they procured birds' eggs and cocoa nuts, they ran their ship ashore on Pitcairn's Island, situate 25 degrees 2 seconds south latitude, and 130 degrees west longitude. Finding the island small, having but one mountain, and that adapted for cultivation, they put up temporary houses made of the leaves of the tea-tree, until they were able to cover them with palms. In this island they found yams, taro, plantains, the bread-fruit tree, and ante, of which they made cloth. They climbed the precipices and procured eggs and birds in abundance: they made small canoes, and fished; and they distilled spirits from the roots of tea. In this manner the whole party lived four years; during which time there were born to them several sons and daughters. But a jealousy arising between the English and their Otaheitan servants, the latter revolted, and murdered all the former, except one,—Adam Smith;—whom they severely wounded with a pistol-ball. The women, upon losing their husbands, to whom they had become exceedingly attached rose in the night, and, stealing silently to the place where their countrymen lay, murdered them. By this act there remained upon the island only one Englishman (Smith), the Otaheitan woman, and the children. Thus left to their own exertions, Smith, and the women applied themselves to tilling the ground; in which they cultivated plantains, nuts, bananas, yams, and coconuts. Their animals consist of pigs and fowls; but having no boilers, they dressed their food after the manner of Otaheite. They likewise made cloth, and clothed themselves also like the Otaheitans. Thus situated, they were at length discovered by an American captain, who chanced to sail that way. At this time the children had grown to be men and women; and the population amounted to thirty-nine. They looked upon Smith as their patriarch; they spoke English; and they were brought up under his tuition, in a moral and religious manner. Some time after they were discovered, their population increased considerably; they parted with their still, and obtained a boat. Their ceremonies of marriage, baptism, and funerals, were plain and simple; none of them learned to read; but great strictness was observed in respect to religious duty. Many ships afterwards visited them; and in September, 1819, a subscription was entered into, at Calcutta, to supply them with ploughs and other useful articles. These were sent by Captain Henderson, who undertook to land them in the *Hercules*, on his voyage to Chili. In 1819, not a quarrel had taken place among the inhabitants for eighteen years!

At the time of Captain Beechey's visit, considerable apprehensions were entertained, that, by the rapid increase of the colony, the island might prove inadequate to the support of its inhabitants. It, therefore, appeared desirable to remove them to some other island, which offered a more certain prospect of support for their increasing numbers. Accordingly, an arrangement having been effected between the British Government and the authorities of Otaheite, for a grant of land for their use on that island, the *Comet* sloop, Captain Sandilands, arrived at Pitcairn's Island on the 28th of February, 1831, and offered to take on board any of the inhabitants, who were desirous of removing to Otaheite. On the 7th of March, the whole colony had accepted the offer, and, with their little property, sailed for that island. Their reception was cordial and friendly, and they were located on a rich tract of land; but the experiment did not succeed. The manners of the Otaheitans were so different from their own, and the dissolute conduct of some so disgusted them, that they were unhappy; they were also attacked with diseases new to them, and seventeen of their number died. They requested to be allowed to return, and were, accordingly, put on board an American vessel, and taken back to their native island. Subsequent accounts state, that their transient stay at

Otaheite was by no means favourable to their morals; it had unsettled them, and some had addicted themselves to drunkenness, and others to bad vices. In addition to this, John Buffet, and two other Englishmen of dissolute habits, had married native women, and settled on the island, and their influence had tended greatly to demoralise the colony. The latter, however, had been brought to a sense of their duty by the timely arrival of a respectable gentleman, named Joshua Hill, who, at the age of seventy years, had left England to settle amongst them, as their pastor and preceptor. At his suggestion they destroyed their stills, established a temperance society, and returned in some measure to their former state of order and moral discipline. They are happy at having got back; and the three Englishmen who had done so much harm by their immoral example agreed to leave the island. The latest return made their numbers seventy-nine; and a closer examination of the island has proved that it is capable of supporting one thousand persons; so that no apprehension of an overgrown population need be entertained for many years to come.

### Geological Notices.

THE TERTIARY DEPOSITS.—These are the uppermost and latest of the various deposits which make up the solid crust of the earth. At an early period of geological science they were conceived to have been all deposited on one plane, and referable to one epoch. In other terms, that they had all been spread out on one level, and at one period of time. Subsequent researches, however, have proved a fact, which is usually characteristic of all inquiries into nature, namely, that these objects are far more extensive than they were originally conceived to be—that they are all deposited in the order of superposition—and that they rival the secondary rocks beneath, in extent and importance. Indeed, far from being all referable to one period, they are of most distinct and different dates, and Mr. Lyell has the honour of being the first of our English geologists who has proposed a scale for adjusting the relative age of the separate members of these formations. The mode of calculation which he adopted is of a somewhat singular kind, being founded on the nature of the shells found in these beds, and the greater or less number of those species which are referable to those now in existence. Thus, when he discovered the largest number of shells similar to those now in being, he considered these strata to be of modern date and character, from this identity of its fossil shells with those now existing in our present seas; where a less number of living forms prevailed, he inferred the less modern character of the era; and, finally, when the living forms amounted to a very small proportion, he considered the bed to be the oldest in the series, bestowing on the various strata in question the Anglicized Greek terms of *eoecene*, *miocene*, and *pliocene*, which the English reader will understand as signifying ancient tertiary, middle tertiary, and modern tertiary, this last term being again subdivided into early modern tertiary, and late modern tertiary.

The tertiary strata have been carefully examined at the plaster quarries in the vicinity of Paris. The gypsum or plaster strata contain very remarkable species of mammalia and other animals, none like which can be found on the earth. Among them we may mention the *Palæotherium*, (so named from two Greek words signifying "the ancient beast,") one species of which was shaped like a tapir, and about the ordinary size of a horse.

THE ICHTHYOSAURUS.—In consequence of the attention now so generally devoted to natural science, discoveries are constantly made of fresh objects of interest in the fossiliferous districts; and, not a month passes without some fresh object of interest and value being brought to light. We find that Mr. Dudley, of Tewkesbury, who has for some time been an assiduous collector, has recently obtained possession of an ichthyosaurus, or fish-lizard, one of the monsters of the primeval earth, which was exhumed from a quarry in that neighbourhood. This creature, as its name indicates, was more fish than lizard, and is remarkable for uniting in its structure the characters of various animals of the present day. Thus it had the back of a porpoise, the teeth of a crocodile, the head and breastbone of a lizard, the paddles pertaining to the whale tribes, and the vertebrae of a fish.

THE PLESIOSAURUS.—This creature, as its name implies, differs from the animal just mentioned, in being more lizard than fish, and is still more remarkable for combining in itself the attributes of some half dozen animals in one, since it had the head of a lizard, the teeth of a crocodile, a neck resembling the body of a serpent, a trunk and tail of the proportions of those of a quadruped, with paddles like those of a turtle, its most remarkable feature consisting in the extraordinary length of its neck, which far surpassed that of a swan, the longest necked of all living creatures. It is conceived that while the ichthyosaurus may have dwelt in the depths of the primeval ocean feeding on the fish, who were its cotemporaries, the plesiosaurus must have lurked on the shores and shallow waters, preying in like manner on the smaller and more delicate fish, which its long neck gave it an opportunity of seizing and capturing.

### The Divinity of Water.

WHILE many nations of antiquity looked with dread and terror on the sea, few hesitated to worship running streams, and adore them as the emission of a benevolent deity, if not as god's themselves. The veneration of the Hindoos towards their sacred river, the Ganges, is sufficiently well known,\* yet not only were many of their superstitions shared by other nations who never knew such a people or such a country, but other rivers in that vast continent were idolised as divine.

The Cingalese pay their adorations to a river known by the euphonic cognomen of Mahavallagana, and the Banians bow down to the Tappi. The Tumrabunni is carried off in flasks at the cataract of Pupanassum by the holy devotees, who resort to its banks from many parts of India. The Hurdwar, too, possesses no small claims to sanctity, and those who are too lazy to go themselves, but can afford to pay for their piety, employ the poor and needy to bring vessels of this water even hundreds of miles, that it may be used at rejoicings, feasts, and other solemn festivals. Whether or not these holy water-carriers ever dip their flasks into some nearer but less sacred stream would be too much to inquire. Superstition lies always in the dark, consequently the actions of its votaries must not be closely investigated. The Ganges, however, is the chief of all their sacred rivers, and happy is he who in his lifetime has seen it flow in its victorious way, carrying with it the souls and bodies of its devotees to eternal bliss. Happier, however, are those, in their own estimation, who give their bodies to the tiger on its banks, to the alligators on its islands, or to the shark in its swelling breast, that they may the sooner be wafted to the shores of eternal rest. There was a time when an extraordinary fit of religious piety took possession of the British Government, and it resolved to relinquish the tax placed on the pilgrims to Jughernaut; but the result was so pernicious that its replacement became immediately necessary. So vast were the numbers of free-trade pilgrims, that a famine was bred in the neighbourhood; the waters on the entire route were polluted, and the native inhabitants fled to the woods to escape contamination from the human locusts which flocked upon them. At the source of the Ganges, stands a temple which the Bramins insist has been erected for at least ten thousand years (!), a period more than double since that when Noah was a little boy, and Methuselah a hale old man. The principal duty of the priests is to feed the fish in the stream with bread; these aquatic dwellers, in our enlightened eyes, have more sense than their feeders, for they know the dinner hour, and retire when they have enough. To this hallowed locality myriads travel, that they may bathe in the "foot of the goddess;" but the principal solemnity is held only once in twelve years, when the crowd is estimated to amount to at least two millions of persons! As every devotee must pay for his ablution, we may suspect that the priests can well afford bread for the fishes, and something better for themselves. The admirers of nature, while they pity and despise such mummeries, may not object to learn that the Ganges issues out of a bed of snow, and that above its frozen outlet hang huge icicles, which drop tears at its departure. At this spot the great river is at least twelve thousand feet above the level of the sea, which is sufficient to account for its rapid and swollen flow to the ocean.

The Indus is the next river in holiness to the Hindoos. The old kings of India endeavoured to pacify its wrath by throwing bulls and horses into its stream at the time of its overflow; and many tribes believe that all their beauty and virtue are derived from the visitation of the sacred river to their shores.

The most remarkable fantasy connected with rivers in the Pagan world is that relating to Adonis, the cold-blooded youth who rejected the embraces of Venus, and was killed while hunting by a wild boar. Notwithstanding the goddess mentioned was the patroness of the tender passion, the women of many countries in the East celebrated the resolution of Adonis, and mourned his death. His blood was supposed to form a stream, and in whatever country the believers dwelt, a distant locality was fixed upon as the place where the red stream ran. An annual feast in commemoration of the death of the beautiful boy was held on two separate days. On the first, the women, tender souls, beat their breasts, tore their hair, and imitated the distresses of Venus when she saw her hunter slain. These solemnities prevailed through many centuries among the Phœnicians, Egyptians, Syrians, and Greeks. A respectable old gentleman, known in the polemical world as St. Cyril, gives his word and honour that a letter was written by the women of Alexandria to those of Bibalus, where the river Adonis falls into the sea, in which was conveyed the happy news that Adonis still lived.\* The careful postman was no other than the sea itself, and the letter reached its destination in seven days. The Saint does not condescend to inform us what favoured lady received the note, or how the sea knocked at the door, or what was the charge for

postage. It is sufficient for us to know that the letter was received, and that all the women who read it gave themselves up to all manner of rejoicing, believing that the gentle youth had arisen from the dead. Any one who calls in question the sacredness or utility of these annual solemnities is shown the blood-red colour at the season when they take place, and a vile infidel is he who can deny that sacred sign of their heavenly institution. There is such a thing, however, as natural science, known by many as sceptical inquiry. The time of the solemnities is fixed in the rainy season, when the floods bring down a quantity of red earth from its source in Mount Lebanon, and other places along its banks. Our readers may, as they choose, either believe that it is earth, or the blood of Adonis, that colours the stream. Those who are ruled by the opinion of the native women may believe that it is the latter; those who will be guided by us may accept the other as the only cause.

The Nile has also been long known and esteemed as a god-river. It waters nations totally unknown to each other, yet all along its majestic course it was worshipped and revered as a power in whose mighty hand resided life and death—whose going forth was to execute judgment and justice—to reward the virtuous and destroy the wicked. The Abyssinians call the Nile by a name which implies "The Giant." Vespasian, the Roman Emperor, placed in the Temple of Peace, a large block of basaltic rock representing its figure, with sixteen children playing round it. Even yet, at its annual opening, no Jew or Christian is legally allowed to be present, lest the Deity should be offended by the presence of those who attribute no sacredness to its waters.

The Russians also, even to this day, bless the waters with much religious ceremony. The rite is performed twice a year—on the 1st of August and 6th of January, old style. After mass has been celebrated at church, the priest, followed by his congregation, goes down to the nearest lake, brook, or stream; a portion of the church service is performed, and that part of Scripture relating to the pool of Bethesda is read as a lesson. The cross is then dipped by the priest three times into the water, after which he sprinkles the people around him with hallowed drops. The virtue of the water being now at its highest excellence, young men, girls, and boys, clothes and all, rush in, in loving intermixture, leaping, swimming, and careering in the wildest ecstasies of superstitious joy. Mothers dip in their children, and men their horses, that health may be secured to them, at least until the next period of ceremonial blessing.

The elder Persians deemed it sacrilege to pollute water, and so highly did they deem its extension or flowing that any person who caused a brook or spring to run whither it had not previously watered, was permitted to enjoy the benefit of his labours, even to the fifth generation. We are told by our deeply learned friend, Mr. Bucke, that the custom is still observed, and that the day on which such water is introduced is one of rejoicing among the peasantry. A fortunate hour is appointed for its being let loose, and the joyful exclamations of "May prosperity attend it," echo on every side.

By a revered law the ancient Kings of Persia, sacred in their own persons, were prevented from drinking any other water than that from the Choaspes, which was carried for their use in silver vessels throughout all their marches and regal visits. Xerxes, the famous Grecian invader, was at one time as much in danger of perishing from thirst, in consequence of the supply of royal water being expended, as he was from the "fiery Greek" and "his red pursuing spear." The crowned fool, who lashed the Hellespont with chains because it broke his bridge of boats, certainly deserved to suffer by the want of his own adored beverage.

This idea of royal water, however, is not exclusively oriental. There is a spring near Pisa of such valued qualities, that the Grand Duke drank no other. He, to his honour let it be said, did not keep the entire spring to himself, but allowed it to be sold in Florence, where, in the earlier part of the last century, it obtained a better price than ordinary wine. Now, however, it has fallen greatly in money value though still esteemed. It is said that on dropping some rose water into it in a glass, the liquid from the spring becomes as white as milk.

Some of the Tartar tribes worship water, and well they may, as the deserts they traverse only become bearable when a pool or brook relieves the eye from the almost everlasting sand. In their festivals, water in a marine shell is held up for adoration, much after the manner in which the Host is elevated in the high ceremonies of the Catholic Church. A practice is common with them, as was with the old Icelanders, of never crossing a river without taking off their hats—(such as they were), in dutiful obeisance. The torrid and frigid zones, it would thus appear, originate the same idea, of water being a necessary of life, and that whenever it escapes the absorption of sand, or encrustation of ice, it is equally an object of solicitude.

The Druids residing in an insignificant island lying to the north-west of Europe, and which, if we mistake not, is known by the name of Great Britain, also had their holy streams. The worship of these rivers, however, is now in the high keeping of their poets. Shakspeare, Pope, Thom-

son, and others dwell on the banks of rivers, and Ossian sung their praises by comparing his heroes to their proud sweeping course. In America, too, the noble savage, hears, in the foaming cataract, the dreams of his cloud-mind, and listens, with a devotion which even a bish might adore, to the midnight roar of the flowing giant which roll triumphantly through his wooded and solitary land. Throughout the world, rivers are esteemed the life-blood of the earth; and it is one of the best and most natural weaknesses of the barbarian to seek for aid from that which fertilises his unploughed fields, and brings to him the treasures of the deep to the door of his own wilderness. But we of the world, in this wicked century, are a unromantic race; steam boats plough their crystal surfaces, disturb the quiet pebbles on their banks, and absolutely frighten the fish. They have tried the same game in America, but there the rivers are too broad and long, and the lakes by much too expansive, to be easily disturbed by the puny hands of man. The Rhine and the Volga have been long since profaned, the Hellespont has lost its classic virginity, and the Ganges has been polluted by the rough embraces of a steamer. What will the world come to?

### The Zoology of August.

SINCE last month the face of nature has undergone a obvious change in the hue of its complexion. As the author of *The Mirror of the Months* observes, "the rich and unvarying green of the corn-fields has entirely and almost suddenly changed to a still richer and more conspicuous gold colour,—more conspicuous on account of the contrast it now offers to the lanes, patches, and masses of green with which it everywhere lies in contact, in the form of intersecting hedgerows, intervening meadows, and bounding masses of forest. These latter are changed too; but in hue, not in colour. They are all of them still green; but it is not the fresh and tender green of the spring, nor the full and satisfying, though somewhat dull, green of the summer; but many shades of green, that blend all tints belonging to the season just named, with others at once more grave and more bright; and the charming variety and interchange of which are peculiar to this delightful month, and are more beautiful in their general effect than those of either of the preceding periods."

In the course of this month the field-mouse and the harvest-mouse have young. The female of the former species makes her nest very near the surface of the ground, and often in a thick tuft of grass; and produces from seven to ten at a litter, and probably has more than one litter in the year. Gilbert White relates that while his servants were pulling off the lining of a hot-bed, an animal very nimble leaped out of it, but made a very grotesque figure, "no was it without great difficulty that it could be taken: when it proved to be a female field mouse, with three or four young clinging to her teats by their mouths and feet. It was amazing that her desultory and rapid motions did not oblige her litter to quit their hold, especially as it appears that they were so young as to be both naked and blind. More recently, Mr. Joseph Clark says, that a field mouse's nest having been ploughed out of the ground at Safford Walden, Essex, the female ran away, but very heavily and awkwardly, and on being overtaken and killed, two young ones were found clinging so tenaciously to her teats, that some force was necessary to remove them from their dear parent."

Common shrews (*Sorex araneus*) are, at this period frequently found dead in great numbers in the woods, fields, and roads, without any apparent marks of injury to their bodies. In the *Gardener's Gazette* of August 11 1838, Mr. J. H. Fennell says that all of several debilitated specimens which he picked up near Islington, "were infested with multitudes of very minute lice, which may perhaps be the cause of their debility and mortality at this period; or their enfeebled state may be owing to the having been violently seized upon by some preying animal, which has been compelled to release them from its grasp on account of their strong smell, which is so disagreeable that although cats will kill them, they refuse to eat them. Selby, indeed, asserts that the white owl rejects the shrew but that is incorrect, for Mr. Macgillivray found one in the stomach of that bird, and Mr. Henry Turner found the skeletons of eight shrews among the disgorged pellets of its nest, in the Cambridge Botanic Garden. Yet, notwithstanding this, it may be the case that they do not eat them when they can get less offensive meat. A similar fatality attends the American short-tailed shrew (*Sorex brevicaudatus*), which Mr. R. C. Taylor says he repeatedly saw in spring time, lying dead on the paths about the Alleghany mountains, Pennsylvania, having been destroyed and partly eaten by owls, or other enemies, which had been compelled he supposes, to abandon their prey because of its strong musky smell."

Towards the end of the month, the British yellow wagtail departs from the northern counties of Durham and Northumberland to the southern county of Devonshire. The common turnstone sometimes arrives on our shores as early in the year as the end of this month. The common whitethroat continues to frequent gardens to feed on the small fruits and berries. The duncock is silent for a short period, while undergoing his annual moult. Adult short-eared owls also moult.

The turbot and the brill deposit their spawn. The fry of the smelt are found about three inches long, swimming in shoals near the surface of our rivers; and by the Lord Mayor of London's sanction, the smelt fishery in the Thames and Medway commences on the twenty-eighth day of the month, and continues till Good Friday. Young grey mullets, now about an inch in length, enter the fresh water, "keeping," says Mr. Couch, "at some distance above the tide, but retiring as it recedes."

In badly-managed hives, the bees, for want of sufficient food, begin to plunder other hives, and to way-lay and rob other hive-bees and humble-bees, when they are on their way home and laden with honey. These burglaries and highway robberies they also commit early in the spring when, as at present, there is not an over abundance of provision for them.

\* One instance among millions we may be permitted to notice, as being so far separated from the loathsome sacrifices which are made upon the Ganges, that it even demands our admiration for its poetic beauty. When Nuncomar, minister to an Indian prince was executed by Warren Hastings, the multitude who witnessed his death rushed to the river to wash away the pollution of having looked on so barbarous a deed. In the whole wide range of Pagan mythology there is no idea comes so near the Christian belief of their Redeemer—for the Ganges is the redemption of the Hindoos)—washing away the wickedness of the world from the souls of men. Can it be that the mind of the most benighted may not wholly shut out from its vision the glimmering of an intercessor who is willing and mighty to save?

\* The ladies of Rome, who admired a handsome youth as much as their more eastern pagan sisters, could not in the paltry Tiber see any resemblance to Adonis, so it was given out that in his life-time the boy had a splendid garden, and therefore flowers were an emblem of the ill-fated youth in Rome. The sensitive ladies of the old republic used to plant herbs in pots on the day of his festival, which, being kept in a warm temperature, soon came into existence, soon blossomed, seeded, and died. Hence the shortness of love, and all its raptures, were compared to the garden of Adonis. Thus it was that semi-religion lent the charm of its influence to illegal passion, and brought ruin on numerous noble houses, as well as death to many a patrician dame. When superstition blinds the intellect to what is called fate, virtue, honesty, patriotism, and even domestic love, take the wings of the morning and are seen no more.

Dwellings that are sluttishly kept, and ill-ventilated, swarm with flies and gnats, and beds that are not properly attended to harbour most unpleasant bedfellows. Looking after these matters is a much more useful employment for young servant women than looking after soldiers and policemen. This is our curtain lecture to all who have eyes and noses in houses where vermin are tolerated, and entertained at the expense of flesh and blood. Down with the bed, and death to the intruders; and then—ah, what then? Why then to thy breakfast with what appetite you may have after the morning's hunt with the Bedfordshire pack. If every person would set earnestly about destroying them, we might soon get rid of these offensive blood-suckers, these nightly drinkers of our most precious claret.

### The House of Stuart.

THIS royal house, which existed nearly four hundred years, was ever famed for its misfortunes, the majority of its princes having died by violent means, while the few others almost all expired under the bitterness of personal or national affliction. Robert III. is said to have died of a broken heart, in consequence of his eldest son having been murdered by his uncle, while the second was detained for upwards of eighteen years a captive in England. James I., the unjustly detained prisoner, was murdered at Perth, under circumstances of the most afflicting barbarity. James II. was killed by the accidental bursting of a cannon at the siege of Roxburgh. James III. was slain in battle, near Bannockburn, while vainly endeavouring to quell a revolt among his nobles. James IV. was likewise slain a battle, at Flodden-Field. James V. died of shame, disappointment, and rage at the traitorous conduct of his nobles. Mary was beheaded; her husband blown up; and her natural mother (Regent Murray) shot by an assassin. James I. of England, her son, escaped murder by conspiracy several times, and his death was strongly suspected to have been occasioned by poison; as was also that of his eldest son, Prince Henry, a youth of eighteen, on whom the nation had fixed its hope of future honour and advancement. Charles I. suffered on the scaffold. Charles II., after being an outcast and exile, was restored to his throne and died under every symptom of poison. His brother, James II., was driven from the throne amidst the execrations of his subjects, and the uproarious shouts of his soldiers, to die in exile in a foreign land.\* His daughters, Mary and Ann, died without leaving issue, esteemed by women the greatest curse of Providence. His son, the old Pretender, lived in Italy, buoyed up by the vain expectation of acquiring the regal inheritance of his ancestry, and at his death bequeathed the hopeless acquisition of a sceptre to his sons. The eldest, Prince Charles Edward, the young Pretender, the hero of a thousand Scottish ballads; after enduring incredible hardships in Scotland, including cold, nakedness, hunger, danger from the elements, and a price upon his head, he escaped in an open boat, and went to Italy, the common refuge for discarded princes. His brother, Cardinal York, not only resigned all claim to the throne of Britain, but at his death transmitted to George III. the ancient crown jewels of Scotland, which had been worn by Mary, and including the celebrated rubies mentioned in the "Fortunes of Nigel." The Cardinal, being a Roman priest, lived a celibate, and was latterly a pensioner on the bounty of England; and with him expired this ancient bygone house, of which it has been said no experience could teach, nor misfortune humble.

\* In our eighth number we gave an outline of the character of Charles II. The following memoranda respecting his brother James II., are taken from *Fraser's Magazine*, and are not more severe than true:—In the year 1685, the queen, as was reported, gave birth to Prince James, who was pretty generally considered to be by all but the king's party merely a supposititious child—namely, a newborn infant, secretly introduced into the queen's bed under a warming-pan without being heated. The account of the birth of this supposititious heir to the crown was published in the *Court Gazette*; the cannon at St. James's Park, and at the Tower of London, announced the event; and the court annals of the time gave a circumstantial account of the Archbishop of Canterbury, and other state officers and ladies of the court, being in attendance in the next apartment of that of the queen, with her majesty's door open wide; but *malgre* these mock demonstrations, to quote Samuel Butler in his *Hudibras*,

"Those persuaded 'gainst their will  
Will be of the same opinion still."

Hence the case, to use the phrase of Westminster Hall, "had not a leg to stand upon." Unfortunately for the holders of the truth of the event, it was well known to the residents of the palace that there was a jib-door, which was covered with part of the tapestry in the panel in a room close behind the head of the royal bed; and further, that there was a private staircase that communicated both upwards and downwards to this very doorway in this very apartment. Our Lady of Loretto (known to fame in England before the Reformation) had promised the royal banting to the pious supplications of his Majesty King James; but strangely enough this holy personage was not subpoenaed into court in proof of the birth, and of course we have not the authority of her evidence.

Many believed at the time, and still do believe, that this was a supposititious birth. This event, which the king had long made the object of the most ardent prayers, and from which he expected the firmest establishment of his throne, ultimately proved the cause of his downfall; for as he was now in the fifty-sixth year of his age, and the Princess of Orange was the next heir to the British throne, the nation had entertained hopes of at last obtaining a peaceable and

safe riddance of all their grievances; but when a son (real or pretended) was born to the king, they were reduced to despair, and saw no resource left except in forming a confederacy for their mutual interests; and this comprehensive union of Whigs and Tories, Churchmen and Dissenters—Protestants, speedily produced the Glorious Revolution!

In the year 1688, on the 1st of October, the Prince of Orange published a declaration, with the reasons of his intended expedition to England: and one of these was "to inquire into the birth of this supposed Prince of Wales."

So general had the public hatred spread against James in every part of the kingdom, from the flagitious acts of those about the court, and the sanction which he gave to the daily atrocities which were committed to the injury of his subjects, that the whole body of the Protestant people willingly believed every report that had got abroad to the prejudice of the house of the Stuarts; for the whole empire, with the exception of the Papists and the Jacobites, had imbibed a hatred for the name, and the wish became universal. All the judicious amongst those of the Catholic communion were alarmed and disgusted with the violent measures of the frantic James, and wisely foresaw the consequences that must of necessity ensue; but he was too self-willed to listen to advice, and blindly rushed upon his fate. But James was the victim to an incurable infatuation, and was entirely governed by the rash counsels of the bigot queen, and of his own confessor, Father Peters, a Jesuit, whom he created a privy-councillor; all was now hastening to rapid ruin, and the last act of the direful drama had reached the very threshold of the throne.

Before the arrival of the Prince of Orange, indeed, only within a very few days, all the real friends of humanity, however influential their station might seem, at once absented themselves from the court; the palace was deserted, and James was left without a friend. Every day, every hour, brought the tyrant bigot a new disaster. In his agitation, he entreated the support of certain amongst the most honoured and respected of the nobility; but his appeal was made too late.\* Some injured party answered him with the bitterness of sarcasm or reproach, and every one left him without sympathy for his fate. He had not the balm of family consolation to repose upon in his trouble,—for the last who fled from the palace was his daughter, the Princess Anne, the wife of Prince George of Denmark; which saddest sorrow he was constrained to endure without an appeal, for he had forfeited all claim to the affections of relations; and as for friends he had none, saving those who had been active abettors of his persecutions.

On the occasion of the bishops being taken to the Tower, an immense concourse assembled upon the water, and the scene was most touching, for the prelates were known to be wise, honest, and holy persons, universally and deservedly honoured and venerated accordingly. They were in consequence rowed to the place of their captivity amidst the prayers, tears, and blessings of the people. There were some accidents at the passage under London Bridge; but when these holy men attained the Traitor's Gate, where they were delivered into the custody of the authorities, and when the boats with their crews, at the returning tide, put about, their shouts were so loud and increasing, that it was asserted they were heard at the water-gate at Whitehall; and the yell of the boatmen against those who were in attendance *ex officio* at the melancholy procession surpasses the power of description. And further, it is related, that the commotion continued in the streets, and in all the public and private parts of the metropolis, during the whole succeeding night; and that even in the morning of the succeeding day, vast groups of people assembled in every street; and such was the general excitement, that fifty thousand people might have been collected together, ready to have become the perpetrators of every sort of insubordination and public mischief, had an influential person offered to become their leader. This wanton outrage committed against the independence and becoming holy zeal of the bishops sealed the evil fate of King James; for the measure of his iniquity had already been almost complete, and the reservoir of crime of late had been augmented, through so many daily and hourly streams of iniquity, that it would bear no more; when hasty ruin and dismay now pervaded the court, and every miscreant agent and abettor of his crimes thereof were driven to seek safety, either by secreting himself or in hasty flight.

The last act of James's egregious folly and short-sightedness was manifested on the day after the seven bishops were acquitted and liberated; for the king was dining in the camp at Hounslow, at the table of the General Commander, Lord Feversham. His majesty had in the morning been reviewing the troops at the camp, and all seemed to go on well; but in the midst of the dinner a general shout was heard from the camp, attended with the most extravagant symptoms of tumultuary joy.

"What is that noise?" inquired James.

"Nothing particular," answered the commander-in-chief. "It is nothing but the rejoicing of the soldiers for the acquittal of the bishops."

James was visibly affected, looked angry, suddenly became pale, and observed, "Do you call that nothing? But so much the worse for them."

"Man proposeth, and God disposeth," said the Princess Anne, when her husband, Prince George of Denmark, privately communicated this event to her. For from that moment all reliance upon the loyalty of his soldiers vanished as it had been a dream; and the fatal reality remained "that her royal father had been relying on a broken reed." She raised her prophetic hands, and exclaimed, "Now, indeed, all is lost!"

\* The share which James II., when Duke of York, had in the death of the patriotic Lord William Russell, of glorious memory, and the reply made by the Earl of Bedford to the king's request for assistance at this critical juncture of his affairs, form an admirable chapter in English history. As *Fraser* has omitted this honourable testimony to the house of Russell—(surely from no political bias)—we shall supply the deficiency in our next.

### Familiar Chapters on Science.

#### CHAPTER VI.—PHOTOGRAPHIC PRINTING AND DRAWING.

THE art of photography, or taking drawings of objects by means of the action of the sun on chemically prepared paper, is an interesting modern discovery which was familiarly explained in our 5th number. At present it is our design merely to give a few suggestions to those persons who are still practising this elegant, easy, and useful method of taking faithful representations of the works of art and nature. As one among many examples that might be adduced to show that its utility extends even to the smallest objects, we may mention that at the meetings of the Entomological Society, on April 1 and May, 6, 1839, Messrs. Raddon and Shipster exhibited various photographic drawings of insects and their anatomical details.

A person, who signed himself D., sent to the editor of the "Bristol Mirror," a letter dated March 29, 1839, enclosing the two first specimens of photographic, or sun printing which had ever been executed. The following is a copy of one of them.

#### "THE SOLAR SYSTEM OF PRINTING."

His Royal Highness, the Sun, presents  
To Mr. Taylor his compliments,  
And begs to state to M. T.,  
That within a very short period, he  
(The Sun) intends to do no less  
Than to set up a photographic press.  
The Sun presents to Mr. T.,  
These lines, which were printed by one of his beams,  
And his Highness would much rejoice to see  
The same in the "Mirror" as soon as may be,  
It being the first of the solar themes:  
A "True Sun" paper would surely pay,  
For 'tis evident from my hasty rhymes  
That 'twould throw out 'new light' every day,  
And the printer would work to the end of time.

(Printed by A. Sun, whose place of abode is all over the world, at his office, 7, Redcliffe-hill.)

Mr. Taylor's photographic paper is prepared with ammonio-nitrate of silver, and fixed with hypo-sulphate of soda. This being an explosive mixture, persons should, however, be cautious not to keep any great quantity of it by them.

Mr. Cooper's photographic paper is prepared by soaking laid or water-marked paper in a boiling-hot solution of chlorate of potash, for a few minutes,—the strength of the solution is of little consequence. Then take it out, dry it, and wet it with a brush on one side with nitrate of silver, sixty grains to an ounce of water, or if not required to be very sensitive, thirty grains to the ounce will suffice. This paper has a very great advantage over any other, for it can be fixed by washing with common water. It is, however, very apt to become discoloured even in the preparing, or shortly afterwards, and is besides not so sensitive, nor becomes so dark as that made with common salt.

The albumen paper is prepared by washing paper with the white of eggs. Paper thus prepared is not immediately sensitive to light, but after a few minutes exposure to the direct rays of the sun it becomes brown, and its colour continues to increase for two or three hours, until at length it is of a very fine beautiful chocolate, infinitely finer and more glossy than the very best of the other kinds of photographic paper. Whatever paper is washed with the albumen it always becomes by this method uniform in tint throughout; and the pictures though somewhat tedious to produce, may, without being fixed, be exposed for a short time, even to direct sunlight, without injury. This albumen paper, which is very excellent for transparent objects, such as lace, flowers, &c., has a serious inconvenience,—it acts very imperfectly if not exposed to the direct light of the sun, and is therefore comparatively unserviceable with the camera obscura, or to transfer prints, &c. A correspondent to the *Athenaeum* says he has found that photographic paper made by washing it with a mixture consisting of equal quantities of the white of eggs and water, and afterwards with the solution of nitrate of silver, succeeds very well, and recommends that the drawings taken upon it be fixed with the iodide of potassium.

Another kind of photographic paper may be made by using phosphate of silver, instead of nitrate of silver, and drying it according to the ordinary method. When a drawing is taken it must be fixed by immersing the paper in a diluted solution of ammonia, and left for a short time, till all the yellow parts of the impression become white, showing that the whole of the yellow phosphate is washed out. A writer, (G.M.,) in the *Gardener's Gazette*, recommends as a mode of fixing photographic drawings, that immediately that they are taken they should be immersed in a solution of potash, instead of common salt, and asserts that the latter method will most certainly be found objectionable from its rendering the photograph liable to attract moisture from the air in damp weather. If it be intended that your photographic drawings should be seen only by candlelight, or are required only to transmit, in a portfolio, to some distant country, no fixing or preservative washing is necessary. Travellers need not wash their photographs till some future time, when they may have greater leisure, provided they keep them excluded from the light and air meanwhile.

Photographic copies of paintings on glass may be taken by throwing the light through them on to the prepared paper. The effect in this case is very singular, for as some of the colours intercept the violet rays of light, the result is often contrary to that expected. For example, if a part of the painting on the glass be yellow, we might suppose that, as this is the lightest colour, the paper beneath would become very dark; but in truth it will scarcely become changed at all, for this yellow part of the glass will intercept all the violet rays.

# Traits and Sketches of Irish Character.

## THE SISTER BRIDES.

For many years were the people of England dinned with a newspaper strife respecting the political and national evils arising out of the domestic feuds in Ireland. Acts of cruelty were rehearsed, and the demand for vengeance made; no one looked into the destroying effects of these brawls so far as regarded social existence—no one thought it useful or proper to look beneath the surface, and see how much misery pervaded the ranks of lowly life, until Mrs. Hall, in her Sketches, gave to the world some new features of Irish history, some redeeming instances of suffering as well as daring, which proved that the peasantry, though led astray by faction, and blinded by local hate, possessed all the elements of social virtue, and that they only required to be properly directed to induce the abandonment of strife, and ensure the restoration of harmony. The following story beautifully illustrates the punishment of a factious mind, its yielding to remorse, and its triumph over evil passion:—

Jack Casey was a prosperous and wealthy farmer, but his neighbours called him "hard and honest," and certainly, whatever were his claims to the latter distinction, there could be no doubt as to his meriting the former. He had two daughters, Anty and Honor; the eldest a cheerful, sunny-hearted girl; the youngest, a gentle, beautiful creature, four years younger. Anty had mirth and mischief enough in her composition to enliven half a dozen farms; she was the very consolation of her mother, who, by some unexplained obtuseness of female intellect, had never been able to discover her husband's weak points so as to turn them to domestic advantage; though married to him for twenty years, the poor woman had only become thoroughly acquainted with his obstinate ones, which she unfortunately strengthened by opposition. Anty, though afraid of her father, was the bird of his bosom—the peace-maker, the joy-giver—the harmony of the house, taking off the rough edges of unkindness by her sweet words and kindly manners, and being withal the gayest at the rustic dance, as well as the most devout at the parish chapel; her nature was warm and enthusiastic, and her mother, doubtless remembering her own young days, imported the Virgin with many a prayer to "overlook" her beloved Anastasia, and keep her from trouble. The poor woman for a long time believed her prayers were answered; but it so happened that a young farmer of a neighbouring parish was so captivated by Anty, that he took every opportunity of meeting her whenever her father was absent, well-knowing that a sort of faction-feud which had existed for many years between the Coyne, of Ballyduff, and the Caseys of Ballyran, of which each was a member, added to the impossibility of his telling down guinea for guinea with "hard Jack Casey," would effectually prevent the old man's favouring his suit; he trusted, however, to time—and chance—and "his luck"—the old man's love for his daughter—to all and everything, in fact, which lovers trust to, without looking closely into the future. To Hope he trusted, believing it would do all for them both. Anty did not care whether her lover was a Casey or a Coyne; she loved him with all the enthusiasm of a young warm heart, and without inquiring of herself why she did so. From her mother, hitherto, she had never had a secret, but she had cherished a dangerous habit of evasion and concealment with her father, a habit which extreme sternness invariably originates, and the only person in her perfect confidence was her little sister Honor. Still, the knowledge that she was carrying on a clandestine courtship damped her spirits; instead of her voice echoing through the house in merry laughter, her very footsteps descended upon the floor as though she would not have been heard. If this absence and care of manner was at all noticed, she would atone for it by a burst of merriment too boisterous to be natural even in an Irish woman, or break into some of the wild snatches of song so characteristic of a people whose feelings are easily excited.

One clear moonlight night, Anty met her lover at the old Tryst—a tree near to a Holy Well, under the shadow of which they had spent many hours together, talking over the various "nothings" which time out of mind have made up the sum of lovers' "somethings."

"My heart misgives me, John," she said; "not so much on account of my father, for sure it wouldn't be possible to do anything with him—but my mother, John dear—my kind gentle mother, that I never told a lie to about any but you—that's what's grievin' me, and making my heart heavy; and I'm thinking, John, no blessing will be over us this way; and the last time I was with the priest, he told me as much; and that's another thing, it has kept me from my duty lately; and John agra, maybe it would be better we unsaid the words that—"

Her lover would not permit her to finish the sentence. "Unsaid the words!" he repeated; do you mean, Anty Casey, that we should unsay the promise we made kneeling by that blessed well, to each other, in the sight of God, with his stars looking down upon us? haven't we the same hearts in our breasts, the same feelings towards each other? the Coyne and the Caseys are not farther off than they were. At the very last fair-day, though hurling Casey dragged his coat through the fair-green, daring a Coyne to touch it, did I lift a

finger to him? and for whose sake did I stand back with the eyes of all my people on me, but for yours? And this is my thanks? Oh, Anty, I never thought it would come to this!" and he dashed himself passionately on the ground; while poor Anty, terrified at his vehemence, stood by trembling, not knowing how to appease his anger.

"John, dear, sure I hope for the best," she said at last, while kneeling by his side; "it was for the best, I spoke only to unsay the words, until such time as I could tell my mother the truth, and maybe bring my father to reason; he's bitter intirely lately on account of Jim Coyne of the mill's boast, that you heard of, and that stirred up all the bad blood of the family. And my mother, that seldom takes part in anything, joined my father last night against every Coyne that ever broke the world's bread."

"And you agreed with her," again interrupted the impetuous young man, springing up. "You know you did Anty, or you would not be for unsaying the words; it's all because hardship has weighed heavy on the Coyne, while the Caseys have got up in the world; but I care no more than you."

"But I do care, John; God, he sees my heart, for it's light to him; and he knows I would rather beg my bread with you through Ireland's ground this minute than live in a palace with any other—and that's more," she added, turning away her face, upon which the moon shone brightly, as if ashamed of the confession—"that's more almost than I ever dare own to myself before." Her lover pressed her to his bosom, and instead of "unsaying" the words, they repeated their vows of mutual affection! kneeling before the cross which some pilgrim had carved ages ago upon the south side of the well; and was regarded with extreme veneration by the peasants—who mingle religion with the business of their lives—some call it superstition, and so it is, to a certain extent, but still it proceeds from a "looking upwards" at all times and under all circumstances—a firm belief in the omnipotence and omnipresence of the Creator; and a truth in Him, which never fails them, is never shaken, and seems to grow stronger the more they prove the instability of all worldly promises. And yet, when Anty returned home, her spirits were heavier than ever, and though her father was in excellent humour, she could hardly prevent tears from rising to and overflowing her eyelids.

"Anty, avourneen," he said, "put a brighter colour in yer cheek, and a finer polish on yer hair against this time to-morrow night—there's one will be here then that will be proud of ye, as well he may be—and you of him; Anty, a cushla, I'm not going to keep my daughters moulding at home; hold up yer heads, girls, there's money bid for ye; the best in the country know there's something in Jack Casey's house besides smoke. Come, Honor, take the plate from yer sister, and get supper; we can't have her always, nor you either, little Honor, when yer time comes; a cushla ma chree, we'll have a bright house this time to-morrow, when Alick Cotter and his father to the fore—"

"Anty, what ails you, agra!" inquired her mother: "Anty, my jewel; Anty, honey!—Oh, John, the life has left her, she's both cowlid and heavy in my arms; Anty! mother's blessing! spake to me, darlint!"—Anty had fainted on her mother's bosom.

"What ails her?" inquired her father, sternly, when she had somewhat recovered, "what ails her?"

"A wakeness came over her," said Honor, tremblingly.

"I'll have no such wakenesses come over my girls," observed the old man, in a determined tone; "I'm not going to give them what I earned by the labour of my hands and the sweat of my brow, unless they plaze me in the only thing I want them to plaze me in."

"I want nothing from you father, dear," exclaimed Anty, falling at her father's feet; "I ask nothing but to be let remain here, to slave for you and my mother to the day of my death, if you'll not ask me to marry Alick Cotter—that's all—but I'll die first—I'll never say the words for him before priest or bishop. Oh, father, sure you'll never crush the heart of your poor Anty." A loud and angry scene followed, but Anty lacked courage to confess the truth: errors in domestic management acquire fearful strength as they grow—and the first harshness—the first equivocation—the first duplicity—if not stifled in its birth, is certain to produce a base and powerful progeny.

The farmer was not to be turned from his determination. The next evening Alexander and his father arrived at Ballyran, where all was made ready to receive him; and Anty, in obedience to commands she had not the power to dispute, moved silently about the house, more changed in her appearance in twenty-four hours than if ten years of ordinary existence had passed over her head. After supper the two fathers sat at the table with the punch "screeching hot," between them, arguing stock against stock, advantage against advantage, guinea against guinea; while the lover, not consulted in any way in the transaction, was left, as was supposed, to make the best progress he could in the affections of his intended bride. In accordance with this design, he seated himself by her side on the "settle," which was close to a wall that projects in Irish cottages before the door, so as to form a sort of screen to protect those who sit round the fire from draughts. He addressed the poor girl in the rural jargon of prescribed love-making, while her

mother and sister were busy about the house. She listened to all he said as one who heard not; but on endeavouring to kiss her, she sprang from her seat, casting a look of horror and disgust on the perplexed youth, rushed from the room;—while the fathers were intent on their traffic as not to note the occurrence. Alick was sufficiently astonished to remain with his eyes fixed on the fire for some minutes, and then endeavoured to keep himself awake by setting the dog and cat to fight; a pastime they sometimes indulged in after a fashion of the master and mistress of the house, reversed, however, the finale, as the cat usually came off conquer. This, however, was put an end to by "the Misthree" throwing a pitcher of water over the combatants; and being informed by Honor, that "Anty was above in the room, and would not come down,"—the lover, imagining his duty ended, folded his arms, and fell asleep.

"And now, children," said John Casey, rising, at last "and now, children, having settled this business to entire satisfaction, it only remains for us to give ye a blessin', and fix the day for his reverence to spake words—but thunder and ages, Mr. Cotter, why, yer boy fast asleep—and—Mitty—Honor—where's Anty?" say. He continued furiously, stamping, while Honor and mother, after telling, what they believed, that she was "above in the room," shrank in affright before him, and young Cotter, roused at last, looked stupid and astonished, as sleepy-headed people do when suddenly awakened.

Anty was no where to be found; she had taken nothing with her; even her bonnet and cloak were in their accustomed places. Honor, as much terrified as her mother, at her absence, flew towards the well, a trysting-place, where she thought she might find her sister. She was followed by her father and young Cotter; it was a fine clear night, but the moon hardly showed above the horizon. "Ye needn't run so fast, Honor," said her father; "I found only this morning who had fixed her mind on, and the message she sent to me who I'd rather see her a corpse at my feet than marry to. And I fastened her pretty messenger in until this night was over, for he wouldn't tell me the rights of what she entrusted him. No need to hurry, she'll be met the well, but not by him she expected."

"Here she is, father, like a silver rod under the starlights; for the love of God, don't terrify the life out of her. Anty, I'm here," shouted Honor.

"To disgrace her family this way," muttered the old man between clenched teeth, grasping his shillelagh tightly in his hand; "to disgrace me and mine!" would appear that Anty, not meeting her lover as expected, saw who was coming, and knowing the violence of her father's nature, resolved, in a moment of desperation, that he should not overtake her. She fled like an antelope across the field.

"Father, father," exclaimed Honor, in an irrepressible agony, "she's making for my aunt's house, and the foot-bridge is broke. Oh, father, the narrow stream is broad enough there to drown ten men. Stand by, father; let me call." And she did—but in vain; unconsciously rushed forward to her doom. They ran on the edge of the bank—and then she disappeared. Honor and the young man arrived almost together at the fatal spot; nor was old Casey far behind;—in an instant both the men had plunged into the dark water from the broken edge of the frail bridge, which they talked of repairing. Once, while they were striving with the rapid stream, Honor saw, or fancied she saw her sister far below where she stood. It might have been she—or a sudden brightness of the moon—she could not tell which. Had not her screams brought help, speedily, Casey would have shared his daughter's fate—Alick's arms were strong—and he was a good swimmer—he dived, moreover, and well—but brought nothing from below save the broad leaves of the water lilies, which clung around him like a shroud. The next morning, the once light-hearted and joy-giving girl was found in a pool—about three hundred yards from where the accident occurred—into which the eddy of the stream must have hurried her, even while the voices of her father and her sister were ringing in her ears. There she lay—as if asleep—one hand grasping a bundle of rushes, the other tangled in her hair. In death, she was even more beautiful than in life; and no one would look upon ever forgot her;—bitter were the lamentations at her untimely end. The most celebrated keel in the country composed a keen expressly for her, calling her "The fair haired girl of the clear stream;" "The white dove of the valley;" "The early blossom shaken from the bough by the north wind;" "The music of waters;" and other epithets equally gentle and endearing. Her young companions kissed her in her shroud, and her broken-hearted lover presented himself at her wake; and after pouring a torrent of bitter reproach upon the grey-haired old man, demanded the privilege of carrying her head, i. e., walking under the head of the coffin, to the grave. The Coyne mingled with the Caseys at this mournful funeral. The people call the pool the Grave of the Maid, or the Maiden's Grave, this day. The village boy will not ply his idle business of angling in its waters, but cross himself, and pass to another spot. Nor do the young even now deem it lucky to meet their sweethearts under the shade of the well-tree. Coyne emigrated soon after; and a long time, elapsed before the bereaved parents were observed to go about their usual occupations. The

however, though it does not altogether obliterate, disperses sorrow.

Honor grew in stature and in beauty, and the love of both father and mother twined close, and more closely, round their surviving child.

"I'm thinking," said the old man to his wife, "I'm hinking—don't let the little colour that the trouble has left there quit your ould face intirely, agra, whenever I'm going to spake to ye; but I am thinking that Honor has more than a mind to take up with young Lawrence Coyne." "Lord, save us!" muttered the old woman, laying down her knitting, and looking over her spectacles at her husband, while she trembled violently at what might follow. "I'm sure of it; my ears hear nothing at her step and her voice, and the study of my life is to try to see into her heart!"—He paused—"if it is so," he continued, "and I know it is, I'll not put against it," as his wife clasped her hands in thankfulness, "I'll never put against it, even if it broke my heart; though the spirit's going out of the factions, and the boys are forgetting their old ways, and born foes are dying friends; still Coyne's a Coyne, and a Casey's a Casey; but I'll not put against it either for the sake of the dead or the living; if Jack Casey's heart was hard, it has had enough to soften; and you, my poor woman," he added, with the touching emotion of a stern man, the more powerful from being seldom excited, "you have had enough to break yours, poor Mitty! you war young and handsome—so like her when I had you first—and you bore that trial without ever throwing one reproach in my face—or meetin' me once, even once, with a cowlid look, though I murdered your child!" The old man laid his arrowed brow upon the faded cheek of his loving wife, and their tears mingled together.

"It was her hard fortune, John, dear; it was the will of God: and she's one of the bright angels long ago. I often think, and I laying awake in the night, I often think what time it will be when we see her in glory! But don't give way, John, agra. Shure it was the will of God."

"Not it," he exclaimed, starting up; "it was the wilfulness of man that flew in the Lord's face."

"Whisht, whisht, Alana machree, and don't be talking such wild words that's enough to lift the roof of the house—it was the will of God, avourneen! and that's my great comfort—His holy will be done!" And she covered her face with her hands and rocked herself backwards and forwards, while her husband paced up and down to subdue his emotion.

"Well!" he said at last, "but about Honor. Lawrence isn't a bad boy for a Coyne; thought he has nothing in his hands an' his heart."

"Many an Irish boy has made great way entirely in the world with no more."

"I can't take what we've got out of the world," said the man, his old hardness dictating an apology for his resent liberality.

"And if you could, dear, sure it wouldn't be any use!"

"You may tell Honor—that—she may ask Lawrence byne here,—or, do you do it; that will be better—He's a good boy, though a Coyne; one can't go past luck, and so—a Coyne must be in the family—that's sartin—his house can be mended with the thrifle she'll have at last, and in God's name, let him take home his bride—let him take home his bride—better he should take her home than death, Mitty. We know that the ould man must part with his money—better his money than his child, you know; and they'll be convenient, not far away from us in our ould age—there's no going past luck—a Coyne and a Casey, in these times!" And so he muttered to himself, and walked up and down long after his life had hastened to communicate the tidings to Honor, who could hardly believe it possible that the good news was true, and that she was at liberty to make her own choice.

In the early part of the next spring, a group was seen passing along the road leading from Ballyran to Ballynaff: the bride was "bringing home" to her husband's house, followed by her aged parents and the blessings of the people.

### The Tomb of Aaron.

A MAN rising from a tomb with all his clothes on does not require much time for the arrangement of his toilet. In less than half an hour we had breakfasted, and were again on our way. Forgetting all that had engrossed my thoughts and feelings the day before, I now fixed my eyes upon the tomb of Aaron, on the summit of Mount Hor. The mountain was high, towering above all the rest, bare and rugged to its very summit, without tree or even a bush growing on its sterile side, and our road lay directly along its base. The Bedouins began to show an unwillingness to allow my visit to the tomb; and the sheik himself told me that it would take half the day, and perhaps be the means of bringing upon me some of the horde I had escaped. I saw that they were disposed to prevent me from accomplishing my object; and I felt sure that if we met any strange Arabs, my purpose would certainly be defeated. I suspected them of stratagem, and began to think of resorting to stratagem myself. They remembered the sheep, however, and told me that the sacrifice could as well be performed at the base as on the summit of the mountain; but this, of course, would not satisfy my conscience.

With my eyes constantly fixed on the top of the mountain, I had thought for some time that it would not be impracticable to ascend from the side on which I was. Paul and I examined the localities as carefully as a couple of engineers seeking an assailable place to scale the wall of a fortified city; and, afraid to wait till they had matured some plan of opposing me, I determined to take them by surprise; and, throwing myself from my horse, and telling Paul to say that we would climb the mountain here, and meet them on the other side, I was almost out of hearing before they had recovered from their astonishment. Paul followed me, and the sheik and his men stood for some time without moving, irresolute what to do; and it was not until we had advanced considerably on the mountain that we saw the caravan again slowly moving along its base. None of them offered to accompany us, though we should have been glad to have had one or two with us on our expedition.

For some distance we found the ascent sufficiently smooth and easy—much more so than that of Mount Sinai—and, so far as we could see before us, it was likely to continue the same all the way up. We were railing at the sheik for wanting to carry us around to the other side, and congratulating ourselves upon having attempted it here, when we came to a yawning and precipitous chasm, opening its horrid jaws almost from the very base of the mountain. From the distance at which we had marked out our route, the inequalities of surface could not be distinguished, but here it was quite another thing. We stood on the brink of the chasm, and looked at each other in blank amazement; and at a long distance, as they wound along the base of the mountain, I thought I could see a quiet smile of derision lighting up the grim visages of my Bedouin companions. We stood upon the edge of the chasm, looking down into its deep abyss, like the spirits of the departed lingering on the shores of the Styx, vainly wishing for a ferryman to carry us over, and our case seemed perfectly hopeless without aid. But, when the times the genii and spirits lent their kind assistance to the sons of men are gone, if a man finds himself in a ditch, he must get out of it as well as he can; and so it was with us on the brink of this chasm. Bad, however, as was our prospect in looking forward, we had not yet begun to look back; and as soon as we saw that there was no possibility of getting over it, we began to descend; and groping, sliding, jumping, and holding on with hands and feet, we reached the bottom of the gully; and, after another half hour's toil, were resting our wearied limbs upon the opposite brink, at about the same elevation as that of the place from which we had started.

This success encouraged us; and, without caring or thinking how we should come down again, we felt only the spirit of the seaman's cry to the trembling sailor boy, "Look aloft, you lubber!" and looking aloft, we saw, through a small opening before us, though still at a great distance, the white dome that covered the tomb of the first high-priest of Israel. Again with stout hearts we resumed our ascent; but, as we might reasonably have supposed, that which we had passed was not the only chasm in the mountains. What had appeared to us slight inequalities of surface we found great fissures presenting themselves before us in quick succession,—not, indeed, as absolute and insurmountable barriers to farther progress, but affording us only the encouragement of a bare possibility of crossing them. The whole mountain, from its base to its summit, was rocky and naked, affording not a tree or a bush to assist us; and all that we had to hold on by were the rough and broken corners of the porous sandstone rocks, which crumbled in our hands and under our feet, and more than once put us in danger of our lives. Several times, after desperate exertion, we sat down perfectly discouraged at seeing another and another chasm before us, and more than once we were on the point of giving up the attempt, thinking it impossible to advance any farther; but we had come so far, and taken so little notice of our road, that it was almost as impossible to return; and a distant and accidental glimpse of the whitened dome would revive our courage, and stimulate us to another effort.

If I had never stood on the top of Mount Sinai, I should say that nothing could exceed the desolation of the view from the summit of Mount Hor, its most striking objects being the dreary and rugged mountains of Seir, bare and naked of trees and verdure, and heaving their lofty summits to the skies, as if in a vain and fruitless effort to excel the mighty pile, on the top of which the high-priest of Israel was buried. Before me was a land of barrenness and ruin—a land accursed by God, and against which the prophets had set their faces.

On the very "top of the mount," revered alike by Mussulmans and Christians, is the tomb of Aaron. The building is about thirty feet square, containing a single chamber; in front of the door is a tombstone, in form like the oblong slabs in our churchyards, but larger and higher; the top rather larger than the bottom, and covered with a ragged pall of faded red cotton in shreds and patches. At its head stood a high round stone, on which the Mussulman offers his sacrifices. The stone was blackened with smoke; stains of blood and fragments of burnt brush were still about it; all was ready but the victim; and when I saw the reality of the preparations, I was very well satisfied to have avoided the necessity of conforming to the Mussulman custom. A few ostrich eggs, the usual ornaments of a mosque, were suspended from the ceiling, and the rest of the chamber

was perfectly bare. After going out, and from the very top of the tomb surveying again and again the desolate and dreary scene that presented itself on every side, always terminating with the distant view of the Dead Sea, I returned within; and examining once more the tomb and the altar, walked carefully around the chamber. There was no light except what came from the door; and, in groping in the extreme corner on one side, my foot descended into an aperture in the floor. I put it down carefully, and found a step, then another, and another, evidently a staircase leading to a chamber below. I went down till my head was on the level of the floor, but could see nothing; all was dark, and I called to Paul to strike a light. Most provokingly he had no materials with him. He generally carried a flint and steel for lighting his pipe with; but now, when I most wanted it, he had none. I went back to the staircase, and descending to the bottom of the steps attempted to make out what the place might be; but it was utterly impossible. I could not see even the steps on which I stood. I again came out and made Paul search in all his pockets for the steel and flint. My curiosity increased with the difficulty of gratifying it; and in a little while, when the thing seemed to be utterly impossible, with this hole unexplored, Petra, Mount Hor, and the Dead Sea, appeared to lose half their interest. I ran up and down the steps, inside and out, abused Paul, and struck stones together in the hope of eliciting a spark; but all to no purpose. I was in an agony of despair, when suddenly I found myself grasping the handle of my pistol. A light broke suddenly upon me. A pile of dry brush and cotton rags lay at the foot of the sacrificial altar: I fired my pistol into it, gave one puff, and the whole mass was in a blaze. Each seized a burning brand, and we descended. At the foot of the steps was a narrow chamber, at the other end an iron grating, opening in the middle, and behind the grating a tomb cut in the naked rock, guarded and revered as the tomb of Aaron. I tore aside the rusty grating, and thrusting in my arm up to the shoulders, touched the hallowed spot. The rocks and mountains were echoing the discharge of my pistol like peals of crashing thunder; and while, with the burning brand in one hand, I was thrusting the other through the grating, the deafening reverberations seemed to rebuke me for an act of sacrilege, and I rushed up the steps like a guilty and fear-struck criminal. Suddenly I heard from the foot of the mountain a quick and irregular discharge of fire-arms, which again resounded in loud echoes through the mountains. It was far from my desire that the bigoted Mussulmans should come upon me and find me with my pistol still smoking in my hand, and the brush still burning in the tomb of the prophet; and tearing off a piece of the ragged pall, we hurried from the place and dashed down the mountain on the opposite side, with a speed and recklessness which only fear could give. If there was room for question between a scramble or a jump, we gave the jump; and, when we could not jump, our shoes were off in a moment, one leaned over the brow of the precipice and gave the other his hand, and down we went, allowing nothing to stop us. Once for a moment we were at a loss; but Paul, who in the excitement of one successful leap after another, had become amazingly confident, saw a stream of water, and made for it with the glorious boast that where water descended we could; and the suggestion proved correct, although the water found much less difficulty in getting down than we did. In short, after an ascent the most toilsome, and a descent the most hair-brained and perilous it was ever my fortune to accomplish, in about half an hour we were at the base of the mountain, but still hurrying on to join our escort.

We had only to cross a little valley to reach the regular camel-track, when we saw from behind a slightly elevated range of rocks the head and long neck of a dromedary; a Bedouin was on his back, but, riding sideways, did not see us. Another came, and another, and another; then two or three, and finally, half a dozen at a time, the blackest, grimmest, and ugliest vagabonds I had ever yet seen. A moment before Paul and I had both complained of fatigue, but it is astonishing how the sight of these honest men revived us; any one seeing the manner in which we scoured along the side of the mountain, would have thought that all our consciousness was in our legs. The course we were pursuing when we first saw them would have brought us on the regular camel-track, a little in advance of them, but now our feet seemed to cling to the sides of the mountain. We were in a humour for almost calling on the rocks to fall upon us and cover us; and if there had been a good dodging-place, I am afraid I should here have to say that we had taken advantage of it, until the very unwelcome caravan passed by; but the whole surface of the country, whether on mountain side or in valley's depth, was bare and naked as a floor; there was not a bush to obstruct the view; and soon we stood revealed to these unpleasant witnesses of our agility. They all shouted to us at once; and we returned the salute, looking at them over our shoulders, but pushing on as fast as we could walk. In civilised society, our course of proceeding would have been considered a decided cut; but the unmannerly savages did not know when they received a civil cut, and were bent upon cultivating our acquaintance; but the manner in which they did so we must leave for another chapter of Mr. Stephens's stirring adventures.

### The Conscription in Russia.

EVERY class of Russian subjects, except the nobles and the clergy, is required to furnish one recruit annually out of every four hundred males. It is found, however, more convenient that this visitation should fall upon each government or province only once in two years, when, of course, one man is called for out of every two hundred. To examine and enlist the conscripts, boards are appointed which sit from the 1st of November till the 31st of December, in the capital of each province and in some of the district towns. The board, in the government town, is composed of the vice-governor and some other functionaries, a medical man or two, a field-officer, and a subaltern, with a secretary and a number of clerks. The district boards are similarly constituted under the chairmanship of the marshal of the district. An aide-de-camp of the Emperor is always sent to see that the business is properly conducted, and that the different boards discharge their duty. He fixes his head-quarters in the government town, making occasionally excursions into the districts, and in many respects exercising the same species of superintendence as that of an assistant poor law commissioner over the proceedings of the boards of guardians within his district. It is also the duty of the Imperial aide-de-camp, when the business of the conscription is closed, and the full complement of men has been enlisted, to inspect the whole body of recruits, to make a general report of the proceedings to the Emperor, and to select the finest looking men for service in the Guards. To be made a soldier in Russia, implies being placed at the absolute disposal of the Emperor, to be employed either by sea or by land. All the sailors on board the men-of-war are soldiers, and are equipped and exercised as such. The apparent absurdity which has often been noticed, of Russian naval captains, wearing spurs as a part of their uniform, arises from their being called upon, when on shore, to do duty as field-officers. The minimum standard of height for the lines is five feet three inches, and for the Guards five feet six: the conscript, when enlisted, must be between the ages of twenty and thirty-five, and he is not entitled to his discharge until he has served for twenty-five years. The wife of a soldier is free, and his children are the property of the crown, which educates the boys as soldiers, and places them in the ranks when old enough to serve.

The dread which the Russian peasant has of the conscription is not surprising, when the severity of military service and of military discipline in the country is borne in mind, and when we remember how completely every tie of family or affection is severed, every previous hope and prospect destroyed for the victims of this iron system. In fact, to make him a soldier is the most alarming and effectual threat which a Russian can hold out to the most vicious and refractory of his peasants, and the infliction of this dreadful punishment is reserved for the worst and the most incorrigible characters. On the estates which belong to the crown, and which form nearly one-half of the landed property of the empire, the lot of furnishing a conscript falls upon each family in turn, according to the number of males of which it consists, and the selection is made by the community of peasants themselves. The same rule holds with regard to the traders, but their numbers are so small in proportion to the peasants, that the ranks of the army may be considered as almost entirely filled by the latter class.

When the families who are to furnish recruits have been fixed upon by the community, their names are sent in to the board which we have mentioned, and it is the duty of the board, and the most troublesome part of its business, to ascertain that the choice is just and proper, by referring to the registers in which the name and ages of all the male peasants on the estate are inserted, and also examining the parties themselves, and hearing all that they have to urge on their own behalf.

It not uncommonly happens that in a numerous family the sons are all too young, and that the father alone is capable of serving, while upon him the family depends for their maintenance; and when this occurs the case is truly pitiable, while, if the selection is just, the board have often no power to remedy the evil, or to refuse the conscript. When there are two or more brothers of the proper age and height, they either draw lots, or the father names which he pleases as the recruit. Although no one can be compelled to serve until the age of twenty, young men, who are not less than seventeen, and who are of the proper size, may be received, by their own consent, in the room of others. Substitutes are occasionally purchased, and in this case a legal contract is drawn up beforehand, after entering into which the substitute cannot flinch from his bargain; but before he is received as a soldier, the money, or whatever part of it remains due, must be paid to him in presence of the board; if he wishes a part to be given to any of his family, the person whom he names is immediately called in to receive it; and, finally, a statement of the whole transaction is entered on the minutes. To purchase a substitute costs sometimes not less than a hundred pounds; but the peasant on the crown estates are occasionally possessed of considerable wealth, and can afford to pay thus highly to be exempted from their turn of service.

The peasants belonging to the estates of private individuals afford, comparatively, little trouble to the board, since it has only to ascertain that the recruit is of the proper age and height, and physically qualified for service; it being the privilege of the proprietors to select any of their serfs whom they please as conscripts, and they naturally endeavour to pick out the worst characters and the most useless men for this purpose. If they have no one whom they wish to get rid of for misconduct, they generally make those families draw lots in which there are three or four grown-up sons, and which, therefore, can best spare one.

For every recruit who is received, and who afterwards proves to have been at the time of his enlistment unfit for service, owing to any physical defect, each member of the board is liable to a penalty of five hundred roubles, about twenty pounds.

Bribery often prevails to a great extent in the business

of the recruitment; masters paying to have bad characters, who are unfit for soldiers, received; and conscripts who are fit, paying to be rejected. Clerks are sometimes detected in receiving from fifty to a hundred roubles from poor fellows for promised protection, which they have no power to give; and these gentlemen, if delivered over to justice, are punished by being made soldiers themselves. The doctor, too, in examining the conscripts, not unfrequently, when he looks at their teeth, finds, not a silver spoon, but a gold piece in their mouths; this he, of course, is intended to take, and in return to pronounce the man unfit for service.

But the system of bribery is not always confined to these petty offences, the roubles are sometimes paid in thousands, and the receivers are neither the clerks nor the surgeons to the board. It is said, that the President, if he manages matters well, may clear, during the two months of the sitting, upwards of two thousand pounds; and when this is the case, of course clerks receive their mites with impunity, and gold pieces are quietly transferred from the mouths of the conscripts to the pockets of the doctor, instead of being publicly laid on the table of the board, as happens almost daily under the vigilant eye of a president known to be incorruptible himself, and not inclined to overlook the delinquencies and peculations of others.

The members, with the doctors and the secretary, are all in uniform, and wear swords; the civil uniform differing little from the military, except in the absence of epaulettes. A standard measure, which can only be lowered to five feet three inches, is placed in the room, flanked on either side by a tall corporal.

The ante-room is crowded with peasants, and there are a certain number of soldiers and gens d'armes in attendance to keep order. When a man is received as a soldier, a patch is immediately shaved on his forehead to mark him; if he is rejected, a patch is shaved at the back of his neck to show that he has been examined, and to prevent his being brought forward a second time. At the conclusion of each day's sitting, the recruits, who have been enlisted, are marched in a body to a church, where they take the oaths of allegiance and fidelity before a priest.

To return to the proceedings of the board,—we will suppose the business to begin with the examination of the conscripts furnished from the estate of a private individual. At the president's order, one of the corporals in attendance opens the door into the ante-room, and calls out for the peasants of Ivan Petrovitch Pashkoff to be in readiness; the president then reads out A. B., the first name on the list of conscripts sent by Mr. Pashkoff. "A. B. come in," shouts the corporal, and in walks A. B., stark naked. He is first placed under the standard, the corporal on each side taking care that he holds himself upright, which of course he is not very willing to do.

"Five feet four inches," says the corporal. The president enters the man's height opposite to his name in a book; the conscript is then handed over to the doctor, who pronounces him sound and fit for service. The field officer then examines him, to ascertain that there is no peculiarity in his person, such as his being very much bandy-legged or knock-kneed, or having an extraordinary shaped head, which would interfere with his wearing uniform. He pronounces his approval of the recruit; the president enters everything in his book, and simply calls out "Lop" (forehead); the corporal instantly shoves A. B. out of the room, shouting "Lop."—Lop, Lop, is repeated in the ante-room, and the man is taken straight into another apartment where his forehead is shaved, and he finds himself a soldier. In the meantime C. D. appears before the board. He is either too short, (if a sheet of paper can be passed between the man's head and the measure marking five feet three, he is rejected) or the doctor or inspecting officer find that he is physically unfit to be received. The president calls out "zatillac" (neck), C. D. is shoved out of the room, zatillac, zatillac is repeated in the ante-room the back of the man's neck is shaved, and he is set at liberty. If a man declares himself labouring under any defect, or subject to any complaint unfitting him for a soldier, and the case is such that the truth cannot be ascertained on the spot, he is sent to the hospital for examination, and a report of his case is received the following day. Of course these poor men often counterfeit fits and other infirmities, in order to avoid being enlisted, but if they are discovered, they are liable to severe punishment, and their claim to a discharge after twenty five years' service is sometimes taken away.

When the turn of the crown peasants come, three brothers perhaps enter together, one of whom is to be selected. They are accompanied by their father and mother, and their wives and children, if they have any; decency being laid aside, for the three young men are stark naked. The board, after referring to the register, and hearing all that the men, as well as their father and mother have to urge in their excuse, decide that it is justly the turn of this family to furnish a conscript; the three brothers are therefore measured and examined, and the result we will suppose is, that the eldest is tall and healthy, but he has a wife and three or four children; the second measures but five feet two inches; and the third brother is a fine tall lad of eighteen. Of the three, therefore, the youngest is under age, and the second is under size; they, therefore, are legally exempted from the conscription, and the eldest brother must be taken away from his wife and family and made a soldier, unless the lad of eighteen will voluntarily consent to serve in his stead.

A scene now ensues, which is at the same time both pathetic and ludicrous. The elder brother and his wife, the father and mother, and the little children, all throw themselves on the ground, and prostrate themselves repeatedly at the feet of the young man, beseeching him to have pity on the family of his brother, and to consent to be enlisted in his place. The poor lad looks with a bewildered air from one to another, not exactly knowing what to do, having no fancy to be a soldier, and unable to make up his mind to refuse. However, he is urged on every side, for the members of the board add their exhortations to the entreaties of his family, some bidding him be a good christian and sacrifice himself for his relations, and others encouraging him with the promise of good treatment in the

army. At last, completely overpowered, he musters up courage, crosses himself, and consents to be a soldier.

The conscription frequently gives rise to most pitiable scenes, where married men, or the sons of widows or age parents, are torn away from families of which they were the chief prop and stay. The recruits thus situated often cry and lament bitterly their hard lot when they come before the board to be examined; but the moment the are enlisted and their fate decided, they generally cheer up and recover their spirits, as if they thought it useless to grieve over what could no longer be remedied or avoided. The Russian peasants are extremely attached to one another in their families, and it rarely happens that there is any difficulty in persuading a young man to devote himself for a relation; on the contrary, they often persist in doing so, to save an elder brother, or an uncle, against the advice of all around them. A lad under twenty, whose married brother was nominated as a conscript, insisted upon coming with him, in order, as he said, to see his father. The man was accepted as a recruit, and the father coming out, said to his younger son, who was waiting in the street, "they have taken your brother, Gabriel." Gabriel without answering, rushed into the house, pressed through the crowd in attendance, and hurried, breathless, into the board-room, fearful of being too late to offer himself as a substitute for his married brother; he was, however, in good time, and being a fine young man, was of course readily received in the place of another.

The recruits, after being sworn in, receive a great coat and cap, a pair of boots, and some other necessities; and they are then quartered in barracks, detachments being occasionally draughted off from thence to the neighbouring towns. Their beards are immediately removed, the moustaches alone being left; and in severe weather it is quite pitiable to see the raw chins of these poor fellows, who have just been shaved for the first time in their lives.

### A Riddle.

I am first in the last, in the last I am found  
In the flower you will see me, though not in the ground  
In the lily, the lilac, and lotus I am hid;  
Though not seen in the eye I am known to its lid;  
In the castle I lurk, in the palace I am seen,  
Though banished, alas! from the cot on the green;  
Deep hid in the violet's bosom I dip;  
Indeed I am the very first thing on your lip;  
Though not known to the river, I am found in its flow  
Unseen in the breezes, I'm still in their blow;  
Not felt in the fire, yet I'm part of the coal;  
And am aye the last thing that is found in the bowl;  
When you turn to the right, tho' to me you're bereft,  
I'm the very first thing that you meet on your left;  
I always am heard at the toll of the bell,  
And am lying like truth at the end of a well.  
Is a lady without me, don't deign to accost her,  
You'd find her a sad begging-letter impostor.  
You will certainly own that I'm present at lunch,  
Tho' absent when dinner or breakfast you munch;  
And yet I am never away at your meals;  
You have me alike in soles, salmon, and eels.  
In mutton, beef, chickens, altho' I am missed,  
Yet in veal, and in lamb, and in fowls I exist.  
Hid on your pillow, tho' not on your bed,  
Say, gentles, my name, for my riddle is read.

ATTIC SALT.—A Russian lady being engaged to dine with M. de Talleyrand, at that time Minister for Foreign Affairs, was detained a full hour by some unexpected accident. The famished guests grumbled, and looked at the watches. On the lady's entrance, one of the company observed to his neighbour in Greek, "When a woman, neither young nor handsome, she ought to arrive betimes. The lady, turning around sharply, accosted the satirist: the same language, "When a woman," said she, "in the misfortune to dine with savages, she always arrives too soon."

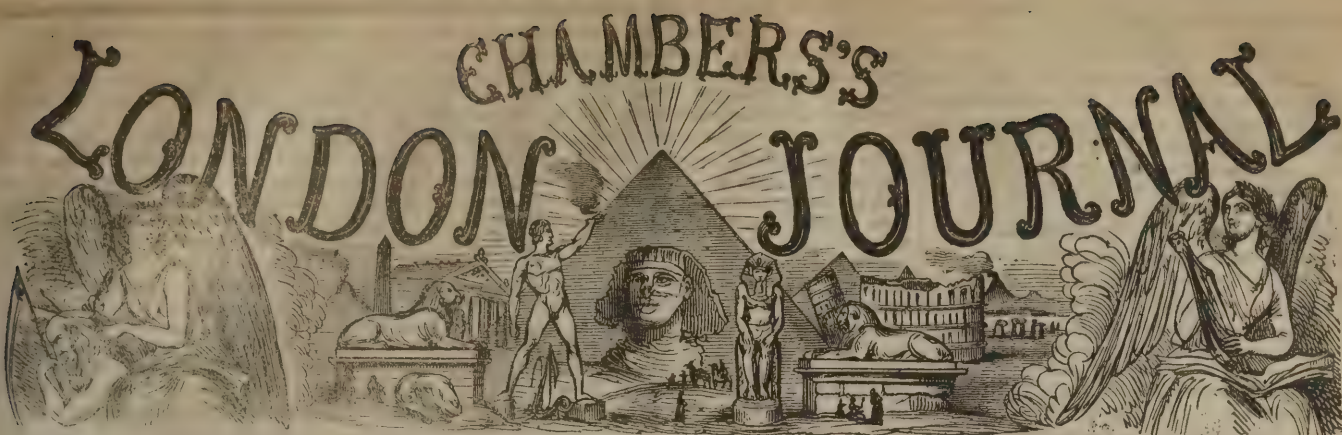

THE FIRST THEATRES IN LONDON.—In the reign of Elizabeth, theatres were just getting into vogue; as regular dramatic pieces had superseded the mysteries or moralities founded on scriptural subjects. The earliest patent for acting comedies, tragedies, &c., is dated 1574; and such was the rapid progress of this rational amusement, that, early in the next century, at least fifteen licensed theatres were open to the inhabitants of London. The best plays, especially those of Shakspeare, were acted chiefly at the Blackfriars theatre, or at the Globe, on the south side of the Thames. A flag was hoisted on the front of each theatre. The price of admission to the best place a shilling; to the inferior ones, a penny or twopenny. The critics sat on the stage, and were furnished with pip and tobacco. The curtain drew not up, but was drawn back on each side. From the railway of Sir Philip Sydney it is doubtful whether there was a change of scenes. It probable this deficiency was supplied by the names of places being written in large characters on the stage stating, for instance, that this was a wood, a garden, Thebes, Rome, or Alexandria, as the case might be. The stage was lighted with branches like those hung in son churches. Before the exhibition began, three flourishes or pieces of music, were played; and music was likewise played between the acts. The instruments chiefly used were trumpets, cornets, and hautboys. Perukes as masques formed part of the stage paraphernalia; and the female parts, for the first hundred years, were performed by young men. One dramatic piece composed the whole entertainments; and the hours of acting began about 6 in the afternoon, and lasted generally about two hours. The audience, before the performance began, amused themselves with reading or playing at cards; others drank or smoked tobacco. For some time plays were acted on Sundays only; after 1579 they were acted on Sundays and other days indiscriminately.

## The Folly of Artesian Wells in London.

THE scientific notices which have appeared in this Journal, and the encouraging spirit in which all artistical attempts have been lauded, will be deemed amply sufficient to rescue us from a charge of deriding any attempts of genius, by which new methods may be discovered to advance the welfare and comfort of the human race. But when an attempt at imitation of a great theory is made under totally different circumstances, and an expectation held out that equally beneficial effects will follow from widely distinct causes, our love of truth, our admiration of science, and our strict regard for fact, compel us to depart, in some degree, from the merely narrative character of our Journal, and to assume a more argumentative tone.

The celebrated Artesian well at Grenoble, which, after years' labour, having produced a vast quantity of water, is offered to some half-informed adventurers the prospect of boring for a like favourable result in London. For the present, we shall content ourselves in giving some geological information respecting Paris and London, by comparing which it will at once be seen that the same results cannot be expected. In a future paper we shall take occasion to describe the different qualities of water which arise from upper and nether springs, and how the action of the atmosphere is required to soften, purify, and render fit for domestic use the clearest water which trickles in drops from its stony bed.

The bed of Paris and its villages form a basin of immense extent. It forms nearly the appearance of a saucer. That, however, would be of small consequence did not the lower strata continue to retain that appearance. Almost uniformly, whether beneath the level or rising ground, the clay and the chalk lie at parallel distances from the surface. When it is remembered that into any hole dug in the earth, water will flow, it will readily be admitted that the deeper the bore the more likely are we to acquire a greater quantity of water. This is supposed to be the true principle of Artesian wells; but such is not the case. The principle of the engineer who sunk the well in Artois, from which all others take their name, was to reject the surface-water entirely, to perforate every successive stratum until he reached the chalk. That arrived at, geology told him that beneath it a certain current of water would be found, purified from the earthy particles by percolation through the body of the chalk. Through this body, therefore, the perforation was continued, water arrived at, and plentiful was it said to be that it welled up in a powerful stream, and flowed off in immense quantities. Let the geological structure of the Parisian bed be remembered; the slopes of the country have their internal slopes of chalk, beneath which, all round the amphitheatre, the waters flow in a self-made hollow in the valley. The chemical power of water on the chalk, and the deposit which it leaves, as well as the mineral properties it retains, form no part of the subject of this paper. We confine ourselves to present quantity.

It will readily be admitted, the whole range of hills growing its percolations into a broad bed, that there the truest supply of water was to be obtained. When it is known also that this chalk stratum lies far beneath the level of the Seine, it will at once be evident that the water of the earth will have a greater tendency to drop through the chalk than to flow over it, than to rise above obstructions, or to seek emission in the river. Hence it is that the Seine, large as it is, contains no great body of new water—hence it is, that the rejected water of Paris conquers the fresh springs, and renders the Seine almost useless as a medium of domestic supply.

This short yet exact detail of the position of Paris and its environs, with respect to water, illustrates at one view how widely different its locality is from that of London. The Thames and its tributaries not only command a vast supply of thoroughly filtered water from the upper springs, but its bed is honeycombed throughout with the wellings of those deeper in the bosom of the earth. This arises in great measure from the absence of chalk, by which

absence the water extends, as well as descends, through the earth, and thus reaches, every way in its course, the tributaries and the wells which supply the Thames. Any artificial sinking of a well, however deep, in the vicinity of London, unless it perforated the chalk, is no Artesian well, but merely a deep hole into which the unfiltered surface water readily flows. We state this broadly and distinctly, in opposition to the assertion of a gentleman, calling himself a practical engineer, who, before a committee of the House of Lords stated that Artesian wells merely meant deep borings. In many, if not the major parts of London, there is no chalk whatever, consequently in these places there can be no Artesian well; any water dragged from such places must be imperfectly filtered, as, until it reaches its natural place of emission, it must not only be strongly impregnated with earthy particles, but tintured greatly with decayed vegetable matter, the more especially if taken from marshy ground. The practical engineer we have already alluded to, and some few others, it would appear, have induced a gentleman in the neighbourhood of London to allow them to drain a marshy valley in his ground from which, on sinking a tube some 120 feet, he drew by pressure from a pump, which threw two gallons at a stroke, and seventy strokes per minute, what he was pleased to call the enormous quantity of 8,400 gallons an hour—from a place too, where, according to his own account, an abundance of water had been running for centuries. In such a place, he says he was astonished that after an hour's pumping the water was as plentiful as ever! It was on such experiments, and on such a limited extent of knowledge, that this engineer gravely desired the Lords' Committee to report in favour of a company to raise a capital of four hundred thousand pounds, by which all London could be supplied with water at a rate equal to that now paid by Marylebone alone!

Although on that Committee there was at least one influential nobleman who has no objection to have his marshy ground drained at the expense of a public company, the idea appeared so preposterous that it was scouted at once. This same gentleman talked most learnedly of the lower springs rising up through the chalk to the upper springs, and of the surface water lying on the top of all. Every one knows that marshy ground retains water on the surface because the hard clay beneath will not allow it to pass downwards with sufficient rapidity; if an excavation is made in the clay, the water will leave the surface, and seek the artificial bed made for it, conveying with it, every day, and on every shower, the rotten vegetation of the marsh. But our engineer says he rejects all this surface water, and his process of showing how he does so is certainly amusing. He puts down an iron pipe, through which he says the marshy water cannot get into the well beneath. He does not appear to be aware, however, that the water which went down to the clay before the pipe was introduced can continue to do so outside the tube, even more easily than before. Let him pass his pipe through the clay, and the same result will follow; and through the chalk also, when he proves he has come to it—rather a difficult matter to do in marshy ground, for where there is chalk the water will go regularly down, and leave the ground comparatively dry—that is to say, the reverse of marshy. It is impossible that there can be any natural reservoir of chalk-filtered water near London, in consequence of its being one large plain, plentifully dotted with deep springs, which flow into the river and streams which feed it. All the marshy ground around the metropolis may be drained with advantage, but we would the water were permitted to run its natural course to the nearest rivulet, instead of being bottled up in an iron pipe and conveyed for immediate use. Let surface geologists and boring engineers say what they please, the earth itself is the best chemist, and will purify water in its heart, and send it forth at its due season to revisit the regions of day in a fit and proper state for use.

In one part of his evidence, our engineer says that in tapping several places, he came one time to a "KIND OF

ROCK." What class of rock this was, however, he did not say, and very likely could not. We believe that the merest tyro in geology is aware that rock seldom forms a bed on which marshy ground reposes. The kind of rock could be no other than the hard knotted clay, plentifully mixed with marl, on which water acting chemically, converts it into a compact substance, through the cracks in which the water gets down without being filtered, as it is through sand or chalk. On exposure to the air, however, the substances separate of their own accord. In answer to a previous question, however, we find our over-sanguine friend saying, "The springs lie eight feet deep," and that the chalk lies "just under those springs." These are scattered over a meadow, a valley about three miles and a half in length, by three quarters broad, and present to his unskilful eye a body of water capable of supplying London, and having sufficient waste to replenish the Colne, should it become dry by draining the marshes! Supplying a city like London we thought a task sufficiently herculean, but to supply a river in addition, from one series of springs, it now appears is quite an easy matter! Imagination is very pretty, "high in air ascending," but the bowels of the earth, like those of man himself, require substantial fact to satisfy them.

Another engineer, examined before the same committee, stated his disapprobation of the Artesian system, and recommended that the waters of the Colne, the drainage of the marshes, and any springs that could be collected, should be gathered into reservoirs, and an Act of Parliament passed, compelling the Water Companies of London to send their pipes there, and receive their supply from the company recommended to be formed. In laying down this plan, the gentleman gravely talked of the monopoly enjoyed by eight Water Companies as being injurious to the public, and which he thought would be beneficially altered by placing alike the public and the companies at the mercy of the new company. When the consulting engineer gave such advice, a noble lord on the committee put the following question:—

"If there was any deficiency in your supply, or anything went wrong in your supply, all London would be dry?"

"Yes, unless provided against by reservoirs."

The practical engineer, however, protests vehemently against the necessity of reservoirs; the springs are there, summer and winter; they were nothing the less when he pumped 8,400 gallons from them, and therefore they will last for ever! This logic is again contradicted by the evidence of the consulting engineer, who, in reply to the question—"The Artesian wells have failed very much in some instances?" says, "I have very little reliance upon them. The parties who came to me wished me to provide for the supply of London by Artesian wells, but I declined it."

And very judiciously resolved it was. Notwithstanding the vast employment which it must have given him, and the high remuneration to which he would have been entitled, this gentleman properly considered that his professional reputation would be injured by countenancing such a scheme. He also admitted that the drainage from land injured spring water, although it was part of his own plan to mix them with a supply from the Colne. The springs in the marshes he also admits to be of different tastes and qualities, and that it would be improper to call all the water sweet because one or two of the springs tapped were so. Nor would he answer for the quantity to be derived from the springs, nor sanction any plan unless the mixture he recommended were adopted.

When two gentlemen pecuniarily interested to so great an extent in this quixotic scheme differ so materially—when they confound drainage, boring, and Artesian sinking in one common denomination—when they rush so hastily to conclusions which their small experiments will not justify—and when they talk so disparagingly of the immense labour (setting capital aside) which has been bestowed by the existing companies to obtain a sufficient supply,—it is

abundantly evident that experience has not yet moderated the ardour of their views, nor lent its sobering influence to the speculations of a heated imagination. But let us suppose for a moment that, instead of a solitary ridge of chalk here and there, London rests on a foundation of that material, it will be a ground work on which to illustrate, in our next, a few particulars which the admirers of Artesian wells seem too much disposed to overlook.

#### An Adventure with the Bedouins.

OUR traveller, in his descent from the tomb of Aaron, endeavoured in vain to escape from the Bedouins, whose attention had been attracted by his inglorious descent from the holy mount. With a loud shout, (continues Mr. Stephens), slipping off their camels and whipping up their dromedaries, they left the track, and dashed across the valley to intercept us. I told Paul that it was all over, and now we must brazen it out; and we had just time to turn around and reconnoitre for a moment, before we were almost trodden under foot by their dromedaries.

With the accounts that we had read and heard of these Bedouins, it was not a pleasant thing to fall into their hands alone; and without the protection of the sheik we had reason to apprehend bad treatment. We were on a rising ground; and as they came bounding towards us, I had time to remark that there was not a gun or pistol among them; but every one, old and young, big and little, carried an enormous sword slung over his back, the hilt coming up towards the left shoulder; and in his hand a large club, with a knot at the end as large as a doubled fist. Though I had no idea of making any resistance, it was a satisfaction to feel that they might have some respect for our fire-arms; as even a Bedouin's logic can teach him, that though a gun or pistol can kill but one, no man in a crowd can tell but that he may be that one. Our armoury, however, was not in the best condition for immediate use. I had fired one of my pistols in the tomb of Aaron, and lost the flint of the other; and Paul had burst the priming cap on one of his barrels, and the other was charged with bird-shot.

It seemed that there was nothing hostile in their intentions; for though they came upon us with a wild and clamorous shout, their dark eyes appeared to sparkle with delight as they shook us by the hand, and their tumultuous greeting, to compare small things with great, reminded me of the wild welcome which the Arabs of Saladin gave to the litter of the Queen of England, when approaching the Diamond of the Desert on the shores of the Dead Sea. Nevertheless, I looked suspiciously upon all their demonstrations of good-will; and though I returned all their greetings, even to the kiss on their black faces, I would rather have been looking at them through the bars of an iron grating. But Paul behaved like a hero, although he was a supreme coward, and admitted it himself. I knew that every thing depended upon him; but they had come upon us in such a hurry, and so few words had passed between us, that I had no idea how he stood affected. His first words reassured me; and, really, if he had passed all his life in taming Bedouins, he could not have conducted himself more gallantly or sensibly. He shook hands with one, took a pipe from the mouth of another, kicked the dromedary of a third, and patted his owner on the back, smoking, laughing, and talking all the time, ringing the changes upon the Sheik El Alouin, Habeeb Effendi, and Abdel Hasis. I knew that he was lying, from his remarkable amplitude of words, and from his constantly mixing up Abdel Hasis (myself) with the Habeeb Effendi, the prime minister of the Pacha; but he was going on so smoothly that I had not the heart to stop him; and, besides, I thought he was playing for himself as well as for me, and I had no right to put him in danger by interfering. At length, all talking together, and Paul's voice rising above the rest, in force as well as frequency, we returned to the track, and proceeded forward in a body to find the sheik.

Not to be too heavy on Paul for the little wanderings of his tongue, I will barely mention such as he remembered himself. Beginning with a solemn assurance that we had not been in Wady Moussa or Petra (for this was his cardinal point), he affirmed that I was a Turk making a pilgrimage to the tomb of Aaron under a vow; and that when Sheik El Alouin was at Cairo, the Habeeb Effendi had taken me to the sheik's tent, and had told him to conduct me to Djebel Haroun, or Mount Hor, and from thence to Hebron (Khalil), and that, if I arrived in safety, he, the Habeeb Effendi, would pay him well for it. We went on very well for a little while; but, by-and-bye, the Bedouins began talking earnestly among themselves, and a fine wicked-looking boy leaning down from the hump of his bare-backed dromedary, with sparkling eyes thrust out his hand and whispered bucksheesh; an old dried-up man echoed it in a hoarse voice directly in my ears; and one after another joined in, till the whole party, with their deep-toned gutturals, were croaking the odious and ominous demand that grated harshly on my nerves. Their black eyes were turned upon me with a keen and eager brightness; the harsh cry was growing louder every moment; and I had already congratulated myself upon having very little about my person, and Paul was looking over his shoulders, and flourishing the Habeeb Effendi and the Sheik El Alouin with as loud a voice as ever, but

evidently with a fainting heart; bucksheesh, bucksheesh, bucksheesh! was drowning every other noise, when a sudden turn in the road brought us upon the sheik and his attendants. The whole party were in confusion; some were descending the bare sides of the mountains, others were coming down with their dromedaries upon a full run; the sheik's brother, on my horse, was galloping along the base; and the sheik himself, with his long red dress streaming in the wind, and his spear poised in the air, was dashing full speed across the plain. All seemed to catch a glimpse of us at the same moment; and at the same moment all stopped. The sheik stood for a little space, as if astonished and confounded at seeing us attended by such an escort; and then spurring again his fiery horse, moved a few paces towards us, and dismounting, struck his spear in the sand, and waited to receive us. The men came in from all quarters; and, almost at the same moment, all had gathered around the spear. The sheik seemed more alarmed than any of us, and Paul said he turned perfectly green. He had heard the report of the pistol, which had given him much uneasiness; the men had answered it, and scattered themselves abroad in search of us; and now seeing us come up in the midst of such a horde of Bedouins, he supposed that we had opened an account which could only be settled with blood.

The spirit of lying seemed to have taken possession of us. Thinking it would not be particularly acceptable to my pious friends to hear that I had been shooting in the tomb of Aaron, I told Paul to say that we had shot at a partridge. Even before saluting the strangers, with a hurrying voice and quivering lip, the sheik asked the cause of our firing; and when Paul told him, according to my instructions, that the cause was merely a simple bird, he was evidently relieved, although, unable to master his emotion, he muttered, "Cursed be the partridge, and cursed the gun, and cursed the hand that fired it." He then saluted our new companions, and all sat down around his long spear, to smoke and drink coffee. I withdrew a little apart from them, and threw myself on the ground, and then began to suffer severely from a pain which, in my constant excitement since the cause of it occurred, I had not felt. The pistol which I fired in the tomb had been charged by Paul with two balls, and powder enough for a musket; and, in the firing, it recoiled with such force as to lay open the back of my hand to the bone. While I was binding it up as well as I could, the sheik was taking care that I should not suffer from my withdrawal. I have mentioned Paul's lying humour, and my own tendency that way; but the sheik cast all our doings in the shade; and particularly, as if it had been concerted beforehand, he averred most solemnly, and with the most determined look of truth imaginable, that we had not been in Wady Moussa; that I was a Turk on a pilgrimage to Mount Hor; that when he was in Cairo waiting for the caravan of pilgrims, the Pacha sent the Habeeb Effendi to conduct him to the citadel, whither he went and found me sitting on the divan by the side of the Pacha; that the Pacha took me by the hand, told him that I was his (the Pacha's) particular friend, and that he, Sheik El Alouin, must conduct me first to Mount Hor, and then to Khalil or Hebron, and that he had given his head to Mahommed Ali for my safety. Paul was constantly moving between me and the group around the spear, and advising me of the progress of affairs; and when I heard who I was, and of my intimacy with the Pacha, thinking that it was not exactly the thing for the particular friend of the Viceroy of Egypt to be sprawling on the sand, I got up, and, for the credit of my friend, put myself rather more upon my dignity. We remained here half an hour, when, seeing that matters became no worse, I took it for granted that they were better; and, after moving about a little, I began to arrange the saddle of my horse; and, by-and-bye, as a sort of declaration of independence, I told them that I would ride on slowly, and they could follow at their convenience. The sheik remained to settle with my new friends. They were a caravan belonging to the El Alouin tribe, from the tents at the mouth of the entrance to Petra, now on their way to Gaza; and the sheik got rid of them by paying them something, and assuring them that we had not been in Petra.

Early in the afternoon a favourite camel was taken sick, stumbled, and fell; and we turned aside among the mountains, where we were completely hidden from the view of any passing Bedouins. The camel belonged to a former female slave of the sheik, whom he had manumitted and married to "his black," and to whom he had given a tent and this camel as a dowry. He had been very anxious to get away as far as possible from Wady Moussa that night; but, as soon as the accident had happened, with the expression always uppermost in the mouth of the followers of the Prophet, "God wills it," he began to doctor the animal. It was strange to be brought into such immediate contact with the disciples of fatalism. If we did not reach the point we were aiming at, God willed it; if it rained, God willed it; and I suppose that if they had happened to lay their black hands upon my throat, and strip me of everything I possessed, they would have piously raised their eyes to heaven, and cried, "God willed it." I remember Mr. Wolff, the converted Jew missionary, told me an anecdote illustrating most strikingly the operation of this fatalist creed. He was in Aleppo during an earthquake, and saw two Turks smoking their pipes at the

base of a house then tottering and ready to fall, cried out to them and warned them of their peril; they turned their eyes to the impending danger, crying, "Allah el Allah, God is merciful," were buried under the ruins.

It was not more than four o'clock when we pitched our tent. The Arabs all came under the shade to more at ease about our ascent of Mount Hor, and adventure with the Bedouins of Wady Moussa; wishing to show them that we Christians have an interest in Aaron, I read to them, and Paul explained the verses in the Bible recording his death and burial on the mountain. They were astonished and comforted at finding anything about him in a book; record of travel being entirely unknown to them, and he, therefore, regarded as of unquestionable veracity. An unbeliever of the previous night, however, was now obstinate as if he had come from the banks of Zuyder Zee. He still contended that the great priest of the Jews was a true follower of the Prophecy, and I at last accommodated the matter by allowing he was not a Christian.

That evening Paul and the sheik had a long curious conversation. After supper, and over their coffee, the sheik asked him, as a brother, why he came to that old city, Wady Moussa, so long a journey through the desert, spending so much money? and Paul told him it was to see the ruins, he took them from his mouth, and said, "That will do very well before the world; but, between ourselves, there is something else;" and when Paul persisted in it, he said to him, "Swear by your God that you do not come here to search for treasure;" and when Paul had sworn by his God, the sheik rose, and pointing to his brother as the very acme of honesty and truth, said after a moment's hesitation, "Osman, I would not believe that brother had sworn it. No," he continued, "Europeans are too cunning to spend their money looking at old stones. I know there is treasure in Wady Moussa; I have dug for it, and I mean to dig for it again;" and then again he asked Paul where he had discovered any, and where; telling him that he would aid in removing it, without letting any of the tribe know anything of the matter.

#### Burns Illustrated and Explained.

##### CHAPTER VIII.—THE COTTER'S SATURDAY NIGHT CONTINUED.

OUR humble cottagers, happy as they were with other, must either imitate the great, or supply the deficiencies of a keen appetite, by a general entertainment. The description of the viands is in the poet's style:—

But now the supper crowns their simple board,  
The halesome parritch, chief of Scotia's food  
The soupe their only hawkie does afford,  
That 'yont the hallan snugly chows her cood:  
The dame brings forth, in complimentary mood,  
To grace the lad, her weel-hain'd kebuck, fell,  
An' aft' he's prest, an' aft' he's ca'st it guid;  
The frugal wife, garrulous, will tell  
How 'twas a towmond auld sin' lint was i' the bell.

Let not the animal pride of luxury despise the cottage group, because the wholesome porridge crowns their simple board. Stalwart men and lovely women have been nourished by the frugal diet, and Burns himself had known a time when even that inexpensive diet was almost beyond his reach. Their table, though poor, is surrounded by happy hearts, and contentment smiles in radiant lustre from the healthful faces of the all. Sweet is the bread of industry; and remember Burns could say—

What though or hamely fare we dine,  
Wear hoden gray and a' that;  
Give fools their silks, and knaves their wine,  
A man's a man for a' that.

And esteeming himself a man according to the charter of his creation, dependent on himself alone, or on the destiny which had planted him on the cold and winter-shaded side of a bleak hill, he says—

While ye are pleased to keep me hale,  
I'll sit down o'er my scanty meal;  
Be't water brose or muslin kail,  
Wi' cheerful face.  
As lang's the Muses dinna fail,  
To say the grace.

And the Muses dwelt with him in his poverty, forgetful of those whose brains ascend no higher than their palms and whose souls are concentrated in their stomach—of the who never uttered a generous sentiment, nor enriched the stock of human thought by a single idea, their existence being consumed, not in adding to the value of the world, but in estimating the expense at which the profit of earth has been to sustain them. Or if a flash of roman ever wandered across their mazy intellect, it was in the sad regret that they could not enjoy the more than Aldermanic privilege of eating their dinner over again as practised by Hawkie the cottar's cow, which "yont the hallan snugly chowed her cud." From this sorry sample of mankind may Poverty—dread mistress of the many—keep us free, and render us more earnest in that which shall proceed from our lips, than in that which may pass therein.

There are indeed few items of pride in a cottager's household, but the well preserved home-made cheese

the kebbuck, is generally one, and months will often elapse between the periods of its appearance on the table, to cheat the wondering eyes of the docile children. The age of the cheese is of great importance to the dignity of its proprietor; and as an extraordinary event has occurred this evening, Jenny having appeared in a new character, and her lover being present, a due sense of the compliment must be impressed on him. It was a "tome-mond auld sin' lint was i' the bell." It was a twelve-month old when flax was in the bloom—that was in May or June, and this is now November, and the cheese, in a high state of preservation both as to flavour and quantity, is therefore a year and a half old. But the young man, though rather awkward at a compliment, and thinking more of Jenny than of her mother's cheese, contrives to make his awkwardness interesting, for few can discover more readily than a mother—whether a Dowager Duchess, or a ploughman's wife—the exact reason of this bashful conduct under the peculiar circumstances.

The cheerful supper done, w' serious face,  
They, round the ingle, form a circle wide;  
The sire turns o'er, with patriarchal grace,  
The big ha'-bible, once his father's pride;  
His bonnet reverently is laid aside,  
His lyart haffets wearing thin an' bare;  
Those strains that once did sweet in Zion glide  
He wales a portion with judicious care;  
And "Let us worship God!" he says with solemn air.

The humble supper is finished, and they form a circle round the family fire, Jenny, of course, having accidentally placed her chair next to that of her lover, and he has equally unconsciously laid his arm over the back of her seat, the tips of his fingers wandering from Jenny's shoulders to her neck, and from her neck to the chair, as a momentary flush of recollection passes from between his half-dimmed eyes and the undefined objects around him.

It is at this particular moment of the story that the well-known picture of the Cotter's Saturday Night is taken. The old man, intended by description in the original, in the engraving represents William Burns, the father of the poet, Burns himself personating the lover, and by a peculiar incident the little runaway, assiduously employed with his mother's shears in reducing the fair proportions of the cat's tail, was a random but correct likeness of Burns's second son, "a wee ill-deedie laddie," as his father called him, lately a brave and victorious officer in the East India army, but now an inspector of factories in Scotland. The big bible, sacred to the hall—for parlours were not then in existence in cottages—was ever an heir-loom in a country family, and contained within its leaves a register of the births, marriages, and deaths, occurring under the roof-tree. Doubtless, when the old man laid it on the table, Jenny might be tempted to imagine the time when she would follow with her eye the tracings of her father's withered hand as it registered in that familiar family chronicle an event which would take her from beneath that quiet and happy roof to place her in a cottage of her own. Deem her not too selfish if she did, for few in like circumstances would be guiltless of the same wandering to a day that was yet to come.

His bonnet reverently is laid aside,  
His lyart haffets wearing thin and bare.

Lyart is a word of more expression than can be compressed into one of English. The autumn's leaf, when it falls dead from the tree, with that cold dry rustle which speaks of decay and death, is called the lyart leaf. It is not the seared and yellow leaf of Shakspeare; the lyart leaf is streaked with brown or deep dark grey; the yellow has become dim, and the green has sickled into that nameless disagreeable colour which betokens dissolution, and amouldering away into that nothingness from which it budded in the spring. His haffets—his temples—are lyart—they are wearing thin and bare. The wan texture of the skin, laid bare by the departure of his once raven locks, which his wife, in the pride of her heart, used to shade across his temples, is now streaked by the cold blue veins that rise in rebellion against the stiffening and contracting skin—the flush of health no longer glazes the roots of his dull grey hairs—the autumn of his life has come, and the sighing blast passes coldly across his naked temples, telling him that the leaf has already fallen, and that the trunk itself is withering beneath the creeping but unretiring—the silent but unconquerable progress of age, against which the tide of youth returns no more. It is November with him, as it is with the seasons.\* In the beautiful and

\* Burns himself, in his sweet little song of the "Auld Man," has given a simple yet graceful portrait of poor and decrepit age:—

But lately seen in gladsome green,  
The woods rejoiced the day;  
Though gentle showers the laughing flowers  
In double pride were gay.  
But now our joys are fled,  
On winter blasts awa'  
Yet maiden May, in rich array,  
Ag ain shall bring them a'.

But my white pow, nae kindly thowe,  
Shall melt the snaws of age;  
My trunk of eild, but buss or bield,  
Sinks in time's wintry rage.  
O age has weary days  
And nights of sleeping pain;  
Thou golden time of youthful prime  
Why comest thou not again?

affecting ballad of the "Flowers of the Forest," written on the disastrous defeat of Flodden, where the flower of the nobles of Scotland fell around their slaughtered king, the women are made to lament the absence of their lovers—there is not a young man in the harvest field—they have withered away.

The bandsters are runkled, lyart, and grey.

And so is our aged cottager, but the sorrow that sighed for Flodden's fatal field

Where shiver'd was fair Scotland's spear,  
And broken was her shield

grieves not him. His days of youth, and worldly hope and regret are past, and he builds his prospects on the surety of the Eternal.

Those strains that once did sweet in Zion glide;  
He wales—[he selects]—a portion with judicious care,  
And let us worship God, he says with solemn air.

And solemn to the end of time be the repetition of those hallowed words. Not that we will presume to enter with him into the sanctuary of his soul's worship, and the spirit's holy flight; these are matters above our sphere, stretching far beyond the aim and attempt to speak of the mere created beauties of Nature; but let us ever consider that in the sainted echo of these words we discover the origin of this sublime and perfect poem; a cause sufficient for us to hear in humble quiet, and pause ere we too rashly cross the threshold of other men's motives and belief.

They chant their artless notes in simple guise;  
They tune their hearts, by far the noblest aim:  
Perhaps Dundee's wild-warbling measures rise,  
Or plaintive Martyrs, worthy of the name;  
Or noble Elgin beats the heaven-ward flame,  
The sweetest far of Scotia's holy lays:  
Compared with these, Italian trills are tame;  
The tickled ear nae heart-felt raptures raise;  
Nae unison hae they with our Creator's praise.

These are the names of three of the tunes of Scottish psalmody; each beautiful, but widely different—the simple melody of "Dundee" is well contrasted with the majestic flowing of "Elgin;" but a more than passing word must be bestowed on the sad and almost harrowing agony which steal across the vocal energy when plaintive "Martyrs" arises in its broad volume from the commingled voices of a congregation. It is commemorative of the Covenanters, when the simple worship of the Scottish church was celebrated among the heather hills and willowy glens of a rude and sterile country. The mandate of power had gone forth, that Episcopacy must be the religion of the land, and torture, exile, or death was the daring punishment which presumptuous men awarded to a disobedience to this tyrannic law. But the hardy indwellers of that rocky soil, when their pastors were driven from their churches, met upon the mountain's brow, with sentinels on each surrounding hill, to give warning against the approach of the ruffian horse of that fearless soldier, but bold bad man, chronicled in Scottish history as the bloody Claverhouse, the instrument of a fanatic king. Many were the conflicts which his troopers encountered with a determined peasantry; their father's broad swords had been taken from their rusty sheaths, and the darkened weapon of death was laid upon the book of life, in a solemn vow and covenant to maintain the independence of their conscience, and their unrepeatable privilege of worshipping the Creator in a manner which appeared to them the best. Often have the dragoons of Claverhouse cut down a preacher who scorned to fly while engaged in prayer, and often has smoke and flame betrayed the arguments by which these agents of Prelacy sought to inculcate their doctrines on the Scottish people. In commemoration of those that fell in these struggles was this pious anthem written; and when ruin and desolation had done their worst, when the tide of vengeance had rolled back the emissaries of havoc, and triumph's broad and ample banner waved over the heroes of the Covenant, the inhabitants of each district entered not into their ruined church, nor piled a stone to rebuild its shattered walls, until they went to the spot of conflict and death, and wept for the departed—swelling the tuneful harmonies of Martyrs holy song, and uttering to Him who is mighty to save the bursting gratitude of a delivered people.

The poem then goes on to describe the religious worship of the family.

The priest-like father reads the sacred page,  
How Abram was the friend of God on high;  
Or Moses bade eternal warfare wage  
With Amalek's ungracious progeny;  
Or how the royal bard did groaning lie  
Beneath the stroke of Heaven's avenging ire;  
Or Job's pathetic plaint, and wailing cry;  
Or rapt Isaiah's wild, seraphic fire;  
Or other holy seers that tuned the sacred lyre.

Perhaps the Christian volume is the theme,  
How guiltless blood for guilty man was shed;  
How he, who bore in Heaven the second name,  
Had not on earth whereon to lay his head:  
How his first followers and servants sped,  
The precepts sage they wrote to many a land:  
How he, who lone in Patmos banished,  
Saw in the sun a mighty angel stand; [command.  
And heard great Bab'lon's doom pronounced by Heaven's

Then kneeling down, to Heaven's eternal king,  
The saint, the father, and the husband prays:  
Hope springs exulting on triumphant wing,  
That thus they all shall meet in future days:

There ever bask in uncreated rays.

No more to sigh, or shed the bitter tear,  
Together hymning their Creator's praise,  
In such society yet still more dear;  
While circling time moves round in an eternal sphere.

Compared with this, how poor Religion's pride,  
In all the pomp of method and of art,  
When men display to congregations wide  
Devotion's ev'ry grace, except the heart!  
The Power incensed, the pageant will desert,  
The pompous strain, the sacerdotal stole;  
But, haply, in some cottage far apart,  
May hear, well pleased, the language of the soul;  
And in his book of life the inmates poor enrol.

These are sublime and serious truths, which the lonely heart will cherish, and to its quiet and inobtrusive devotion we may well leave the profound subjects they unfold.

Then homeward all take off their sev'ral way;  
The youngling cottagers retire to rest:  
The parent-pair their secret homage pay,  
And proffer up to Heaven the warm request,  
That He, who stills the raven's clam'rous nest,  
And decks the lily fair in flow'ry pride,  
Would, in the way his wisdom sees the best,  
For them and for their little ones provide;  
But, chiefly, in their hearts with grace divine preside.

An exquisite finish to the Saturday evening scene. Jenny and her lover have by this time retired across the moor, and it needs no historian to register the important truth, that she held up her little lips with less of female pride and more of womanly affection, when her attentive suitor bade her a kind good night, in the recollection of what had passed in her father's house before her lover's eye.

### Forest Anthem.

THE Sun hath westward glided o'er the tops  
Of the dark mountain pines; his golden tints  
Are slowly blending with the hue of night,  
And broadly are the shadows of the trees  
Grotesquely length'ning upon the ground.  
The winding forest path seems, in the sun's  
Last rays, like to some vast cathedral aisle,  
Stretching away in airy shadowiness.  
The locked and gnarled boughs, that high o'erhead  
Fling wildly their broad Titan arms across,  
Do form the fretted roof, its pillars being  
The massive trunks of the strong Oak and Pine.  
The stars are leaping into glowing beauty  
Within the filmy haze above, and seem  
Like spangles in some great cerulean banner:  
And calmly sailing is the beauteous moon  
Among yon burning orbs, all joining in  
The deep and silent melody of nature;  
Upon the ocean dance those glowing lights  
And lighting up, full many a fathom deep,  
The fairy palaces and coral groves  
That far beneath its heaving bosom lie.

Hark! now begins the thrilling Forest Anthem  
Wonderously sweet, the melancholy winds  
Sob out their greeting to the night, and pass  
In rich and ringing music o'er the trees.  
Sweet are its murmurs dying in far distance,  
With sighs as gentle as the southern breeze  
Sweeps o'er a bed of flowers, and the Pines  
Bend down their crested tops, like nodding plumes  
On the dark heaves of death, as tho' they mourned  
The cold unshrouded graves of those whose bones  
Are mouldering within its solitudes.  
It fills the heart with solemn thoughts and sad!  
Rises the melody again, triumphant  
And heart-gladdening, and makes the soul of man  
To leap and to rejoice, and filling him  
With wild and joyous rapture, as he turns  
His high and bared brow up to the blast,  
And waves his arms to the unseen winds, and cries  
"Blow on! this is a land of liberty!"

Oh soothing are its tones, rich as the breath  
Of zephyrs playing amid golden harps;—  
The storm's wild music is most beautiful  
As with its gentle breath it waves the flowers,  
And then sweeps on, and on, still gath'ring strength,  
Until at last, the Forest is one roar  
Of melody.—And on it rolleth o'er  
The mountain tops, with sound like to the boom  
Of thunder, crashing in the hyaline.

First with a low  
Sweet whisper, the breeze doth onward go  
Touching the silver lined leaves, and tinted edges  
Of the trees, and playing in the waving sedges  
Of the grass below.

The many fingered wind  
Plays in the low thick branches, with a kind  
Of prelude, in a deep and sombre monotone,  
Then mounting upward to the tree tops with a moan  
Sighs the wind.

Solemn the sound  
Comes rolling in deep tones along the ground,  
Like the hoarse murmur of the sullen surge  
Dashing upon the shore, or the sad dirge  
Sung o'er the mound.

And now 'tis sighing  
Like those deep tones that pain wrings from the dying;  
Now sharply rings, like to the sullen knell  
That rises from the boding deep death bell  
As past 'tis dying.

E. F. R.

## British Fossils.

THE researches of our geologists have placed it beyond a doubt, that there was a period when the place now occupied by Great Britain was a deep sea, encased by other land, on which grew, in a climate as warm as the West Indies, tree-ferns and palms, which, in the natural course of decay, were carried into the adjoining sea, and having accumulated there for ages, have now become converted into our strata of coal. The bed of the sea must have been then broken up, and heaved above the surface of the waters, when a new state of things prevailed in the vegetable and animal creation, the sea swarming with enormous saurian reptiles. The land must afterwards have been subjected to repeated submersions and elevations before Great Britain rose from out the deep in its present form, to become, after a necessarily long preparatory interval, a dwelling-place for tigers, hyenas, bears, hippopotamii, and elephants. How many ages those wild beasts, of species different from those that now exist, were the sole inhabitants of our island, it is impossible for us to form any conjecture. It appears to be certain that not a fragment of a fossil human bone has ever been found.

Our island abounds with fossil remains of animals and vegetables, some of enormous size, but it is not till recently that their nature and origin have been correctly understood. At an early period they attracted attention when dug up; but they were for ages mistaken for the remains of existing species that were supposed to have been buried by ordinary casualties. The great size of some of them led to the notion of the former existence of giants. Till the time of John Hunter, anatomists had so imperfect a notion of comparative osteology, that it is not surprising that such ignorant ideas should have been entertained of the species to which fossil relics belonged. Even the few who recognised, or thought they recognised, the remains of elephants, &c. among the fossil treasures of our island, could only explain their occurrence by supposing that those animals had been imported from abroad, had died here, and were decently buried. In the time of James the First, Lord Cherbury was commissioned to make inquiry respecting some bones found near Gloucester. Bishop Hakewell, speaking of this affair in his *Apologie of the Power of God*, (London, 1635), says, "His lordship showed me the bones he had collected, which were a huckle-bone, part of the shoulder-blade, some parts of a tooth, and the bridge of the nose, all of a huge bigness: but his lordship's opinion was, that they were not the bones of a man, but of an elephant, because Claudius, who brought elephants into Britain, did build that city, for which he voucheth *Ponticus Verunticus de Rebus Britannicis*, who saith that the Romans had a colony thereabouts. His lordship told me, that these bones were found mingled with those of oxen, sheep, and hogs, and he showed me the tusk of a boar found amongst them. There was a great square stone lying by them, which we conceived might be the upper stone of an altar, and that the bones were the relics of some great sacrifice celebrated there. The bridge of the nose was what confirmed his lordship's and my opinion, that it could not be that of a man, for it did rather seem to be a bone very apt to bear up the long snout of an elephant. His lordship further told me, that Dr. Harvey, a great anatomist, opined that they were the bones of some great beast, as an elephant. Dr. Clayton, his Majesty's Professor of Physic at Oxford, was of the same opinion. One of the teeth of this pretended giant, by the special favour of my Lord of Gloucester, I had the happiness to see, which I found to be of a stony substance, both for hardness and weight: and it should seem by his lordship's letter to me, that he himself was not confident that it was the tooth of a man."

This extract, considered with reference to the period, is highly interesting, and although one cannot help smiling at the conclave of the lords and doctors gravely disputing whether the bones and teeth were those of an elephant or of a human being, we may adduce a full apology for their misgiving about the matter from the highest modern authority. Cuvier in his *Ossemens Fossiles*, (tome i. p. 75.) observes that "certain bones of the elephant have more resemblance with those of man, than have those of the more common animals: and thus some skilful anatomists even have been led to mistake them for human bones."

Bishop Hakewell's notice of fossils is perhaps the first distinct one in the English writers. The progress and popularity of a study is always well shown by the bibliography of it, and we shall, therefore, register in this place, those fossilological works we are acquainted with that were published in England before this study reached a state of maturity. Christopher Merrett's *Pinax Rerum Naturalium Britannicarum*, (octavo, 1667), contains an account of British fossils exclusively; William Somner's *Chartham Neues*, (quarto, with a plate, 1669), describes some strange bones lately dug up at Chartham, Kent; "a few years afterwards Dr. Plott, in one of his topographical publications, attempts to account for the appearance of fishes, shells, plants, and seeds in the centre of rocks, by supposing them to have been formed there by "plastic force;" an unintelligible property of matter, derived from the Epicurean philosophers, who fancied that it enabled the earth to bring forth animals and plants without the aid of a Creator. This foolish fancy was soon disposed of by Cudworth and Ray, whose views were less absurd. Ray insisted that all fossil remains belong to species that formerly existed, but he was unable to account for the presence of fossil fishes in the hearts of solid rocks, except by supposing that such creatures, when very young, insinuated themselves between crevices, and arrived at their final station by subterranean passages. Jacob Petiver's *Musei Petiveriani*, (octavo, 1692-1703), contains an account of a collection of fossils in his museum. Edward Luid, or Llywd, published his octavo work entitled *Lithophylacii Britannici Iconographia* at Oxford, in 1698; but the best edition, containing twenty-five plates, appeared in 1760,

and is now very scarce. This writer supposed such productions to be caused by the sperm of living things, conveyed into the air by vapours, and then deposited in fitting places, when the results, or the matters to be engendered, were determined by the nature and abundance of the sperm itself; if perfect it brought forth whole animals and plants, but if imperfect, it yielded nothing more than the teeth of fishes, single valves of shells, the jaws and bones of animals, leaves, and seeds of plants. From this theory he sagely concluded that the sperm which produced plants was in all cases imperfect, because the fossil plants with which he was acquainted consisted of ferns, mosses, and similar low tribes. These speculations seem to have been favourably regarded till the year 1723, when Scheuchzer, a Swiss botanist, seriously undertook to refute them. In 1728 appeared a curious little book entitled *British Curiosities*, from which we learn that the Royal Society then in Crane-court, Fleet-street, contained "part of the upper jaw, and eight very great double teeth, and the fragments of other bones, all petrified and found near Canterbury, seventeen feet underground; a petrified crab, hard as a pebble, dissolvable with acids; a great double tooth, five inches long and two broad, petrified; a shark's tooth, and that to which this belonged must have been thirty-six feet long; a large cylindrical piece of a petrified tree, fourteen inches in diameter, and about the like depth, brought from Antiochia, in 1695, by Benjamin Middleton, Esq.; the horns of a red deer, seven feet one inch between the tips, found in Ireland, fourteen feet deep in a bog, and given by an Irish Bishop." The writer also tells us that "stones like cockles and oysters are found on the hills near Alderley, about twelve miles south from Gloucester;" that "astrolites or star-stones, such as sparkle, are found at Shugbury, about nine miles north-east of Warwick;" "Whitby, in Yorkshire, is remarkable for stones that are found there, which resemble serpents, in stone cases; and on the shore at Huntley-Nabb, in that county, are found stones of several sizes, round as bullets, naturally, and on breaking which you find serpents, commonly without heads, wreathed up in circles;" "a prodigious skeleton of a man was found at Corbridge, in Northumberland, whose thigh bone was nearly two yards long, so that his whole length must have been about seven yards. Some parts of this skeleton are yet at Dilton, the late Earl of Derwentwaters;" "in the low grounds and champion fields of the island of Anglesea, are every day found and dugged out of the earth the bodies of huge trees with their roots, and fir-trees of a wonderful length and bigness." It was also in 1728 that Woodward published his *Natural History of British and Foreign Fossils*, (2 vols. octavo) and, likewise, his *Method of Fossils*. In the following year he published his *Natural History of English Fossils* (2 vols. octavo), now a scarce work. In 1730, Behren published, in London, his *Natural History of the Hartz Forest* (octavo), containing its fossils; and this is probably the first work that appeared in England treating solely of those of a foreign country. In 1757 appeared Da Costa's *Natural History of Fossils* (quarto, with a plate), but only the first volume was ever published. Gustavus Brander published his *Fossilia Hantoniensia* (quarto) in 1766. Hill's *Fossils arranged according to their obvious characters* (oct. 1771); and G. Edwards's *Elements of Fossiology, or an Arrangement of Fossils into classes, orders, genera, and species* (octavo, 1776), were the next publications upon this subject, which from that time has been placed in a better train for scientific inquiry and accurate elucidation. The works of Hutton, Knorr, Buckland, Lyell, Smith, Cuvier, Agassiz, and some other eminent authorities, have rapidly followed each other, and bear ample testimony to the progress which fossillogical science has made, by dint of great diligence and careful observation.

Fossil remains being very abundant in this country, and easily obtained wherever pits, wells, railway tunnels, or canals are being dug, we are surprised that so few persons, comparatively, interest themselves in forming collections of them. In the hope of stimulating our readers to engage in this study, we have expressly prepared some articles, descriptive of the most interesting collections of fossils with which we are acquainted, and which we shall from time to time take occasion to lay before them.

## The Hall and the Library.

## THE HALL.

*Blackwood's Magazine* for last month has a most excellent story, under the title of "The Announcements and Three Rooms." Almost all the parties are engaged in matrimony and jointure hunting, and neglect a poor niece of the host's. We give the scene in the Hall, as a rough-coloured picture in servant life, and that in the Library as an excellent denouement to a well-told tale. The intermediate scenes in the drawing and dining rooms describe the reception of the various visitors, and the attentions paid them at table. The hero in disguise and the niece are either neglected or insulted throughout, the latter having only been sent for by her uncle to dinner when he was informed by the attorney of her having a prospect of obtaining some portion of her father's property.

A fat man, with a very red face, rushed distractedly into the lobby of Pigston Hall, in Leicestershire; and after succeeding in getting, with difficulty, into a huge livery-coat, which was yet a good deal too small for him—throwing forward first one arm, then the other, then both together—sinking his head and raising his shoulders—and in short going through all the evolutions consequent on a tight fit, he listened attentively for a minute or two, with his ear at the key-hole of the front door, and finally, as if satisfied with the result of his observation, threw himself into an arm-chair, and said, with a sigh, which evidently gave him great relief, "It wasn't nobody after all! Such a set of lazy hounds them house-servants is!" pursued our friend—detering his scarlet cotton. "I remember when I was in Sir Charles's stables, afore I became master's butler, we managed the stable boys very different.

And I thinks I may say, without any wanty, that I neve spoke to a under-helper in my life, without either a sla over the head with a pitchfork, or a good dig in the rib with my fist; but them footmen wont stand it, and that! the reason the brutes is never in time. Thomas!—leave off a-palavering with that ere Marianne, will ye, an come here? I 'spects the company every minute."

But Thomas seemed to prefer palavering with Marianne to cooling his heels in the hall.

"Time enough?" continued the impatient butler, as in answer to some response of the dilatory Thomas. "Time enough? how is a man in the country to know whether its time enough or not? Did you ever hear of any two clocks being in the same story? Why, it's perhaps seven o'clock at Sheepsbury now, and only half after five at Swanfield. You come up here, I tell ye, or somebody sure to play a tune on the knocker afore we're ready to dance to it. Dang it!" he added, in a lower note, "if I had such a feller as that in the stable, wouldn't I stich two-prong into his shoulder—that's all!"

Whether awed by the magisterial voice of his superior, or rejected by the aforesaid Marianne, we cannot say, but Thomas at last made his appearance—his hair thickly powdered, and tremendously curled—his coat white, and yellow—his waistcoat blue velvet—his continuations of the same splendid colour and material—and his stockings flesh-coloured silk: a breathing condensation of all that is hateful and disgusting in human nature—an overfed and over-dressed flunky. "Did you require my assistance particularly, Mr. Tippings?" said Thomas, as he lounged towards the door; for at that moment I was somewhat more deliciously engaged?"

"Making love and?"

"Pardon me, Mr. Tippings; other people, perhaps, make love, and a dismal manufacture I should think it was; but some how or other, it always happens that whenever I begin speaking to a pretty girl, 'tis ready made!"

"Well, well, never mind about that," said Mr. Tippings, evidently regretting the abolition of corporal punishments, which used to be the pride and buckler of the stable service. "Where's David?"

"Here I are, and no mistake—though crickey, I feels as if I wasn't quite myself neither in these here oudacious breeches—I never was out of fustians before."

"Now, then, let's be ready," said Mr. Tippings.—You, Thomas, go and stand near the drawing-room door; you, David, be near me, and take the gentlemen's hats—if they don't take 'em in with them, and the ladies's scarfs, I'll give the name, and Thomas is sure to hear it without your bawling it out too—so do nothing but bow as the company passes. Then as soon as they're all arrived, off I goes and gets into my plain coat—for a real butler is a cut above livery—and you get the dinner on the table as hard as you can. Most of the strangers will bring their own men, so there'll be lots of waiting. Now then, steady—I hears wheels."

But as this declaration of Mr. Tipping's proved to be unfounded, we conclude it was a ruse of that worthy functionary to get quit of Thomas. Thomas proceeded to the other end of the lobby, David ranged himself beside Mr. Tippings, and that gentleman was on the very point of opening his mouth to illuminate David's understanding, when his attention was arrested by a noise at one of the side doors, and his eye rested—infated with anger and surprise—on three or four of the female domestics, who had taken up that position to have a peep of the company as they passed: it was against all Mr. Tippings' notions of propriety and etiquette. "Well, if this ain't a shindy! all the petticoats in the house come up to look at the arrivals, as if it was a trial-run for the Derby! I say, you gals! you must be off every one of ye.—Ha'n't you got your own business to attend to?"

The three other domestics tossed their heads as if disgusted at being reminded that they had any thing to do but to amuse themselves; but this demonstration did not suffice for the injured dignity of Marianne. She tripped across the hall, to the increased dismay of Mr. Tippings, and said, in not the pleasantest tones that a lady's-maid can assume—

"Did you address yourself to me, Mr. Tippings, by that very appreciating appellation?"

"What appellation?" replied Mr. Tippings, anxious to get quit of his visitor.

"Why you called me 'gal!' Now, that's a name as I wont stand from nobody. If you were a gentleman, as a butler ought, you would call us young ladies."

"Well, well—young lady, why ain't you attending your mistresses,—they're not all gone into the drawing-room yet?"

"My two young friends, Miss Vibbler and Miss Arabella—if you means them by that vulgar expression—has been there this twenty minutes. I assisted their hair myself, and gloved and shoed 'em before they went in."

"But Miss Helen?" pursued the butler—

"Oh, her! them poor relations must wait on themselves.—She's no young friend of mine."

"You should be happy to wait on such a beautiful critter, you should," said Mr. Tippings, waxing warm. "By dad!—if I could tie up hair!"

"Why don't you try?" said Marianne, with a sneer. "But a poor curate's orphan daughter should not hold her head so high."

"Her head—poor dear lady!" said the butler; "she never seems to hold up her head at all; and such a head it is to hold up—small ears, large eyes, broad front, long neck. She's regular thorough-bred,—and our master's sister was a lucky woman to marry such a true gentleman as Mr. Welby."

"A curate!" again repeated Miss Marianne, with a toss. "A man in a threadbare coat, making a small perquisite to his wages by keeping popples!"

"He was my old master, Sir Charles's younger brother, and the best judge of a horse in the country; and as to them popples, how he could help it, when it was all he had to do? Sir Charles was ruined; the old hall mortgaged; nobody gave him a living; he couldn't go into service, where he might have been comfortable, and saved a little

for his old age; and so you see, he was forced to take in three or four young gentlemen to fit them for college—and a hard enough work he found it; at least I remember when all the strappers and stable-boys was my popples at Sir Charles's, they led me the life of a dog. But never let me hear you say a word against Miss Helen,—she's the beautifullest angel on earth, and would come in very near the winning post against most of them in heaven. So be off—be off,—the company's coming at last!"

And wheels gritted on the gravel in front of the hall door. Marianne flew across the hall, David drew near to be ready to receive the visitors. Rat-tat-tat, rat-tat-tat, rat-tat-tat, tat-tat-tat! The door flew open, and down the steps of a plain yellow chariot skipped an old gentleman, a little overdressed, with bright green waistcoat, crossed by two or three gold chains—large gold seals dangling from his watch pocket—and an appearance of having paid extraordinary attention to his toilet.

"Mr. Bagsby!" said Mr. Tippings, when the gentleman had fairly entered the hall."

"Mr. Bagsby!" repeated Thomas, throwing open the drawing-room door, and in a short time the ancient dandy was lost to the admiring eye of Tippings, David, and the four maids.

"Now, David," said Mr. Tippings, you wouldn't believe, to see that 'ere little man in his Sunday clothes as he is to-day, that he's nothing but a regular-built attorney; that little fellow sits all day on a three-legged stool, poring over poor devils' title-deeds that he has got into his clutches. There ain't a gentleman within twenty miles that dares to say his land's his own, or his soul either, for old Bagsby's sure to have some mortgage or flaw, or some devilry or another, to get them all in his power. So you see, though every body hates him, and knows him to be a thief, they can't do without him; and I'll be bound that nasty little varmint is more attended to than 'er an honest gentleman in the country. It's a most aggravating circumstance, David."

Rat-tat-tat!

"Mrs. Higgles, Miss Harrabellar Higgles, Miss Juliar Higgles;"—and three ladies, dressed exactly alike, each with a white pocket handkerchief in the right hand, and a vinaigrette in the left, tripped across the hall, and were ushered by Thomas into the drawing-room.

"For my own part, David," said Mr. Tippings, "I ain't partial to mothers and daughters being all of the same age. It destroys all sort of variety in the female sex, and, besides, ain't at all fair to the young ones. That's a rich widdy and her two daughters, that goes a husband-hunting every year to Bath or Cheltenham, and come back to their villa near Melton to practise on the hunt. But it's no go—they cut it too fine; and I bet you, though I did not know the man from Adam, that old Higgles was a banker. They ha'n't the breed, and no clipping and trimming can hide the want of blood."

Rat-tat-tat!

A tall gentleman steept leisurely from a very handsome phaeton, and with as much deliberation as if he were performing the most important act of his life, gave his hat to David, and with a small pocket comb arranged the few locks he still retained, in a circle round his brow and top of his head, to hide the deficiency of the crop in these quarters, and after being joined by his companion, a young man of three or four-and-twenty, gave his name to the attentive Tippings, "Sir Hubsty Pippen."

"And the other gentleman, sir?"

"Oh—Charles—ay—never mind, say Sir Hubsty Pippen and friend."

"Sir Hubsty Pippen and friend," bawled Mr. Tippings, anxious that the announcement should reach Thomas's ears correctly; but in spite of all his bawling, that functionary failed to catch the names, and ushered them into the drawing-room as Sir Snubsy Whipping and Mr. Brend.

"Now, that Sir Hubsty Pippen, David," said the cicerone to his assistant, "is what I calls a real pervericating sort of a ticket. He hasn't a farden of his own, but he knows every body else that has fardens; so it comes to the same thing. He follows a kind of trade they call being an executor, and takes care of all the rich old gentlemen's properties till their sons come a rising twenty-two; and all the time they're colts, mind me, you wouldn't know this same Sir Hubsty for anything but the squire himself. He keeps up all the expenses, and p'raps a little more: stables choke full; subscriptions to the hunt; butchers, bakers, grocers, wine merchants, just the same;—so you see it's a jolly good thing to be an executor, David; for the little boys at school all this while, at may-be fifty pounds a year, and Sir Hubsty's a-spending all the rest to keep up the respectability of the family. I dare say, David, you never knew he wasn't owner himself of Maldon Manor, and thought he pulled down the house, and was just a building it up again, to please his own taste."

"Noa, I can't say I ever did, Mr. Tippings, 'cause I never heard tell of he before—nor Maldon Manor either."

"Never heard of Maldon Manor? the best breeding stable in this country. The young squire has been a-travelling in Rome and Italy, and other foreign continents—as they calls 'em; but he'll be home soon again, I hope, and turn old Sir Hubsty about his business."

A repetition of the rat-tat-tat of the previous visitors interrupted the stream of Mr. Tippings' eloquence, and gave admission to the Rev. Mr. Spinks and Dr. Ladle, who had walked across the fields from the neighbouring town. At last, after a long pause, Mr. Fitzwalters Sniffy, and Mr. Algernon Horatio Montalvan Smith, completed the party.

"Now, then," said Mr. Tippings, as the last echoes of Thomas's announcement died away at the drawing-room door, "tell cook to send up the dinner. I must just walk into my black clothes; and, David, you go and strike the gong the moment you hears me clap my hands at the side-board."

#### THE LIBRARY.

It was now half-past nine. The drawing-room was brilliantly lighted, the party disposed in groups pretty much after the same arrangement as during dinner. Mr. Spinks and the Doctor were doing duty as attentive listeners to the two Miss Higgleses, the two Vibblers being

of course monopolized by Mr. Sniffy and Mr. Smith. The two matrons of the party, Mrs. Vibbler and Mrs. Higgles, sat on one of the sofas, lost in the contemplation of their respective daughters; Mrs. Higgles laying it down in her own mind as an incontrovertible fact, that these two young men, of whom one evidently squinted, and the other was pitifully lame, were the two most vulgar, ignorant, and tasteless individuals in England, to leave her two finely dressed, loud-talking, and fashionable girls to the humdrum attentions of an old physician and a middle-aged divine. Mrs. Vibbler, on the other hand, thought them the two handsomest and most intellectual men in Europe; one with a peculiarly *distingue* mode of walking, particularly with the left foot, and the other with a most captivating glance, especially with his right eye. The three older gentlemen, Mr. Vibbler, Mr. Bagsby, and Sir Hubsty Pippen, occupied a sofa at the further extremity, near the window, and were engaged in a very interesting conversation, each with a cup of coffee in his hand, which had that moment been handed round by Mr. Tippings and Thomas.

"God bless me, Sir Hubsty! who would have thought it? a regular heiress, as things go—twelve thousand pound!" said Mr. Vibbler.

"With interest," added Mr. Bagsby.

"Ay; interest," continued Mr. Vibbler, "since her father's death, three years at three per cent. Why, it's thirteen thousand eight hundred pounds."

"Pardon me," said Sir Hubsty; "with interest since her father's marriage. Henry Welby, the clergyman, was a man that neither knew nor cared about money. When he married, he accepted twelve thousand pounds as his full patrimony under his father's will, and allowed it to lie on the security of the estate, with a prior right to any other creditor. Sir Charles was as thoughtless as his brother; the interest was never paid; the estate became involved, was mortgaged, the clergyman died, then Sir Charles, and if it had not been for Mr. Bagsby, I should never have thought it worth while to assume the executorship left me by the poor baronet; but already I see my way clearly enough, to assure you the sum settled on the parson, if not the whole estate, will in a very few months be in the possession of Helen Welby."

"Why, it will be twenty thousand pounds at least; and we have treated her like!"—Mr. Vibbler did not finish the sentence; but it was evident he felt some compunctions visitings for his neglect of his niece, now that he found she was no longer poor and dependent. Great plans immediately began to suggest themselves to the disinterested uncle. He would send that very night for his son, who had lately eaten his terms, and was now digesting them in a wig and gown up five pairs of stairs in Lincoln's Inn, on an allowance of a hundred and fifty pound a-year. He had hitherto kept him as much as possible from home, for fear of his being entrapped by his penniless and designing cousin; and, moreover, had imbued him so entirely with the family propensity to despise her poverty and dependence that the high-minded young gentleman had followed his sister's example on the few occasions he had seen her, in making her feel her situation as bitterly as he could. But twenty thousand pounds, with a chance of the Welby estates, and a restoration, perhaps, of the baronetcy,—la! he would have him down without one hour's delay.

These cogitations were interrupted by Sir Hubsty.

"Mr. Bagsby tells me, Mr. Vibbler, that you said something to him about a claim for expenses during the time Helen Welby has lived in the house."

"Oh, a mere trifle, Sir Hubsty; she has had every advantage, to be sure, and three hundred a-year would not repay me; but she's a dear, delightful creature, quite one of my own children, and, in fact, the favourite of them all; and I had a plan for repaying myself long before I heard of her good fortune."

"Indeed?" said both the gentlemen.

"Yes, I had indeed. Now that Alfred, my son, Sir Hubsty—a most excellent clever young man—has passed at the bar, it was my fondest hope to see them united; and Alfred is such a disinterested fellow, I have no doubt he will be disappointed when he hears she has become such a desirable match in a pecuniary point of view."

"I believe," said Sir Hubsty, drily, "that I am her guardian, as executor to her uncle, Sir Charles; and, at present, I have other views for her."

"But, my dear Sir Hubsty, let her judge for herself. My son will be here in three days."

"By that time, I think, I must claim Miss Welby myself."

"Yourself! Gracious, Sir Hubsty; the ages! Why, she's only twenty-one!"

"And I am sixty-two."

Mr. Vibbler looked ineffably taken a-back. "So it was all for this," he muttered, "the grand discovery has been made—the old, disgusting, selfish scoundrel!"

"But we had better go and consult the young lady herself," continued Sir Hubsty, as he moved across the room, accompanied by Mr. Bagsby. Mr. Vibbler slipped up to the sofa where his wife was sitting, and whispered to her—"Great things have happened; Helen Welby is worth twenty thousand pounds at least, and Alfred always insulted her. Sir Hubsty is going to marry her himself! Send for Alfred immediately."

Mrs. Vibbler started. "How? where? when? Twenty thousand pounds?" but when she looked round her husband had disappeared.

Mrs. Higgles saw something had happened.

"Dear Mrs. Vibbler, has anything occurred?"

"Yes; such a thing—no, no, nothing; only Mr. Vibbler gave me a sort of shock."

"A shock; nothing serious, I hope?" enquired Mrs. Higgles, burning with curiosity; "nothing about your daughters?"

"Oh, no; I wish it were!" said Mrs. Vibbler. "The lucky, proud, disdainful creature! She'll look down on us all now."

"What is it? for any sake tell me, I'm dying with curiosity."

"Where is she? let me see her," said Mrs. Vibbler, instead of giving a direct answer; and then she added, "let me congratulate Lady Pippen!"

"Lady Pippen; who is she? is she here? do let me see her," cried Mrs. Higgles, following her friend towards the folding door of the library. This motion of the two seniors attracted the attention of all the others, even of the two Miss Vibblers and their swains; and a general move took place towards the scene of what every one felt was an unusual occurrence, though what it could be no one had the least idea.

While these various incidents had been taking place in the drawing room, Helen had seated herself on a sofa in the study—quite unnoticed, as usual—and had been shortly afterwards joined by Mr. Brend, whose motions were equally unworthy of being observed. What their conversation may have been for the first half hour we have no means of judging; but at the moment of our recommencing our report, Helen was evidently replying to some question of her companion.

"Reject your friendship?—your love? for adversity has schooled me so well into self reliance, that I disdain to pretend to be ignorant of your meaning. See my position here—and you can't perceive one half of its wretchedness; recollect the years we have spent together in the home where both were so happy; and believe that it is only a most sacred and insuperable obligation that makes me beg that I may never see you again."

"But what can the obligation be? It is, perhaps, a misunderstanding—an obligation that no one had a right to impose on you."

"It was my father."

"I can't believe it, Helen; he loved me; I know he loved me; and it is impossible he can have laid his injunction on you to consign me to perfect misery. I won't believe it, Helen."

"Often, often he repeated it to me when you first came to Otterton, within a month of his death. It was because he loved you he did so; because he saw that we—that we—that is to say, that you!"

"Loved his daughter Helen from the moment he saw her, and all the years I lived in the same house: and that was the reason! I have been much deceived. I did not deserve such treatment."

"Oh, don't mistake him, Charles. You were rich, recollect, and he was poor. Malicious people told him when he took you as a pupil, that he had taken the surest way of providing for his girl. He bound me never to let it be said that a poor vicar's daughter!"

"And for an absurd scruple like that, you will make us both unhappy! Do you not think he would have relented, Helen, if he had lived?"

"Never; but let this conversation cease. Leave me to my own misery, and do not double it by reminding me of happier times."

Mr. Brend took Helen's hand in his—"This is perfect madness, Helen; is there no way of conquering this unfounded scruple—would it alter your resolution if you knew that I was poor?"

"Pon my word, Sir Hubsty," said Mr. Vibbler, who at this moment came to the scene of action, "your friend seems to take matters pretty coolly! You've told him, I suppose, of Miss Welby's good fortune?"

"Not I," answered Sir Hubsty; "but his own good fortune seems considerable, too, just at the present time."

"Sir, I consider it unfair," said Mr. Vibbler, in a rage; "I consider it unjust, I consider it dishonourable, to bring a person, without a penny, to run off with my niece. My son, sir, shall make answer for his conduct—he will! Was such a thing ever heard of? Here I come in, and find an impertinent fellow holding my niece's hand!"

"And continuing to hold it, as far as my want of spectacles enables me to judge," added Sir Hubsty.

"The very moment it was ascertained she had a splendid fortune!"

"A splendid fortune!" exclaimed, as if in chorus, the whole party assembled at the folding door.

"And her, to throw herself away on a protegee of Sir Hubsty Pippen—perhaps as a decoy for the objects of Sir Hubsty Pippen himself—an individual we never knew till this very day—a fellow without a shilling!"

"Is it true that this gentleman is so poor?" inquired Helen of Sir Hubsty.

"Poor? no doubt of it,—he once had good prospects, poor devil, but at present they are very black; he has nothing now but his own ingenuity to depend on."

"A builder, or artist, or something of that kind," whispered the Misses Vibbler to their respective admirers.

"Oh! I wish it were indeed the case that he was poor," said Helen.

"And that you yourself were a considerable heiress?" inquired Sir Hubsty; "and in right of your uncle's will my ward?—eh, Miss Helen? Then be quite easy on that score, you are rich."

"Then, Charles," she said, holding out the hand which she had withdrawn—"the impediment is removed."

"And you consent, like a dear, good natured delightful girl as you are," said Sir Hubsty, "to be the Lady of Maldon Manor?"

"Why, what in Heaven's name is all this about? Do you ask her for yourself, after all?" said Mr. Vibbler, bewildered.

"Oh, no," said Sir Hubsty, with a laugh—"I believe I must shut up shop in that quarter, and put up a ticket, 'removed to the opposite side of the way,' for I shall immediately go and reside in the late Sir Charles Welby's. If I manage as well for his estate as I've done for this young gentleman's!"

"Mr. Brend do you mean?"

"No, no; Charles Maldon of Maldon Manor; he had an object in concealing his name as long as he came, like a knight of old, in disguise, in search of his lady love; but now that he has found her, I suppose there is no farther need of concealment—eh, Bagsby?"

"None whatever," answered the lawyer; "we are all witnesses to her promise; and I believe if she draw back, he might recover very heavy damages. I shall be happy to be agent for the plaintiff—for a very moderate per-centage on the sum awarded."

The Vibblers, great and small—the Higgleses, young and old—the clergyman, as in duty bound—and the physician,

as might be expected, lost no time in congratulating all parties on so happy a result. Whether all of them were sincere in their felicitations, we have no means of knowing; but probably Mr. Vibbler found it as well to alter his intention of sending for his son, as that gentleman remained stationary in Lincoln's Inn. "By-the-bye, Mr. Bagsby," he said, drawing that highly gratified gentleman into one corner, "we were speaking about the allowance I might claim during the three years my niece has been here. Now that her prospects are so glorious, should you think four hundred a-year too much—eh?"

"We must speak of that afterwards; but whatever it is, you can deduct it from her mother's portion, and pay over the remainder to me."

"Her mother's fortune?—bless me! you surprise me," said Mr. Vibbler, breathless and amazed.

"My dear sir," answered old Bagsby, "in looking over poor Mr. Welby's papers, I found an engagement of your father's, to pay to Mrs. Welby two thousand pounds, or, retaining it in his own hands, burdening the estate with it at four per cent. Are you aware of its ever having been paid? But, in short, I tell you I have gone carefully over all the accounts, and it has not been paid. I will let you know the precise amount in a day or two, and both matters can be arranged at once. Is this satisfactory?"

Satisfactory it might be—and, from the gratified malice perceptible on the lawyer's visage, it probably was to Mr. Bagsby himself, but the state of affairs was viewed in a very different light by the thunderstruck Mr. Vibbler. In the midst of this happy conclusion to three years' misery on the part of two amiable young people, it pains us, as grave historians, to have to relate, that on the result of the evening's discoveries being conveyed to the servants' hall, Mr. Tippings did not behave with the equanimity and decorum befitting his years and station. It is credibly reported that he kissed the cook in the most open and barefaced manner; and threw his hat with such prodigious impetus up to the ceiling, that he made it a shocking bad hat in a very few minutes, with two or three large indentations in the rim; that he drank an innumerable number of pints of strong ale, to the health of the young couple, and finally rolled off to bed, expressing an opinion of the family whose bread he was eating—or rather whose beer he was drinking—which could by no possibility be constructed into a compliment; while, at the same time, he gave it as his decided impression, that the young people were the handsomest match in England—sweet-tempered, splendid steppers, and both regularly thoroughbred.

#### Formation of New Coal Beds.

If we extend our observations to the actively-operating agencies which are now going on in countries covered with a dense vegetation, abounding in lakes and marshes, and traversed by vast rivers, we shall no longer feel surprised at the immense quantities of vegetable matter which compose coal measures. In America, trees in prodigious quantities, the wrecks of whole forests, are borne down by the tributary streams into the great rivers, and hurried along by the mighty flood of waters, till, arrested in their course, they become entangled, and form stationary masses called rafts, which, in the Mississippi, the Missouri, and other large rivers of North America, extend over many leagues, and are of great depth; in some instances, particular species are associated together, as cedars, pines, and firs, without the intermixture of other trees. Near the mouth of the Mississippi, in many of its larger branches, rafts of great extent, composed of drifted trees brought down every spring, constitute a matted bed of vegetables, which is many yards in thickness, and stretches over hundreds of square leagues. These rafts become covered with fine mud and sand, on which other trees and plants are drifted down the following year; earthy deposits again take place, and thus alternations of vegetables, with layers of calcareous matter, are annually produced, while a profuse growth of vegetation takes place at top.

In the lower plain of the Mississippi, immense inundations continually occur from the melting of the snow, and the flood of water thus suddenly pouring into the bed of the river, and that of the Missouri, the mouths of the large tributary rivers are thus absolutely choked up, and their waters, being driven backwards, overflow their banks, and inundate the lower parts of the plain, forming lakes of twenty miles or more in length. Here we have the conditions required for the formation of future coal fields; rapid development of vegetation in swamps, and other periodical inundations of watercharged with mud and sand. That the bituminization of vegetables, and their subsequent consolidation by pressure into coal, might take place under the conditions here contemplated, we can readily conceive, from what is already known as to the conversion of peat into coal, in bogs of comparatively recent origin; but in the coal measures we have vast alternations of strata that abound in marine remains. But rafts might be drifted into the tranquil depths of the ocean, and become covered with mud and sand; and a repetition of this process, at intervals, during a long period of time, would be sufficient to produce the appearances described. The occasional vertical position of the stems, and the admirable preservation of delicate leaves, do not appear to us to invalidate this inference; for in the entangled floating forests of the American rivers, trunks of trees often occur upright; and in the interior of the rafts, grasses and tender plants are often found entire. Such masses, therefore, might be drifted thousands of miles, and yet the embedded fragile species, protected by the external network of entangled branches, remain uninjured; and, undergoing bituminization,

while enveloped by the soft mud permeating the mass, might become changed into durable forms, similar to those which exist in the fossil plants of the coal.

#### The Progress of Duelling in France.\*

##### SECTION I.

THE origin of duelling may be traced to that barbarous state of society in which personal courage was deified as the perfection of human virtue, and the exhibition of it esteemed as the noblest ornament of life. Its causes are assignable to the rude liberty of an uncivilised people, to a false conception of honour, founded upon ignorance, and to superstition. During the earliest periods of civilisation, a belief of an adequate distribution of rewards and punishments in the present life seems to have generally obtained. Hence arose the practice of making a direct appeal to the Deity in single combat, under the persuasion that the justice of heaven would infallibly declare for the innocent, and visit the guilty with dishonour and death. Although the practice of deciding public disputes or quarrels by single combat has prevailed from the earliest ages of the world, yet these cases bear little analogy to the modern duel. They were always between public enemies, not between private friends or fellow-citizens.

In the ancient history of civilised nations such a species of warfare is not to be found. No traces of it are to be met with amongst the people of Asia, nor in the communities of Greece and Rome. Caesar relates that two of his officers having a dispute, mutually defied each other, not to single combat, but to show which of them should perform the most glorious actions in the succeeding battle, and that one of them, after beating the enemy back, was on the point of falling a victim, when he was rescued by his adversary. A similar instance of heroic emulation is mentioned of two officers of Alexander the Great's army. Metellus, when challenged by Sertorius, Antigonus by Pyrrhus, and Augustus Caesar by Mark Antony, replied merely, that they were not so dissatisfied with life as their challengers. Marino, when invited by a Teutonic Chief, sent him back a rope to hang himself, if he was tired of the world.

The duel is a peculiarity of modern times, and of the northern nations of Europe. One of the earliest constitutional usages of Germany of which we read, was the custom for particular families to wage war with one another, for the expiation or satisfaction of affronts or injuries. Tacitus relates that an ordinary device of the Germans for ascertaining the event of a projected war or military expedition, was to match a prisoner of the hostile nation against a champion of their own, and that the event of the combat was regarded as a sure presage of the result of the intended enterprise. It is a fact to which sufficient attention has scarcely been paid, that in the constitution of the early German tribes, while the cognizance of all offences against the state, such as treason, deserting the banners of the chief, going over to the enemy, was by custom especially reserved for the assemblies of the people, crimes against the person or property, such as mutilation, maiming, robbery, and homicide itself, were regarded rather as civil injuries, than as offences against the public peace. The power of punishing the latter description of guilt existed in no magistrate or public authority; all that the community bound itself to do in such cases, was to procure compensation to the weaker party for the damage done. There were no crimes but those against the commonwealth, in a state where every man was deemed competent to maintain his rights, or avenge his quarrels with the sword. Family feuds and family combats from this cause became universal in Europe after the irruptions of the barbarians had destroyed the Roman empire. It is, however, from the records of France that any satisfactory account of the early history of duelling is to be collected.

Universal as it was by usages, which time had combined and settled into law, society soon loosened the ligatures by which it was bound; and, in the salique law, granted a dispensation from acting in an hostile manner, to any timid individual of belligerent families, who was inclined to desist from exacting a satisfactory vengeance for wrongs or injuries received; but, at the same time, annulled the defaulters' right of inheritance as a punishment for recreancy so ignominious. The early legislators of France, finding it impossible to put an entire stop (for that the evils were known, and its complete suppression an object to them cannot reasonably be doubted,) to the licentious abuse of courage, contented themselves with prescribing limits to it, and to do so framed the judiciary form of "Trial by Battle." Hence arose a new species of jurisprudence, which may not improperly be called, the right of the sword. This mode of deciding civil contests could not, however, in its first stages, be claimed as a mere matter of right. If the proofs in the litigation were so obviously glaring as to flash immediate conviction against the party complained of, then the Judges decided summarily, by inflicting a penalty adequate to the offence. It was only when the affair wore a doubtful complexion, that the contending parties were allowed to proceed to trial by battle.

Judicial combats are to be distinguished from the tournaments which were so much in vogue during the

days of chivalry. The latter were somewhat after the manner of the gladiatorial games in ancient Rome, except that instead of fighting by the hands of slaves, the knights fought by their own. We have an exposition of the purposes and ceremonies of tournaments in the code of laws for their regulation drawn up by René of Anjou, King of Sicily and Jerusalem, who, being despoiled of his dominions, found ample leisure for this important purpose. In these singular *pandects*, it is laid down as a fundamental rule, that jousts and tournaments are to be held in honour of the fair sex. They alone were to inspect the arms and distribute the prizes; and if any knight or esquire should speak evil of any lady, the other combatants were to maule the libeller with their swords, until the assembled fair ones adjudged the drubbing sufficient. Tournaments were strictly of the nature of spectacles or games, and could be held only by a prince or great baron. Judicial duels were upon a very different principle. They were for the redress of wrongs or the restitution of rights.

The first recorded legislation on the trial by battle is the Gombette Law, which was instituted by Gondebald King of Burgundy in 501, and allowed the expedient of duelling to those impleaders from whom the oath administered to offenders did not obtain a voluntary acquittance of the cause complained of. Charlemagne, in his statute books, allowed the litigating parties, when proper testimonies for terminating the matter in dispute had been adduced, to have recourse to the trial with quarter staff and buckler, which practice was conformable to the Lombard Law. It was not until the reign of Louis le Debonnaire, (816-840), that litigants were permitted to decide their disputes with what are specifically called arms; and from his reign, none but vassals or peasants combated with the quarter staff.

Henry II. (1031-1060), attempted to restrain the practice, by instituting "the truce of our Lord," which forbade duelling from Wednesday night to Monday morning, as a mark of veneration for those days of the week which Christ had consecrated by the last mysteries of his holy life.

Louis le Jeune followed up the attempts of his predecessor, by forbidding, in 1168, duelling in civil suits in which the debts did not exceed the sum of five sous of that period. This salutary enactment must soon have fallen into disuse, for in the time of St. Louis, (1226-1270,) a debt exceeding twelve farthings was deemed sufficient. The existence of these regulations affords ample proof how universal these combats must have been. Grave and petty causes, a dispute about a trifling sum of money, an accusation of murder, robbery, or perjury, a contested title to honours or estates, equally afforded legitimate grounds for these conflicts. Even the rights of the church, its domains and revenues, were subjected to this singular ordeal; sometimes the zeal of an ecclesiastic carried him into the lists as a champion. In the generality of cases, the cause of the church, as well as that of females, minors, the sick and the maimed, was committed to the care of some sturdy warrior, who was ready to risk his life for the benefit of others.

Along with other continental customs, William the Conqueror introduced this feature of Norman jurisprudence into England. But, like other foreign usages, it was modified by the peculiar genius of the people, and was only used in three cases; in the decision of causes in the courts martial or courts of chivalry; in appeals of felony; and in civil cases upon issue joined in a writ of right, in which last, it was, until the reign of Henry II., the only mode of decision.

When the litigation between two parties was allowed by the proper tribunals to be decided by an appeal to arms, the adverse persons, or their authorised champions, appeared on the assigned day within a ring, formed for the purpose by the officers of the court, and guarded by its functionaries. They were, if of noble blood, on horseback, and furnished with all the offensive and defensive armour of the time. They were strictly enjoined to carry a crucifix, or the image of a saint, upon their shields or banners. The heralds arranged the spectators around the ring, all of whom were on foot, no one being permitted to be present on horseback, under the penalty, if noble, of losing his steed, if not noble, of having an ear cut off. Originally, a gallows was erected at one extremity of the lists to hang the vanquished as soon as the fight was over. Two seats, covered with black, were prepared for the champions, on which they sat during the ceremonies preliminary to the combat. The presiding officer, who was generally the judge of the court from whence the proceedings issued, accompanied by a priest, caused each of the combatants to be sworn upon a cross, that the right was on his side, and that he bore upon him no enchantments or magic arms. The illustrious St. George was invoked for the truth of the oath; though even his undoubted name was not some times satisfactory, and the persons of the antagonists were often scrupulously searched for charms and bewitched weapons. When the preliminary ceremonies were gone through, the marshal of the field pronounced the signal—"Let the brave champions loose." The parties were ordered to charge, and the mortal struggle commenced. The conquered party was accounted infamous, and if he were not killed in the fight, was generally hanged or ignominiously mutilated. His arms were seized for the benefit of the presiding officer, the prevailing maxim being, "the dead must be wrong, the conquered ought to suffer." When burglars or other infe-

\* This summary of an interesting topic through a long series of years, and strictly according to history, has been drawn up at great labour, and after much research.

rior persons adventured on the trial by battle, their weapons were limited to clubs, wherewith they beat each others' heads until victory declared for one of the two. If the skull of the craven or defeated party were not so battered or smashed as to have caused death, he was without delay hanged; the conquerors were carried home in triumph and enjoyed the spoils of the defunct.\*

### The Smuggler's Grave.

#### CHAPTER I.—THE ALARM.

THE very romantically situated village of L—, in the county of Kent, was, some fifty or sixty years ago, one of the most noted smuggling stations on the coast. The noted inefficiency of the preventive service of the period only acted as a stimulus to these bold and daring men, and without checking the evil, served but to excite their ingenuity and courage—their love of adventure and thirst of wealth, the more. Many are the wild stories related of the deeds and exploits of these fearless searovers, and wonderful and numerous instances of their cunning and quickness in devising expedients, and of their dexterity and valour in carrying their plans into execution, are still told by the hoary chroniclers of the sequestered hamlet. Amongst these traditions of a rover, and perhaps not the least interesting, will be found "The Smuggler's Grave."

It was a calm and mellow evening in autumn, the slanting beams of the sinking sun were tingeing with his own golden hue the peaks and projections of the rocky shore, and making "the village windows blaze," as ten or twelve men in fisher's garb were seated upon the long bench that extended in front of the solitary village ale-house. The foaming ale was passed from hand to hand with the freedom of long tried and ready fellowship, and jest and laugh, and harmless glee, enlivened their hour of enjoyment. In the little bay in front, which seemed to have scooped itself a nest from out of the surrounding rocks, a long, low-hulled, yet high raking vessel rocked to and fro on the swells. She was alone, and held by a short cable, with her sails clewed up in such fashion that they could in one instant be shook out, at the same moment the anchor could be tripped, and she put before the breeze, and ready and able to brace any sea and dare any danger.

"Is she not a beautiful creature, Martin," said one of the men, addressing his nearest comrade, while he rested the measure on his knee, and surveyed the trim and gallant bark with a glance of admiration. "Is she not a palace for a prince—there's not such a model swims from Jersey to Jerusalem, and as right and tight as one of old Hans Vanderpumps flasks of Schniedem, with his own seal on the cork."

"Aye, aye," responded Martin, "and quiet as she looks, I warrant me she has gone through more wicked work in her time than a dozen of the king's cruisers all together."

"Well, messmates," said a third, "here's success to the jolly little Rover, and here's to

The wind that blows,  
The ship that goes,  
And the lass that loves a sailor."

and draining each his measure dry, they all joined in an enthusiastic hurrah.

"Come, Bill Barnacle," said the first speaker, turning to a young man who sat near. "Come, Bill, give a stave, a real sou'-wester lilt—like what you tip the revenue nabbers, when the little Rover is giving his Majesty's utter the go-by on a hazy night."

"Aye, Martin," replied the young man, "that is the time to sing, when the winds laugh in our bellying canass, and the waves join in chorus around us, while the little skimmer there is dancing under us as if she were nudged with life and rejoiced in her speed."

"Come, Bill, the song—the song," joined in all the rest, and the young man without hesitation, but like one who knew and felt confident in his powers, trilled out in free, manly, and sonorous tones, the following sea ditty, made expressly in praise of the idol of his heart, the lovely little Rover.

Come heave ahead, her white wings spread  
Before the sweeping breeze;  
And mark how gallantly she'll tread  
The surface of the seas.  
Lay out, lay out, spread out each sheet,  
Until you crack the mast—  
How joyously she flies to meet  
The rushing of the blast.

See how the sparkling waves at war,  
Rush on to kiss her prow;  
Oh! what cares now the Rover for  
A fellow or a foe.  
She loves the singing of the wind,  
She loves the wild waves roar,  
But most she loves to leave behind  
The false and faithless shore.

\* Wager of battle was allowed, not only between the principal parties in a suit, but between one party and a witness produced by the other. On the lie being given to a witness the combat was ordained, and if the witness was acquitted, the party producing him was held guilty of subornation. But this was not all: if the process had been tried by depositions, the losing party had a right to impeach the judgment of the Court, give the Judge the lie at the moment of pronouncing judgment, and challenge him to be field. On the other hand, the Magistrate had a right to challenge any who refused obedience.

Now where's "the sea-dog," that would dare  
To cross us in our path,  
Ah! soon the fools shall learn to fear  
The Rover in her wrath.  
She is no dolphin of the deep,  
But the fierce and fanged shark;  
For fearless hearts and hands now keep  
The bold free-trader's bark.

This song was received with reiterated cheers of applause, and the flowing measure was passed round the group with a rapturous enthusiasm. In the midst of their revelry they were joined by the landlord of the "Hostellerie" and a young man in the garb of a seaman of a superior rank from those around him. His appearance also bespoke one of a more elevated stamp of mind, while his bright unquailing eye—firm-cast, yet handsome features—his well knit, yet lithe frame, and his ample shoulders, and expanded chest, told of him as one who had the strength to do, and the recklessness and will to dare.

"Well, messmates," said the youth, sitting down amongst them, "I am proud to see you all so hearty—push about my hearts of oak, never let the jug come to an anchor while it holds a drop—our cargo is all safe—so we may defy the land sharks and give loose for one night to mirth and good fellowship. There she sits as close as a duck, and as clear as a new cutlass. That was a regular dog-watch song of yours, Bill Barnacle; come let me have a drink with you—nay, fill it man—up to the brim, 'here's success to the Jolly Rover and her crew,'" and he drained the goblet to the bottom. Again their wild hurras made the caverns of the shore resound, and his health and a life of happiness were toasted with fervor and earnest zeal. Young Harry Herne was the son of a wealthy farmer who resided near the village of L—. From his infancy an uncommon predilection for the sea led him early to associate with the fearless fishers of the coast, with whom, to the terror of his parents, he spent most part of his time; sometimes engaged in the unlawful pursuits which occupied the better share of their time and thoughts, and sometimes busied in the arduous tasks which ostensibly formed the avocation of their lives. In these desperate adventures he soon acquired a name above his compeers for daring and dexterity, and his love for this life of danger continuing to increase, his father was induced to purchase for him a share in a small coasting vessel. Here he acquired skill in the management of a trader, but soon sold his share in the coaster, and entered on board a Dutch vessel, half trader, half smuggler. He remained with the Dutch for a voyage or two, and then returned to his native village much improved in circumstances, and with a thorough confidence in his own skill and science. He got the little Rover built after a certain model, and engaging some of the boldest and most expert of his former companions, she was furnished and put to sea as a regular free trader. She proved unequalled for speed, and was always able to baffle the revenue cruisers; and once being surprised while landing a rich cargo, she fought the king's ship and so disabled her, that she was glad to be allowed to sheer off, and leave the daring smuggler to make the best hand of his contraband merchandise. Herne was now a passing wealthy man; he had a stout vessel of his own, and a brave and numerous crew devoted to his interests. His fame was the theme of every tongue, and his unparalleled successes trumpeted far and near; while his dexterity, prowess, and courage, were magnified beyond that of any other free trader that had ever visited the coast. Harry had long fixed his affections on Alice, the fair daughter of Justin Fairbrother, mine host of the British flag and the agent to the Rover. Alice, too, had long and tenderly loved Harry, and purely for himself alone. His fame and the prosperity which attended him in his illegal pursuits, and which she was taught to consider as the reward and results of his superior virtues, made her feel a double pride in being the heart's chosen of such a man. Every voice raised in his praise sounded in her ears like the words of angelic spirits, and sunk into her heart like a balm and a benediction. Harry had won her father's consent, and this was the evening on which the wedding was to take place. Everything was in happy preparation; his men were ashore, and the villagers were gathering round to celebrate the union of two fond hearts with all becoming festivity.

"Messmates," said Harry, after a short pause, "our kind landlord here informs me, that certain suspicious-looking strangers have been seen prowling about here this day or two, as if waiting our arrival, and that this very morning the rascal of an exciseman set off on horseback to Deal, where a cutter has been lying this week back."

"Ha, ha, ha," laughed the mariners simultaneously. "Why let 'em come, Master Herne. Bless your lively limbs, the bird has fled, the prize has vanished like the sails of a lugger in a fog-bank, and the guns, who they're stowed away as snug as if she never carried an ounce of powder since her keel left the stocks. Ha! ha! how innocent she looks—let 'em come, let 'em come."

"Why," said the landlord, "there must be something in it—something serious, and I fear treachery may be at the bottom, for as I passed through the Fisher's Glen this morning I called at the cottage of Bumps, and he was not at home. You know the disgrace he has suffered at our hands—he never will forget. Bumps is a revenge-

ful and black-hearted man. Harry Herne, I warn you to beware."

"He broke our laws three times," said the young man, "and we expelled him, but he will not turn traitor; he cannot break the oath by which he is bound—nay, he knows he dare not—he knows me too well. At the worst all he can 'peach about is the skirmish with a king's cruiser—but what of that—he dare not."

"Too much, too much," replied the landlord, "and it's bad trusting your chickens to a sleeping fox, and foolishness to walk blindfolded through the house when a halter hangs at the gate. I would not trust him, and my advice would be that you immediately be off to sea for a day or two, until all doubts are removed. If I am wrong why no harm is done—if I am right, the evil were well avoided."

"Justin Fairbrother," replied Harry, "you see more in a passing cloud than another man would in a hurricane. You have lived so long on shore that you fancy every breeze a tornado; come, man, look on the bright side of the weather—or is it that you wish to defer my happiness, are you playing me the child, Master Justin?"

"No, Henry Herne," answered the landlord, "you should know me better; my daughter's welfare has been ever held too precious for me to trifle with one who is soon to have it in his keeping. But I am done; I spoke but for your good."

"Well, here's my hand, Justin," said the young man, "it is all over. We'll have a happy night. Come, Bill Barnacle, give us t'other song: let us have one of your merriest ditties; this is no time to think about sharks or sea-bailiffs—they may all go to Davy Jones. The song, Bill, the song! Bill, as usual, without the slightest indication of bashfulness, spread his broad horny palm, on which he rested his bronzed brow, and after pausing a moment as if to recollect the words or the tune, gave out the following rude

#### SONG.

Come, fill up the sparkling glasses high,  
For a bumper it must be;  
And may his cup though life run dry  
Who would not pledge with me.  
Then here's, the wide world over,  
To hearts—the brave and the free;  
And here's to the fearless Rover,  
Whether on the land or sea.

He drinks of the rich and ruby wine  
Wherever the grape grows free,  
From the farthest East to the rolling Rhine;—  
And the Frenchman's *eau de vie*.  
The Western Isles send rum for his use,  
And brown ale the banks of Trent:  
And his is the Dutchman's Juniper juice,  
And the Spaniard's *Aguardiente*.

There is pleasure for him on every strand,  
And beauty on every shore,  
And a hope that greets him in every land,  
Makes him love his own the more.  
Then drink, the wide world over,  
To hearts that are brave and free,  
And a health to the jolly Rover,  
Whether on land or sea.

That night Harry Herne was a happy man—he had within his arms "the visioned hope of years," for the one whom he had long and faithfully loved was now his own. Many and many were the guests of the humble but comfortable hostelry, and the laugh, and the song, and the dance followed in rapid succession through the night. Articles of foreign luxury were scattered in profusion, whilst the native October, "brown and bright," followed in rivers. The bride and bridegroom had retired, but still the seamen and villagers stood stoutly to the carouse, and long and sturdily did their strong and well practised heads resist the potent effects of the liquor.

The revel was waxing dull—some were still loud and boisterous over their cups, others were nodding in half stupid weariness, and many lay prone upon the benches and the floor. The dawn was breaking in the misty east, and eclipsing with its grey light the lowly burning tapers, when a man but half dressed rushed in, and with a loud exclamation, roused the slumbering, and startled the drinkers.

"Up men, up!" he cried, "is this a time to be bawling your ballads and swilling like swine, when the little Rover has been boarded and carried by the crew of a king's cutter, and two armed boats are within a pistol's shot of the beach."

In an instant all was in confusion. Cups half drained were dashed from the lips, and those who were nodding started to their feet, and with staring eyes seemed to enquire if what they had heard as in a dream could be true. One was shouting for one thing to be done—another was ordering something else—the bold were arming, and the timid seeking for a hiding place. The wire had reached the bridal chamber, and Harry Herne made his appearance amongst them half-dressed. The matter was briefly explained.

"It is right, then," said he, "my dream is true. Arm, Rovers, arm!—it is now for life or a rope's end, and a dog's death at the yard-arm, for we are betrayed;—the traitor has sold us, but dearly shall he rue the treachery. But let us out and face them manfully;—let them not catch us under hatches until they smoke us out. Come, my lads, show them what the jolly Rovers can do once more."

So saying the smuggler led his men to the beach.

### The Chief of the Russells.

AMONG the many noble and gallant spirits who came forth in various ways to rescue their country from degradation, and its liberties from ruin, in the days of Charles II. none bore a higher character for purity of motives than did William Lord Russell; yet was he marked out by the then Duke of York, the king's brother, for his peculiar revenge, he having availed himself of the undoubted privilege of an Englishman to question the succession to the throne. Prosecuted by the infamous Jefferies, tried by an illegal jury, denied the privilege of challenge, and sworn against by perjured witnesses, he was condemned to die the death of a traitor. His lady threw herself at the king's feet, and pleaded with many tears the merit and loyalty of her father (who had been one of Charles's most faithful ministers) as an atonement for the errors of her husband. But her entreaties were of no avail. Every effort was continued to the last by his friends to save his life, and it was more than once supposed that the king would have yielded but for the machinations of his brother, who, with an indecent and fiendish vengeance, suggested that his victim should be executed before his own house, in the presence of his wife and children. Heartless as the king was, the proposal was rejected, and the noble lord gave up his valuable life in defence of a glorious principle in Lincoln's-inn-fields, on the 20th July, 1683, sustaining to the last an unexampled fortitude, and leaving a name of which his illustrious family may well hold in devout remembrance.\*

The royal encroachments on the liberties of the people succeeded for a time, the king died, and was succeeded by the Duke of York; but the troubles of the country heaved around him like a deep sea swell, and as one after another of his faithless courtiers left him to his impending fate, he personally sought assistance, among others, from the Earl of Bedford—from him who had prayed to him that his grey hairs might not be brought with sorrow to the grave by the execution of his only son—from the father-in-law of her who pleaded the services of her own father, and the claims of her children on their grandsire's merits—from the father of him, who, less than six years before, he exultingly would have executed before his victim's house. There was a sinless retribution in the Earl's reply to the solicitation of James for assistance, when he thus meanly besought him, "My Lord of Bedford, you are an honest man, have great credit, and can do me signal service." "Ah sir," replied the Earl, "I am old and feeble, BUT I HAD ONCE A SON."†

\* Like Lord Stafford, he refused to give any sign to the executioner, who having deliberately taken aim, at two strokes severed the head from the body. In the written speech circulated after his death, he expressed his belief in the reality of the popish plot; that his zeal in favour of the exclusion of James originated in a desire to obviate the danger of political papistry, and disclaimed any intention of altering the form of the Government. He denied that his offence was treason, as there were no levying of war, but admitted being present when there was some loose talk with others of surprising the guards. Upon which it was held by the crown that whoever comes into an assembly more than once, where rebellion is proposed, though he says nothing, is in law presumed to consent to it, and guilty of high-treason; it is held misprision if he does not discover it the first time.

† Mr. Wade, in his admirable summary of British history, gives the following account of the bigot king:—

James was deposed from the Government of three kingdoms with as little disturbance as a parish changes its overseer. So complete a national defection is without a parallel. A change of government was effected without bloodshed or popular commotion. Profound tranquillity prevailed throughout the country, and the administration of the prince of Orange was submitted to, as if he had succeeded in the most regular manner to the vacant throne. The fleet received his orders; the army, without murmur or opposition, allowed him to remodel them, and the city promptly supplied him with money for his present necessities. Such is the omnipotence of public opinion, and the ease and safety with which a great political revolution may be effected, when the people are unanimous in their resistance of tyranny.

The abdicated monarch had hardly any private virtues to redeem his public errors. Sincere he doubtless was in his bigotry, and disinterested even to weakness, in its maintenance, but his sincerity was that of a monk; for while making the most solemn promises to maintain the religion and liberties of the people, his whole reign was directed to their subversion. It is extraordinary that a man who was generous enough to avow his own sentiments at whatever risk, should wish by every means, fair or foul, to deprive others of the same privilege. Bravery has been imputed to him, but his courage was problematical: he did not evince it at the battle of the Boyne, nor in some of the incidents of the Dutch war. If not actively, he was passively cruel; the rewards he bestowed on Jefferies, and the brutal jests in which he indulged on the sanguinary proceedings of that ruffian judge, are an indelible stain on his memory. When shipwrecked in the north, he evinced more anxiety about the preservation of himself, his dogs, and priests, than the ship's company, or of his brother-in-law Hyde, who accompanied him, while duke of York. He had the character of a man of business, but it seems as if he merited it more by dogged industry than dispatch or discrimination. Although cold and formal in manner, he did not escape the licentious contagion of his brother's court, and had several avowed mistresses.

Upon the whole, in the love of the polite arts and the virtues of private life, James was inferior to Charles I.,

Need it be added that the King turned as if bitten by a serpent. He quietly retired.

It would be unjust to the exalted lady from whom has descended so many worthy scions of the House of Russell not to mention that her devotion to her condemned lord was unceasing, and that so completely did she bend herself to spare him every pang, that on her last parting with him she gave him no disturbance, but bound up in his presence every sob, every sigh, every tear, that a loving wife and distracted mother might well have been allowed to vent. To the end of her long life she continued a widow, faithful to the memory of her lord, and evinced through her many family trials a fortitude and devotion which have rendered her a pattern to all women. Six months after the death of her only son, one of her daughters died in childbed in her presence. By a singular coincidence another of her daughters was, on the same day, in a like condition, which rendered it necessary not only that she should conceal her sister's death, but even assume a lively manner before her surviving daughter; and in reply to inquiries respecting the sister, this strong-hearted woman replied, while her heartstrings must have been cracking, by this extraordinary colouring of the fact—"I have seen your sister out of bed to-day." Such ancestors are indeed worth being proud of, and were all the members of the aristocracy possessed of a like devoted virtue, their names would be as laden with public honour, and a people's homage, as too many of them are encumbered with reproach.

### Editorial Notices.

STAY LACING.—A very sensible young lady, "who is more desirous of possessing good health than a good (or rather a fashionable figure)" requests to be informed where the stays recommended in our Journal may be obtained. The "boddice," as we believe it is called, was invented by Mr. Hare of Leeds, and is strongly recommended by the faculty in the cure of spinal diseases; but we are not aware of its being kept ready made at any of the fashionable stay warehouses in town. Several ladies of our acquaintance, we are permitted to say, have made the article themselves, the only materials required being jain, cotton lining, cotton cord, linen thread, and a stout needle. An ordinary stay maker could very easily make the boddice, and although a trifle more might be charged than they are really worth, from their newness, that ought not to debar our fair friend from following out her excellent resolution.—The same "gentle reader and gentler purchaser" considers it but fair that we should give the men a lecture in their turn, a duty which we certainly shall perform with great pleasure. Rigid as our venerable contributor has been in his remarks on the ladies, they are milk and honey to what will be said of the men. We have no doubt that our gentlemen readers have been crowing rather ungallantly at the "Experiences;" if they have, their indiscretion shall be amply avenged.

A communication has also been received on the subject of the stays, addressed to the writer of the article thereon, by "A Young Mother." We rejoice that a lady entering on the sweet yet severe duties of a mother, has resolved to despise the prevailing fashion, and give herself up to the nurture of her family, and the care of her own health. We have only to add, that the improved stays cannot by any means be so expensive as the others, and that the great advantage they possess is in their guarding the back, instead of compressing the bust. We shall take an early opportunity of communicating with the inventor, and have no doubt but he will find it profitable to appoint an authorised agent for London.

SECRET MEETINGS.—A love-born Juliet has solicited us to give our opinion of clandestine meetings, in consequence of the object of her choice being denied the privilege of visiting at her father's house. Secret meetings are quite as vicious in domestic life as they are in political society. They are the source of present heart-burnings and future recriminations. When a woman too readily yields to the solicitations of "the stranger," to meet him when and where he pleases, she places herself too much within his power, and enables him to assume a command over her

while he had some of his worst vices. He was quite as obstinate as his father. Opposition might change his resolves but never weakened his convictions. There might be something English in this, as well as in the character of his intercourse with the French monarch. James, while receiving the money of France, was always indignant at the idea of England being considered the vassal or dependent state of that kingdom. Louis remarked on the inconsistent pride of the Stuart, by observing, "The king, my brother, is proud, but he is fond of the French pistols." In this connexion with France, as in his domestic government, he evinced his defective intellect. Meditating a great struggle with his own subjects, it was obviously his wisest policy to cultivate a cordial understanding, which he did not, with his Gallican neighbour.

James survived his dethronement ten years. As his punishment was milder than his father's, so it was productive of more enduring benefits to the nation. By his expulsion, two important constitutional advantages were secured. First, the supremacy of the law was established, and the slavish maxim,—"From God the king,—from king the law,"—corrected: it was settled that kings might do wrong, and their rights were not indefeasible. Secondly, the authority of parliament was acknowledged, and the prerogative claims more definitely ascertained. The contest lasted five hundred years, and ended by making the crown a derivative of the commons, in lieu of the contrary, as heretofore contended. It was not, however, a popular movement. The masses had no share in the revolution of 1688; it was effected by the aristocracy of church and state, who reaped its chief benefits. But it had this advantage to the people—it brought them one turn nearer the goal of political power, which in a latter age they have reached.

which he would never otherwise attempt. Let our fair correspondent obey her parents; if her swain is at all worthy, he will appreciate her conduct, and trust confidently to her constancy. Fathers are not so hard hearted as they are called, although they often forget the hasty feelings of their own youth, and judge love-sickness with uncompassionate calculation. Never mind, Juliet. Sighs, and tears, and dishevelled hair will do no good. Be cheerful, attentive, and obedient at home, and papa will soon discover that your self-betrothed is not so much to blame in loving so very nice a girl as you appear to be.

SINGING STEEL.—An admirer of Burns wants to know the meaning of the expression, in the poet's address to a Scotch Haggis:—

"Clap in his wallee nieve a blade  
He'll make it whistle."

The poem is intended to illustrate the hardness and strength of muscle which results from feeding on the Scottish ragout, and the passage alluded to implies that swordsmen so victualled, will be able to wield his claymore until it whistles in the air by the rapid evolutions of the arm. We cannot better illustrate the idea than by giving the following anecdote told by Allan Cunningham:—"To make a steel blade whistle requires a man! There was Donald Bane, when sixty-six years old, and no saxe souple as he had been, was called on to fight for the honour of the broad sword, with a foreign braggart, 'Donald (said his chief) d'ye think yere yauld (able or strong) enough for him?' With that he whipt out his claymore—a broad bright bit o' steel it was—and made it whistle in the air like a hunting hawk; weel! away he gaed up the Lawn-market to the strife, and ye'll na hinder some ane frae saying, 'Ah Donald's failed (worn out with age); I doubt he'll no do!' When Donald heard this, I wish ye had seen but his ee—it glented fire—he lap right up into the air, and seizing a lamp-iron far aboon other men's reach, lunged by at hand for a moment, sprang proudly down, and cried, 'She'll do yet!' And he did do."

STATUE OF CHARLES FIRST.—This equestrian statue was not erected by the exuberant loyalty of popular subscriptions, but came from a fund which was voted by Parliament on the 30th of January, 1678, to solemnize the funeral of the "Martyr King," and erect a monument to his memory. This grant amounted to £70,000, and was given in the same year with £40,000, as a portion to the Princess Mary on her marriage with the Prince of Orange, afterwards King William, "of pious and immortal memory." During the recess, previous to these votes, the Court gave £10,000 to the imperial ambassador, £12,000 to the Spanish envoy, and a like sum to the French ambassador, to purchase votes in the House of Commons. Charles II.'s disgraceful pension from France was this year expended in the same patriotic manner. These bribes, however, wrought their own cure; when the court and country were completely exhausted, the corrupt party saw the error of their ways, listened to the voice of patriots, declared the people sovereign, and called themselves the agents under heaven of a great and glorious revolution.

AN UNEHEEDED EARTHQUAKE.—It was during the battle of Thrasimene, between the troops of Hannibal and Flaminius, the Roman consul, that an earthquake occurred, and was unnoticed by the combatants. The Romans had been completely encircled by the mastery tactics of the Carthaginian, the consul was killed, and Roman desperation strove only to make defeat less terrible, the invaders being eager to avenge themselves for a long amount of Roman insult. Livy, the Roman historian says—"Such was their mutual animosity, so intent were they upon the battle, that the earthquake, which overthrew in great part many of the cities of Italy, which turned the course of rapid streams, poured back the sea upon the rivers, and tore down the very mountains, was not felt by one of the combatants." Byron, on visiting this remarkable spot, was elevated to a sense of its poetic and romantic fame, and infused his own high spirit into the following stanzas illustrative of the events of that stormy day:—"I roam

By Thrasimene's lake, in the defiles  
Fatal to Roman rashness, more at home;  
For there the Carthaginian's warlike wiles  
Come back before me, as his skill beguiles  
The host between the mountains and the shore,  
Where courage falls in her despairing files,  
And torrents, swoll'n to rivers with their gore,  
Reek through the sultry plain, with legions scattered o'er;  
Like to a forest fell'd by mountain winds;  
And such the storm of battle on this day,  
And such the frenzy, whose convulsion blinds  
To all save carnage, that, beneath the fray,  
An earthquake reel'd unheeded away!  
None felt stern nature rocking at his feet,  
And yawning forth a grave for those who lay  
Upon their bucklers for a winding sheet;  
Such is the absorbing hate when warring nations meet!

The earth to them was as a rolling bark  
Which bore them to eternity; they saw  
The Ocean round, but had no time to mark  
The motions of their vessel; nature's law,  
In them suspended, reek'd not of the awe  
Which reigns when mountains tremble, and the birds  
Plunge in the clouds for refuge, and withdraw  
From their down-topping nests; and bellowing herds  
Stumble o'er heaving plains, and man's dread has no words.

Far other scene is Thrasimene now;  
Her lake a sheet of silver, and her plain  
Rent by no ravage, save the gentle plough;  
Her aged trees rise thick as once the slain  
Lay where their roots are; but a brook hath ta'en—  
(A little rill of scanty stream and bed)—  
A name of blood from that day's sanguine rain:  
And Sanguinetto tells ye where the dead  
Made the earth wet, and turn'd the unwilling waters red.

## The Pharaohs of Egypt.

THE entire history of elder Egypt is written in hieroglyphics. Some of the early Greek authors give detailed accounts of the dynasties, laws, and habits of the Egyptians, but even these remote descriptions go not sufficiently far back into the annals of time to enable us to satisfy and prove the correctness of the legendary history of this most remarkable country. The investigations which have of late years been made into the monumental inscriptions of Egypt have added greatly to the stock of public information, and although learned travellers sometimes differ in their interpretation of various remarkable passages and signs, enough has been gleaned to enable us to give a short outline of the Pharaohs. It may be remarked, however, that the history of the oldest living country in the world, is not one of war and bloodshed: it is rather one of the earnest gropings of mental darkness, which the inhabitants progressed wonderfully in knowledge, while they surpassed all their contemporaries in the wild whirling flights of speculation. The most abstruse sciences were reduced to order, their laws explained and creations determined: the arts flourished in the midst of peaceful people, and self-pride grew and waxed mighty along them. They looked with contempt on the ignorance of those around—they left the stranger to war and to despoil—they shut their gates upon him, and enjoyed without interruption all the luxuries and refinements which modern nations had long fancied to belong to these our own times.

On the extirpation of the Shepherd kings, to which we allude in our outline of the "First Kingdoms," the three provinces of Egypt were united in one, under the government of Osirtesen, who was the Pharaoh that raised up the land of Joseph, and received his brethren.\* This prince, though the direct means by which one great shepherd king was expelled from Egypt, was the immediate cause of another being introduced into the land vacated by the former. It was long a favourite argument of the sceptic, that it was not at all likely that the land of Goshen had been lying vacant for the children of Israel, nor that any sovereign would dispossess his people to accommodate a stranger; but here, by the untarnished record of enduring stone, it is proved that the dwellers in the sunny spot had been expelled for political offences: and that a grateful monarch bestowed the abandoned territory on the brethren of him whose wisdom had saved the entire country from destruction, and his people from the most fearful mode of human extermination. In the reign of this monarch the phonetic alphabet was introduced, which we can only explain by saying that it was a combination of signs and figures, as well as letters, and that it was admirably adapted to enable its founders to retain the key of knowledge in their own hands, while its less important elements were distributed among the people. This was a check on the priesthood, whose derivation and character we have already explained: common justice, however, compels us to say that their example has been well and fully followed by their successors, and that even the professors and teachers of the mild and truly humane Christian faith have not hesitated to follow such an example.

Osirtesen was one of the flourishing and successful kings of Egypt, not, as we have already observed, in foreign conquest and alien subjugation, but in obtaining the greatest possible degree of domestic success and comfort for his subjects. Let us suppose for a moment, a seven years' scarcity in the most refined of modern countries—

\* A most remarkable painting has lately been discovered in the tomb of Benihasen, traced to have been governor of the land of Goshen at this period. It is a procession composed of thirty-seven persons, which, by a learned and acute dissertation in the *Westminster Review* is shown to be emblematical of the second arrival of the younger patriarchs in Egypt. This subject is so interesting, so fraught with Biblical and Pagan truths, so replete with evidence of the historic value of the sacred writings, that we must devote an exclusive chapter to its marvellous exposition.

would not the poor, the needy, the idle, the violent make themselves acquainted with the ministers of State? Would not the disaffected, the turbulent, the selfishly ambitious harangue the crowd, and cause deeds of violence and blood? Our early and everlasting instructors, the sacred authors, tell us of nothing approaching to this, nor do the Greek historians—no, nor do the tablets, obelisks, pillars, and tombs of Egypt, graven as they are with the thrice-told tale of departed ages. Order, harmony, and confidence appear to have been the prevailing conduct of the day. The tomb of Osirtesen has not yet been discovered; but the enduring structures of this wondrous land give ample evidence that it is still in existence, and future research may yet display the marvels of his reign.

This judicious and well-counselled monarch was succeeded by Amosis, whose reign was a continuation of the same happy system of paternal government. Even in this early stage of human history, we observe that the reigns of the good and wise are passed over in comparative silence, while those of tyrants, of human despoilers, and monsters in regal robes are emblazoned on the gilded page of parasitical narrative. There never was a more true or happy observation made than this, (and it was a favourite remark of the inquiring Greek biographers,) that when little is said concerning a long reign, the reader may content himself with the reflection that the people were happy and the king beloved. Should this be true, as we believe it is, the memory of these two Egyptian monarchs we have alluded to may have been embalmed as their bodies were, amidst the tears, prayers, and regrets of those who dwelt beneath their government, and who, however wedded to a system, were convinced that the good of the many was never sacrificed for that of the few.

Amenoph I. was the successor of Amosis, having married his daughter; and although a stranger in the royal family of the Pharaohs, in right of his wife wielded the sceptre and dispensed the law. Egyptian pillars, dates upon tombs, Scripture, and Josephus, all concur in describing this as the Pharaoh "who knew not Joseph." He must have stood much in the relation to Egypt as William III. did to England; he married the king's daughter, but would not accept the cares of government unless he had the honours also. Little has yet been discovered respecting this sovereign, except that his line of issue failed, and that his successor came from another branch of the royal line. Whether or not the Egyptians failed to engross his history on his tomb, as was "their custom in the afternoon" of a monarch's life, or that his final resting place has not yet fallen into the democratic hands of the modern invader, we cannot say. We may here at least repeat the fervent wish we uttered in No. 8, respecting the opportunity now offered to Mehemet Ali, by which he may gratify the curiosity of the antiquarian world in permitting a full and leisurely investigation of the antique treasures with which his land is stored. An account or painting representing the destruction of the Egyptian host in the Red Sea, either in the monument to Amenoph, as his final exploit, or in that of Thothmos, as the cause of his acquiring the regal dignity, would be an invaluable treasure to the world, and drown the sceptic in the delirium of his own thoughts;—it would be a pagan and human acknowledgment of the most unaccountable miracle recorded in holy writ. The explanation of the defeated and destroyed on such a phenomenon would go far to explain the mysteries of Egyptian lore, and might teach the world something worth knowing, for an inquisitive and speculative people like the Egyptians could not fail to remark and ponder upon so remarkable a circumstance. Had Moses or his inveterate opponents, the magicians, been attended by short-hand reporters from a daily press, we may well suppose that Pharaoh's heart would not have been so repeatedly hardened, nor would the cavalier, who now-a-days questions the right of the Israelites to "spoil the Egyptians," have a dubious thought on which to hang a doubt. Let us all be thankful that the press has been invented, else, with all our knowledge, we might have been equally prejudiced.

The first Thothmos was succeeded by a second and third of the same name, all of which accounted Amenoph an usurper, whether on account of his misconduct or misfortunes history sayeth not. Had his treatment of the Israelites resulted in success, it is more than probable that he would have been blazoned as a hero, as a defier of Egyptian greatness, and a bulwark of its renown; but inglorious defeat having tracked his footsteps, and marked his final exit from this world of dreams, a callous people felt no compunctions in setting him down as a blot upon their records, and as a monarch at whom the fingers of scorn and reproach might safely be pointed. Ah! the fickle breath of popular applause was then, as now, only the reward of success and the punishment of failure!

Rameses I. followed, who is the famous Sesostris of Grecian history—the mighty warrior who overran Asia with his victorious troops—who took away the reproach of cowardice from Egypt; but who, like many other conquerors, made nothing of his invasions except the gratification of having destroyed his species, desolated hearths, widowed wives, and orphaned children. Such are the duties warlike monsters feel called upon to perform, and which have been lauded by ignorant and besotted dupes, until the demi-gods have almost fancied themselves privileged to harrow and destroy until the earth itself rebelled and starved the wasting combatants into common sense!

The successor of Sesostris was a splendid monarch, under whom the renown of Egypt prospered exceedingly. This was Sheshonk, the father of Solomon's wife, and the just chastiser of the insolence of King Rehoboam. The conquests of this Pharaoh are exemplified on the imperishable walls of Karnac, "even unto this day," for there may be seen the portrait of the Jewish king who threatened to chastise his people with scorpions when they made complaints of his government, and whose own chastisement is spoken in the word "captive," written under his picture on the un mouldering but not yet well understood annals of Egyptian history.\*

During all this long and eventful period the land of Egypt was undisturbed. It was sufficient for itself, and its inhabitants sought not the rarities or luxuries produced by other nations. Its hereditary priesthood continued the depositaries of its religion, of the sciences, and of the teaching of arts. Sons succeeded their fathers as tailors, shoemakers, or wood-splitters, as well as astronomers, chemists, and jewellers. Age followed upon age, and there was neither change nor variability in the habits, hopes, or appetites, of the Egyptians. At length, however, a king of the elegant name of Psammetichus opened the ports on the Mediterranean and the Red Sea to foreigners;—great encouragement was given to the Greeks, who were known to be an early offshoot of their own race. But it would not do. The Egyptians, by centuries of custom, had been secluded from intercourse with adventurous nations—they did not like them—they hated, despised, and feared. This was continued through an unwilling century, until Amasis, who certainly was a prince fitted to reign in more enlightened and cosmopolitan times, drove liberalism to its fullest verge. Like too many of our political economists, he died just as his measures were in their bloom, and an unskilful or unwilling hand was left to gather in the

\* It has long been a matter of surprise that so many antique memorials should exist in Egypt. But when it is recollected that frost and rain are there unknown, the preservation of these early memorials of human taste and industry will cease to be surprising. The rays of the sun fall harmless on the immense blocks of granite which there compose the records of sublime antiquity; and the sand, although it may hide for ages the wonders of architecture and stenography, has only to be removed to display, in all its freshness, the immortal labours of giant minds, of daring hands, and industrial energies—the workings of those who taught the world the practicability of reducing thoughts to words, and of effecting the tracery upon stone, upon paper, and upon the human heart, of all that has excited the pride, passion, and cupidity of the human race.

harvest. His son Psammenitus was forcibly intruded upon by Cambyses, the greatest of Median monarchs, who built upon the ruins of empires the immense Persian dynasty, and which, under Darius the Mede, was prostrated by Alexander of Macedon. As Egypt would not condescend to take its policy from Cambyses, that type of modern usurpers removed the independent sovereign from the helm of affairs, placed a viceroy in his stead, and made the land of marvels—the daughter of Nineveh, from which Medea itself had revolted,—a tributary to the Persian dynasty, and placed it, along with Babylon, among the countries which had been, but which shall never exist again.

Among the excesses committed by Cambyses none offended the Egyptians more than his taking the remains of Amasis from their tomb, and burning them. It was a long cherished doctrine of Egypt, that the soul would again return to the body in after ages, if the latter were preserved: hence the almost universal embalming of all who were loved and respected; and to destroy a mummy was to rob the deceased of a future state of existence, and cheat the world of the reappearance of the wise and godly. The expressed disapprobation of the Egyptians, however, only excited Cambyses the more: he insulted the priests, slew the holy bull which represented the embodied doctrines of Osiris, overthrew and broke in pieces the colossal statue of Memnon, and sent an army of twenty thousand men to destroy the temple which had been reared in the oasis to Jupiter Ammon. This band of destructives was overwhelmed in the sands of the desert; and Cambyses, arising in a furious rage murdered his wife and brother, is said to have become raving mad. He is also reported by the Egyptian records to have died of a wound he had accidentally inflicted on his thigh, precisely similar to that by which he destroyed the worshipped Apis.

On the death of this usurper, the Egyptians struggled fiercely to regain their liberty, and with varied success. Darius Hystaspes, however, succeeded in establishing himself on the throne of the Pharaohs, and reduced the land of the Nile to the low condition of a Persian province. Thus was the "mother of Greece" involved in the quarrels between the Persians and Greeks, and thus was Memphis attacked by an army of Athenians! About 414 years before the Christian era, the Egyptians made another bold attempt to throw off the Persian yoke, and partially succeeded, but deservedly failed ultimately, in consequence of the contempt with which they treated Agesilaus, king of Sparta, who came to their assistance. Artaxerxes Ochus again reduced Egypt to a submissive province of Persia, and further to degrade the conqueror, slew the sacred bull, and ordered it to be dressed for food. Assassination was in consequence the fate of the Persian king, but independence no more looked down from the Pyramids, nor girded with its strengthening might the people who were once a terror to Israel, a marvel to the world, and a reproach to themselves.

At this period Alexander the Great began to stretch his sword over continents hitherto unknown, to besprinkle the earth with blood, and prove that one madman could command the services of millions. After having subdued Persia, the Macedonian invaded Egypt, and which submitting to his dominion without opposition, he there founded the notable city of Alexandria, which bore a distinguished name beneath the government of the Roman Ptolemies, and is not devoid of honour under the pachalic of Mehemet Ali.

Such is a rapid outline of Egypt under the Pharaohs. It is, however, in its domestic history—in its stories of the loom, of the avil, and the needle, that it most commands our admiration, and in which our pen shall have grateful labour in simplifying and laying before our readers in continuous detail.

### Burns Illustrated and Explained.

#### CHAPTER IX.—THE COTTERS SATURDAY NIGHT CONCLUDED.

THE apostrophe to the scene is the outburst of a poet conscious of the truth of what he has been writing, and an invocation to the genius of his country to perpetuate the objects of his description. The glowing allusion to the time and struggles of Wallace, recalling the heroic splendours of the land to witness the peaceful avocations of its free-born sons, is just, apposite, and delicately correct—for Burns was to Scottish Poesy what Wallace was to national independence.\* It was left for Sir Walter

\* The poet had his detractors as well as the hero.—When Burns was first invited to dine at Dunlop-house, (says Allan Cunningham) a westland dame, who acted as housekeeper, appeared to doubt the propriety of her mistress entertaining a mere ploughman who made rhymes, as if he were a gentleman of old descent. By way of convincing Mrs. McGuistan, for that was her name, of the bard's right to such distinction, Mrs. Dunlop gave her "The Cotter's Saturday Night" to read. This was soon done: she returned the volume with a strong shaking of the head, saying, "Nae doubt gentlemen and ladies think mickle o' this, but for me its naething but what I saw i' my father's house every day, and I dinna see how he could ha'e tauld it o'ny other way." The McGuistans are a numerous clan; few of the peasantry personally acquainted with Burns were willing to allow that his merit exceeded their own.—"Indeed, sir," said one of these worthies, Hugh Cowan by name, to an inquiring admirer, "Robert Burns, says in

Scott, by his triumphs, and successes, and rewards, to become the victorious Bruce.

From scenes like these old Scotia's grandeur springs,  
That makes her loved at home, revered abroad:  
Princes and lords are but the breath of kings,  
"An honest man's the noblest work of God;"  
And certes, in fair virtue's heavenly road,  
The cottage leaves the palace far behind;  
What is a lordling's pomp? a cumbrous load,  
Disguising oft the wretch of human kind,  
Studied in arts of hell, in wickedness refined!

O Scotia! my dear, my native soil:  
For whom my warmest wish to Heaven is sent;  
Long may thy hardy sons of rustic toil,  
Be blest with health, and peace, and sweet content;  
And, O! may heaven their simple lives prevent  
From luxury's contagion, weak and vile!  
Then, howe'er crowns and coronets be rent,  
A virtuous populace may rise the while,  
And stand a wall of fire around their much-loved isle.

O Thou! who pour'd the patriotic tide  
That stream'd through Wallace's undaunted heart:  
Who dared to nobly stem tyrannic pride,
